INDIANAPOLIS

## FARMERS! IT'S UP TO YOU

A man with a farm and a family, plants a crop—say it is a crop of potatoes—gathers it, puts it on his wagon—one load at a time—drives to town, and says to the fellow that don't raise anything: "Here is a load of potatoes, what'll you give for them?"

Now just stop long enough to look in that wagon and see what is loaded there. First, there is the work of the man himself—the farmer—represented in that load of potatoes, to a certain extent, and the work of his boys or hired help. The work of his women folks who cooked for them while growing those potatoes; and the labor of his team in cultivating them; the taxes on the land, the wear and tear of machinery and the feed of his team. Something he is out for fertilizer; the value of his time and that of the team in hauling the stuff to town; and in fact, many other little items of expense that no one on earth but the producer himself has any knowledge of. All are there in that wagon, and the farmer drives right up to the inexperienced man—inexperienced in so far as the cost of farm produce is concerned—and virtually says to him: "What's my time and work and all the other things just enumerated as represented in this load of potatoes, worth to you, so that you can make a good profit for yourself? Never mind me and the old lady, the boys and girls and babies, and the horses and such like; we can get along some way."

That's the size of it. That's just the way the farmers are doing today. It's an absurdity on its face.

But to go back to the load of potatoes: The fellow standing there, perhaps with a cigar in his mouth—he hasn't got a potato on earth except some that may have been brought his way, just like you brought yours. But he has good nerve. He is betting on the chances, that if you don't take his price, the next fellow will; so he simply rolls his cigar to the other side of his jaw and says: "I'm paying thirty cents a bushel today."

"Gee whiz! It cost me fifty cents a bushel to raise them." But you haven't figured it out, nor consulted any of your friends and fellow-farmers who are raising potatoes, also. So you take the price offered—which is the price allowed for all the things enumerated above—and unload the potatoes.

# Greatest Book Ever Written!

# The Third Power

SHOULD BE READ BY EVERY PERSON IN AMERICA  
—AND PARTICULARLY BY FARMERS.....

*The Third Power is a revelation to every person who reads it. Its 275 pages are all new thoughts, yet the most astounding truths ever spoken. Its entire scope is a vast new field that is dead ripe for the rarest, richest and best harvest that humanity ever garnered. One reviewer writes, "The Third Power is a book that deserves a place next to the Bible and Pilgrim's Progress. It will win a place in the homes of all classes without regard to occupation, profession or condition. Every person who reads it will be better for business and as a member of Society."*

## The Third Power

Explains in clear language how the farmers will come to the front, farming be elevated until it is the best business in the country, at the same time benefiting all other business and consumers of farm products. The plan is so simple that any person can understand and doubters doubt no more. The index is most comprehensive, containing 246 references. Among which are the following questions and answers:

Are agricultural colleges, farm papers, etc., doing good for the farmers?—Are farmers taxed too heavily?—Are there too many farmers to cooperate?—Can farmers cooperate?—Can farmers organize?—Can farmers in the United States secure profitable prices for their crops regardless of European farmers?—Can you help the tobacco growers, who are now at the mercy of the trust?—Can this society prevent the adulteration of food products?—Could the government help farmers by loaning them money at a low rate of interest?—Could good prices be made for farm crops if your society had a large capital with which to buy crops?—Do farmers need to market a twelve months' supply in a few months?—Do you think money can be well spent in marketing farm crops?—Do you think the grange would have succeeded if operated on the plan of the A. S. of E.?—Does speculation injure farmers?—How are members bound?—How about meat; will prices advance?—How can agricultural products be removed from the list? How can poor farmers hold their crops to help maintain the minimum price?—How can farmers store their produce?—How does the food trust operate?—How will the farmers' organization affect labor?—How will this movement affect the producer of perishable products?—How will this movement affect railroad rates, stock yard charges, grain inspections, grading, etc.?—How many members had the alliance and grange?—If farmers can get good prices will they overproduce?—If a surplus should exist at any time what will be done with it?—Is cheap food a blessing to the world? Is the A. S. of E. a secret society?—Is "The American Society of Equity" a good name?—Is it a fact that the larger the crops the lower the prices?—Is the ground as productive as formerly?—Is the 1903 wheat crop worth \$1 a bushel?—Must a member belong to a local union?—On what does the prosperity of the country depend?—Suppose buyers would not pay the price organized farmers asked?—Tell about the system of crop reporting?—What are the local union membership fees and dues?—What are the speculative commodities?—Why are these selected?—What will be the result if this effort to organize farmers fail?—What do you mean by intensive farming?—What is the membership fee and dues?—What will be the result of co-operation by farmers?—When is the time to organize the farmers?—Will farmers become a power in politics when organized?—Will farmers' business grow worse?—Will farmers hold together?—Will farmers stick together?—Will dollar wheat come?—Will profitable prices for the farmers make higher prices for consumers?—Will the minimum price limit consumption?—Will you need to control production as well as consumption?—Will it not be sufficient to have storehouses and get low freight rates?—Will plans be defeated if many farmers do not join?—Who are eligible to membership in the A. S. of E.?—Who will be injured by this movement?—Why not have a society for each crop?—Why not organize one state and see how the plan will work?—Why do you admit merchants, bankers, etc.?

### FROM CHAPTER III

"Here we have a class of men, the most numerous in the country, who fail to get what they ought to have, simply because they do not combine to get it. Farmers should not have anything to which they are not entitled. And it is not the intention of the writer to array them against their brethren of the capitalistic and labor classes. All that is desired is that the farmer should profit by the example set by these other classes. The demand is for equity and nothing more. And equity for one is equity for all. The farmer can not be truly prosperous without benefiting the whole country. The country can not be prosperous without the farmer is prosperous. Keep the farmer prosperous and we can not have hard times. So the cause of the farmer is the cause of the nation, and of every citizen of the nation. Prosperity begins and ends on the farms. Therefore, keep the farmers prosperous. Keep the source of prosperity pure and strong, so it will flow a powerful stream that will invigorate every industry. "So the appeal is to the Third Power to become a real power, to the end that it may make itself felt for the good of all the peo-

ple. If it is right for the thresher to say what he will charge for threshing the farmer's wheat, it is right for the farmer to say what he will charge for his wheat. It is at least not equity for the farmer both to buy and sell at prices made by others. If we admit that it is right for those who sell to the farmer to fix the prices at which they sell, and we don't dispute it, we must also admit that it is right for the farmer to fix the prices at which others shall buy from him. But really it is not a question of right at all—it is a question of power. If the farmer is to free himself from the compulsion to which he is now subjected, he must do so by his own act. And it is better so. A prosperity won by one's own effort is better and more securely based than that created and guaranteed by government. The solution of the problem is not to be found in Washington, but on the farm. There is no need to ask for favors. The politicians can not greatly help, and we don't propose to call on them. The farmers organized, and pricing their own products, will be so strong in the control of the food and clothing of the world, which the other people must have, that they can put any price on them that they want to. Thus they can meet prices, expenses, and taxes, imposed by others. The farmers organized, don't need to care whether there is politics

swelled by the fruits of the labors of the husbandman: The factory, the railroad and the mine all live off the farm. We talk of labor as the source of all wealth, and so it is—but it is the labor of the farmer. And yet we find that, after all these years these men on the firing line of our American civilization, who should be the most independent men in the world, are dependent on the captains of industry, the promoter, the underwriter, the labor leader, and the grain gambler. It is time to end this dependence. And unless the American farmer rouses himself, he will have to always be content to have his business controlled by others, to be called a "jay" a "rube" or "hayseed," and to see himself caricatured in the comic papers and on the stage as the ridiculous victim of the gold-brick swindler and the hay-fork note pedler, and indeed no gold-brick swindle was ever so palpable as that which is inherent in our present industrial organization. The Third Power can end it when it becomes a real power."

Every member of the American Society of Equity should have this book. Every non member and every person who wants to understand the serious problems of farming and know the only remedies should read it, merchants, bankers, manufacturers, ministers, professional men, laborers, and politicians, cannot afford to be ignorant of what it teaches and make calculations on the rise of The Third Power.

or not, nor how much they are taxed only in so far as they may be interested in another class—the consumers. Nothing should be asked of the politician except treatment that will make it possible to deal equitably with others. It is clear that the farmers need not look to lawmakers, Divine Providence or anywhere but themselves.

"It has been said of the Irish people that they have fought successfully in all battles except their own. This is largely true of the farmers. They have labored and struggled and paid taxes for others, and upon their intelligence, industry, and thrift, today depend the welfare and prosperity of the nation. The farmers in the United States have been the soldiers of civilization. They have reduced a wilderness to subjection, and have made it a fruitful garden. They have endured loneliness, hardship, severe toil, privation and hunger, in order that others might be fed. Our export trade, of which we boast so much, and which has indeed attained tremendous proportions, has been

**PRICE** In very handsome, durable cloth binding, \$1.00, 10c. extra for postage. In paper cover, 50 cents, 10c. extra for postage. 275 pages. Size 5x8 inches.

### SPECIAL OFFERS

- NO. 1. FOR 60 CENTS** and return of below coupon we will send UP-TO-DATE FARMING one year and a paper cover copy of "THE THIRD POWER" all postpaid.
- NO. 2. FOR \$1.10** and return of below coupon we will send UP-TO-DATE FARMING one year and a copy of "THE THIRD POWER," bound in handsomest cloth, all postpaid.
- NO. 3. FOR 50 CENTS** additional we will enroll you as a member of The American Society of Equity, send certificate, emblem, etc.
- NO. 4. FOR 30 CENTS** additional we will send the rare and valuable seeds and the due bill for 25 cents worth of seeds as offered on page 13 of this number.
- NO. 5. A SUGGESTION** If you will add 20 cents to the last offer it will entitle you to another years subscription to UP-TO-DATE FARMING, which will be sent to any address you give. These offers are good for new subscribers or renewals.

### COUPON (Cut out)

MR. J. A. EVERITT, Pub.

You will find \$..... enclosed for which please send offer No. .... as printed above, in January 1st number of UP-TO-DATE FARMING.

Name .....

P. O. ....

Indianapolis, Ind.

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
AT 227 WEST WASHINGTON STREET

Entered at the Indianapolis  
Post-Office as Second Class Matter

VOLUME 7

INDIANAPOLIS, JANUARY 15, 1904

NUMBER 2

## UP-TO-DATE FARMING

OFFICIAL ORGAN OF THE AMERICAN SOCIETY OF EQUITY OF N. A.

PUBLISHED SEMI-MONTHLY

J. A. EVERITT Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club, (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2	- for	\$ .75
A Club of 3	- for	1.00
A Club of 10	- for	2.50

### ALTERNATE PLAN

If you have not time to make up a club, we will accept

Your Own Subscription 2 yrs. for \$ .75

For Membership in the A. S. of E. add 50 cents to any offer.

The emblem of the A. S. of E. as shown above, is symbolic of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgment.** The date in connection with your address on wrap-up informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. Don't Neglect This. See Special Subscription Offers elsewhere in this number.

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of December 15, 1904 Circulation

Indianapolis, Dec. 14, 1903

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the December 15, 1903 number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum, State of Indiana. Before me, Charles E. Brigham, a notary Marion County, public personally appeared S. E. Cullum and swears to the foregoing.

(Seal)

Charles E. Brigham,  
Notary Public.

**THE FIRST MEMBER'S year has expired but there will be no annual dues until the Society is built, whether it requires another year or five years. We will, however, expect every one to renew their subscription to Up-to-Date Farming. See regular subscription rate on this page and special offers elsewhere in this Number.**

Farmers to the front.

That's where they belong.

Don't ask for your position. Take it.

It belongs to you by every right of importance, numbers and power.

"The Third Power." Organizers and Deputy Presidents should always have a supply on hand. It is in large demand. Write for wholesale price.

Join a local union if one is at your place. If none, then help organize one. If this is not convenient, then don't fail to enroll your name with the National union at once.

Order bundles of the official paper and distribute them among your neighbors who have not heard of this farmer's movement, or send us the names and we will mail them.

The Governor's contest will be decided this month, (January) awards announced and prizes paid. The delay occurred on account of the official vote of Iowa not being announced until the meeting of their legislature in January.

The American Society of Equity is in operation. It is giving benefits. It is responsible for 15 cents to 25 cents advance in the price of wheat against the combined opposition

of organized middlemen, millers and speculators. Any man of ordinary discernment and unbiased judgment will admit this.

On June 26, 1903, we began the campaign for dollar wheat. Indisputable evidences were presented from time to time to show that wheat was equitably worth the dollar. Enough farmers held their wheat back to produce a condition in the market as was never known before. Wheat would have been \$1 before today if it was not for the determination of the powers opposed to the farmers to fight against their independence.

Last June speculators were selling the farmers wheat crop out at 60 to 65 cents a bushel. Many millions of bushels were thus contracted. We remember very well how millers and dealers wanted to contract the farmers wheat in advance of threshing at 65 cents a bushel, but they had to admit that they could not do it this year like they formerly did. Even now, December 29, '03, as we write, the farmers have control of the situation as evidenced by the following: "The bid on the Board of Trade in this city (Indianapolis) for No. 2 red wheat for milling was 90 cents. There was none offered at the price." It will be the part of wisdom for millers to put the price on the basis of \$1.04 at once, and get the wheat. This is the farmer's price for January. For February it will be  $\frac{3}{4}$ c higher.

The American Society of Equity has done this thing through its official paper, no other farm paper helped, but many sneered and hindered. Even now they pretend that the A. S. of E., did not do it. Farmers do your own thinking. Some of your friends are only pretended ones. Ask them what influence is responsible for the advance in wheat? Is it a short crop? Where are the people who will admit it? Is it a large export demand? The records do not show it. All the evidences go to show that there was a liberal crop grown but it has not come to market. Must they not conclude that the farmers have been doing something. Have they not held the surplus back on the farm instead of converting it into "visible supply"—the speculator's club? Who told the farmers that wheat was worth \$1 per bushel except the president of your society? Who told them to hold their wheat on the farm except the same person? Who told them that by doing this they would control the supply and thus make the price, except the same person? The law of supply and demand is beginning to work for the farmers. Now the wheat demands a fair price. When the money is in sufficient supply, millers can have it. Ninety cents won't get it at the headquarters of the A. S. of E. One dollar won't get it but the farmer's price is \$1.04 for January.

Besides the members of the A. S. of E., (59,000) there are several hundred thousand farmers who are carrying out the principles of the society and are not members. In this way its power cannot be estimated in numbers. We urge all those who want to see the farmers win, to come forward and have their name enrolled. Thus they will influence others. By doing this, they will receive the official paper and be in a position to co-operate on all crops. You have acted on our advice about wheat, see the result. If wheat is worth 90 cents to-day why was it not worth 90 cents last July and August and September and October and November? It was, and the farmers who sold at less have been robbed of the difference. But you cannot blame anybody but yourselves. We now want to put corn back to 61 cents, oats to 47 cents, beef to 5½ cents, hogs to 5½ cents and fair prices for every other crop. We cannot carry on a campaign for these crops such as we did for dollar wheat. The only way these things can be accomplished is through the official paper (this paper). As surely as enough farmers will read this

(Continued on page 5)

## War Is Declared

### The English Cotton Manufacturers in Mass-Meeting Assembled Pass Resolutions Condemning Gambling in Cotton "Futures," and Appeal to the Government to Take Action to Suppress the Evil

The American Society of Equity is not alone in its vigorous fight against the evil of gambling in "futures," and its demand for the dethronement of the market manipulators. Another voice is now heard, and another hand is now raised in defense of legitimate and equitable transactions in the disposition of our farm product. Indirectly only, is this the purpose of the British Manufacturers. Their first purpose is to defend themselves, and to get relief from a position that they find untenable.

As contended by this Society, the gamblers in cotton futures have carried the price of spot and future cotton above the bounds of reason,—this after the producer has disposed of his crop, which is now held by the various "corners" and "cliques,"—and the price has attained such an unusual height, that the manufacturers cannot afford to buy it and weave it into fabrics of any class. Particularly they cannot take the risk of buying on the present basis and manufacturing into goods that will decline in price as quickly as the bulls weaken their grip on the raw material.

In this country, the cotton mill operatives were the first victims of the squeeze, with a cut of ten per cent all around, which they accepted with good grace. Then the order went out to reduce production to a minimum, for plainly there was no money in the manufacture of cotton goods at the price the manufacturers had to pay for cotton,—foreign mills could under-sell those of America, despite our protective wall; and now it appears that "there are others," and for some reason, the British cotton manufacturers cry out against the great up-tide in cotton prices. Probably the English mills cannot compete with those in other countries; and so, they cry out; and like a bull at bay, they, with characteristic British tenacity and courage, turn to fight the enemy of their industries,—the gamblers in cotton futures.

The following is the text of the cablegram giving an account of the action taken by the English cotton manufacturers:

"Manchester, Eng.; Dec. 29th, 1903.—At a mass-meeting of the cotton trade held here today, a resolution was adopted, strongly condemning International Cotton gambling, which has greatly injured the trade, resulted in serious losses and lessened employment, thus bringing great distress. And also inviting the government to receive a representative deputation, with the object of urging measures to prevent gambling in cotton. The meeting was well attended by representative men. It was cited, that:

"Want of foresight in allowing combinations of gamblers to assume gigantic dimensions BEFORE TAKING STEPS TO COUNTERACT THEM BY EQUALLY POWERFUL COMBINATIONS, was responsible for the present abuse." A motion looking to International action was favorably acted on.

You see, when the tail of the British lion is twisted, he turns and strips for action. How many times shall the tail of the American farmers be pulled and tied into hard knots before they will also show fight, by rallying to the standard of the American Society of Equity,—that splendid and only association that is calling for volunteers from valley, hill and dale, to suppress the gambling, and the gamblers in American farm products.

You will note that the British cotton men assert that the gambling in futures has "resulted in heavy losses, and lessened employment, thus bringing great distress." It reaches out past the well fortified manufacturer, and strikes the mill operative, causing financial distress to all classes. The man of millions is held up by the gambler tough,—the poor girls of the factory, as well as the boys and men, are deprived of the means of a livelihood; the price of cotton fabrics is bound to go up, which will affect many lines of manufactures, commercial enterprises and the general public without any exceptions, and all for the enrichment of the leech that is sucking the life blood out of honest labor, and legitimate enterprises. The farmer who produces the cotton, gets little of this rake-off,—it goes to the high-ball rollers,—the gamblers in futures. We may also safely change that the Department of Agriculture is (perhaps unconsciously) a party to this great disaster, and we may ever challenge them to show in what respect their crop reports are a benefit to the farmers or the masses who are supposed to be the beneficiaries. Reference to former years' reports will show that the December cotton report is usually much lower than the final report (August following), thus whether by design or otherwise it is responsible for boosting the price after the farmers have unloaded the bulk of their crops and depressing it just before the next crop is ready to be harvested. In support of this claim we refer to the Dec. 1901 report, 9,674,000 bales. Final (August 1902) report, 10,701,000 bales, Dec. 1902 report, 10,417,000 bales. Final (Aug. 1903) report, 10,758,000, Dec. 1903 report, 9,662,00 bales. The question is, what will the final (Aug. 1904) report be?

Cotton is our greatest export article, and lack of foresight on the part of the men who grow it, as well as apparent indifference on the part of the American manufacturers and our government, has resulted in a general "hold-up" of the fleecy staple, and a robbing right and left by the cotton gamblers, who are just now making the biggest stake of a generation. This is a most startling object lesson to the farmers of America. It is cotton this time, but it is just as likely to be wheat or corn, which the gamblers will corner next time.

This is a shameful condition of affairs. It is enough to put American manhood as represented by farmers, manufacturers and representatives of government, to the blush.

Picture the American Cotton planters and their brothers of the grain fields of the North, with their hands folded, indifferent and inactive, while the manipulators of the produce market are gathering in the shekels from a quiescent public, by manipulating market values up and down, as best suits their purpose; and all without a word of protest, except through this society which for one short year has been organizing to demand Equity and secure justice for all loyal, liberty-loving citizens.

There are none so blind as those who will not see. Can't you read the signs of the times? Don't you see that the producer is entirely at the mercy of the grain and provision gambler? Shall we remain inactive here, while our cousins across the waters are preparing to fight the evil, and clear out the blight?

The farmers must organize, and organize fast, too; if they would break the chains that now bind them, and which are daily and hourly being forged tighter and tighter.

The American Society of Equity is the Ark that is fitted up to ride the floods of inequity, and to bring its members to a haven of safe control. We do not need to run to cover. What we must do is to get right out in the open and fight for the right. The cotton and grain gamblers, the provision and the fruit gamblers must be routed at all hazards. Farmers must control farm products until they are called for by the consumers. This is the way, and the only way to starve out the parasites. To throw the products of the farm on the market in a lump, is to dump them into a "corner," which will result in inequity for both the producer and the consumer. Marketing must be controlled and the trick is done. The men who produce the crops are the only ones who can control marketing for good to all and injury to no legitimate business.

Read this British protest, and then think of the great danger that is even now in partial effect in the markets of the world. Is it not time to take action? Shall the idle fatten on the produce of the industrious, or, shall the latter in the name of Equity demand their rights and assert them, as free and self-respecting men should?

(CONTINUED FROM PAGE 3)

paper every issue, these things we promise will be accomplished.

You should do this: As soon as you receive this paper, you should send \$1 for a membership in the A. S. of E., including the official paper. (For modifications of subscription price, premiums, etc., see elsewhere in this paper.) You should also see that ten or more of your neighbors join this farmers' movement. You should secure and read "The Third Power," you will never know yourself and your business until you do. You should order a bundle of this paper and place them in your neighbors hands. If you have a little time—and every farmer has in the winter—you should become a Deputy President.

A Deputy President is a person appointed to organize one or more local unions of the A. S. of E., in his neighborhood. On receipt of application, the National union will send commission and supplies, with terms, rate of compensation, etc. We want a Deputy President in every township.

#### ONE YEAR OLD.

December 24, 1902, the American Society of Equity was organized.

#### MEMBERSHIP.

It had 59,000 members on December 24, 1903.

#### ATTENTION OF THE WORLD.

This farmers' movement commanded the attention of the people, press and governments to a greater extent than any other movement of any kind in many years.

#### THE NATIONAL UNION IS HAPPY.

The National Union is happy in the knowledge that the period of experimental work is past; that the plan of the A. S. of E. has been tried and found sufficient; that the objects have been before the world and approved; that the few who attack or oppose the movement do so from lack of understanding and are left in confusion; that not one person who has been converted has been a blackslider; that the society has already shown benefits to farmers in the advanced price of wheat estimated at \$90,000,000; that it has had a sustaining effect on the price of other crops when the speculators combine to force them down; that the machinery of organization is now well equipped, and that the complete machine of co-operation will soon be in perfect working order.

#### APPEAL TO MEMBERS, FRIENDS AND ORGANIZERS.

At the beginning of the new year we appeal to all State organizers, deputy presidents, officers of local unions, members and friends of the American Society of Equity everywhere to increase their activity to secure greater results in membership.

We promise that the year 1904 will produce startling developments for the farmers. They are rising like a nation to demand equity in their markets and prices.

Their demand is so fair that no citizen who loves liberty and fair play will oppose them, but those who are not inclined to play fair with the farmers may suffer serious consequences.

#### FARMERS WANT TO TRY CO-OPERATION.

The farmers want to try co-operation on the plan of the A. S. of E. They expect their friends and those in situations that they have supported these many years to help them, and they are already serving notice on those who do not help, or perchance oppose, that their support will be withdrawn.

Already has been heard the murmur of disapproval. "Why don't our president say something about the way to get fair prices for our products?" "Why don't the Department of Agriculture help us in our effort to get fair prices for farmers' products?" "Why don't other farm papers join with you in demanding an equitable return for farm crops?" "Why don't the agricultural colleges and the farmers institutes teach us how to get a fair price for the crops we now grow as well as to teach us how to grow larger crops?"

These questions are asked. Farmers are waiting for an-

swers. The people and institutions of whom the questions are asked must reply in no uncertain tones. If agriculture is ever to be put on a basis of certainty for profit equal to other industries, it must come through control of marketing.

#### CONTROLLED MARKETING.

This is the solution. When farmers all over the country know what a crop is worth, as they will in the A. S. of E., all they will need to do will be to market as long as the buyers will pay the price. The moment the buyers will not pay the price stop marketing. All farmers are not needed to make this work out reliably. If enough farmers, when organized to a very small extent, will withhold wheat to force offers up to 90 cents a bushel, with none to be had, what will they do when a million or more farmers are into the organization? We tell you such a power will be irresistible, and whatever price they ask for their goods, that they will get.

Suppose the buyers would be stubborn and say, "You may keep your wheat, cotton, cattle, etc.," how long do you suppose the consumers would hold out. One day would develop such a condition as this country never experienced. A week would surely bring them to their senses and they would pay the farmer's price. The farmers have better prospects of enforcing their demands than any other people on earth.

#### BUT TO GO BACK TO THE QUESTION,

"Why don't the Department of Agriculture help us to get fair prices for our products?" The answer is in the following letter:

"Department of Agriculture.

"Office of the Secretary.

"Washington, D. C., Dec. 21, 1903.

"Dear Sir—I have looked very carefully into your paper, 'International Consolidation of Agricultural Interests and the American Farmer.' It evidences careful and laborious research on an exceedingly interesting topic. \*\*\* Your proposition, as I understand it, is to substitute a great scheme of international co-operation for the competition as it now exists between different countries, and to form a sort of union on a great international scale, which shall regulate the supply of agricultural products so it will just meet reasonable demands, and consequently maintain equitable and profitable prices. This proposition is under consideration by farmers within the United States. I have been watching its development with a great deal of interest. The idea is, however, contrary to our common understanding of the law of supply and demand. We, as a people, think competition is the proper regulator, and there has not been enough progress shown by any steps so far taken to warrant the attempt to substitute co-operation for competition on the vast scale you propose. \*\*\*

"Very respectfully,

"JAMES WILSON, Secretary."

#### THE LAW OF SUPPLY AND DEMAND.

"Contrary to our common understanding of the law of supply and demand." We fear our esteemed Secretary knows very little about this supposed law and we would refer him to pages 63 to 68, inclusive, of "The Third Power." Also, to the workings of the law (?) in the wheat market this year. What is this law? Is it a political or natural law? If a political law, why not change it so it works the greatest good to the greatest number. If a natural law, how do you explain its workings, sometimes forward and sometimes backward? Other natural laws are reliable, always the same in workings and effect. Readers of Up-to-Date don't believe in such a law at present, but there should be such a law, and, as regards agricultural products the farmers must have the enforcing of it.

#### "COMPETITION THE PROPER REGULATOR."

The guerilla warfare of competition of one farmer against the others is responsible for more misery than all other things combined. The competitive system has kept the farmers poor and enabled a few non-producers to grow immensely wealthy. Competition is a relic of barbarism and has been put aside by every class and industry except the agriculturists, and co-operation substituted. If competition is not good enough for other lines of business, why should it be perpetuated by or for the farmers? It must not be,

and our worthy Secretary's very serious consideration is asked to this subject.

#### THE TIME HAS COME.

Aaron Jones, Grand Master of the Grange, in a recent address said:

"The time has come when the farmer must provide for the distribution and sale of the products of the farm. Farmers should provide granaries and storage on their farms, and not be compelled to rush their products into public elevators and into the hands of speculators."

Has the time just come? Were these things not as important twenty-five years ago as this year 1904? Don't it look as though the Grangers are awakening to a condition that has existed as long and longer than their society, and they just now find the remedy? Is this not an endorsement of the A. S. of E.?

#### THE OHIO FARMER TRYING TO GET OUT OF THE WOODS.

The Ohio Farmer, that paper that has opposed this farmers' co-operative movement at every opportunity, recently said:

"If a system could be devised for informing farmers every day as to the situation, advise them when to hold and when to sell, and to what extent, it would save (make) millions for the producers every year."

A few more turns of the wheel and even the editor of this paper will be converted. Yet how ridiculous to advance such an argument as above, in view of the simple plan proposed by the A. S. of E., as follows: "Decide on a minimum price for each crop as produced." This will make it unnecessary to advise farmers every day as to values. With the frequent fluctuations of markets at an end the necessity of the daily paper will vanish. A weekly paper of advice will fill the requirements. "Advise them when to hold and when to sell." With a price known by every producer in the country, and the system of feeding the market all it will take at the price and nothing beyond, every person will know when to market, how much, and when to withhold. Farmers and others want to understand this thoroughly. Note how simple the workings of the plan. It is the same way all through. No person is asked to do anything that it is not to his interest to do. He is not even required to do what the society recommends, and if half or two-thirds of the farmers were absolutely stupid, stubborn and determined to do the things that were opposed to their interests, yet we say the plan would work. To produce conditions that will insure the failure of the plan of the A. S. of E., human nature must be reconstructed. You must destroy the natural trait of self-interest and make the individual so he will voluntarily work for the other party.

#### ELEVATORS AND WAREHOUSES.

There is a very prevalent opinion among farmers and cured through co-operative stores, elevators and warehouses. No more erroneous idea can be entertained. Until the farmers are organized to make their own prices by control of marketing, there can be no permanence or stability of such co-operative institutions. For this reason the object of elevators, etc., in the A. S. of E. will not be urged until the machine of co-operation is built and the first great object, "Profitable prices for all farm products," secured. The country is full of wrecks of co-operative stores, elevators, warehouses, etc., because the speculators, trusts, corporations, etc., put the price on the farmers' crops.

#### NEWSPAPER COMMENTS.

There are many articles, favorable and unfavorable to co-operation by farmers in the papers to-day. The editor of Farm, Stock and Home, published in Minnesota, has repeatedly exposed his ignorance of the plan of the A. S. of E., yet boldly asserts that the plan is wrong. To illustrate: in a recent issue he said:

"It lacks the elements of cohesion and mobility that any organization must have to make it effective in the execution of its purpose."

That editor believes that the farmers must be bound in an ironclad contract to do certain things and be punished or

fined if they transgress the rule or law.

#### THE A. S. OF E. BELIEVES

in giving the farmers as much latitude as at present in marketing their crops. It believes self-interest will be sufficient to control their actions in carrying out the advice of the central body. It believes that when a million or more farmers are in the society, when each of these and all their brother farmers have the same knowledge and advice about the same crops at the same time that enough of them will follow the advice to regulate marketing and prices will be controlled. It believes there will never be a time when all the crops must be held at one time. It believes that whenever necessary **ENOUGH CROPS WILL BE HELD OFF OF THE MARKET TO PREVENT THE TEMPORARY SURPLUS THAT MAKES THE PERFECT CONDITIONS FOR SPECULATORS.** It believes that by marketing a twelve months' supply in twelve months no large visible will be created after harvests, which is now used as a club to beat prices down the balance of the year. It believes, in short, that farmers will not agree to be bound to sell at a certain price recommended by the central head, but that they will hold for that price if they are allowed to use their judgment about holding for more. Let the individual farmers be their own judge about this matter.

#### RESOLUTIONS TO PRESIDENT ROOSEVELT.

The President of the United States has frequently expressed much interest in the farmers, and we judge from his utterances that he desires to see the business of agriculture in this country put on a sure, safe and permanent basis for prosperity. The members of the A. S. of E. believe this can only be accomplished through controlled marketing of farm crops, and they realize that there is only one plan before the people that seeks to accomplish this object, and it is represented by the A. S. of E. Therefore the following was submitted to President Roosevelt:

"Resolved, That the attention of His Excellency, Theodore Roosevelt, President of the United States, be called to the very general desire on the part of farmers to secure more uniformity and equity in markets and prices for farm products; that it is the sense of this meeting that the desired uniformity and equity can only be secured through co-operation by farmers, and that co-operation can only be secured through organization; that inasmuch as our President has many times expressed a deep interest in the welfare of the farmers, and believing that he will consider it his duty and a pleasure to do all he can toward the betterment of the greatest class of our citizens and the industry of agriculture; therefore, we instruct our president and secretary to lay before His Excellency these resolutions with a copy of the book, 'The Third Power,' and make such additional explanations of the plans and objects of the American Society of Equity as may be necessary, to the end that he may understand our movement, and with the hope that he will lend his help and influence to its development and the good of agriculture in America. Also, as agriculture is the leading and most important industry of our country, that he will make it a subject of some special report or refer to it in his next message, to the end that the best plan of co-operative marketing to secure equitable prices by farmers may be promoted."

[Seal.]

J. A. EVERITT, President.

M. WES. TUBBS, Acting Secretary.

#### "WE CANNOT DO TOO MUCH FOR OUR FARMERS."

The above is a quotation from a letter from Hon. James Wilson, Secretary of Agriculture, to the writer. Below is a copy of a resolution passed at the annual meeting of the A. S. of E. and sent to the Secretary:

"Resolved, That the attention of the Hon. James Wilson, Secretary of Agriculture, be called to the very general desire of farmers to secure more uniformity in the markets and prices for farm products; that it is the sense of this meeting that such uniformity can only be secured through co-operation by farmers, and that co-operation can only come through organization; that the subjects of markets, prices, co-operation and organization should be treated in his annual report of the Department of Agriculture, or be treated in a special bulletin and given wide dissemination; that this subject be treated, not from the standpoint of need of co-operation, but with the view of recommending the best plan of co-operation; that the plan of the American Society of Equity be explained to the Secretary, and his endorsement and co-operation, and that of the Department of Agriculture, be solicited; that we instruct our president and secretary to submit these resolutions with a copy of the book, 'The Third Power.'"

[Seal.]

J. A. EVERITT, President.

M. WES. TUBBS, Acting Secretary.

## FARMERS! THIS IS THE TIME TO KNOW YOUR FRIENDS.

The farmers want to try co-operative marketing. They need the help of all farm papers. They are watching the papers now as they never did before. The following correspondence is interesting and is a sample of many similar letters we have received, but we have refrained from publishing them. The time has arrived, however, when each farm paper must make a choice. There cannot be any middle ground. They will either be for or against the farmers in the struggle to throw off the burden of exploitation and domination of non-producing classes.

"Cedar View Farm, near Woodbine, Pa., Nov. 23, 1903.

"Mr. J. A. Everitt, President A. S. of E.:

"Dear Sir—I enclose herewith copy of a letter sent to the editor of ———, also his reply received. You will note that he positively refuses to help along the good cause and recommends the 'Grange' as the ideal farmers' organization. But then, the Grange does not publish a farmer's newspaper. Oh, yes! "We are groping in the dark." How very much the ——— could help with the influence it would have with its great number of readers. Self first—farmers afterward. I think that every self-respecting farmer should withdraw his patronage from such farm papers.

"I want to ask a question: Is there still hope of advancing wheat to \$1? I think you ought to pound away for dollar wheat. It will have a wonderful influence on this farmers' movement. Make it a feature in every issue of Up-to-Date. Set aside a particular space for it. Fraternally,

"ED F. ILGENFRITZ."

Answer to question: We will follow your advice about wheat. We will have more to say about it in the future. Also about cotton, corn, cattle, hogs, etc., etc. As stated in a former article, "Dollar wheat will come when the foreign wheat growers who have not heard of the movement in this country are done marketing." This time is approaching, and we think dollar wheat is only a short time in the future. However, it will be \$1.04 in January ( $\frac{3}{4}$ c per bushel advance per month for carrying).

The letter referred to is as follows:

"Woodbine, Pa., Nov. 10, 1903.

"Mr. ———, Editor:

"Dear Sir—Being a subscriber to and a life-long reader of ———, I take the liberty of asking why the ——— fails to help spread the sentiment for dollar wheat and help along the great co-operative movement now in progress among farmers all over the United States and Canada. Why don't you cease your prating about farmers' problems—showing up the dark side of farming, but offering no solutions to the problems, giving no succor to the imposed upon and enslaved agricultural classes. Why don't you put aside petty jealousies, selfish interests and come out boldly for this special farm organization and your subscribers, for whom you profess such ardent and loyal friendship. I address you in the interest of my many friends and brother farmers, as well as myself, who are members of the great ——— family. Is the ——— broad-minded and generous enough to help support this movement, and thereby deserve the everlasting gratitude and patronage of all friends of agriculture? With honest interest many of us are watching the course of the ——— in this (to us) momentous movement. Will you disappoint and compel us to forever take leave of an old-time and honored guest in our family circles? We hope not. We wish to prolong a heretofore agreeable friendship. Yours very truly,

"ED. F. ILGENFRITZ."

Following is the reply by ———:

"———, Nov. 14th, 1903.

"Ed. F. Ilgenfritz, Woodbine, Pa.:

"Dear Sir—I have your esteemed favor of the 10th, which I have read with interest. If I had as much faith in farmers co-operating as you seem to have, I certainly would advocate it in the ———, but I see little hope of that. I believe the Grange is doing more effective work than any other organization, and I would like to see every farmer join that organization. ——— is always ready to proceed when it has sufficient light for the pathway, but is careful not to grope in the dark. Very truly yours,

"———"

Farmers, here you have the situation exactly. Will you now ask again why the agricultural press does not aid the farmers to build a machine of co-operation. They are "always ready to proceed when they have sufficient light for the pathway, but are careful to not grope in the dark." Who

are the people that this country delights to honor? Are they the ones who eat of the fruit from seed planted by their forefathers, or the ones who planted the seed and set the orchard? Are they the ones who now have a seat in the legislative halls or the sturdy people who were brave enough to shout defiance to their oppressors and unsheath their sword to back up the shout? Are they the ones who now occupy the farms that are ready for the plow and harvester, or the ones who braved unbroken forests, wild beasts, wilder savages, and made the wilderness to blossom as the rose? This world doesn't need men and women who are ready to follow, but men and women who will lead. No people were ever freed except by their own exertion. Farmers have a right to expect the help of the institutions they support.

"Who would be free themselves must strike the blow."

Just a word with reference to the Grange: We wish the Grange well. It is not our object to belittle or antagonize any other farm organization, but it is a fact that all through the central west and west, to mention the Grange to farmers is like flaunting a red rag before the eyes of a bull. Unless the Grange stands for other objects in the future than it has in the past, it will not solve the farmers' problems in a thousand years. Notwithstanding ———'s claim that "it is doing more effective work than any other farm organization," claims that cannot be supported are like promises that are not kept.

## HOW IT FEELS TO BE CONVERTED.

In this connection permit us to print extracts from a few recent letters to show how it feels to be converted to the good cause that will lift agriculture up to a level with the best industry in the country.

"I have been a constant reader of the official paper of this great farmers' organization, the A. S. of E., since its first organization, and am deeply interested in the beautiful principles of Equity for all which it so earnestly and sincerely advocates. You are awakening in the benighted minds of the farmers new thoughts, aspirations and possibilities that have never been dreamed of before. Go on with your good work of enlightening the minds of the farmers. Your course is just and right. It is for the uplifting of the downtrodden. The long night of agriculture is almost past. The dawn of equity will soon burst forth in the beautiful sunlight of a newly awakened day. Then from thirty million homes will rise the heart throbs to bless you."—A. J. Keithly, Georgetown, Ind.

"I think the plan of the American Society of Equity is the most blessed thought that ever entered the mind of man, next to the Holy Gospel, in its possibilities. A man must be as blind as a bat that can't see its adaptation to the case of the downtrodden farmer. I hope, Mr. Everitt, that you and I shall live to see its good influence not only in this country, but all over the world. I have been taking a farm paper for five years, but when I recently read what the editor said in regard to the matter of co-operation among farmers I wrote to him right away that I had no use for his paper any more. That is my feeling as to the benefits of this great movement in word and deed."—Thomas L. Phillips, Sparta, Wis.

"Inclosed please find \$1 to pay for subscription on your most valuable paper, and membership in the American Society of Equity. I have read your paper for over a year and a half, and would not like to be without it. I have also read and pondered on everything that has been published about the A. S. of E. I consider it a good thing and worthy the support of every farmer. I have talked with my friends and brother farmers on the subject, but some of them seem to think it is too far away."—S. R. Hanscom, Errol, N. H.

[Brother Hanscom, farmers who have access to the U. S. mail service are not too far away to co-operate on the plan of the American Society of Equity. The official paper of the Society brings the spirit of unionism—unity and unison of action—to every member, no matter where located.—Ed.]

"Please find inclosed ———, for which put my name on the roster of the A. S. of E. I have read about the A. S. of E., studied its principles, and am convinced that it is the thing for farmers. I only count one, but enough ones make a million. Please send badge and certificate. I will try and

get others to join."—J. E. Smalley, Wilson, O.

"I am glad to find that this country has one man that has the courage to so ably defend and uphold a cause that is of such vital interest to every American farmer. I think you have struck the keynote that will give them an opportunity to redeem themselves from their present slavery and degradation. I have been a farmer for over sixty years, and have long since become acquainted with the sap-sucking, conscienceless speculators and gamblers in farm products."—L. W. Colvin, Antioch Mills, Ky., Nov. 27, 1903.

#### WHAT IS TO BE DONE?

The A. S. of E. would like to have the assistance of all the farm papers, or of the leading ones, to build the machine of co-operation. The farmers are anxious to try the plan as soon as they understand it, and they are anxious that the other papers help. The fear on the part of the farm papers is groundless. Even though farmers cannot control marketing when the trial is made, what harm will be done? What farmer would not risk 50 cents or \$1 to make the trial? If he wins he wins thousands of dollars, to say nothing of other than financial benefits too numerous to mention. If he loses it is only 50 cents or \$1. He risks many times this amount on every crop he puts out, not knowing whether the speculators, trusts and middlemen will allow him a living price or not. If the plan of co-operative marketing wins he will know when he starts the plow in the spring that that crop will return him a fair wage, interest on investment and a profit besides.

There may be another reason why the farm press does not help in this movement. As Mr. Ilgenfritz intimates, it may be because of petty jealousies—selfish interests. We think there is much in this view of the matter. In one respect it is unfortunate that this society needs an official paper; but it could not carry out the plan without it. The paper for advice is the key to the whole movement, and other publishers probably fear a monopoly of the agricultural field by one paper. This fear is groundless. We have stated before that the success of the A. S. of E. meant that its official paper would be devoted to society news, crop reporting, market reporting, advice, etc., and the other farm papers could continue furnishing advice about how to grow crops, etc. The success of the A. S. of E. will be a great benefit to every worthy farm paper, inasmuch, as with uncertainties of markets being removed the daily paper will not be needed and farmers will be prosperous and can support their papers better. We have no intention of

#### MONOPOLIZING THE AGRICULTURAL FIELD

with the official paper of the A. S. of E., and are anxious to make some disposition of it that will remove it from the questionable elements. It should be understood that this paper was in existence before the A. S. of E. was thought of. It was instrumental in originating the society and has promoted it until the present time. An official paper is necessary, hence why should it not be Up-to-Date Farming? If it is not this paper, it must be another. We certainly don't want farmers and publishers to think that the society is being promoted for the benefit of the paper which is the property of its president. Observing people who have been members of the society and subscribers to Up-to-Date Farming surely will admit that our heart is in this farmers' movement, and we assure all that every effort is being made to establish the A. S. of E. and give this plan of co-operation a trial, without any selfish objects in view whatever.

We feel, however, that the official paper should be more intimately a part of the farmers' movement. We have thought of inviting the publishers of the leading farm papers to associate themselves with us in the publication of the official paper without any cost to them. For instance, we would give them such a share as they would be entitled to for the members to the A. S. of E. they secure in a year. In this way each paper that was in the syndicate would work for the establishment of the society. The various publishers being part owners of the official paper, would have voices in its management. What do our readers think of the plan? If such a proposition was made to the publishers, and

they accepted, there would be no question of establishing the society with a million members in a few months.

Another idea: We have thought of setting over the official paper to the society—making it a part of the society—and any profits that it would make from subscriptions or advertising would go into the treasury of the society. If by doing this our present members would help enough to guarantee the building of the co-operative machine with a million members in six months, we would not hesitate one minute to do it. All we want is to carry out our pet scheme of putting the farmers in a conditions to control marketing of their crops, thus control prices, and thus be in a condition to enjoy all the good things that rightfully ought to be the portion of the farmers.

Write to us about these things. We want to take the members and our subscribers into our confidence. This movement is a mutual one—a co-operative one—where none can give or get benefits without others give and get also.

#### A GIGANTIC ROBBERY.

We will not call it anything else, because the farmers have been held up and robbed as clearly and as boldly as was ever an individual by highwaymen. We refer to the robbery in cattle, hogs and corn. The price of the first is 2 cents per pound lower than a year ago, of the second the same, and of corn about 15 cents per bushel. Yet the consumers pay as much for meat and the consumers of corn could pay the extra 15 cents per bushel without any hardships. This shrinkage represents about \$500,000,000 to the farmers. What it represents to the individual farmer you can figure for yourself. Think about these things. Are you willing to perpetuate them, or do you want to end them? Have you enough backbone and manhood to revolt against a system that makes such gigantic robberies possible. You are responsible for its existence, and through you must come the remedy. You have been in the habit of looking to Congress for a remedy. You have voted for your party these many years, and yet the troubles are growing worse instead of better. If you are compelled to sell your crops for a dollar less than they are worth, you are to that extent a slave to a system that allows others to rob you. Let it be understood that in the A. S. of E. you don't ask help from others, but take what is your own, as explained in "The Third Power," as follows:

"This appeal is not to the government, not to the politicians, not even to the law, but to the farmers themselves. If they show themselves worthy of the blessing which they crave, they can get them. The demand is not for government warehouses, free silver, unlimited issues of paper money, loans from the treasury on crops or land, duties on farm products, or even for the better regulation of trusts and corporations, but simply for the use of the power which the farmers have to help themselves. The question is whether they are patriotic enough, intelligent enough, self-restrained enough, determined enough, and wisely selfish enough, simply to put out their hands and pluck the fruit which hangs within easy reach of their grasp. They, in the beginning at least, need no help from any one. Governments are like God in one particular, in that they help those who help themselves. When people generally, and the politicians in particular, see that the farmers are in earnest about this business they will promptly co-operate. The farmers will find that they have as many real friends as they now have pretended ones. Success will bring unexpected allies, and will uncover and discomfit secret enemies. Would the American colonists ever have won their freedom if they had waited for France to begin the struggle? Nay, rather did not France withhold her aid till she was convinced that the colonists could win their freedom even without her aid? The Cuban patriots battled for a generation before our great republic, at last convinced that there could be no peace till Spain was driven from the island, intervened in behalf of Cuban freedom and independence. English liberties are the product of centuries of toil and fight, and it was the French people that won liberty for France and maintained it against combined Europe. So the American farmer must not whine, and beg, and supplicate, must not rely on politics and politicians, nor even on Divine Providence wholly, but must, as others have done, fight his own battles. The victory is sure. And when it is won, as won it will be, it will be found that all will be benefited. So it is true that no American freeman, able and willing

to support himself without bonuses or subsidies from the government, and without the protection of unfair and unjust laws, loving justice and fair play, and asking for nothing more than is rightly his—an honest reward for honest toil—need have the slightest apprehension about the movement for the organization of the farmers. The beggars, the preyers on other men's wealth, the parasites, the government pets, the grafters, the boodlers, and all who look on government as an instrumentality for their own enrichment, may well be disturbed. But there is no warfare to be waged against the rights even of these. We want to take the broad and manly view of this movement. It is not a grab for privileges, or a war of reprisal, but simply a firm and resolute stand for justice and equity. The farmers are not going to ask any one to give them something. They are merely going to take what is theirs. The Third Power, representing the divinely established business of agriculture, when it is organized, will not need to ask favors; it will only have to insist on rights. Favors it does not want or expect. Rights it will have."

#### CO-OPERATIVE COMPANIES MUST FEDERATE.

The last issue of a Western paper that is the official organ of one of the most successful co-operative elevator companies, contains an article headed as follows, "Our Company Needs More Money." This is the natural result where farmers don't make their own prices. As long as the speculators price your crops, elevators and warehouses will be of little avail, sufficient benefits will not be realized by members, and a fatal day is almost sure to come. In this connection we reprint from The Co-operative Journal as follows:

"A few years ago there were numerous Grange stores scattered all over the land. As a rule they were not successful. The reason is not hard to find. Each store tried to exist independent of the others. The organizers meant well, but they had not yet learned the fact that co-operation is necessary to success. Not only must the individual members work together within the companies, but the companies themselves must co-operate with other companies. The government of the United States is a good model of co-operative organization. The individuals co-operate among themselves in the school district or township, these co-operate under the county or city governments, and these in turn work in harmony under the laws of the State, while the several States work together under the supreme laws of the national government.

"The time is not far off when nations will co-operate under international law, and then we may hope for the greatest and most rapid advance of all.

"No man, or nation, or organization, can live by and for self alone. All must have assistance from others. The law of co-operation is supreme, and so far as men depart from obedience to its mandates, just so far will they fail to accomplish what they might. Co-operation is the positive law of advancement and building up. Competition is negation and destruction. There is no such thing as strict independence. Existence itself depends upon mutual aid. Co-operative companies form no exception to the general law. They must federate or perish. The end may be delayed for a time, but it will surely come.

"The past is full of proof of this truth. Union, combination, co-operation wins. Selfish individualism, disloyalty, competition works destruction. Let us act the part of wisdom and work together. Let us co-operate. Let us federalize."

In a business like agriculture, which is national and the greatest industry of our country, one society is sufficient. In this way only can complete and successful co-operation be carried out.

#### COTTON AT 14 CENTS.

Our friends in the South are surely learning a lesson on price-making. This is the time to get together and prevent cotton from going down to 6 cents. We still want a correspondent in the cotton States who will give us the news about that important crop. A good price will be paid for good service.

#### NOT AGIN' THE COMBINE.

One of the members of the Iowa Implement Dealers' Association, which was recently in session, is reported as saying:

"This association is not agin' the harvester combine. It simply proposes to make the best deal possible with it."

Thus one combine combines, or makes the best deal possible, with another combine, to skin the farmers who are not in a combine. However, when the farmers do combine, all dealings, dickerings and agreements will begin and end with them.

#### NO FIGHT AGAINST ANYONE.

Farmers, don't you begin to realize the strength of the position you may occupy. "They are merely going to take what is theirs." The crops are yours before any other person can touch them. You can take your profit first. Don't fear that your goods will be left on your hands long. The world

must have them, and at your price. Your position is quite in contrast with labor. We quote as follows from the advice of Mr. Gompers, a labor leader, to his followers:

"Boys, let's go out and fight the employers for better wages, shorter hours, and keep at it forever."

Read from "The Third Power" on this subject, as follows

"So the American Society of Equity does not come to oppress or enslave any class, but to give liberty and independence to the greatest class of citizens, and through them to all others—not to destroy or cripple any institution, but to benefit and strengthen all institutions, including the government itself. HERETOFORE FARMERS THOUGHT WHEN ORGANIZING THEY MUST FIGHT EVERY INSTITUTION ON EARTH TO GET THEIR RIGHT. This we admit is human nature, but also is a relic of barbarism. There are too many such relics remaining. The farmers really have no fight against anybody or anything; all they need is equity, and this they can take, regardless of the disposition of other parties."

#### NOT A WORD FOR THE FARMERS

Governor Cummins, of Iowa, in a recent address in Boston, is reported to have made this broad declaration: "Our producers are just as much entitled to the aid of their government in making foreign markets as they are to its aid in holding their home markets, and yet, as I now remember, there is not a single word in a law or treaty, (unless it be in the treaty with China), intended to protect or aid the American farm producers in any foreign country."

Could this be so if American producers, American farmers, were organized? There are words in both laws and treaties thus protecting other classes, why not the farmers? Gov. Cummins knows, the law and treaty makers know, the world knows—the farmers are not organized, and are, therefore, not in a position to ask for anything. Common sense, reason, the demonstrated power of combination, the things accomplished by organization—all point to organization and co-operation as agriculture's only hope. I pity the farmer who, in the face of present conditions, can console himself with the sluggard's declaration: "A little more sleep; a little more slumber; a little more folding of the hands to sleep!" Rather, WAKE UP! There is a fearful responsibility upon the present generation of farmers.

#### ALL COMING OUR WAY.

It is encouraging to note in the newspapers how generally the plan of the A. S. of E. is being endorsed. Notice for yourself that the opinion is very prevalent now that the farmers ought to organize to control their marketing. This is the keystone of the A. S. of E., and no matter who advocates it, farmers must give credit to this paper and its editor for the idea, the plan to put it into effect, and the demand for equitable prices

THE AMERICAN SOCIETY OF EQUITY,  
Indianapolis, Ind.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

### WEAR THE EMBLEM

Wear this button. Show it to every farmer you meet and tell him it stands for profitable prices for every farm crop. Ask him if he is satisfied to continue the speculators and gamblers in the price-making business? Tell him that through the American Society of Equity he can put prices on his own crops. Tell him to join the army for A MILLION UNITED FARMERS.

\*\*\*

### LABOR

Every new development emphasizes the necessity of farm organization on the lines of equity. The employers of labor and the labor so employed have warred with each other so long that both are rapidly running into hurtful extremes. The conservatism of agriculture must again come to the rescue and save civilization from these dangerous extremes.

\*\*\*

### LOCAL UNIONS

It is no confession of weakness to say that much of the success of the farmers' movement depends upon the local unions. They are the posts which hold the fence in position. Every member should see to it that they stand firm, and keep the entire fence in line.

\*\*\*

### APPALLED

We are now well entered upon the second year of the American Society of Equity. When we look back over the work done during the one short year of its existence, we are gratified and amazed; when we look forward to the work that must be done we stand almost appalled. But the history of the soil tillers is that the greater the task, the more determined the effort. We are sure the farmers will not go back on that record in 1904.

\*\*\*

### DOLLARS VS MEN

Is the spirit of commercialism taking possession of the ranks of agriculture, as it seems to have swallowed up all other classes? Are farmers beginning to weigh dollars against men—to count the cents against the men? An effort may cost, rather than the results to be accomplished? Let us hope not. Let us pray that while farmers adhere to their accustomed economy, in a work like this great one of co-operation, they look at the things to be accomplished rather than at the sacrifices necessary to accomplish them.

\*\*\*

### 1,000,000

A hundred thousand copies! This has been the circulation of our official paper during the past year. What shall it be during the year through whose open door we have just entered? Induce every possible farmer to become a member of the Society, but when you find one who will not do that, get him at least to subscribe for UP-TO-DATE FARMING. That accomplished, the other task will be easy—he will soon become a member. Remember we want all roads to lead to the million.

\*\*\*

### WOMAN

Does woman recognize her power in the church? Many illustrious divines have declared that without her efforts and influence the church itself could not stand. This should enable us all to appreciate the importance of woman in an organized movement for the betterment of the human race. Thus is her work in the A. S. of E. Let everything be done to encourage her enlistment in the ranks.

UP-TO-DATE FARMING is the Official Organ of the American Society of Equity of N. A. for National Co-operation by Farmers.

Membership Fee—including Official Paper, Dues for one Year, Certificate, Badge, etc., \$1.00

\*\*\*

### WAR CRY SUBSCRIPTION CARDS

These are postal cards that we offer at a special price. See offer elsewhere in this paper. Each card is good for a year's subscription and membership in the A. S. of E. When you take an order the name is written on the card and the card is dropped in the mail box or post-office. We have a bundle for you!

\*\*\*

### EQUITABLE PRICE

The winter wheat acreage of the entire country is 6 per cent. less than it was a year ago, and its condition December 1st, was nearly 14 points below that of the past year. The equitable price for wheat in 1903 was \$1 per bushel; in 1904 it may be more than that. But the equitable price cannot be obtained without organization. It is up to the farmers to say whether or not we shall have it.

\*\*\*

### GREATER RAKE OFF

Secretary Wilson's recent report is one to elicit much thought. The tide of rapid development seems to be returning from the West eastward and southward. I am not quite ready yet to conclude that the fertile valleys of the West have reached their maximum of productivity, but it really seems that there is a more rapid increase in other sections. For instance, the production of corn is increasing more rapidly in the South than in any other section, as is also wheat, sweet potatoes, cane and sorghum, tobacco and fram-made butter, as well as horses, mules and hogs. The East shows a marked increase in buckwheat and potatoes, and is holding up well with other crops. The far West, though the Rocky Mountains and the Pacific slope, show a great increase in rye, hay, apples and home-made cheese. A valued contemporary concludes from this that "new life has come to agriculture in all parts of the country." But what does it avail to the farmer if he cannot exercise any control over his products? The increase is only a promise of a greater "rake off" for so-called board of trade gamblers. Until farmers can have the natural, equitable and indisputable right to control and price their products, we shall be unable to rejoice much at increased production. And yet, it must be confessed that the farmer has no great cause to kick. That he does not exercise this right is no one's fault but his own.

\*\*\*

### LABOR UNIONS

In Wisconsin the labor unions seem to be taking up the question of farm organization, and have begun a campaign of education in this direction. This reminds us of the ancient prophecy that the Jews are to be brought in on the shoulders of the Gentiles. It is not my purpose to call the farmers Jews, nor those of the labor union Gentiles; but as the Jews would naturally be expected to come in the enjoyment of the final promises of their own accord, while the Gentiles would not be expected to be much concerned about them, the analogy becomes apparent. However, let the campaign of education go on. If the farmers can be aroused and brought to their own, all honor to the instrumentality, no matter what it be. Besides the interests of farmers and laborers are so closely allied that they may well work in harmony—the co-operation of producer and consumer is one of the great aims of the A. S. of E.

### FARMERS AND OTHER PEOPLE

It is strange how differently the public press view propositions coming from different people. A proposition coming from one class may be considered entirely practical, and be lauded as wise and noble, while the very same proposition coming from another class may be condemned as impractical and foolish, if not actually wrong. No less prominent a publication than the Chicago Inter-Ocean, speaking of a recent meeting of farmers held in that city, declares that for the farmers by any means to try to put prices on their products is absurd, foolish and impossible, and holds that the true "business view" of the matter is "to let every farmer and every farmers' organization do whatever they think best."

for their own pocket-books." Of course that "business view" represents the present condition of things, the farmers unorganized, with every individual doing as he pleases, with no regard for the interest of any one else, and no power to secure his own; and every farm organization gathered around its own banner, feebly working out some local purpose. There must be no combination when farmers are concerned.

But what would our distinguished contemporary say of these propositions coming from the steel interest, the sugar interest, the oil interest, or any manufacturing interest? Would it say, that to attempt to put prices on their products would be foolish and impractical? Not at all; for these interests have done that all the years with the approval of the public press. Would it say that the "business view" would be to let each steel plant, each sugar refinery, each oil field and refinery and every factory, direct its own local business, and each "do whatever they think best for their own pocket-books?" Not much. In their case combination is the "business view," and combination to the destruction of competition has been effected without a protest from the same public press.

Why the difference? Are not the agricultural interests as great as the manufacturing interests? Are not the products of agriculture as necessary to the human family as are the so-called manufactured articles? Are not the farms as deserving of consideration as the furnaces, the factories, or the oil wells? Are not those who till the soil as deserving an element of the world's population as the steel men, the sugar and oil refiners and the shop workers? Again we ask, why the difference?

All these other people have made the prices for their products ever since they have had products to sell—they could not exist without doing so. They have even gone to the Congress and secured legislation which shuts out foreign competition and enables them to make their own people pay higher prices than they charge the people of other countries. The public press sees no folly in all that, but for farmers to undertake such a thing, editorial hands go up in holy horror—the hands of the "great" editors, the self-styled molders of public opinion. It certainly takes no agricultural Solomon to see the animus of these different views of the same proposition.

Subject for discussion: *How can farmers teach the public and press to respect their rights and enlist their assistance in the campaign of education until American agriculture puts behind it harmful competition and is on the basis of equitable operation?*

### THE THIRD POWER

Mr. Everitt's Book.

The editor of this department of Up-to-Date may speak freely of Mr. Everitt's book, "The Third Power," without subjecting any one to the charge of self praise, especially as I write entirely without Mr. Everitt's knowledge, and was not aware that he was writing a book until I received a copy.

"The Third Power" is a book of 275 pages, including an exhaustive index which enables the reader to find anything in it without a moment's delay. It comprises three parts. The first part is stated by Mr. Everitt himself to be "an argument in favor of co-operation by farmers; a comprehensive presentation of the farmers' case; how the rise of the farmers' power will affect other individuals, classes, industries and governments." It is truly all this and more; it is not only an argument, it is a compilation of facts upon which the arguments are based, making them impregnable. It is in Mr. Everitt's easy, well known and popular style, which makes it very pleasant reading, and whoever is familiar with this part of the book is qualified to defend any proposition bearing upon farm organization and co-operation, and no one, however gifted, can successfully contradict it. The book is divided into chapters, each chapter being introduced by gems of verse bearing upon reform matters, most of them original, and by gifted living authors.

The Second Part, is devoted to "The International Consolidation of Agricultural Interests," by a distinguished Russian author and diplomat, Eugene Matrosow, D. C. L., the international representative of the A. S. of E., and at present located in Washington City. Mr. Matrosow has made a special study of the conditions of agriculture in all the important countries, and it is conceded that the world has no man better posted on these and kindred subjects than he. His work is a startling revelation, and it is neither hearsay nor fiction—it is from national records, official figures vol-

ume and page being given for every declaration. Every American, whether farmer or not, should carefully read this part of Mr. Everitt's book.

The Third Part is devoted specially to the American Society of Equity, the organization that is so rapidly developing the Third Power. It contains the plan, the by-laws, etc. A most important part is "Questions Answered." These are questions that have been asked from time to time during the past year, and have been answered by Mr. Everitt as president of the Society. They cover almost every conceivable subject of inquiry, and comprise a mine of information for local unions, lectures, organizers and others.

I believe this book ought to be in the hands of every farmer in the land. For those who may not be able to buy and own a book individually, the local unions could do nothing more effective than to obtain one or more copies of the book, and keep them as property of the union, to loan to members and others on the plan of a public library, seeing to it that they are promptly returned when read, to be loaned to some one else. The books should not be reloaned by borrowers, but returned to the local union, and loaned only by the union.

### THE MILLIONS IN SCHOOL

Eighteen million persons are in school in the United States, nearly one-fourth of our entire population. How many of these go from farm homes into country schools we are not told, but evidently a very large portion of them. And they will come out of those schools strong men and women, most of them well equipped to grapple with the problems of life.

But will they be equipped to grapple with the problems of farm life? We cannot by any means be certain of that. The schools of the country teach everything more than they do agriculture. Every other life is held up in dazzling brilliancy before the farmer boy and girl. The primers tell pretty stories of city children. The readers speak of miners, of mechanics, or heroes of the sea, or of battles. The geographies describe and picture the palaces of kings and princes, and great institutions, the histories know no farmer heroes, the sample sentences in the grammars are taken from imaginative poets or writers of fiction, and the very problems in the arithmetics breathe of trade and commerce. When the farm boy and girl enter the door of the school house, they others that all the co-operation farmers need can be se-leave the atmosphere of the farm behind them. They are expected to be farmers and farmers' wives, but they find nothing in the school room to lead them in that direction, but something else is constantly before them, distorted and magnified. Their farm homes furnish the money to support the schools, their farm parents fondly look ahead and anticipate the time when the children will be better farmers than they themselves have been, but there is nothing in the school to make them so.

Against this fact, feeble complaints are heard occasionally, but those complaints are disregarded because of their feebleness. Here again appears the necessity for organization. If farmers were in a position to speak with the voice of UNION, how quickly would laws, studies and schools conform to their demands.

Question for discussion: *How may the country schools be made to better qualify country youth for farm life?*

### LANDS TAKEN BY FRAUD

Of all people on earth, farmers are most interested in the land, and have a stronger claim in equity to the public lands than any other class, because they want them for homes and for use to aid them in feeding the world of mankind and domestic animals. The recent report of the Secretary of the Interior shows that, during the past year, nearly 23,000,000 acres of these lands were taken from the government, by fraud, high officials being found participants in the frauds. Every acre of these lands so taken is a primary robbery of the farmers and a secondary robbery of every person who uses or consumes agricultural products. The farmers, therefore, should enter such a protest against these frauds as would change the system, or policy, or management, or laws, or whatever it is that makes such frauds possible.

But how can farmers do that without organization? How can they speak with the power that belongs to them unless they can speak through an authorized head as the voice of one mighty man? It all calls for organization. Every consideration of equity requires it, and every exigency of farm life demands the organization of farmers.

Question for discussion in Local Unions: *How may the public lands be saved to farmers who can secure them at first value instead of through land grabbers and speculators who will wring the last dollar out of the family who finally seek them for homes?*

To the Presidents and Secretaries of the Local Unions:

I want you to hold your next monthly meeting in that school house near you where there is no farmers' union. Get all your members to go. Go over when the nights are bright. Get the word out through the school that you are coming. Write to A. S. of E., Indianapolis, Ind., for 50 (E-12) and send one to every farmer in that school district. Then they will all know about the meeting.

When you meet take the evening to tell about the plan of the A. S. of E. You can read the plan and talk about it, if you cannot make a speech.

Tell them this is a movement to make the farmer's business a profitable business. That it means a fair price always for wheat, corn, oats, potatoes, beans, eggs, butter, milk, etc. It means two dollars a hundred more for cattle and hogs. Tell them you will hold your meetings every other month with them. Get as many of them to join the society as possible that night, and in this way double your membership. I mean have the two school districts united in one local union. In some cases it is better to have three school districts united in one local union. You will have a better attendance and keep up the enthusiasm and interest better.

Our only hope of success in organizing is through the farmers themselves. If we can arouse them to action our society will soon have its million members, put this plan in operation, show the millions of farmers that it is practical and then they will flock into it by the thousands and stick together so closely that they can not be pulled apart. Farmers, I know whereof I speak, I was one of the first organizers for the A. S. of E., and my home is right in the midst of members and local unions. They have got to the point where they are all pulling for success. It will come to this in your neighborhood if you strike now and strike right. We must do this work of organization ourselves. We can not depend upon any one else to do it for us.

An old lark had a nest of young ones in a wheat field in the old times when they cut wheat with the old fashioned hook. She was afraid the wheat would ripen and be cut before the young ones could fly and they would be killed. She told them to listen and note what they heard while she was away. One day while she was away the farmer and his son came to look at the wheat. The farmer said, "John, this wheat is ready to cut, so you must go over and tell our neighbors we will expect them to come tomorrow and help us reap the wheat."

When the old lark came home the young ones were greatly excited and begged their mother to remove them at once. But when the lark heard what the farmer said, she told the brood not to be alarmed as the wheat would not be cut the next day.

The next day, the farmer and son came to the field and waited for the neighbors till the sun was high and hot, but not one came to help him. The farmer said, "You see my son, our neighbors have forgotten us, so you must go over and tell your uncle and cousins we will expect them early in the morning to help us." When the lark heard this, she said there was still no danger.

When the farmer and son came next day, they waited in vain for their relatives. The farmer then said, John our relatives as well as our neighbors have forgotten us and I'll tell what you do. "You get two good sickles and sharpen them up and tomorrow we will reap the wheat ourselves, my boy."

When the old lark heard this, she said: "Now, my dears, we must indeed be gone, for when a man resolves to do his own work you can be sure it will be done."

Farmers, let us go to work and build the machine that will be worth a thousand dollars to each of us each year and a thousand million dollars to all of us.

C. O. DRAYTON,  
National Organizer.

## FROM OKLAHOMA

The following letter from the Oklahoma organizer contains so many good points that we print it for the guidance of other organizers and the information of members and farmers everywhere:

PALACE, O. T., DEC. 28, 1903.

W. F. HENDRICKS, PRES. FARMERS CO-OPERATIVE UNION, WAKITA, OKLA.

Dear Sir and Brother Farmer:—I am in receipt of a letter written by yourself to the National Pres. of the A. S. of E., J. A. Everitt, Indianapolis. As I am the duly appointed Territorial Organizer, he has referred the matter to me for consideration. As I understand your letter, you and your union are willing to enter into a federation with our Society (the American Society of Equity), provided you will be permitted to build a chain of elevators along the Mississippi valley from Oklahoma to Minnesota.

Well now, brother Hendricks, I don't know that I am willing to concede that to you, as I am interested in the welfare of the Farmers' and I am one myself. 1st. Let me call your attention to the fact, were we to have this chain of elevator along the entire Mississippi valley fully equipped and working, where would we be anything a head, for would not this little territory be only a tantalizing handful, for they would not and could not control the market of this country. They would act as a teaser for the man who sits upon the branches of the commercial tree and he only would profit thereby. True some small effect of their influence might be felt for us farmers in this immediate vicinity for a short time, but soon this middle man would crush them all out of existence.

2nd. Let me again call your attention to another important thought, and this time I must refer you to the statistical record of lodges with these same ideas (as yours.) Their modus operandi has been identically the same. I ask you candidly is it not a poor policy to follow in the foot steps of others who failed and bring ruin upon their society? Do you not think it would be a far better plan to profit by failure of those who went before us? Is it not better policy to try on a more up-to-date plan—on entirely new and different lines? Again I would ask you in your good business judgment, is it not better to first begin on the ground and build up. Secure pledges from enough farmers in all parts of the country to control the market all over the country? Have them to band themselves together in one National union, with local lodges or unions throughout the United States. First making this national lodge or union large and strong enough to control every production of the farm, knowing the country would be saturated thoroughly with local unions. Then the national union could give the command and every member and every local union could know what price to ask and then each or several local unions could build their own elevator or warehouse in safety. Then we could march on to and over the enemy's line to victory. Now brother Hendricks do not let your mind and good business judgment wonder away from these important facts, that the very first step to be taken by the farmers is that we organize ourselves into a National society and at the same time as rapidly as possible into local societies, so densely saturating the United States and Canada with them that every man will have an opportunity to join and make it so much to his interest that he cannot afford to remain out. Remember, a perfect organization of pledged members who have been taught and raised up to that high standard of life

—the Golden Rule—love thine enemy as thyself. Love thy neighbor even better than thyself. For these things the A. S. of E. stands now and forever. Love and kindness for ones enemy is the worse kind of punishment. I would again ask you, did you ever stop and reflect upon the fact that we farmers are our own enemies. It is true, our most bitter enemies, because we are fighting everything under the sun, even to ourselves, simply because we have been taught to believe we have got it to do in order to succeed. Oh! I would to the Almighty God above that I could in one minute teach farmers the falsity of this idea and instill into them the beautiful and good principles of Equity as embodied in the A. S. of E. That I could command them to love and honor their neighbor as themselves or even better. Then we could be banded or united together and would stand united and so strongly banded together that none would want to break asunder.

Hoping now that you see as I do the great necessity of first National and local societies organized solidly. Then closely following up with ware and grain houses, elevators, etc. My experience in this work is, wherever I organize a local union they want to build their own warehouses and elevators and I at all times encourage the building of them and in this way. When we have this North American continent saturated with local unions of the National union, we have at the same time caused to be built warehouses, elevators, etc., also controlled local markets, and at the same time established one great National clearing house. When we have done this we have built up monuments to be looked upon with pride by the coming generations, not as eye-sores or failures. We will also have them as monuments over the graves of the board of trade gamblers, but where no tears will ever be shed.

Never loose sight of the fact that farmers must first own and control their own clearing house. To do this they must all have knowledge of crops, conditions and markets. All these things are supplied through the official paper of the A. S. of E. and all members no difference where can cooperate to control marketing, prevents gluts, consequently make and maintain prices. Under such condition investment in elevators, etc., will be secure, but they will always be in jeopardy, if other classes make our prices.

I now ask you, are you willing to federate your union and ideas with that and those of our Society? Are you willing to join hands with me in Oklahoma and Indian Territory, and walk shoulder to shoulder with me into the ranks of the enemy and win for ourselves and brother farmers a victory that is unequaled by any other ever fought since our Heavenly Father created these beautiful garden territories. Let me hear from you and what you think of holding a grand mass meeting of all the local unions in Oklahoma, of both your co-operative union and those of the American Society of Equity. Hoping to hear favorable from you and wishing you a happy New Year.

I am very truly,

WILLARD J. CONOVER, Palace, Okla.  
Territorial Organizer for A. S. of E.

## 1,000 TONS OF PAGE WIRE

Was sold to manufacturers of coil springs in October, 1903, and the balance of our output for that month, 2,000 tons, was woven into Page Fence. Coil-Spring-Wire and Page-Wire are synonymous.

Page Woven Wire Fence Co., Box 81, Adrian, Mich.

**WIRE FENCE** at Wholesale. A 48-inch stock fence 29¢ per rod. Send for price list and FREE catalogue of Wire Fence and full line of Fence Supplies.  
W. H. MASON & CO., Box 71 Leesburg, Ohio.

## LAWN FENCE

Many designs. Cheap as wood. 32 page Catalogue free. Special Prices to Cemeteries and Churches. Address COILED SPRING FENCE CO., Box 88 Winchester, Ind.

## This Tubular Fence Post

made of Galvanized Metal, will not rust, rot nor burn, and will last a lifetime. Cheap as the best wood post. Takes any kind of woven, barbed or smooth wire fence. Made plain or ornamental. For farm, lawn, cemetery, etc. Circulars and prices on application. Bloomfield Mfg. Co. Box 107, Bloomfield, Ind.

## GAIN ACRES

by clearing that stumpy piece of land. THE HURDLES Stump Puller pulls any stump. Saves time, labor and money. Catalog FREE. Hercules Mfg. Co., Dept. 11, Centerville, Ia.

"ECONOMY PITLESS"  
Wagon and Stock Scale

NO PIT TO DIG

above the ground. We save you \$30 to \$40. Foundation only required under each end of scale. Scale protected by a FIVE-YEAR GILT EDGE GUARANTEE. Write for catalogue, etc. Address

**McDonald Bros.**

P. O. BOX 115 PLEASANT HILL, MO.

## Steitz Potato Planter

Always works right, easy to set; light of draft; well balanced. Marks furrows, drops and covers whole or cut seed potatoes in one operation; hills 14, 16 or 18 1/2 inches apart. Never misses; every hill planted actually yields.

SPECIAL PRICE  
\$40

**SPECIAL OFFER!** To make 1,000 new users we will reduce the price to only \$40.00 for the complete, latest model, improved Steitz Potato Planter, provided you order this month. Absolute guarantee of satisfaction given with each Planter; money refunded in full any time between now and July 1, 1904, should guarantee not be fulfilled in actual work. Write at once for illustrated catalog and positive proof that the Steitz Potato Planter is the one perfect planter and is sold at absolutely the lowest price. STEITZ IMPLEMENT CO., 276 35th Street, Milwaukee, Wis.

## FARM FENCE

Don't hesitate. Rely on our statements. Years of experience with an ardent ambition to excel has made us master of fence construction. We use only the best, High Carbon, heavily galvanized Coiled Spring Steel Wire. To get this good enough, we make it ourselves. The weave is so perfect that full strength of every wire is preserved. The strain is equally distributed. Every twist is an expression of strength. Every line a suggestion of symmetry. The whole fabric so flexible that it staples to the posts as you would nail a board. Confidence in our product rests on a foundation of practical experience, guided by practical sense. Don't worry. We'll pay the Freight, yet sell to you direct at WHOLESALE PRICES.

## DIRECT TO

## THE FARMER

ON THIRTY DAYS TRIAL.

## HORSE HIGH, BULL STRONG, PIG TIGHT.

Horse High is high enough, Bull Strong is strong enough, Pig and Chicken Tight is tight enough. SENT ON TRIAL, with privilege of returning same at our expense, any time within thirty days if not found entirely satisfactory, you to be the judge. Write us. This will get you in communication with us. We have something more to say to you. Our catalogue is full of fence sense, and shows the various styles we make. It's free.

Box 88

**MARKETING MILK CO-OPERATIVELY**

I am an old milk shipper. I shipped milk to St. Louis for seven years. I kept about thirty cows, so that I know something about the business and about the St. Louis market for milk. I am sure of one thing—the men and women who are shipping the 5,000 cans of milk to St. Louis daily, would not be over paid for their labor, every day in the week, in all kinds of weather, if we should raise the average price 2½ cents per gallon. I was secretary of the Milk Shippers Union a number of years and we found it was absolutely impossible to control the price of milk in St. Louis unless we have all the milk producers in the territory around the city so far out, that dealers will find it impossible to supply themselves with milk when we are on a strike. The American Society of Equity is almost solidly organized at every station on the Baltimore and Ohio S. W. R. R., out as far as Shattuc, Ill., and on the Vandalia R. R. as far as Greenville. We have a good start on some of the other railroads running into St. Louis.

This society aims to secure profitable prices not only for milk but for all farm products. If the St. Louis milk shippers

go on a strike through this society, they will have the sympathy and support of all the milk producers and all other farmers around the city, who will see to it that the St. Louis dealers are not supplied from any other source while the shippers are in conflict with them. Milk shippers! This is the organization in which you will find all the milk producers of Illinois and Missouri. We are spreading this society rapidly through each of these states. We hope to organize around St. Louis sufficiently by August 1, 1904, to raise the price 2½ cents per gallon for six months following, over what it has been in previous years, and then raise the price in all the territory contiguous to St. Louis. We ask every milk producer around this city to go into this union at once. Please be sure not to sign a contract with any milk dealer or condensary that will bind you beyond Aug. 1, 1904. When they hear of this movement they will raise the price a little and try to bind you in a contract past the time of the World's Fair. They would rather raise the price 1½ cents than 2½ cents per gallon.

Members of the A. S. of E. around St. Louis, show this article to all the milk producing farmers around you. Get your

home paper in the country to copy it. We will push the organization around St. Louis and try to put this plan into operation on milk by August 1. The dealers in St. Louis are in a trust with millions of dollars of capital but they can not do business without milk. Let every milk producer try to have an old sow or two with pigs, August 1, 1904. Success here will depend largely upon how hard the milkmen and other farmers around St. Louis work for this organization. We certainly have a good start and every reason to be very hopeful. Make the American Society of Equity solid all around St. Louis by August 1, and we will raise the price of milk 20 cents a can as sure as St. Louis people consume milk after that date.

I will go to any town around St. Louis and explain the plan of the A. S. of E., providing a place to speak is furnished, a good audience of farmers guaranteed, and my expenses are paid. Correspond about date. Let me hear from you, farmers.  
C. O. DRAYTON,

**MAKE \$2,000.00. THIS YEAR**  
**GENERAL AGENTS WANTED**  
The SEGMENT Corn and Bean Planter, 2,000 dozen sold last year. Never cracks a kernel nor skips a hill. Simplest, lightest, most durable and most accurate. Frictionless slide. Genuine Chinese bristles brush, which never mats. Hopper and spout galvanized iron. Working parts stamped out of sheet steel, which means absolute uniformity, extreme lightness and great strength. Will make favorable contract with men competent to handle territory and control sub-agents. Ask for Contract No. 2.  
**Greenville Planter Co., Greenville, Michigan**

32 years ago we occupied one room with two clerks and published a catalogue a quarter the size of a hymn-book.

**We Want You to Try Us**

and test for yourself our ability to please you. Tell us what kind of goods you are interested in and we will send you without charge any of the following illustrated special catalogues quoting wholesale prices. Merely mention the number or letter of the catalogue you want.

# "Grandfather Traded With Us"

One of the greatest joys of this great business is the many kind letters we receive daily from our customers, expressing their pleasure and satisfaction with our goods and methods.

Often the most significant part of the letter is embodied in the few words: "My grandfather traded with you years ago." It is the complete confidence of our customers in our honesty, born of past experience in dealing here, that enables us to hold their continued trade.

One-time special "below cost offerings" to catch an occasional customer, and making up the loss on subsequent orders, would never build a business like ours.

It is the constant saving and steady stream of pleasant business relations which makes our patrons eager to speak a good word for us at every opportunity.

Our prices are 15 to 50 per cent below regular retail figures.

**Our Big Catalogue** contains over 1100 pages and wholesale prices on Groceries, Dry Goods, Crockery, Hardware, Furniture, Harness, Implements, Vehicles, Clothing (all kinds for Men, Women and Children), Millinery, Musical Instruments, Sewing Machines, Bicycles, Sporting Goods—practically everything that anybody could want.

It also contains freight rates, full instructions for ordering, and tells you everything you might want to know about us.

Ordering is easy from this wonderful book, which costs us almost one dollar apiece to print and send out.

Send for it today and save the profit you pay your dealer. You can get your money back if your purchases are not satisfactory. Fill out this slip, enclosing 15 cents for partial postage as a guarantee of good faith.

Send four two-cent stamps for our

**10 Color Wall Hanger**

showing the inside of this building, with the goods and the clerks at work. One of the most complex and complicated pieces of lithography ever attempted. Very interesting and attractive. You can get it for what it cost us—four 2c stamps.

Today, we occupy more than 200 times as much floor space, employ over 3000 people and our catalogue contains over 1100 large pages.

**Cut this slip out and send it TODAY.**

MONTGOMERY WARD & Co., Chicago.

Enclosed find 15 cents for partial postage on Catalogue No. 72, four 2c stamps for Wall Hanger, or 20c for both.

### WHAT WILL THE PUBLIC DO

This is the question raised by the press recently when considering the price of meat. The price of cattle has declined fully \$3.00 per hundred weight in about a year without any appreciable decline in the price of meat to consumers. The price of hogs in the same time declined over \$2.00 per hundred weight without any appreciable decline to the consumers. It is not the supply that forces farmers' prices down, or at least the packers are not over-burdened as we see from the following from the Armour Packing Co.

"Our killing in October, 1902, was nearly twice as great as in October of this year. To be more accurate, this house killed 61,134 cattle in October a year ago and 38,783 cattle in October this year. The difference in hogs was even a little greater."

This is another illustration of the law (?) of supply and demand. This supposed law works in wonderful ways.

From the Kansas City Star we get the following:

The farmer whose load of steers has been his pride and hope all summer comes to market and goes home discouraged. He has planned to pay off a mortgage and have enough left to make some improvements out of the proceeds of his bunch of steers. Perhaps he has planned to take home some presents to his family, but when he goes on the market with his steers the buyer says: "They are too heavy. We don't want that class of stock now, but we'll give your four cents a pound for them." But if they happened to be lean he says: "We can't use such undesirable stuff as that to advantage. We want heavy cattle." Either way the farmer must sell for what he can get. If it won't pay the mortgage he must find some way of making up the deficiency and go without the improvements. The presents for his family are out of the question. That is the average farmer's condition who comes to market with stock this year."

Therefore we have the question. "What will the public do?" Some suggest going into the courts, others suggest independent stock yards and still others an appeal to congress. The laws are of no effect to protect the weak individual against the organized trusts and corporations. The independent stock yards will not reach the trouble, congress is controlled by powerful lobbies representing the organized stock yards, food trusts, etc., and the unorganized consumer is absolutely powerless.

What is the public going to do? What can they do?

There is absolutely only one power on earth that can do anything to regulate these evils and that power is not an organized power at this time. It is the farmer power, the farmers' combine. They can, when organized, secure Equity for themselves in the markets and guarantee Equity to consumers. Therefore hasten the farmer power; the third power; the greatest power of all that will regulate the trusts, compel an equitable government and guarantee Equity to all.

Beware of all schemes to organize Independent stock yards, elevators, etc., that does not propose also to take price making out of the hands of speculators,

gamblers and food trusts and put it in the hands of farmers. What benefiteth it the farmer if he store his grain in a company elevator, or ship his stock to an independent stock yards if the speculators put the prices on them? This is only another way to whip the Devil around the bush, but he will catch you sure.

Beware of any million dollar corporation or fifty million dollar corporation or trust that proposes to help you by selling YOU THEIR stock, so THEY may build YOU an elevator. Why do you need to give THEM your money for THEIR stock, so THEY can take YOUR money and build YOU an elevator the deed for which THEY will hold. THEY to be paid large salaries out of YOUR money to handle YOUR business with YOUR money.

Are farmers the fools some would-be slick citizens think they are?

## SIDE LIGHTS ON WHEAT AND FLOUR

In the olden time, the road from the harvest field to the mill and back to the kitchen, the oven and the table, was a short one, and one travel worn and smooth. It was grain, and grind, and grist, and then bread and cake, and there was equity for all in those days. But now, the conditions have changed, and the trip from the sheaf to the griddle or the bake pan is one that is filled with many ups and downs; and the pathway is no longer straight and narrow, but crooked and irregular, with many forks and side tracks, that lead to the coffers of those who toil not, and neither do they spin.

The wheat crop of today—and for that matter, any other farm crop—after it has been gathered and put on the market by the farmer, becomes the speculators' foot-ball, and the way it is kicked about regulates the price which the consumer shall pay for it. The law of supply and demand then becomes a dead letter; and the price is fixed not by right, but by chance. If the bear interests get the best of the deal in the stock gamblers contest, the price is temporarily reduced; but, if the bull side should happen to prove the stronger, then the price is put up just as far as it can be pushed by the trading interests back of it. And, somehow, the price never gets to the top notch until the farmers have dumped most all their wheat, and then it takes an upward turn.

Of course, the farmer is out of the deal then, and has become a mere spectator until the next year's harvest time; but not so the consumer—and that means all of us—for he is the one who pays for the whistle; because, there is a third interest in this wheat and flour question, and that is the milling interest; and don't you fool yourself by thinking for a moment that this interest is asleep. It is, on the contrary, something of the nature of a broncho, which will hump up very promptly, but is very slow to squat, or get below it's normal status.

The milling interests follow the speculator in his up-spurts with a fidelity that is most beautiful to behold. Just let wheat advance a cent or two, and you may rest assured that flour will follow it with celerity. But, let wheat go off a little on price, and then the flour men look wise, and hesitate a long time before taking any action. That's human nature. Just how it happens that flour usually advances all along the line a few cents a hundred, or barrel, as soon as the bulls in the wheat pit make a toss, is one of the tricks of the trade, known only to the inner circle, perhaps, but it does advance, and very promptly, too, just the same.

An illustration: Last fall the price of wheat went to \$1 a bushel at Minneapolis. Flour promptly went to the same level. Wheat has dropped many points, but flour maintains its high level.

Advances of this kind in flour, doesn't benefit the farmer any, however, but it taxes the consumer without giving him a voice in the matter. It is the speculator and the middleman having a rake-off at the expense of the people, that's all there is to it; and men submit to this thing without a word, who would work like beavers, and vote like one man against any proposed increase in property taxation.

The money filched from the consumers in this unfair way goes to enrich the few,

to the impoverishment of the majority, and so, the trade interests of the community are not benefitted by it in the least.

This is a view of conditions as they are today—an illustration of the way in which the farmer is wronged, and the consumer forced to pay for his bread more than it is equitably worth. It is a condition that could not exist if the farmer should be in control of the market, and put the price on wheat the year round, instead of having it jacked up and down—chiefly up—by the stock gamblers and other interests which augment their profits at the additional expense of the consumer.

A fixed price for wheat, a dollar a bushel say, maintained by the men who produce it, would result in a fixed price for flour and bread, with speculation and false profits eliminated. And, it would also result in cheaper flour for all. Nor is that all; for the equitable distribution among the producers of the increase in price to them, would result in heavier trading on their part with the tradesmen and store-keepers of their respective communities, and in a more general prosperity.

Plainly, it is to the interests of the consumer to assist the farmer in his efforts to release the products of the farm from the blighting grasp of the speculators, and others who levy a tax on the consumer without giving him any voice in the matter.

## WHAT \$1.00 WILL DO

It will pay for this paper, Up-to-Date Farming, published semi-monthly, for one year.

It will secure you a membership in the greatest society that was ever started, the American Society of Equity, with beautiful certificate and badge.

It will make you a factor in the greatest movement of the century, which is destined to strengthen and benefit every legitimate business.

It will change you (if a farmer) from the weakest and most dependent individual of the most numerous class into a member of the most powerful union in the world, where each individual will have back of him the strength of millions united.

It will make your operations definite instead of uncertain as at present.

It will insure a good price for every crop you plant.

Will you risk \$1.00 for all these things and many more? What is \$1.00 to you anyway? You will not miss it if you fail to realize all that is promised, while enough is bound to be realized to make it the best investment you ever made.

## NOTES ON THE FARMER'S BUSINESS

By Henry Burns Geer.

The men who dig the coal from the bowels of the earth, protect themselves by organization.

If there should be no wheat marketed by the American farmers for one whole year, there would be a commercial revolution in the markets of the world. And yet—and yet—the men who possess this tremendous power are letting the stock-gamblers and the speculators fleece them to-day.

The advantages of storage and even distribution, is fairly illustrated in the cold-storage of eggs. Since the big concerns began this practice the price of eggs has ruled uniformly higher all over the country at all seasons. Why should not the eggs be stored by the farmers in local union, as well as by the packing houses?

The farmer who is afraid to trust his neighbor, should move; and the neighbor who is unworthy of trust should move too. It takes confidence and neighborly feeling to maintain equity in a community. The great and unyielding strength of the fathers, rested in their fraternal feeling for each other, and their co-operative system of living.

"Two times one is two"—or, "two times one are two." It doesn't matter which way a member of this society puts it, just so he gets the other feller, and has two members for his local union at the next meeting, in place of one. Sposen' every member would figure it up so, and act accordingly—a mighty easy thing to do. Why, a bigger hall would be needed for the next meeting afterwards.

Possession forms more than nine points in making the price, with the producer. He cannot control that which is in the hands of the other fellow, or cornered up so that others can bet on its value. The way to get just value for anything is to hold it till the public needs it for consumption.

A million farmers with but one hundred dollars worth each, of last year's crop in their bins, would have a nice little reserves fund on the farm. A hundred million dollars ahead would ward off the rainy day for some time, and keep speculators guessing as to when they will let go of it.

Aggregated wealth in the hands of the select few, is just so much of the values of a nation held up. The few cannot and do not spend like the many. The farmers are the greatest spenders on earth in the aggregate. The manufacturing and other interests would languish without the support of the producers. Put money in the hands of the farmers, and it is never idle, but turned back into the markets of trade.

Home storage is the foundation of home pricing. If the farmers would succeed—and they will eventually—in putting the price on their produce, it must necessarily be through home storage, and farm storage through co-operation. The farm storehouse and the co-operative elevator in the community will prove the castles that will hold out against the enemies of equity.

There is today more profit in horses and mules to the farmer than anything else he produces, simply because they are not in the list that the stock gambler bets on, or the speculator holds up for an advance. The price on the horse that is sold is generally named by the man who raises it, and hence it is an equitable one.

The latest book out: "The Third Power," is unlike any other book, because it is for the farmer, and equitable prices all the way through. It is based on that

good old maxim, "Be just, and fear not." The man who is writing this, did not write the book, and so he can say with propriety that it is a book that should be in every farm home in the world.

A farmer wrote to his city brother recently: "I work hard, have had good crops, but only fair sales, and I am but three hundred dollars ahead for the year." The town brother figured a little, and found out that, while he had made a very fair salary for twelve months, he owed thirty-five dollars more than he did on the first day of the year, and had not saved any money at all. So you see, there are some men who are worse off than the farmer. This item is suggested as a pointer for the young man who is about to leave the farm, to stick to his bush—gather with both hands, work for equity, and soon he will be all right.

The farmer, the miner, and the fisherman—these three are they who produce that which feeds, warms, and transports mankind. Should their hands be palsied, and should they cease to produce for even a short time, it would then be seen whence comes that which blesses all. What class then, is more entitled to an equitable return for labor put forth, and hardships endured. Verily, it is time that the world recognized the incalculable value of the work of these men, and stood prepared to award them justly.

Dollar wheat with the farmer, means 25 per cent. more money in circulation throughout the country where the wheat is grown. Dollar wheat with the speculator—wheat that left the farm at seventy-five and eighty cents—means congestion of ill-gotten gains, and a curtailment in the amount of cash in circulation among the producers and their friends.

## OUR CLUBING LIST

By special arrangement we are enabled to offer yearly subscriptions to the following publications, together with a year's subscription to Up-to-Date Farming at reduced prices for the combination. The prices are in many cases less than the price for one paper, hence if already a subscriber for the other paper or desiring to become one, it is to your advantage to order of us. No premiums are given, except the subscriber will be made a member of the A. S. of E. if he or she requests it. Each order must include one subscription to UP-TO-DATE FARMING but where more than one of the papers named in the list is wanted, a deduction of 25 cents from the clubbing price will be allowed for each additional publication desired, thus giving but one subscription to Up-to-Date Farming.

Papers in clubs may be sent to as many different addresses as you desire.

Remit by money order, draft, cash, check, registered letter or 1c postage stamps.

Live Stock and Dairy Editor,  
care Up-to-Date Farming, Indianapolis, Ind.

### CORN AND COW-PEA SILAGE

The corn should be drilled in rows three and one-half feet apart with stalks at intervals of nine to sixteen inches in the row. Plant from the middle of May to the first of June. One row of peas, preferably the Whippoorwill, is drilled as close to the corn as possible when the latter is six inches high and after it has been cultivated once. Where rye or crimson clover occupies the land previous to silage corn, planting can not be done before June 1.

The product is bound into bundles, and causes no delay in passing through the silage cutter. Silage made during the first week in September kept well, and was relished by the cows, which ate thirty-five pounds daily in two feeds. The milk and butter produced was of first

quality. The protein of the cow-pea forage made a smaller quantity of wheat bran necessary in the ration.

The expense of raising and storing the mixed crop was as follows:

Hauling and spreading manure.....	\$3.75
Plowing, harrowing, rolling and planting .....	9.87
Drilling peas and replanting corn, and three cultivations.....	6.37
	\$19.99

for 2.9 acres, or \$6.89 per acre.

Seed and taxes.....	\$4.00
Packing of silage.....	7.60

Total cost of raising 13.25 tons on one acre ..... 18.49

Cost per ton, \$1.41.

### MARKETING BUTTER

There is probably no product which brings the farmer better returns for his labor and investment, than butter, when properly made and marketed. On the other hand, there are few things so easily ruined in the making. Of late years the creameries have supplied a large portion of the best butter, but there is still a large demand for high quality dairy butter. The standard packages are tubs which contain 20, 30, 40 and 60 pounds, respectively. Uniformity of the entire tub is of the utmost importance, while the more uniform the entire product, the better. Butter tubs are usually made of ash or spruce. The spruce tub is regarded with the greatest favor in Boston and throughout New England and in the New Orleans market. Elsewhere in this country the tub of ash is preferred. Cleanliness of the tub is essential. Exporters bag all tubs in burlap to preserve their clean, fresh appearance. If for any reason your butter is "off," don't ship it. When off in flavor it is likely to deteriorate rapidly and sell as "grease."—Farmers' Bulletin 62.

### CORRUGATED CREAM EXTRACTOR. IMPROVED

Inner can detachable, double the cream gathering power of any other, no water in the milk, more cream, more and better butter, pure milk for table and stock, easily cleaned, greatest labor saver ever used on a farm. Free catalogue. Price the lowest. Agents wanted.

### RAISING THE LAMB

While the lamb is still with the ewe teach it to eat; two or three weeks of age is none too soon. Add a little sugar to the grain at first; teach one, the rest will follow. Provide a "creep" built of upright slats about eight inches apart. A cross bar horizontally placed will exclude thin ewes as they will endeavor to squeeze in. Within should be placed a trough filled with a mixture of bran, oil meal, etc. If this is near the watering place the lambs will frequent it more. For feeding lambs to be used for breeding purposes preference should be given to bran, oats and linseed meal. Cornmeal tends to fatten and does not produce growth when fed alone to the same extent as when employed in a mixture with the concentrates. At first the lamb will take only small quantities of grain. By feeding a little at a time and taking away what is left it will soon begin to eat eagerly, and look forward to feeding time. To give young lambs all they have capacity for, requires frequent feeding, three times a day at least. When the lamb is twelve weeks old it will eat about a pint of grain daily.

When the ewe and lamb are on pasture be sure she brings it home at night. A lamb may, after it is several days old, lie down while the ewe feeds away, and come to the yard at night without it, or in case of twins, with only one. You want to be there to find it or perhaps some dog or wolf will before morning.

For scours in the lamb change the food of the ewe and give each lamb three drops of oil of cinnamon and three drops of tincture of opium at a dose every four hours in a teaspoonful of milk. If access is had to a mixture of equal parts of salt and ashes there will be little danger of amb cholera. Sulphur and fresh clay in

small quantities are often realished. Rock salt should always remain in the trough.

### WAR CRY POSTAL CARDS

Have you sent for a bundle? If not, do so at once. See offer below.

### CALL FOR MASS MEETING

Trenton Local Union No. 1, of the A. S. of E., hereby invites all the farmers' unions around Trenton, Ill., to meet in Ginzels' hall in Trenton, Ill., on Thursday afternoon, January 28, promptly at 2 p. m., for the purpose of considering important matters affecting farmers' interests. One of the principle matters to consider is the market for our milk at St. Louis, and to the condenser. Good speakers are invited to address the farmers. This will be a mass meeting of the

members of the American Society of Equity, and every member is expected to attend, and is asked to bring one or more farmers with him who are not members.

HENRY KAUFMAN, Pres.,  
Trenton, Ill.

EUGENE HOYTE, Sec'y.,

# \$1,000.00 Do You Want it Christmas 1904

### THE CAMPAIGN FOR PROFITABLE PRICES

IS ON The A. S. of E. wants to put prices for 1904 on such a basis that each farmer who farms 160 acres will receive \$1,000 more than he does under the present system. To do this, each farmer and friend of farmers must help. We want the "Million United," but great results can be accomplished while the Million are coming.

The farmers are getting great benefit now through the A. S. of E. The papers are full of this plan of co-operation by farmers. Dollar wheat and Equitable prices for farm crops are among the important questions of the day. Even other farm organizations begin to talk about co-operative selling as well as co-operative buying. All these things have been brought about by the American Society of Equity. It is the only farmers' society that stands for everything the farmer needs, and the only one that has a practical plan to accomplish its objects.

### WE WANT 10,000 VOLUNTEERS

on the picket lines of the grand army of co-operating farmers, at once. We want EACH TO PLEDGE HIMSELF OR HERSELF TO GET TEN OR MORE MEMBERS FOR THE A. S. OF E. IN 1904. The women can help as well as the men, and they will be benefited as much as the men in the triumph of this great movement. This is a very small number. You can easily do it. These ten you send us will be asked to get ten more, and so the army will grow. If you cannot be a DEPUTY PRESIDENT OR ORGANIZER, you can be a SOLDIER who can enlist ten of your neighbors.

To any person who will pledge himself or herself to secure ten or more members in 1904, we will send ten or more signed and numbered certificates, and an equal number of emblems or badges, and our famous War Cry Postals with full particulars. The members may be secured on any of the offers printed in this or future numbers of Up-to-Date Farming.

Sit down and figure what it will mean to you in 1904 if you get such a price as you should have for all the grain now in your graneries and cribs, all the stock in your stalls and pens, all the produce in your pits or cellars, and all you will raise in 1904. Will you help yourself to get what you are entitled to receive, but which is often withheld? **IT CAN BE DONE. IT WILL BE DONE.** The only question before the farmers is: Will it be done quickly or will they suffer the wrongs of the old system a few years more?

Fill out the ticket, cut out and send at once. This costs you nothing, but it means \$1,000 more at the end of the year than you will have if you don't help in this movement.

CHRISTMAS  
\$1,000  
1904

## SPASM OF THE GLOTTIS

**F**REQUENT inquiries have been made concerning a disease in pigs characterized by spasms or fits. The attacks almost always occur in winter, when the weather is severe. Animal shows no symptoms when coming from

the sleeping pen until it attempts to take food, when it will be seized suddenly, will raise its nose and gasp for breath, soon fall over and struggle for a moment or two when the seizures will abate, animal will get up and possibly appear all right.

**CAUSE.**—Occasionally the first attack will prove fatal, although this is not the rule. Attacks will occur every day, or it may happen every time the animal attempts to take cold food, especially swill. The attacks come on most frequently in pigs or hogs that have warm quarters, especially those that are allowed to burrow in manure piles or straw that becomes heated. When they come into the cold air, sudden change induces attacks, especially when taking cold drink.

**TREATMENT.**—Treatment that has given the best results is to avoid the conditions that produce the difficulty. Hogs should not be housed in too warm sheds, especially if fed in a cold place. Do not give access to the manure pile, where they will burrow into the heated, half decomposed straw or become piled up and overheated.

It is also of great advantage to warm the feed, where this is practical, and anti-spasmodics should also be employed, such as from ten drops to half dram doses of fluid extract of hyoscyamus, according to size of animal; or ten to fifteen grains of bromide of potash should be given three times a day.

The rugged health that tonic doses of Dr. Hess Stock Food induces will give a hog the vital power necessary to resist these attacks. This wonderful reconstructive is the result of a lifetime of study and experiment by Dr. Hess (M. D., D. V. S.)—graduate of both medical and veterinary colleges—whose methods and works are recognized everywhere as authoritative.

Dr. Hess Stock Food is the scientific compound, sold on a written guaranty, 100 pounds, \$5.00 except in Canada and on the Pacific Slope; smaller quantities at a slight advance. Fed in small dose.

For every disease and condition for which Dr. Hess Stock Food is not recommended, the little yellow card in every package entitles you to a letter of advice and special prescription from Dr. Hess.

For a little information, Dr. Hess' great stock book, the only complete treatise on live stock and their diseases, will be mailed to you free, prepaid. Write Dr. Hess & Clark, Ashland, Ohio, state what stock you have, how many head of each; what stock food you have fed; also mention this paper.

## Save Harness Money

Leather harnesses are expensive, heavy, cumbersome, hard on team and require constant expense of cleaning and oiling.

## The Economy Rope Harness

is ideal for farm and ranch work. It costs one-third and weighs one-third as much as leather harnesses. Is stronger. Lasts longer. Cheaper to repair. Will not chafe. No stitching to rip. No oiling. Made of best rope and patent rope conforming trimmings. Adjustable to fit any team. Neat, cool and durable. Guaranteed. Double harness, except collars, \$5.00. Liberal terms to users to represent us. Study the picture. Write us. **H. B. WILSON MANUFACTURING CO., Box 510, Fond du Lac, Wis.**

## Strawberry Culture

A 60-page book, makes you understand the whole subject. Sent postpaid on receipt of 25c, silver or 1c stamps. Worth four times the price. Money back if you don't think so. Beautiful illustrated Strawberry Catalogue Free.

**W. F. ALLEN, SALISBURY, MD.**

## FARMING IN WINTER

The most successful farmers are those that farm winters as well as summers. In fact, the most important work on the farm must be done during the winter, if we are to make the most of our business, viz.: caring for the stock and planting for the summer. Without constant attention what might have been a good profit on the stock can be turned to an absolute loss. They need not only good feed, but must have the watchful eye of the feeder. A farmer that is thoroughly interested in his work can see every hour in the day something that he can do to make his animals more comfortable, and therefore more profitable.

Besides this there is the planning for the summer campaign. Spring comes on in a hurry, and the farmer that is caught unready for the struggle when the weather opens must be the loser thereby. The farmer that meets with success is the one who has the crops for every field planned, the seed well selected and prepared, the tools in perfect condition, the harness repaired and well fitted to the team that is to wear them, the horses mated to work best together and put in good working condition, and his help secured before the spring is upon him. With this all out of the way, the most important part of the work is done, and he is in a position to drive his field work instead of his work driving him.

There is nothing that will so disgust the hired man, and put thoughts of "leaving" in his head, as being everlastingly behind in his work. A good hired man wants to be up with the neighborhood in his farm work, and the best hired man wants to be ahead with his.

The day has passed when a farmer can make a success of his business and sit around grocery stores, smoking a pipe, telling stories, and cursing the government during winter, and go to town every other day in summer. Competition is stronger in farming, as well as in every other occupation than it was in the days of our fathers, and must be met if we wish to succeed.

**60 VARIETIES** Strawberry Plants, \$2.00 per 1,000—and up. A general line of nursery stock. Send for 1904 catalog now. **H. W. HENRY, LaPorte, Indiana.**

# SPECIAL NOTICE

This is certainly one of the most liberal offers which has ever appeared in UP-TO-DATE FARMING. The American Home Monthly is a handsomely illustrated story paper worth much more than the subscription rate. The offer is absolutely fair and reference is given to two of the leading banks in Des Moines as to the reliability of the publishers. A list of hundreds who have won prizes will be sent anybody upon request. You are as likely to win a farm, piano, or large cash prize as anybody else. Do not fail to take advantage of this offer, no matter what you think of other offers this one will be carried out to the letter and you may lose a farm or piano by classing this offer with many others and not entering the contest. Do not delay but send in your counts at once. The awarding of the prizes is wholly in the hands of judges as stated. One of the judges is an Ex-Governor of Iowa. Surely nobody need fear any partiality being shown. Don't delay. Send in at once.

## FREE An 80-Acre Farm FREE and TWO \$400 PIANOS Elegant Driving Team and Carriage or An Automobile NO BLANKS FREE!

**\$50  
EXTRA**  
for first  
count  
within  
three of  
correct  
number!

**80  
ACRE  
FARM  
FREE**  
in any  
one of a  
dozen  
states

Get your counts in at once. We offer extra prizes to those in early. See Time Prize below. Read conditions carefully. You will lose by delay.

If this chart gets destroyed send stamp for another on heavy paper. If you send subscription now counts can be sent later and will be considered by us as having been received same date as your first letter.

**Do You Think You Can Count? Try It and See. If You Can Count and Plan You Can Win!**  
**Have You Got a Good Plan? It May Enable You to Win a Big Prize!**

**THE AMERICAN HOME MONTHLY**, an elegantly illustrated up-to-date home and family magazine will give FREE to those who can count the dots above correctly or nearest correctly, the following grand prizes:

**FIRST PRIZE**—A Gasoline, Steam or Electric AUTOMOBILE, or a Matched Driving Team, Harness and Carriage, or a Matched Work Team and Wagon, or An 80-Acre Farm.

**SECOND PRIZE**—Two Elegant \$400 Pianos, one to a Lady and one to a Gentleman.

**THIRD PRIZE**—\$100 Cash. **FOURTH PRIZE**—\$50.00. **NEXT FIVE**—\$10.00 each, and

\$200 to be divided equally between all who come within three of the correct count.

**AWARDS WILL BE MADE AS FOLLOWS**—The person giving correct or nearest correct count will get first prize. Next nearest correct, second prize, etc. In case of a tie for any prize it will be awarded to the person giving best plan for counting the dots.

**EXTRA PRIZES**—To winner of first prize and winners of the two pianos will be given an extra cash prize of \$50.00 each if they have three or more counts entered, that is, have paid \$1.00 for two years and three counts, instead of 50c for one year. Don't lose \$50.00 by having only one count, and besides you are more likely to get correct count by taking three and having one on each side of what you think correct.

**CONDITIONS**—50 cents pays for one full year's subscription to AMERICAN HOME MONTHLY, and entitles you to one free count; \$1.00 pays for two years and entitles you to three counts and makes you eligible for the special \$50.00 prizes.

**\$50.00 FOR FIRST COUNT**—We feel early counters should be rewarded and will give \$50 to first person sending a count within three of correct number. The \$50 goes to first person in, so do not delay; get your count in at once. If you can count within three you are sure of a prize, as part of the \$200 to be divided. If you are first, you get \$50 extra and are as likely as any to win automobile team, farm or piano.

**OPTIONS**—The Gasoline Automobile may be had to suit either two or four people. Instead of the Automobile we will give you, if you prefer, an elegant matched driving team with gold mounted harness and elegant rubber-tired carriage, or a fine matched draft team with hand-sewed harness and best wagon, all complete, or an 80-acre farm in any one of a dozen states.

**OUR PRIZES**—We believe we have arranged for the best in every case. These are all prizes well worth working for. There is no element of chance. It is a test of skill pure and simple. If you can count, you can win.

**JUDGES**—The awarding of prizes will be wholly in the hands of the following persons. We are bound the contest must be absolutely fair, and certainly with such judges nobody can question it: Rev. Walter M. Walker, Pastor First Baptist Church; Hon. Frank D. Jackson, Ex-Governor of Iowa; Prof. Z. C. Thornburg, County Superintendent of Schools, Polk county.

**OUR FINANCIAL RESPONSIBILITY**—As to whether we are abundantly able to do as we say, we are glad to refer to Des Moines Savings Bank and Central State Bank. Our offer will be carried out to the letter. Nobody connected with our paper will be allowed to compete. Contest closes May 31st, but get your counts in at once. See about Time Prize above. Anybody having three counts entered may enter additional counts at 25 cents each. The more counts you have, the better will be your chance for winning.

**Publisher AMERICAN HOME MONTHLY, 130 7th St., Des Moines, Iowa.**

I enclose \$..... for subscription to American Monthly, and I wish to enter the..... (write ladies' or gents') Dot Contest. If \$1.00 is paid send three counts; if more than \$1.00 send one additional count for each 50c over \$1.00; if only 50c is paid send ONLY ONE count. The \$50.00 special prizes go only to those having THREE or more counts entered.

My count is: (1)..... (2)..... (3).....

Name.....

We have a list of hundreds who have won \$5, \$10, \$20, Bicycles, Free Trips, Pianos, etc. It will be sent you free upon request.

## FORCING BROILERS

The first two weeks of a chick's life have a great influence on its future, and determine whether it will be a sound, profitable specimen or a hopeless runt. If care has been exercised in selecting the eggs, a good batch of sturdy chicks may be expected.

Until the youngsters are 10 days or two weeks old they may be fed practically the same whether they are intended for market or for use as stock birds. Chicks intended for roasters should not be pushed as rapidly as broilers, white chicks intended for breeders should not be forced at all.

Anoint the head of each chick with sweet oil or lard and sulphur as soon as hatched and there will be no head lice to bother them. After 24 to 36 hours feed a mixture of cracker and bread crumbs rubbed with hard boiled eggs, with no other moisture used than that in the eggs. Bread crumbs moistened with skimmed milk and fed in a crumbly state give excellent results. Then feed rolled oats for about a week, with plenty of fine grit, and cabbage or lettuce, cut fine. Follow oats with broken wheat and millet seed, the latter is a semi-green food. During the second week it is well to try a little mash made of one-third cornmeal and two-thirds wheat bran to which is added a small quantity of meat meal and fine

grit. Season with salt and red pepper. Mix well and add scalding water; warm water leaves it in a very indigestible state and without the proper consistency. The above mixture when fed crumbly is greatly relished. Some breeders put the whole in a well-greased pan and push down hard to stick it together, then bake slowly for three to six hours. In this latter form it may be fed during the first week.

The hard, dry grains call the digestive juices into play and the muscles of the gizzard are given plenty of exercise. When soft, easily-digested food is employed there is a tendency on the part of the chick's digestive organs to slight their natural functions. Bearing these facts in mind, we enter upon the duties of the third week. The first thing in the morning is a feed of hard grain; then comes a feed of chopped raw potatoes. A little later throw in a cabbage leaf cut in fine strips or chopped onions. At nine o'clock feed the mash and again at eleven. At one, you will have a hungry mob and again at three. At five throw down a liberal feed of cracked corn. Little chicks need food five times a day for the first three weeks. All dry grain should be fed in litters to induce exercise by scratching. Allow the chicks plenty of water if they are to do well and take the chill off it in cold weather.

After the third week the frequent feedings should be cut down to three times a day, and mash should form two-thirds of the daily food. Gradually decrease the amount of bran, increasing the cornmeal as the chicks begin to reach the desired size and plumpness.

In finishing them off, put all the cottonseed meal you can stir in the mash and not make it "pudding," with a little molasses added. This will cause them to "yellow up" and appear more attractive. We would caution you against trying to feed this for more than ten days or two weeks at the longest, as the chicks will get clogged of it. One would find it extremely difficult to keep the birds on their feet if it was fed from the first.

If it is bright and warm, put the youngsters out for a few minutes when a week old. Make them hustle around by feeding millet seed. After the second week let them out whenever the weather is favorable. It is very peculiar, but still it is a fact that chickens will contract stiffness of joints and ill health sooner from a board floor than they will in the coldest days upon a dry, well kept earth floor. Warmth, perfect protection from the damp and proper feeding are the elements of success in the growing of chicks.

Do not attempt to raise breeding females under such hot-house methods, because you will sacrifice size through early maturity. Pullets raised under such conditions lay at sixteen to twenty weeks of age.

## SELECTING AND KEEPING EGGS FOR HATCHING

Eggs from healthy and active fowls well mated, are usually fertile. Eggs laid by pullets and eggs laid at the beginning and ending of the laying period are not so apt to be fertile. No monstrosities should be used, such as those large enough for two yolks, or that are pointed at both ends. Ordinary, smooth, medium-sized, well shaped eggs should be selected. The eggs must be collected as soon as they are laid, in order to prevent them from becoming chilled, for extreme cold is fatal to the germ. Three weeks are as long as they may be kept with any certainty of incubating. Place in a basket or box of some sort without any regard to position, and cover with a cloth to check any draught that might strike them, thus preventing undue evaporation, and leave undisturbed until wanted.

## \$3.50 A GOLD WATCH for \$3.50

A perfect beauty. Highest grade 14k gold plate finish. Double hunting case, solid gold pattern. Elegant standard American seven jeweled movement, stem wind and set and absolutely guaranteed for 20 YEARS.

## GREAT BROOD MARES FOR MR. SAVAGE

"M. W. Savage, owner of the International Stock Food Company, has just bought seven mares for his International Stock Food Farm at Savage, Minn. Six of these are speed producers, the seventh is Miss Nutwood. These horses were bought from D. B. Whipple of Bowling Green, Ohio, who spent yesterday at the farm. Mr. Whipple says that this is to become the greatest horse farm in the United States. Natural advantages, equipments and the class of stock all tend to make this the record establishment. In bringing the new mares to the farm Mr. Savage has made a record, according to Mr. Whipple, in that it is the only farm in the world which has more than five 2:10 speed-producing mares.

The new ones are:

Belle, dam of Indiana 2:04½.  
Clara B, dam of Joe Pilot 2:09¼.  
Maude, dam of Martha Marshall 2:06¼.  
Argoso, dam of Argetta 2:08½.  
Columbine, dam of Capt. Brino 2:07¼.  
Dolly Swift, dam of The Swift 2:09¼.

Mr. Savage already had one, Lalla, dam of Kentucky Star 2:08, which brings the number to seven.

Mr. Whipple says that on his next trip he will bring his family with him to drink of the healing waters of the International Spring which is located on this farm and has a flow of 5,000 barrels per day. Its medicinal qualities he holds to be remarkable."—Minneapolis Journal.

## WHAT GOOD IS A LEAKY RUBBER BOOT

We can show you how to mend rubbers so they never leak again. Send name for free particulars A. J. GUSTAVESON, Berlin Bldg., Tacoma, Wash.

## No Cold Corners In Iowa Round Incubators

MONTGOMERY WARD & CO. CHICAGO

## SUMMER BLOOMING BULBS AND TUBERS

The average flower grower confines her list to Dahlias, Gladioli, Cannas and Lilies, overlooking many interesting and beautiful varieties, no more exacting in culture or expensive in price. Let us look into the merits of these comparative strangers.

## Anemone—St. Bridgid

This poppy-like flower should be in every garden, being perfectly hardy and extremely beautiful, both in foliage and bloom. Not only is it a summer bloomer, but if potted is one of our best winter flowers for house or conservatory. The stocks of bloom are from one to two feet high, bearing flowers of every shade of the rainbow, two or three inches across. As a cut flower it lasts for days in water. These plants may be started from seed, and will bloom the first season if given an early start; or the plants may be purchased from seedsmen. Although listed as a hardy perennial, this plant as well as most others of this class will do much better if given a winter mulch.

## Atamasco

The Fairy Lily, as it is popularly known is one of our finest summer bloomers. It thrives in any good garden soil, and being dwarf in habit and constant in bloom is much used for borders and edgings. Like the Amaryllis which it much resembles, it is admirable for potting. The colors are clear yellow, rose pink and pure waxy white; the latter may be had in bell-shaped form (candida) or star-shaped (Zephyranthis Atamasco.) The price is moderate, from 50 to 90 cents per dozen, bringing them within the reach of all. The general culture and care given gladioli will be all right for the Atamasco.

## Alstroemeria

The Alstroemeria is comparatively new, but rapidly gaining favor on account of diversity in colors, and markings which range from orange yellow, pink and scarlet marked with white or black, and its season of bloom, from July till September; just when there is a scarcity of really good flowers. The tubers should be deeply planted, six or eight inches, in well drained and moderately rich

soil and for the first winter should have some protection. After becoming well established they are perfectly hardy and increase rapidly. The best place for these lilies is in the herbaceous border where they will not be disturbed, only as it becomes necessary to divide the clumps. The flower stalks grow from two to three feet high and produce an abundance of bloom.

Butterfly Lily

white, butterfly-shaped flowers of delicious fragrance. The tuberous roots should be planted about three inches deep when in the open ground. It succeeds well, too, as a potted plant for winter blooming in common with the Canna and Iris.

Sanguinea

Another moisture loving, hardy, perennial is the Sanguinea. It is fond of high living too, and if planted where it can receive the kitchen and laundry slops it seems perfectly happy, and sends up a profusion of stalks from two to three feet high. The flowers are coral red or crimson, and contrast beautifully with the evergreen foliage which springs directly from the root. A charming cut flower for table or mantel decoration.

Montbretias

The hardy perennials are exceeding bright and cheerful, with flowers of yellow, pink, vermillion, crimson or orange, borne in long, graceful sprays. Care must be taken in setting to give shelter from high winds or the flowers will come to grief. Among the border plants they do well. Bulbs should be planted closely (about four inches apart) as the habit of growth is slender. A soil only moderately rich suits them best. The price, about 25 cents per doz., will allow of liberal planting. Best named sorts are Rosea—rosy pink with large full spikes; Golden sheaf—beautiful clear yellow; Star of Fire—bright vermillion and Tigridia—orange, spotted with brown in throat.

Tigridia

Our grandmothers couldn't have kept garden without their Tiger or Shell Flowers, beauties too they were, and are, with glowing petals of crimson, yellow, violet and white, variously blotched and spotted. The bulbs should be planted in May in the more northern states,

or earlier in the south; perhaps when the apple trees bloom would be about right. They commence to bloom in about six weeks from planting, and continue until frost. Late in fall the bulb should be lifted; do not shake off the soil, spread them on boards for a few days until dry, then tie in paper bags and store in a warm, dry cellar. The bulbs may be had in mixture, but named varieties are always more satisfactory as one is sure of getting the newest and best. In plain colors we have Immaculate—purest white; Canariensis—bright canary yellow, and Rosea—rose pink. Violet is one of the newer sorts and very handsome Conchiflora—yellow spotted with crimson and Conchiflora—Alba, white with purple spots are fine, as also is Grandiflora red, a glowing red spotted with yellow.

GARMENT CUTTING SYSTEM FREE

We have a few hundred of these systems still on hand, and will continue to supply them.

TREES, PLANTS AND VINES

Our readers should send to Green's Nursery Co., Rochester, N. Y., for their free catalogue beautifully illustrated, containing 112 pages, one of the largest and most complete catalogues ever published. There are over two hundred illustrations and the covers are lithographed. Green's Nursery Co. has been growing trees, etc., for twenty-five years and have secured a national reputation. They are also breeders of high grade poultry and dealers in agricultural and horticultural implements. Mention UP-TO-DATE FARMING when you write and see their advertisement on another page.

A HANDSOME BOOK

One of the finest things, in the way of printed matter, that we have ever seen comes to our desk from Stark Brothers. It is a catalog of trees, etc., showing the fruits in all their beauty. Twenty-two of the large pages are printed in color. Nearly every kind of fruit is represented. The big luscious peaches and pears look so tempting that we have a desire almost to eat the pictures. Readers will do well to send to Stark Bros., Louisiana, Mo., for catalog. Any one who is going to set out an orchard or plant grape vines should be sure to send. Mention UP-TO-DATE FARMING when you write and you will get good service.

REQUEST ADVERTISERS WANT TO

Know in what Paper their Advertisement was seen. Therefore We Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.

THE NATIONAL IS THE BEST IS THE CHEAPEST

No careful, economical farmer will continue to sow his seed by hand (the old way) when he can get one of these machines at our low price. They will save their cost daily in the saving of seed, to say nothing about saving of time and more even distribution, which will have a great effect on the crop. PRICE—\$1.50. Agents Wanted. J. A. EVERITT, Manufacturer, Indianapolis, Ind.

REMARKABLE WHOLESALE STOVE OFFER

ONLY \$1.65

Excelsior Steel Air-Tight Heating Stoves at Remarkably Low Prices

The "Excelsior Air-Tight" is a wonder. It burns wood, either dry or water-soaked. It will burn saw-dust, knots, chips, straw, hay, trash or coals—anything used for fuel excepting coal. The Excelsior is double lined for 12 inches from the bottom. The air is heated before it reaches the fuel, thus causing perfect combustion. This stove will produce more heat, on the same fuel, than any other stove in the world. Will hold a fire over night, and if wood is put in every ten or twelve hours will hold fire the year round. Wood is used in big chunks and does not require splitting.

SPECIAL OFFER We are enabled to sell these stoves direct to the consumer at less than many dealers pay —at wholesale prices. The only cheap thing about this stove is the price.

Number	Height Over All	Length	Width	Height	Price

### FUNNIEST SPEECH EVER MADE IN A MISSOURI COURT ROOM

In the case of Mrs. Sarah E. Mason against Sanford Freeman for \$25,000 damages for false arrest, Farmer Freeman made the queerest speech ever made to a jury in Kansas City. While Freeman was speaking men and women from every floor of the court house came in and filled the court-room. At times the jurors simply roared with laughter, and even the judge could not keep a smile off his face.

Freeman is tall, gaunt and awkward, with a wrinkled, sharp face, home-cut hair and a grizzled mustache. He stood up with his overcoat buttoned and said:

"Men, I am not a lawyer. I don't know much about law or courts. And I don't see why I'd ought to pay a lawyer to come in here and fight this case for me. I've got nothing to hide, anyway, and my notion of lawyers is that their strongest hold is in coverin' up things an' twistin' of 'em around. Now, I ain't goin' to do no squirmin' nor twistin' in this case. I'm going to stick to facts. My notion of court houses an' courts is that they're places for people to come an' have their fallin's out settled up fair an' square. That's what I'm here for. I help pay taxes to keep up the courts, an' can't naways see why I'd ought to pay a lawyer. I can't afford to, nohow. I'm just a poor farmer, one of these fellers the city folks calls a hayseed. I work hard for what I get. You can see that by my hands."

Here Freeman held out his hands, calloused and cracked by hard work, and turned them over slowly so the jurors could see them well.

"I ain't much for puttin' on style. It's true I try to wear tollable good clothes; that is, good enough for a farmer, so's my neighbors won't be ashamed to have me call an' see 'em. I'm sixty-five years old an' I've always worked hard for what I got. I admit that I never had brains enough to make a livin' as easy as these lawyers do. But you twelve men look to me like good square people, an' I'm willin' to leave my case to ye, no matter how much these smart lawyers gets up an' argefys after I'm done."

"Now I admit that I lied to this woman. That is, I told her I was a rich farmer. That was a lie, sure enough. It was as big a wallop as ever I old, an' I've told some in my time. I lied to her about that. My only excuse is hat I was red-hot to get her. I wanted her. An' I hold that all's fair in courtin' an' hoss tradin'. A man always puts his best foot forward when he's courtin' a woman. You men know that. You've all been thar, I'll bet."

At this the jurors fairly roared.

"I see the shoe pinches," the old farmer continued. "Of course, you've all lied to the woman you was courtin'. 'Twouldn't be natural if you didn't. So when this woman told me she was worth \$15,000, I wanted her bad. 'Twasn't her I wanted so much as her money. I tell you when I thought she was worth \$15,000 she looked mighty good to me, an' I told her I was rich, hopin' that would help land her. Of course, if she'd a married me, and found out I wasn't worth nothin' she'd a been mad, but then I'd been so good to her I'd a smoothed that all over. I'd a come nearer lovin' her nearly to death than any man livin'; that is, if she had the \$15,000."

"I tell you, men, and you know it, too, money comes purty nigh makin' any woman look good. A woman may have a hip knocked down or two or three splint knots and spavins, but if she's got money she looks as clean-cut and smooth-limbed as a young colt. 'Tain't hard to love a woman that's rich, an' that's a fact. Oh, you know it."

"Yes, sir, she looked mighty sweet to me till I found out she had nothin' on earth, an' then she didn't look so good. Her beauty jist seemed to fade away with that \$15,000, and I soured on her right there. Why, men I can get a woman to marry me any day."

Here the old man straightened up and threw his shoulders back.

"I'm sixty-five years old, but," he lowered his voice and bent near to the jurors,

"I'm purty tollable well liked by the wimmen folks yit. Yes, sreee. Old Sanford Freeman hain't too old to court a likely woman yit. But I'm too old to marry a woman jist for looks. She's got to have money before she can call herself Mrs. Sanford Freeman."

"So, men, when I found out that she didn't have nuthin' I jist nacherally went back on her an' demanded the \$45 she'd borrowed of me. When she wouldn't pay it I had her arrested. Maybe I hadn't ought to done that. If I had it to do over again I wouldn't do it. But hindsight is always better than foresight. Leastways I done it and I got my money back. I

made up my mind she was jist a smart city woman tryin' to fool an old hayseed; an' I guess I wasn't far away, hey!

"Now if you want to stick me why go ahead. I'd rather you wouldn't. I don't owe nobody a cent an' I'd like to keep on an' die that way. 'Twon't be pleasant to have a judgment hangin' over me. But it's up to you men. You look right an' square to me an' I'm guessin' right now that you ain't goin' to give an old farmer the worst of it jist because he told a few yarns to the woman he was a-courtin'. Think how it was yourselves when you was a-courtin' your gals. That's all I have to say."

## FAMOUS NOVELS BY POPULAR AUTHORS

### A CHOICE LIST OF BOOKS PUBLISHED IN A NEW AND HANDSOME EDITION.

The following list of books is comprised in a new and very attractive series, recently issued. Each is a large and handsome volume containing from one hundred to two hundred double-column octavo pages, well printed in good readable type, and bound in handsome illustrated paper covers. Included in the list are the most popular works of some of the most celebrated authors of America and Europe, and each book is published complete, unchanged and unabridged. It is the finest series of popular novels ever sold at the price, and our offer presents a grand opportunity to all lovers of bright and fascinating literature. Look the list over, and we are sure you will find therein a considerable number that you would like to read and own:

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

### CHAPTER XII—Continued.

Madame knew nothing of me except the request I made concerning Jerome, and sending the papers to the Austrian Arms. Florine went without delay to that place. This was about midday. Meanwhile Jerome, much troubled that I did not appear during the night, pursued our original plan of watching the house, and arranged his men at windows, and in the street, in such a way as not to attract attention. One of them had seen me working at the window but never dreamed it was I. Jerome found the house already doubly guarded by the Provost's men, so his infinite disgust. He was a handy chap though, and not to be outdone. Dressing himself as a clumsy out, he found little difficulty in worming the transactions of the night before out of one of the guards off duty. A drink or two together at the sign of the "Yellow Flag" fetched this information.

Jerome was much wearied through his long watching and anxiety when he returned to the Austrian Arms. The hostler at the inn turned him aside from the front door by a gesture, so that he entered by another way. Claude acquainted him that a lady in the public room desired to speak with M. Jerome de Greville, and would not be denied. Jerome's custom with visitors was to see them first in or no.

Peeping through an aperture he saw the lady walking impatiently up and down the room, tapping at the window, mending the fire, and expressing her haste in many other pettish manners so truly emine. It was Florine. He knew the girl well from his frequenting Bertrand's during this piece of business. Jerome sent her word he would be in, and changing his costume to one he usually wore, presented himself before her in the public room.

"Is it I you seek, M. de Greville, Mademoiselle?" he inquired, politely.

"Oh! Monsieur de Greville, it is you; I'm so glad," he came forward with a pretty air of perplexity and surprise, for Florine had a dainty woman's way about her, showing even through her present trouble. She bore herself more steadily than she had of to deal with some severe-faced stranger, but a allant gentleman, whose mien was not that from which timid maidens were prone to fly.

"Oh, Monsieur de Greville, I know not what to say, now that I am well met with you."

"And by my faith, Mademoiselle, I am sure no word of mine would grace those pretty lips as well as thine own sweet syllables. So I can not tell you what to say."

Florine pouted her dissent, yet was not in earnest ngered—she was a woman. Jerome saw her business lay deeper than mere jest and badinage, so he spoke her more seriously.

"I pray you Mademoiselle—Florine?—am I right? be seated."

Florine had no thought for gallantries; she declined the proffered seat, and standing, proceeded thence to the point of her mission.

"There is a young gentleman in our house," and she blushed a little. Jerome declared to me afterwards, "In Bertrand's wine room—you know the place? looked up, and I am not certain whether he was or is dead. I can not tell Monsieur his name, at you know him. Oh, he was kind to me, and I could willingly do something to save him. It is so hard to be only a woman. The Provost has the case guarded."

"I know it," Jerome put in drily.

"This gentleman gave your name and lodgings to the lady who was with him there last night, and she was who sent you the packet." Florine had run in a hurriedly, unheeding Jerome's blank look of astonishment. This was probably a shrewd guess on her part, yet it squarely struck the mark.

"Lady? Sent the papers? What lady?" Jerome asked before she could answer anything.

"That I must not tell, Monsieur. Oh, come, quick; get him away from there; if our people find him they may do him harm. Monsieur is a brave gentleman, friend of his, is it not true? Come."

Jerome drew the facts pretty well out of the excited girl, knowing somewhat of the circumstances and guessing the rest—all in an exceeding short space of time. Florine told him as accurately as he could in what room I lay, leaving him to locate the window from the street. From this point the man was simple enough. Jerome and Florine arrived at Bertrand's by different routes, Florine passing in unconcernedly, and Jerome, clad again in a stupid country knave, walked by the house to go over my outer window.

It was at this time that the falling of the spur conveyed to him the intelligence of my life and state of confinement. After this Jerome had to depend greatly upon the quick-witted woman.

It would be a long story, and a bootless, were I to tell how it fell out that Florine had a friend, the me kind-faced woman who helped her watch beside my bed; the window of this friend's garret room

opened almost directly opposite Florine's own poor apartment. Only a narrow, dingy alley lay between; so scant was the space the upper stories came near to touching across it. Florine's friend, after some tearful persuasion, consented to aid the rescue of such a gallant gentleman as I was described to be. The girl could come and go at will. The friend permitted Jerome and three of his men to hide in her room. From her window Jerome cast a light cord into Florine's window, she drawing a stout rope across with it, and made fast. It now became a trifling feat for these nimble adventurers to swing themselves across to Florine's room, but twelve feet or so away. Once inside Bertrand's they proceeded with abundant caution, all of which near came to naught through Florine's sudden shriek and my own nervous clamor. It shamed me heartily.

"Truly, comrade, thou hast good lungs," Jerome told me days afterward. "It took all our strength to shut thee of thy wind."

When the four men found me a helpless body in their hands, they were greatly troubled. However, Florine insisted that I be carried to her room where she could conceal me.

Once there they found means to truss me up like a bale of merchandise and sling me across the alley again, whence I was conveyed, still unconscious, through out-of-the-way streets to the Austrian Arms.

And so it was I came to my strength, safe in my own lodgings in Rue St. Denis, with Florine and her kind-hearted friend to nurse me.

### CHAPTER XIII

#### THE GIRL OF THE WINE SHOP

Youth and health do not long lie idle. Even while I lay recovering my health, Jerome and I were busy with our plans. Not the least unforeseen item in what had befallen, was the chance that carried me into a house where I saw again the "black wolf's head," which brought once more to mind the history of the d'Artins. But there was still to come that other happening, the one which bound my whole life, heart and soul, my love and happiness forever, in with the fortunes of that black wolf's breed.

As I grew stronger Jerome and I had a long talk. He told me the morning after I left him, which was Thursday, a veiled woman had brought him a pair of gauntlets, with the request that he preserve them carefully. Jerome naturally wanted to know who had sent such a present. The woman answered no questions, only impressed upon him the importance of keeping them himself and letting no one have them. She would not tell whence she came, and when she departed Jerome made a sign to Claude, who followed. He returned and reported she had entered the apartments of Mademoiselle de Chartres by a private way.

Verily this was coming close to the King, and to Orleans; these gauntlets coming from the house of this haughty Bourbon Princess. One of the gauntlets, of course, contained the papers taken from Yvart, the same I had confided to Mademoiselle la Princesse. I smiled my satisfaction that she had been so discreet.

The other packet Jerome found upon me when I was disrobed for bed.

It was many days before Jerome asked me for any details of my imprisonment, or how it came about there was a dead man in the room with me. I related the whole circumstance briefly as possible, who Broussard was, and all, to avoid further questioning. For I hated to dwell upon the occurrences of that night, yet ever returned to them with a sort of secret fascination.

"You choked him well, comrade," was Jerome's only comment, regarding the affair, yet I fancied I saw him shiver somewhat at the ghastly recollection of Broussard. The matter being thus dismissed we never spoke of it again.

"THE BLACK WOLF'S BREED" began in the September first issue of UP-TO-DATE FARMING. The nine back numbers containing the first installments will be sent for 25c. UP-TO-DATE FARMING, Indianapolis

LOUIS, MO.** We can assure our readers that Salvona Supplies Co. is thoroughly reliable and trustworthy.—Editor

handsomely decorated

Our fire burned warm, filling the room with a home-like glow, so with good wine and clear consciences Jerome and I drank and talked and stretched the lazy evening through.

"There is just one thing we can do, Placide, to put the finishing touch upon our success."

I turned an interrogative glance toward the speaker.

"That is to find out, if possible, who is back of this scheming. That fellow Yvard, dare-devil though he is, has not brain enough to concoct such a plan, even if he had courage and energy to fight it through. Depend upon it, some powerful person is behind Yvard. Most likely Madame du Maine. What say you to an adventure?"

My blood was in the humor for sport, the wine heated me somewhat, and reeking not of consequences I caught at his idea.

"Willingly, comrade, but what?"

"Let us to Sceaux, to Madame's court, and see what we may discover, for two fools like ourselves might perchance stumble blindly upon what a wise man would overlook," he continued with mock humility.

"Yes, and two fools like ourselves might perchance get themselves hanged for what a wise man would keep his skirts clear of. There's a peril in meddling with the affairs of the great."

"Seriously, now, I have means and ways of learning things in Madame's family. My head has been fast set on this matter for some time. If you agree to take the risk with me, you should know how we are to act. Now mind you," he pursued, rising and stretching his back to the fire, facing me, "mind you, I tell you all I want you to know, and you must promise me to make no inquiries on your own account."

By this time I had grown accustomed to trust de Greville, so I simply assented.

## For Kidneys, Bladder and Rheumatism

**New Discovery by Which All Can Now Easily Cure Themselves at Home—Does Away With Surgical Operations—Positively Cures Bright's Disease and Worst Cases of Rheumatism—Thousands Already Cured.**

### SENT FREE TO ANY NEEDY PERSON

At last there is a scientific way to cure yourself of any kidney, bladder or rheumatic disease in a very short time in your own home and without the expense of doctors, drugs or surgeons. The credit belongs to Dr. Edwin Turnock, a noted French-American physician and scientist who has made a life-long study of these diseases and is now in sole possession of certain ingredients which all authorities say will positively cure Bright's disease, diabetes, dropsy, gravel, weak back, stone in the bladder, bloated bladder, frequent desire to urinate, albumenuria, sugar in the urine, pains in the back, legs, sides and over the kidneys, swelling of the feet and ankles, retention of urine, scalding, getting up nights, pain in the bladder, wetting the bed and such rheumatic affections as chronic, muscular or inflammatory rheumatism, sciatica, rheumatic neuralgia, lumbago, gout, etc., which are now known to be due entirely to uric acid poison in the kidneys—in short, every form of kidney, bladder or urinary trouble in man, woman or child.

All this and more is explained in a 64-page illustrated book which the doctor wants you to have as well as a trial treatment of his discovery, and you can get them both entirely free, without stamps or money, by addressing the Turnock Medical Co., 561 Turnock Building, Chicago, Ill., and as thousands have already been cured there is every reason to believe it will cure you if only you will be thoughtful enough to send for it.

"A lady you know—it might get me into trouble," he further explained; with that I made myself content.

Jerome averted his face as if he would first frame his speech carefully before he gave it me. Here Serigny's final remark about making friends of the ladies recurred to me, and I wondered what this fair unknown had to do with such a rough game as we played. Before the hand was out, though, I understood now truly it had been said that women's wits now swayed the destinies of France. Since this day, too, our country has suffered much through women, when under the next, and more pliant Louis, they ruled with even a scantier pretense at concealment or of decency. Jerome spoke slow and guardedly, when he turned to me again. He began in a tone subdued by the intensity of his feelings—which, as I soon learned, were quite natural.

"I was a mere lad; I had a sweetheart whose family lived near our own in the vicinity of a certain small provincial town, it matters not where. She, much younger than I, shared all my childish games. It was the will of God that we should love. My family was rich, is rich; both were noble. I had two older brothers who stood between me and a title or wealth. Her parents were ambitious for her future; I was put aside. They sent her away, away from me, and married her here in Paris to a man she had never seen. A simple marriage of convenience, as we say here. Her heart was numbed and dead; it made no rebellion. I went to the army; gained nothing but my rank. My brothers died, and I being the next heir can live as it pleases me. Here I am in Paris; she is at Sceaux, two leagues away. I love her yet, and God forgive her, she loves me. Her old husband who is attached to the Duc du Maine cares nothing for her. She amuses herself half in idleness with the intrigues of the court. Nay do not look so black, Placide, for even this can be innocent enough. There is much excuse for her, too, my friend. A woman must needs have love to feed upon. They can never, like ourselves, fill their hearts entirely with ambition, with glory or with adventure. Men may make of their lives a cloister or camp and be content; but women, whatever else of gaud and glitter they may have, yet require love and tenderness and gentle sympathy beside. Happy is she who receives all these from her husband; and that husband treads dangerous ground who denies it to her. I see your wonder at hearing this from me; but I have thought constantly upon such things. Peste! this touches not our business; let us go on. Through this lady's husband, and by another source of information, I hope to find the truth concerning Yvard. Do you follow me?"

"Yes, but how?" I put in. "When I run my neck into a halter, I want to know whose hands are playing with the cord."

"Never fear for her. Madame—that is, the lady—has a firm hold upon the Duc du Maine himself, in fact she is quite indispensable to him. Don't ask me for more. Once let the Duc be made Regent, and my old-time sweetheart of those innocent days in Anjou will be the most powerful woman in France. But with all that, Placide," and the man's quivering voice went straight to the very tenderest core of my heart for the depths of bitterness it contained, "in spite of it all she'd rather be back in the country breathing the pure and peaceful air, a guileless and happy girl, than to live as she does, and rule the land. God knows I wish we had never seen Paris."

I held my tongue; there was nothing I could say. He felt his trouble keenly enough, and I refrained from molding my undesired sympathy into words. Directly, Jerome took heart and spoke again: "Those are the conditions, I merely make the best of them. There is still another friend of mine at Sceaux, the Chevalier Charles de la Mora, a most gallant soldier and kindly gentleman. Verily, they are scarce now in France. He has fallen into misfortunes of late and is about to take some command in the colonies. I love him much, and am sorely tempted to cast my lot with his. But, you understand why I stay," and he lifted up his hands with a gesture of perfect helplessness.

"His wife, Madame Agnes—almost a girl—is one of the most beautiful and clever women in France, and who, by way of novelty, loves her own husband."

Women are queer sometimes, are they not? Tomorrow we go to Sceaux; it will at least be an experience to you, even should nothing good come of it. Do you agree?"

My curiosity was thoroughly aroused, and scenting sport of a rare character I agreed to join the chase. It was judged best that we should make all things ready for an immediate journey to Versailles upon our return from Sceaux.

Before we slept, my few serviceables were put in position for instant departure.

## To Women Who Dread Motherhood!

**Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain**  
—Sent Free

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, post-paid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

## FREE HELP FOR THE SICK

### ALL DISEASES CURED

Are you sick? Do you want to get well? If so, this offer is of vital importance to you. I can show you the way to get well. It is the way I have proven successful in thousands of cases. I have on file letters from seventy thousand satisfied and grateful patients who have proven the value of my treatment by actual trial. If you could read a few of these letters telling of miraculous cures

Dr. JAMES W. KIDD

after years of suffering I would need no further argument to convince you of my ability. I have passed the experimental stage. I know what I can do. No matter what your disease. I have cured many cases of Consumption, Bright's Disease, Locomotor Ataxia, and Partial Paralysis, that other doctors pronounced incurable. No matter how many doctors or patent medicines you have tried. The majority of my patients had tried all these in vain before they came to me. I can cure you. This is a strong statement, but I am willing to show my faith in my own ability.

I will send you a free treatment. You can be the judge. If you are satisfied recommend me to your friends. I feel sure of my pay because I know what my treatment will do.

I have no specialty. I treat all diseases. Do not hesitate to write because some one has told you that your disease is incurable. Every organ of the body is a perfect machine and will work perfectly if it is supplied with the proper force from the nerves, and sufficient nourishment from the blood. I have learned how to supply this nerve force and blood nourishment. This is why I can cure when others fail.

I have associated with me the most eminent specialist in America. Tell us all about your case. No matter what your ailment, your correspondence will be considered entirely confidential. We will make a careful examination of your case. The free treatment will be prepared and sent you by mail postage paid. It only costs you a stamp. I can use no stronger argument to convince you of my ability to cure you than this. You have everything to gain, nothing to lose. Write today. Address my private office as follows, Dr. JAMES W. KIDD, 53 Baltes Block, Fort Wayne, Ind.

# SUPREME ELECTRIC BELT FREE

## IT IS YOURS

for the asking without one cent of cost.

This is no deposit scheme; no 30 days trial scheme.

You simply send us your name and address and we send you the Belt. It is yours to keep forever and we under no circumstances ask for or accept any money for it either now or in the future. Five minutes' trial will prove to you its power, a week's wearing of it will convince you of its merits, giving to you the strength and happiness which is your birthright. Many forms of

**NERVOUS, RHEUMATIC, KIDNEY AND LIVER DISEASES**

also Lumbago, Lamé Back, Indigestion, etc., yield at once to its magic influence.

We give it away free to all who can be cured by the one great curative agent, Electricity. After you are cured your friends will each want one and from these sales we will make our profit.

Be a strong, vigorous man among men. This generous offer may be withdrawn at any time, so you should write today for the "Free Supreme Electric Belt."

**IT WILL CURE YOU! Address:**  
**PHYSICIANS' INSTITUTE,** 1788 Unity Building  
 Chicago, Illinois

When I arose in the morning Jerome had already left his bed. I supposed it was out of consideration for what he was still pleased to consider my weak condition that he refrained from waking me. Claude came tripping in later with the message that M. de Greville had gone to make some last arrangements for our journey. I slept so restfully through the night my fatigue and all unpleasant reminders of the episode at Bertrand's had quite worn away, and I felt refreshed and strong again. When Florine came to inquire for my health she found me busied about the packing. I greeted her kindly, for in truth my gratitude was deep and sincere.

"Monsieur is preparing to leave?" she asked as if more than afraid of a reply. I could see she had some purpose in the question.

"Yes, I leave Paris to-day."

"To-day?" she echoed.

Yes, but I would return and find you again; I could not depart from France without finding and thanking you for all your kindness. In truth I am glad you came, for— "I tried to say more, but the words left my lips sounding so cold and meaningless the sentence died away incomplete.

Florine stood there, vaguely watching me as though she did not understand.

"Leave France?" she repeated, her tone expressing the hope she had not heard aright.

I had already said much more than I intended, for I was not fully aware of Jerome's intentions, and desired to say nothing which would reveal them.

"Leave France?" she urged again, "Monsieur—" she halted for the word quite naturally.

"De Mouret," I supplied, and for the first time she knew my name; surely it was little enough to trust one with who had given me my life.

"Monsieur de Mouret is to leave France?"

"Yes," I answered her truly, "but not today, possibly not for several days. I would not go away without seeing you again."

I felt my tone become warmer as I thought of all this girl had risked for me, and so blundered on uncertainly. What was I to do? What could I offer her in repayment? Not gold; she had refused that with the air of a grande marquise the night she first helped me from Bertrand's.

Heartily wishing for some of Jerome's finesse and tact, I gazed at her, stupid and silent, watching the tears gather in her eyes. I could only guess the thought which was passing in her mind, and even then I was wrong.

"Oh, Monsieur!" she spoke as from the fullness of her heart, while her voice trembled with excess of emotion, "Monsieur is going back into the great world; Monsieur has honor and fair fame; I must return to the wine shop."

The poor girl must have been wearied out with her watchings by my bed, for she burst into such an uncontrollable weeping as I vainly would have prevented. I did my rough best at comfort, but had to let her sorrow run its course.

"Oh, Monsieur, think of it! I must go back to that dreadful wine shop, to the gaming tables; must continue to draw men there to be despoiled of their money, perhaps of their lives; must laugh and be gay, though my heart break at its own debasement. There have been many, ah, so many, I have lured to that place; and it came so near to costing you your life—you who were so kind to Florine."

She had sunk to the floor, and catching my hand poured out all the bitterness of her heart.

### WONDERFUL DISCOVERY

Tyron, N. C., April 29, 1902.

Fleming Bros.: I wish to tell you that the Fistula Cure I bought from you has proved thoroughly satisfactory. It is a wonderful discovery. All the horsemen know of nothing but the knife as a cure.

R. & W. ALLSTON.

### TAKE CARE OF YOUR EYES

There are no organs of the body as delicate as the eye. Every person should take good care of their eye, and if anything goes wrong with them they should at once put themselves under the care of a specialist. There is a famous eye doctor in Chicago who has been advertising in UP-TO-DATE FARMING for some time. Dr. Oneal has published a book about eye diseases which should be in the hands of every reader. "It is printed in colors, containing new pictures of the doctor and much valuable information regarding the care of the eyes, diet, exercises, baths, etc. Dr. Oneal writes us that he will be pleased to send this book free of charge to any reader of our paper who is interested enough to write for it. A postal card will do. If you or any of your friends have any form of eye disease or trouble, the book will be interesting and a valuable aid. The doctor will also go a step further and write you a personal letter of advice, entirely free of charge, if you will write him a history of your case in your own words as you understand it. We know the doctor personally. He has been advertising in our columns for some time, and we can vouch for his entire reliability. Ordinarily our guarantee would cover this point, but we wish to state for the satisfaction of any who are in doubt, that we have never had a single complaint regarding Dr. Oneal. He treats patients all over the world, and thousands of our readers have placed their cases in his hands. Of course he does not guarantee to cure all, but he always fulfills every promise, and will not take a case unless there is hope of benefiting it, and he certainly does cure when others say there is no hope. Write for the book today to Dr. Oren Oneal, Suite 906, 52 Dearborn St., Chicago.

### A GOOD THING TO HAVE

We refer to the Garment Cutting System which is offered to Up-to-Date subscribers. Did you see it in the December number? Just think of a reliable system for dress and garment cutting and a year's subscription to this paper for only fifty cents.

What a grand thing it would be to get a number of your neighbors to join with you and get them even cheaper. Then organize a Sewing club in your neighborhood, getting as many ladies and young girls to join as possible. A nominal fee, say 25 cents per member, would pay some one skilled in the art of cutting and fitting to give practical demonstrations and instructions. How few women know how to properly cut and make their own or children's clothing, yet the art is within the reach of all. The world is full of indifferent piano drummers who have devoted hours to practice every week of several years of their lives. Why not make a systematic business of learning to sew, crochet, knit, cook or do laundry work after the most approved methods. You couldn't put the District school house to better use than to organize clubs of various kinds to meet there during these long winter evenings. Choose some one of your number who excel in cooking to preside over the cooking club. Choose a special subject, as bread, cakes, meats, etc., for each meeting and exchange experiences, bringing samples of your cooking to compare with that of your neighbors. You will be surprised at the interest the girls will manifest in the housework if they have it presented to them in a bright way. The social pleasure will do you all a world of good too, and you will find any number of jolly helpful friends among the neighbors you so seldom meet.

### EVERY LADY READ THIS

Years ago when I was a sufferer an old nurse told me of a wonderful cure for the diseases of women. It cured me in one month. It is a simple, harmless lotion, a positive cure for all dangerous and annoying ailments in women. It can easily be prepared by anyone having the recipe. I send it free to every suffering sister who writes me. Address Mrs. D. L. Hudnut, South Bend, Ind.

## RHEUMATISM

Prof. Watson's New Remedy Is Curing Thousands—The VIBRO DISC Method a Wonderful Success

Sufferers Who Want Quick Relief Get a Free Treatment For the Asking

Everybody is talking about Vibro Discs. Even the folks who never had Rheumatism know well that this cruel malady was but rarely cured by the doctors. In the popular mind it is associated with unyielding pain, incapacity and hopelessness. Hence the wide-spread astonishment that a genuine cure

had been found and that a new scientific principle, known as "Vibro-Absorption" was curing even the cases that drove medical men to despair. Wonderful as all this is it is strictly true. What my Vibro Discs have thus far done is but a fraction of the good they will do when more generally known. This is now the aim of my life. I want Rheumatic sufferers everywhere to learn that they are welcome to a Free Treatment. When a remedy is entirely new and different from all others, many are slow to believe in it until they try it for themselves. I want nothing more. For my own name's sake and for the greater glory of Battle Creek, I shall send free Vibro Discs to all who write me. Not one cent of cost, only take them and use them and get quick relief. Prof. S. Malcolm Watson, Dept. 19, Battle Creek, Mich.

## RHEUMATISM

### CURED THROUGH THE FEET

Thousands are Cured at Home Every Month by MAGIC FOOT DRAFTS.

Why not You?

Try Them—FREE

The Drafts cured Mrs. W. D. Harriman, wife of Judge Harriman of Ann Arbor, Mich.

They cured H. C. Van Valkenburg, Providence, R. I., of an intensely painful case of muscular rheumatism.

They cured severe rheumatism of the arms, neck and back for T. C. Pendleton, Jackson, Mich.

Mrs. Caspar Yahrdsorfer, Jackson, Michigan, 70 years old, was cured in a few weeks, after suffering 30 years.

The Drafts cured James Gilbert, Locomotive Dept., Mich. Cent. R. R., Jackson, Mich., after 27 years of pain.

Dr. Van Vleck, Jackson, Mich., writes that they cured him and he is now using them in his practice.

They have cured hundreds of cases probably just like yours. Isn't the chance worth taking? You try them free. Send us your name. We will send you by return mail a pair of Magic Foot Drafts—prepaid. If you are satisfied with the comfort they give you, send us One Dollar. If not, you send us nothing. You decide. Magic Foot Drafts are worn without the least inconvenience, and cure rheumatism in every part of the body by stimulating expulsion of acid poisons through the great foot pores. Splendid booklet, illustrated in colors, free with the trial Drafts. Don't suffer, but write today to the Magic Foot Draft Co., G. A. 2 Oliver Bldg., Jackson, Mich.

## FITS CURED

# A GEOLOGICAL DISCOVERY.

**A NATURAL MINERAL ORE, mined from the ground like Gold and Silver possessing remarkable medicinal power AND HEALING VIRTUES**

## Personal to Subscribers

WE WILL SEND to every subscriber or reader of UP-TO-DATE or worthy person recommended by a subscriber or reader, a full-sized One Dollar package of VITAE-ORE, by mail, postpaid, sufficient for one month's treatment, to be paid for in one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and dopes of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. Vitae-Ore is a natural, hard, adamant, rock-like substance—mineral—Ore—mined from the ground like gold and silver in the neighborhood of a once powerful but now extinct mineral spring, compared to which the springs of the present day are but pygmies. Whose waters, impregnated with the healing and medicinal qualities of the Ore found at its base, no doubt sprouted for centuries before the foot of man trod the Western Continent. It requires about twenty years for oxidation. It contains free iron, free sulphur and magnesium, and one package will equal in medical strength and curative value 800 gallons of the most powerful, efficacious mineral water drunk fresh at the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration and General Debility, as thousands testify and as no one answering this, writing for a package, will deny after using. Vitae-Ore has cured more chronic, obstinate, pronounced incurable cases, than any other known medicine and will reach such cases with more rapid and powerful curative action than any medicine, combination of medicines or doctor's prescriptions which it is possible to procure.

Vitae-Ore will do the same for you as it has for hundreds of readers of this paper, if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitae-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement and will do just as we agree. Write today for a package at our risk and expense, giving age and ailments—and mention this paper, so we may know that you are entitled to this liberal offer.

### READ

#### What a Minnesota Pioneer Says of This Remedy

**SUFFERED FOR YEARS—DISEASE PRO-  
NOUNCED BY DOCTORS "CANCER  
OF THE STOMACH"**

BROWNSVILLE, MINN.

I wish to notify you and my ailing mankind that I was suffering for many years, especially during winter, when I could not leave the room for months and could not do my work; neither could I do my work in summer, for I felt pain if I exerted myself the least bit. The pain was mostly in my stomach, but the heart was also affected. I consulted several doctors; one told me I had Consumption, the other that I had Liver trouble, and the third that I had Heart disease, but none of them helped me. I also tried different patent medicines and electric belts, but with the same result—temporary relief and then it was the same again. Every fall I thought that I would not live to see spring. It finally became so bad last winter that I once more consulted a noted doctor, who pumped my stomach and examined it carefully and then declared that I had Cancer of the Stomach and that he could not help me. He also said that I could live only a few months longer. I then read about Vitae-Ore in THE UP-TO-DATE, which I have taken for many years, and just like one drowning, grasps at a straw, so I grasped for the medicine. I hardly had any confidence in it, but thought I will try it in God's name and if it does not help it surely cannot harm, and look here: After using V.-O. for two weeks I felt an improvement, and after I had used the entire package I could do some work. Then I sent for another package and after using the same I could help along with any kind of work. I even helped along during harvest-time and in making hay, and this winter I feel better than a long time before, and then, too, I am sixty-one years old now. If there is a medicine that can give one new life and new energies it certainly is Vitae-Ore. I am indebted for my life to God's assistance and to this medicine.

JOHN HEMBD.

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health, or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. Address

### A BARREL

Of Vitae-Ore is not necessary to convince you that it is the best remedy in, on or out of the earth for ailing people, to prove to you positively that it will cure your ills, as it has the ills of so many others. One ounce of the Ore (one package) mixed with a quart of water, one month's treatment, is all that you need for the test, all the evidence we want to submit, and we want to send it to you at our risk. You are to be the Judge! One month's treatment with this natural remedy will do for you what six month's use of other advertised treatments cannot. If it does not, you to decide, we want nothing from you!

## CONTROLLED MARKETING

From The Third Power.

"Suppose some fall Mr. Hill or Mr. Leeds were to back his cars up into the wheat country, after having made every arrangement to transport the crop, and should find that there was no wheat to carry; and suppose the railroad president should find that the farmers had all resolved that they should not let go of their wheat for less than a dollar a bushel. If this

resolution were backed by a national organization, the consequences for the railroad and the consumers would not be pleasant.

As for the speculators, they would not find life wholly pleasant under the proposed conditions. When, to return to Mr. Norris's book, Curtis Jadwin tried to corner the wheat supply, he was beaten by the new crop which came pouring in. Here is how it happened:

'And the avalanche, the undyked ocean of the

*Up-to-Date Farming*

# \$1,000.00 Do You Want it Christmas 1904

## THE CAMPAIGN FOR PROFITABLE PRICES

IS ON The A. S. of E. wants to put prices for 1904 on such a basis that each farmer who farms 160 acres will receive \$1,000 more than he does under the present system. To do this, each farmer and friend of farmers must help. We want the "Million United," but great results can be accomplished while the Million are coming.

The farmers are getting great benefit now through the A. S. of E. The papers are full of this plan of co-operation by farmers. Dollar wheat and Equitable prices for farm crops are among the important questions of the day. Even other farm organizations begin to talk about co-operative selling as well as co-operative buying. All these things have been brought about by the American Society of Equity. It is the only farmers' society that stands for everything the farmer needs, and the only one that has a practical plan to accomplish its objects.

## WE WANT 10,000 VOLUNTEERS

SELF TO GET TEN OR MORE MEMBERS FOR THE A. S. OF E. IN 1904. The women can help as well as the men, and they will be benefited as much as the men in the triumph of this great movement. This is a very small number. You can easily do it. These ten you send you will be asked to get ten more, and so the army will grow. If you cannot be a DEPUTY PRESIDENT OR ORGANIZER, you can be a SOLDIER who can enlist ten of your neighbors. To any person who will pledge himself or herself to secure ten or more members in 1904, we will send ten or more signed and numbered certificates, and an equal number of emblems or badges, and our famous War Cry Postals with full particulars. The members may be secured on any of the offers printed in this or future numbers of Up-to-Date Farming. Sit down and figure what it will mean to you in 1904 if you get such a price as you should have for all the grain now in your graneries and cribs, all the stock in your stalls and pens, all the produce in your pits or cellars, and all you will raise in 1904. Will you help yourself to get what you are entitled to receive, but which is often withheld? **IT CAN BE DONE. IT WILL BE DONE.** The only question before the farmers is: Will it be done quickly or will they suffer the wrongs of the old system a few years more? Fill out the ticket, cut out and send at once. This costs you nothing, but it means \$1,000 more at the end of the year than you will have if you don't help in this movement.

### CUT OUT

I hereby pledge myself to send ..... (write number 10 or more) members to the A. S. of E. in 1904. You will please send all promised and full particulars.

Name.....

P. O. .... State.....

## CO-OPERATION BY FARMERS

HAVE you ordered a "Third Power" book? We have one for you. Send order today. Read what this farmer thinks of it.

Mr. J. A. EVERITT,  
Pres. A. S. of E.

DEAR SIR:—The book, "The Third Power," is worth its weight in gold to the farmer of America. It should and certainly will immortalize you in the estimation of this and future generations.

It is the only book I ever read in which I could not detect some selfish motive, exaggeration or untruth. Could the important truths told in this volume be impressed upon all, the so-called agriculture millenium would develop into noonday. It is astonishingly strange how little the principles of free government are understood, not only by the general public but by those who pose as leaders and teachers. I would not be deprived of the valuable information contained in this "Gem of the Library," for any money consideration. I have boys now merging into manhood and in this, if I can leave them nothing else, I will at least leave them a legacy far superior to dollars and cents.

J. M. DUNLAP, Vicksburg, Ky.

## HOW TO & WITH WHAT RESULTS TOLD IN THIS BOOK

### SPECIAL OFFERS

**NO. 1. FOR 60 CENTS** and return of below coupon we will send UP-TO-DATE FARMING one year and a paper cover copy of "THE THIRD POWER" all postpaid.

**NO. 2. FOR \$1.10** and return of below coupon we will send UP-TO-DATE FARMING one year and a copy of "THE THIRD POWER" bound in handsome cloth, all postpaid.

**NO. 3. FOR 50 CENTS** additional we will enroll you as a member of The American Society of Equity, send certificate, emblem, etc.

**NO. 4. FOR 30 CENTS** send the rare and valuable seeds and the due bill for 25 cents worth of seeds as offered on page 33 of this number.

**NO. 5. 'A SUGGESTION'** If you will add 20 cents to the last offer it will entitle you to another year's subscription to UP-TO-DATE FARMING, which will be sent to any address you give. These offers are good for new subscribers or renewals.

### COUPON (Cut out)

MR. J. A. EVERITT, Pub.  
You will find \$..... enclosed for which please send offer No. .... as printed above, in January 1st number of UP-TO-DATE FARMING.

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
AT 227 WEST WASHINGTON STREET

Entered at the Indianapolis  
Post-Office as Second Class Matter

VOLUME 7

INDIANAPOLIS, FEBRUARY 1, 1904

NUMBER 3

## UP-TO-DATE FARMING

OFFICIAL ORGAN OF THE AMERICAN SOCIETY OF EQUITY OF N. A.

PUBLISHED SEMI-MONTHLY

J. A. EVERITT Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club, (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2 - for \$ .75  
A Club of 3 - for 1.00  
A Club of 10 - for 2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept  
Your Own Subscription 2 yrs. for \$ .75  
3 " " " 1.00  
For Membership in the A. S. of E. add 50 cents to any offer.

The emblem of the A. S. of E. as shown above, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgment.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. Don't Neglect This. See Special Subscription Offers elsewhere in this number.

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent. discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of January 1, 1904 Circulation

Indianapolis, Jan. 5, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the January 1, 1904 number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum, State of Indiana. Before me, Charles E. Brigham, a Notary Public personally appeared S. E. Cullum and swears to the foregoing.  
[Seal] Charles E. Brigham, Notary Public.

"This day I will do something for co-operation by farmers." A good thought to begin each day with.

If you receive more than one copy of this paper please hand the extras to your neighbors.

The most important thing for each individual to realize is that he or she is of some importance in a co-operative movement.

To Mr. Wilmer Atkinson, editor of Farm Journal, Dear Sir:—Please apply profitable prices to "Farmer's Problems," and you have the key to their solution. Try it. Yours truly, Editor Up-to-Date Farming.

This is presidential election year. Will politics be first with farmers, or will the farmer's business be first? Will farmers stand up for the politician this year or for farmers; will they dig up for the speculators trusts and office men or for themselves?

The publisher of Up-to-Date Farming believes he can do farmers more good by fighting their battle for equitable prices than in telling them how to grow more stuff. In this respect this paper is different from any other paper published. We hope you approve of our course.

The conditions that allow, make possible, or make necessary, the tramp, the few rich, the many poor, the girl in factory, the boy in shop, the scarcity of farm labor, the hard work of farmers, the uncertainty of values, the dishonest office holder, graft and boodle; must be changed. The third power will change them.

What's the use of contending for the open door in Asia for our agricultural products when we maintain, to a very large extent the closed door in our own country. With food adulterations and excessive prices imposed by manipulators and combination's, the home market is reduced many per cent on some important lines. Farmers remove these barnacles before you spend your effort thousands of miles away.

Farming has existed for two or three thousand years at least. In that time no individual, class or government has volunteered to make profitable prices for farm products. All agree that the farmers problems will be solved only through profitable prices; therefore, are you willing to wait two or three thousand years longer or will you get in line and push and pull for your own business?

**VERY IMPORTANT.** We receive many letters—many of them containing orders—which are badly written, and some without complete address. We caution our readers to be very careful about such things. Also, when you change your postoffice, notify us at once, giving new and old. When you send us names send separate from your orders. Also, ask questions on a separate sheet from orders. As all these things are VERY IMPORTANT, won't you read it over just once more?

Cardinal Wolsey, in his last days, exclaimed, "If I had served my God as I have served my king, he would not in my old age have deserted me." Well may the farmer exclaim, "If I had served myself as I have served my political party, there would not be any serious farmers' problems now." But a new era is dawning. Over 60,000 farmers have agreed to serve themselves first, their party second, and we believe the number will swell to a million in a comparatively short time.

### A TALK TO SUBSCRIBERS.

There are various ways to increase the subscription list of this paper. We make various offers in each issue. Some include premiums. We don't like to offer a premium to induce any person to take a paper on which we have spent as much thought as we do on Up-to-Date Farming. It is the fashion, however, to do it, and the public has become so accustomed to it that it is difficult to maintain or increase a subscription list, no difference how valuable the contents of the paper, without the extra inducement of premiums.

### WAR CRY CARDS.

Our most successful method is the War Cry Cards, which we still offer with a modification or addition of a pledge to secure ten or more members to the A. S. of E. (See particulars elsewhere.) We want 10,000 volunteers who will pledge themselves to send ten members to the A. S. of E. this year. Ten or more people can easily be enlisted in this great movement in any neighborhood. The War Cry Cards can be used on any subscription offer we make. For fear you may not find the pledge elsewhere, we will print one right here, where we know you will see it. Cut it out and send to the publisher of this paper at once and receive ten War Cry cards, ten beautiful certificates, ten badges, with other supplies and full particulars. This won't cost you a cent. Parties holding old War Cry cards will please use them and send in as soon as possible.

#### CUT OUT

I hereby pledge myself to send ..... (write number 10 or more) members to the A. S. of E. in 1904. You will please send all promised and full particulars.

Name.....

P. O..... State.....

Street or Rural Route.....

"STOP MY PAPER." This demand comes from Mrs. Lillie Rempis, Waterloo, Ind. She gives her reason as follows: "We have failed to get any benefit from the A. S. of E. If we could see that we have been benefited we would stay. Until we do we will stop." This is the first person who has stopped their paper for such a reason. Mrs. Rempis lacks necessary patience. It requires more than twelve months to build the machinery of co-operation for farmers. We believe the majority of our subscribers would wait ten years, if necessary. It is very certain if they have no more patience than this lady it will never be built. Also, when it is built we can get along without Mrs. Rempis' help. However, farmers have received benefit. The benefit that has resulted to the farmers of this country cannot be estimated. Millions of dollars have been made for them in the stiffening of prices all along the line. The influence is even felt in foreign countries, as evidenced by the following foreign dispatch printed in the daily papers Jan. 14th:

"Liverpool, England, January 13.—Broomhall's Corn Trade News says: Farmers' holdings in several countries are undoubtedly large, but the agriculturists as a rule are more prosperous than they have been for many years, and we have never heard of a more tenacious holder than a prosperous farmer."

"The international market has witnessed some little activity since we last wrote and prices have tended upward, for, in spite of heavy prospective supplies there is a feeling that in view of the uncertainty of the future in the far East it is not wise to be short of wheat. Current prices can not be considered high, seeing that stocks in commercial channels are quite moderate, smaller indeed, than they have been for ten or twelve years, with the exception of the years immediately preceding and subsequent to the Leiter corner."

#### THE THIRD POWER.

We don't think it is possible to place one of these books without converting the reader to the plan of co-operation by the A. S. of E. In some cases a book bids fair to convert an entire neighborhood. We have sent out several hundred on consignment. Many have been remitted for, some remain unreported, and just one has been returned, with the explanation that the receiver had quit farming. We cannot too strongly urge every person in any way interested in agriculture to read "The Third Power." Organizers and deputy presidents are ordering them in quantities, and we urge, in fact insist, on them always carrying a supply with them. See offer elsewhere in this number.

#### THREE MONTHS' SUBSCRIPTIONS.

To convert people to the plan of co-operation for profitable prices we will accept three months' subscriptions (six copies) for 10 cents, and stop the paper at the end of that time unless renewed for a year.

To people who receive this paper as a sample copy, we invite you to take it for this short term and learn more about the beautiful and good movement it is organizing. Deputy presidents and organizers should see that the people they want to get as members are supplied on this basis.

#### 1,000 DOLLARS—DO YOU WANT IT?

Elsewhere in this paper we attempt to show how any person farming 160 acres of land can have \$1,000 more next Christmas if he follows the advice of Up-to-Date Farming; and in this proportion if he farms more or less. When farmers receive what they are justly entitled to, our prediction is bound to be realized. We hope a few farmers will not conclude that conditions are good enough because they have splendid farms and get large yields. Every person should consider agriculture from the average standpoint. We must make it possible for the average individual in every industry to succeed. Then the superior individual will need to stand a comparative surfeit of prosperity, and there will still be some poor fellows at the bottom who on account of poor farms or poor management will not find prosperity.

Our advertisers are a great factor in the work Up-to-Date is doing. The amount they pay for advertising space helps the campaign along. We hope our readers will patronize them liberally and always mention Up-to-Date when writing.

#### FARMERS DEMAND HELP.

It is clear that farmers are rising to demand help from their farm papers to secure equitable prices. Read letters in this issue and in issue of Jan. 15th. Many more have come to our notice that we have no space to print. This is right. Keep up a steady fire all along the line. The A. S. of E. wants their help. This society is as much for each and all farm papers in the country as it is for Up-to-Date Farming. This paper claims no monopoly. It wants none. It wants this plan tried. It is to the interest of every publisher and editor of farm papers in the country to come forward and help. We will meet them more than half way. If an advisory board composed of the leading publishers of the country had charge of the organization work the plan could be tried on the 1904 crops. However, if the farm press won't help, don't think we will fail. We will not fail, and in the fullness of time the dangers, pitfalls and stumbling blocks will all be removed.

The following papers oppose the attempt by farmers to control marketing to secure profitable prices:

Ohio Farmer, Cleveland, Ohio.

Michigan Farmer, Detroit, Mich.

Farm, Stock and Home, Minneapolis, Minn.

Farmers' Guide, Huntington, Ind.

The following are waiting for more light:

Farm Journal, Philadelphia, Pa.

Farmers' Call, Quincy, Ill.

We don't advise that any subscriber cancel his or her subscription to these papers until the publishers have had abundant opportunity to understand the plan of the A. S. of E. A copy of "The Third Power" will be sent to each of them before this issue is mailed and thus they will have abundant opportunity to decide if they are for or against the farmers in this movement to elevate their business, and remove all their troubles. These things must come through profitable prices. They should consider the prophesy of a man well-known to all of them as follows:

"Mr. J. A. Everitt, President: The writer is waiting with considerable interest for a copy of "The Third Power," which please send. There is no doubt in my mind that the time is coming, and coming faster than either of us anticipate, when the agriculturalist will have his inning in this country to an extent that perhaps we have never ever dreamed of."

JOHN E. BEEBE,

With Mahin's Advertising Agency.

Chicago, Jan. 13, 1903.

#### A PETITION.

We have received the following with the request to publish:

"For obvious reasons public servants cannot be expected to increase their own salaries. No advance has been made in the pay of Members of Congress and general officers of the government to keep pace with the heavy increase in cost of living and the universal increase in wages throughout the country.

"The people are the employers and expect a high grade of ability in their public servants, but pay them less than such servants can generally earn in private life.

"A petition signed by citizens without regard to politics will go to Congress recommending a revision.

"This is intended as an acknowledgement, by the people, of their appreciation of the value of the public servants and will furnish some reason for Congress to treat the subject and avoid criticism from either political party, particularly in view of the fact that no advance is to be made until after the next election, the result of which cannot be foretold.

"Readers favoring the movement can cut out, sign and mail this petition to "Sentry Box," 825 Vermont avenue, Washington, D. C., a non-partisan Bureau not conducted for profit. The integrity of its acts is guaranteed by its founder, a man of international repute in commerce and finance.

"We the undersigned respectfully petition the 58th Congress to fix the salaries of the following government officials at the amount indicated under the column headed "Proposed Salary" to take effect December 1st, 1904.

	Present Salary.	Proposed Salary.
President .....	\$50,000	\$75,000
Vice President .....	8,000	15,000
Each Cabinet officer .....	8,000	10,000
Chief Justice .....	10,500	15,000
Associate Justices .....	10,000	12,000
United State Senators .....	5,000	10,000
Members of House of Representatives...	5,000	7,500

Signed .....

Farmers it is with you. If you have received the consid-

eration your number and the importance of your business is entitled to—or if you can say “Well done, thou good and faithful servant,” we advise you to sign and send the petition as “an acknowledgement by the people, of their appreciation of the value of the public servants.” If on the contrary, you think you are bearing more than your share of taxation; other industries are promoted and protected while yours is neglected; other classes get the plums of office while you eat sour grapes, write your congressmen that you will vote for an increase of salary when you get certainty and equity in your prices. Write to your congressmen to help you secure equitable prices always for your crops and you will see that they get a raise of salary.

*We told you so. Farmers we told you last May 26, that the 1903 wheat crop would be worth \$1.00 per bushel, and have preached it ever since. It looks like it was almost realized as we close this paper. If more farmers would have taken our advice, dollar wheat would have been here months ago and they would have been well repaid for their faith,*

**The Third Power. The farmer power. The greatest power. The power for good for all. Let us make it a real power.**

Farmers to the front.

Why should farming not be as profitable as manufacturing, merchandising and banking?

When agriculture is raised to the level where it belongs, farming as a profession will equal the doctors, lawyers or any others.

The official vote on election contest is announced in this number.

There are many good things in this paper that the reader will never know unless he determines to read every line.

*Read this paper from the first line to the last. If you then feel that your time was lost, send us a bill for its value and we will cash it. If it has paid you a dividend give us credit.*

See elsewhere in this issue for a brief outline of the object and plan of the A. S. of E.

#### FARMERS, KNOW YOUR FRIENDS.

None are so blind as they who will not see.

None are so ignorant as they who will not learn.

It is a serious question with us whether we shall ignore the attacks on the American Society of Equity by other farm papers or reply to them. It seems a waste of time and space to teach those who should be teachers, yet to let their utterances go unchallenged may be taken as an evidence of weakness in the farmers' movement. There are no points in the plan or objects of the A. S. of E. that can be successfully assailed. There is nothing that it proposes that will be criticised by fair-minded people; hence we ascribe the attacks that have been made on it as the result of ignorance of its plan. We reprint articles below and make some comments on the same. We will let farmers judge for themselves.

If the farmers want to try to control marketing, and thus compel equitable prices, we cannot imagine why any editor of a farm paper would forbid them or discourage them to make the attempt. We have never guaranteed that it could be done. We have said, “We believe it can be done,” and we are more firmly convinced now than ever before that it can be done. The expense of trying it (50 cents or \$1 for each farm) is not going to seriously disturb the financial status of any farmer, while if the plan works out as predicted they will make this back a thousand times on the average farm each year.

Wallace's Farmer, Des Moines, Ia., has the following under the head,

“An Iowa correspondent writes us that he is tired of reading about better farming, cowpeas, and rape, muscle-making crops, and would like us to leave off that kind of talk and tell the farmers how to combine. He tells us that his idea of the farmer's duty is to raise less and get pay for what he raises. Hence, he wishes us to take the lead and organize a farmers' combine or trust. He sends us a clipping from his favorite farm paper, which is working this idea to build up a circulation, in which the thought is stated that ‘the farmers don't want to know how to raise more wheat now, but to get more for what they do raise,’ and prays the good Lord to preserve them from the false teachers who urge them to raise more wheat on fewer acres and let the remaining acres grow grass.” The name of “his favorite farm paper, and clipping sent is headed “Where Duty Lies,” which was printed in a recent number of Up-to-Date.

This shows that the seed sown by Up-to-Date Farming is taking deep root in Iowa soil. This “Iowa correspondent is vaccinated with the co-operative virus and it has “taken.” He has the true idea—“get pay for what he raises.” All of our readers can guess we guess the clipping

THE ORIGINAL DOLLAR WHEAT MAN,  
J. A. EVERITT, PRESIDENT OF THE A. S. OF E.

“We suspect we shall have to lose this subscriber, much as we regret to part company with any of them. Let us see how this idea works out in practice. It is the fundamental idea of the English union labor organizations, less work and the same pay, and the result has been that the United States is flooding the English markets and driving the manufacturers out of business where it has been established for a century. It certainly has wrought ruin there. It is the trust idea in its concrete form. The coal barons are limiting anthracite and making us pay \$10.50 for poor coal when we ought to get good coal for \$7.00. The printers' union organized labor on the idea that five days' work should support seven men, and the result was the linotype, with which one man does the work of four.”

But to the text: We are not preaching “less work and the same pay.” What the farmers want and are entitled to is a fair price for what they produce with their hard labor. If corn was worth 60 cents a bushel in '02-'03, after the greatest crop the country ever grew, it is worth the price for a less crop. If farmers cannot afford to fatten hogs and cattle at 3 to 3½ cents a pound, they should have a price that will pay them for their labor, and a profit besides. If farm labor cannot be obtained at a price the farmers can afford to pay, they must have a price for their goods so they can pay the market price for labor. If farmers and editors must pay \$10.50 for coal, when the price they get for their grain and hogs and subscriptions affords them paying only \$7, why don't they put the price of their corn and hogs and subscriptions up so they can pay the \$10.50? Do you think it will be easier to pull the coal barons' price down to your level? Have you not been trying to do this very trick for many years? Did not the Grange, Farmers' Alliance, F. M. B. A., People's party and every other party that was ever devised for the farmers try to pull everything down to their

We suspect you will lose that subscriber unless you hasten to apologize for setting him down for a fool to the end of his days. Farmers are learning, if some editors are not. They are having their eyes opened; their understanding awakened. They don't

level, and fail? Did anybody ever try to lift the farmers' business and his prices up to a level with other business and prices before the birth of the A. S. of E.? The pulling down process is impossible when the coal barons, trusts and combinations practically own the machinery of the government, but no trust, combine, class or government can prevent or hinder the farmers from lifting their business up to the level of the best of them, and then give it a boost beyond that until farming is the best business in America, farming the preferred profession, and farmers the best people on earth, as they should be. If by forcing the price of their salable commodity (labor) up, the printers compelled the linotype, we say blessed was their action. Printers are getting more wages to-day than they ever did before, and there is work for every one who can be persuaded to take it. If higher prices of farm products means additional labor-saving machines, we pray that the farmers' combine, co-operative marketing and equitable prices will come quickly. For no class of people will welcome labor-saving machines more than the farmers.

"We think one of the greatest blessings that the Creator ever bestowed upon the farmer was to retain His own power in the absolute control of the heat and the rainfall, the farmer's raw material, so that it would be impossible for him ever to form a trust because he could never know what kind of a crop he will raise the following year. He may start out to raise fifty bushels of corn, and, do the best he can, grow but thirty because that is all the raw material he has. He may start out the next year to grow fifty bushels and grow seventy, or even eighty, and on very choice pieces of land one hundred. And yet so well does He manage it that the world never has a twelve months' supply of food ahead, and where there is proper facilities of distribution there is never danger of famine."

Without irrigation? On an irrigated farm God has not absolute control of the rainfall, and when the farmer starts out to raise fifty bushels God does not step in and prevent him. Are we to understand that it is God's will, also, that the farmers should dump the bulk of their crops within a month after harvest? or will God allow them to control the marketing and market a twelve months' supply in twelve months? This whole proposition rests on marketing the crop, not on growing it. The object is to get a fair price when God, in his "absolute control" of heat and rainfall, blesses the farmers with an abundant harvest. It is not the small crops that make trouble for the farmers, but the big crops at low prices.

"Does it ever occur to those who are dreaming of this farmers' trust what an absolute impossibility it is? A dozen railroad men in New York form a combination and fix the price of railroad freights, form a general agreement, so-called, and inside of sixty days are cutting each other's throats, and taking freights for what they can get provided there is a limit to the amount of stuff to be moved to market. If a few men who apparently have complete control can not form an agreement, but are constantly appealing to the government to keep them from cutting each other's throats, how can 10,000,000 of farmers, or 1,000,000, or 1,000, ever form a really binding agreement? Take it in the case of wheat. If the price of wheat were advanced twenty cents per bushel, how long would it be until the United States would lose her wheat market in foreign countries, until wheat from Canada would be shipped into the United States, and our people fed on foreign grain while the rats were eating their own in the bins?"

back up his assertion of throat-cutting. We say that what twelve men do or do not do proves nothing against the farmers' movement. If one or two of the twelve would not co-operate with the other ten or eleven, we admit the combine would not work. But let us see about the farmers. There are, we will say, millions of them. What they will need to do is to control the temporary surplus that appears on the market sometimes. Iowa farmers will know what we mean when they refer to the market quotations on hogs and corn. They know very well, when the receipts are very large the price goes down. When the receipts are small the price goes up. If the receipts were kept very small for a long time there is no telling how high prices would go. But if the receipts were just right to equal the demand prices would be maintained. To get at this a little closer: Suppose the farmers all over the country had agreed on a certain price on hogs or corn or wheat, and would sell all the buyers would take at that price, but would stop the minute they would not take any more, how would the shippers or speculators bull or bear the market? Suppose the buyers would say, "I won't pay your price." How many days do you suppose the consumers could hold out? Just think about this. But to go back to millions of farmers. Now suppose one of these farmers would not co-operate it would not affect the result. Suppose a million or two million, or more, would not help it,

Shifting the responsibility on God is one of the easy ways to make excuses. Yet where is there a farmer who would not irrigate his farm if he had the money to put in the plant, make himself independent of rainfall, and make each acre produce three times as much as

How do you know it is an impossibility? Have you tried it? A dozen railroad men may or may not, in a combine, fix railroad rates. This proves nothing on the farmer proposition. We are of the opinion that the railroad combine is a very definite thing, and we suggest that the Iowa editor investigate before he attempts to back up his assertion of throat-cutting. We say that what twelve men do or do not do proves nothing against the farmers' movement. If one or two of the twelve would not co-operate with the other ten or eleven, we admit the combine would not work. But let us see about the farmers. There are, we will say, millions of them. What they will need to do is to control the temporary surplus that appears on the market sometimes. Iowa farmers will know what we mean when they refer to the market quotations on hogs and corn. They know very well, when the receipts are very large the price goes down. When the receipts are small the price goes up. If the receipts were kept very small for a long time there is no telling how high prices would go. But if the receipts were just right to equal the demand prices would be maintained. To get at this a little closer: Suppose the farmers all over the country had agreed on a certain price on hogs or corn or wheat, and would sell all the buyers would take at that price, but would stop the minute they would not take any more, how would the shippers or speculators bull or bear the market? Suppose the buyers would say, "I won't pay your price." How many days do you suppose the consumers could hold out? Just think about this. But to go back to millions of farmers. Now suppose one of these farmers would not co-operate it would not affect the result. Suppose a million or two million, or more, would not help it,

would not affect the result if all were in the movement. We believe if the farmers were organized on a large scale ENOUGH FARMERS WOULD HOLD THEIR CROPS TO PREVENT A TEMPORARY OVERSUPPLY, AND PRICES WOULD BE MAINTAINED. The very fact of the great number of farmers will make the result more definite. We could make this plainer if space permitted.

If the farmers of the United States would raise wheat to \$1 in this country, wheat growers and shippers in foreign countries would raise their price to equal it as soon as they heard of the advance here. The United States has set the price on wheat for the world for many years, and set it too low. The farmers of this country have made paupers of the farmers of Europe, and those farmers will welcome the day when American farmers set the prices higher. On the international basis of 90 cents, United States farmers can raise the price of wheat to over \$1.20 before Canada can afford to send a bushel into this country, on account of the tariff.

"The price of cotton has been advanced in the last year by a corner, and now every foreign nation is seeking some country outside of the United States where they can get their supply of cotton, and if they succeed, as they may in Africa, the cotton industry in this country will be greatly damaged, if not irretrievably ruined."

And who, pray, did it? Are the farmers or the speculators responsible? The American Society of Equity does not stand for high prices, but for equitable prices. It as strenuously fights against an unfairly high price as against an unfairly low price. Until farmers unite to wipe the last speculator off of the earth they will suffer from the monstrous greed of these vampires that are sucking their life blood. The government has refused to remove the iniquity. The farmers must depend on themselves.

"Every attempt to boost the price of wheat or any other grain above the legitimate price made by the normal supply and demand has brought ruin to the men who were engaged in it. Can not plain, common sense farmers see that they are being worked in this scheme by designing men who have ulterior motives?"

Will the Iowa editor enlighten us on "the legitimate price made by the normal supply and demand?" For instance, tell us why what is left of the 1903 crop of wheat is worth now 95 cents a bushel, while what was sold in November was worth 80 cents, and what was sold in July was worth 70 cents. It was all the same crop, all produced under the same conditions; all was to go to feed the people for the twelve months following harvest. The old conditions have prevailed, we suppose—that is, supply and demand regulated price. Now explain, please, for the editor of Up-to-Date and farmers, why this variation in price in five months. When you answer this question it will be easier to decide who is trying to bunco the farmers.

"Ulterior Motive" (an object beyond that which is avowed). Members of the A. S. of E. know how unselfishly we have labored for better conditions in agriculture. There is not an individual in the country who can prove that we have any object other than to build a machine of co-operation for farmers. We believe it will work, and hope it will. If it will, every legitimate business in the country will be benefited, even those who oppose it. Farmers cannot be benefited except every other class receives benefit also.

Verily, farmers, the time has come when you should know your friends.

"It is quite true that farmers get more money for their crop when it is a trifle short over a large area of country than they do when crops are superabundant in any one year. This is inevitable. The only way out is to hold your crop until the world needs it, which it always does inside of three years. Were our system of distribution perfect, or near perfect, we should not be troubled even in these years of abundance. If Shakespeare's ideal were realized when he wrote the lines "When distribution shall undo excess and each man have enough," we should have no trouble, even in years of superabundance. Unfortunately, this is not the case as yet.

"Meanwhile, we shall go right along teaching farmers how to grow more crops and better, using to the full extent the sunshine, the heat, and the rainfall which an overruling Providence Who has retained this matter in His own hand gives us, and to hold crops that can be held until the market will give them a profit on the production."

"Meanwhile, we shall go right along teaching farmers how to grow more crops and better, using to the full extent the sunshine, the heat, and the rainfall which an overruling Providence Who has retained this matter in His own hand gives us, and to hold crops that can be held until the market will give them a profit on the production."

"Hold your crops." "Consistency thou are a jewel." After condemning the A. S. of E.; after charging that the promoters of the A. S. of E. are "working" the farmers and that they have "ulterior motives," this Iowa editor admits the first principles of the society. "Hold your crop until the world needs it." "Were our system of DISTRIBUTION perfect or near perfect." He even admits that controlled marketing would be desirable. He also proves our principles in quoting old Shakespeare, "When distribution shall undo excess and each man have enough." Controlled marketing, surely! Yes, go ahead, Brother Editor. Teach farmers how to grow more stuff and never a word of protest against the crop liar, the board of trade gambler, the food trust that robs at both ends, the

cotton factor that threatens to ruin our cotton industry, the railroad magnate that squeezes the farmer to raise the wages of his employees. Deal gently with them, but goad the farmer on to raise bigger crops, so he and his wife and boys and girls and babes can work harder; so the price will be lower; so there will be more bushels for the middleman and speculators to buy and sell at so much margin per bushel; so the railroads will have more tonnage to haul at so much per hundred weight; so the "overruling Providence" can say, "Well done, thou good and faithful servant, while you were on earth you labored hard and well for everybody but yourself and family." A man who, knowing the evil, will not flee from it, or who, with the way plainly shown, will not be true to himself, his family and his divinely appointed business, is not fit for this earth, which he can make a paradise, nor for heaven.

We will send a copy of "The Third Power" to the editor of Wallace's Farmer and report developments. He must either be for the principles of the A. S. of E. or against the farmers. There is no other alternative. We will see which he accepts. In the meantime, farmers who want greater certainty to prevail on the farm, should write to their farm papers and tell them to teach you how to get fair prices for what you grow.

### "TWO VERY IMPORTANT PROBLEMS."

This is the head to an article in the Farmers' Call, and the editor admits that he has "some opinions about them," but he wishes "longer time to investigate" before he gives his opinions to his readers. We make extracts as follows:

"We are in receipt of a letter from Mr. J. H. Chamberlin, the well-known proprietor of the Clover Dale Fruit and Poultry Farm, near Jacksonville, Ill., in which he renews his subscription and says:

"I find many good items in your little paper, especially your editorials. Please tell us farmers how and where to find better markets. This is what we need more than to know how to grow two bushels of corn where we now grow one. The trouble is we already know how to grow too much corn and too many hogs. There seems to be something wrong, and what we really need is for some one to enlighten us how to get better prices for what we already produce. Also, tell us where we are to get more and better help on the farm at prices that we can afford to pay. By giving us some definite information on these subjects you will greatly oblige many of us farmers."

"In our humble opinion Mr. Chamberlin brings up two of the most important problems, if not the two most important problems, that confront the American farmer. Wider markets and better prices for what he produces and more and better farm labor are two things of vital and pressing importance to the farmers of this country.

"We heartily wish that we could give the definite information asked for. We have some opinions about these two problems, but we wish somewhat longer time to fortify those opinions with investigation and facts before we give them to our readers. In the meantime we will heartily welcome the discussion of these subjects by our subscribers.

"We farmers have neglected the marketing of our crops, giving our thought and energy almost solely to the production of crops. As Mr. Chamberlin says, we know well enough how to produce. We can afford to neglect for some years the productive side of farming while we give our thought and energy to the distributive side of farming. We do not need a greater agricultural production near so much as we need wider markets and better prices for what we produce. If farmers come to realize this fact, the first step and a very important one in getting these wider markets and better prices will have been taken. Much will have been gained when farmers generally see clearly what Mr. Chamberlain so well states.

"How to get good farm help at wages that he can afford to pay is one of the most perplexing things that the farmer has to deal with. We do not believe that this problem will be solved till the wider markets and better prices for farm products that we have been discussing allow the farmer to pay wages approaching those paid for labor in the city. This will result, not so much in bringing laborers from the city as in keeping on the farm a good many of the boys that now are attracted to the city. Make farming pay as well as it should and labor will be attracted to it. There is much talk of getting the very poor of the cities out on the farms, to supply the demand for farm labor. There can not be any doubt that this would be to the benefit of these poor, but they are not the sort of laborers we want. The solution of the problem of farm labor lies in better prices for farm products."

The editor of Farmer's Call admits that the solution of the two very important problems lie "in better prices for farm products." He might as well admit that the solution of every other problem affecting farming hinges on this one proposition, "fair prices for farm products." Yet he doesn't know how to obtain them. There is only one way possible under the sun. If equitable prices cannot be secured through co-operative and controlled marketing, then they will never be realized by farmers of this nor of any other generation. If farmers will build a wall or dyke before their products like is illustrated on the first page of this paper, and let only enough through to supply the demand, they will control marketing and can put a fair price on their

products always. Don't be alarmed that you will have any left when the year rolls around. The world will consume as much food at a fair price as at an unfairly low price. We believe, if certainty of values prevailed and food products were the same price in July as in January, that there would be immensely more consumption. If farmers were co-operating they could get closer to the consumers, cut out the mountains of unfair profits and increase consumption two or three hundred per cent. on some lines. This thing, we believe the farmers can do. We believe if one million or more farmers would undertake to do this thing that they could not possibly fail. We believe no power or influence on earth could stand against the will of such a large body of farmers striving for an object that even their enemies must admit is just and equitable. In the lines of Ella Wheeler Wilcox we may say:

"There is no Chance, no Destiny, no Fate  
Can circumvent or hinder or control  
The firm resolve of a determined soul.  
Gifts count for little; WILL alone is great,  
All things give way before it soon or late."

### THE FARMER HIS OWN REDEEMER.

Here is another from the Farmer's Call. Truly the Illinois farmers are waking up. They evidently intend to compel their farm papers to get out of the deep rut that they traveled in for many years, and which has been worn so deep that they and their supporters are in danger of being mired entirely.

"The day has come when the farmers must unite in order to obtain a fair price for the products of their farms. Thousands of farmers are leaving the farm simply because the remuneration is too small, just barely living by being very economical and working from 4 a. m. to 8 p. m. Some farmers are very good traders and make some money, but most of us farmers have to sell to the middleman, and we have got in the habit of taking just what they offer and pay them just what they ask for what we buy. Of course we are told that supply and demand regulates the price. But such is not the case. Shylock regulates the price. And the better class of farmers are to-day educating their children for the city, lawyers, doctors, merchants, politicians, drummers, bookkeepers, editors, in fact, anything but farmers. The writer knows families that have left productive farms for the city and are to-day making five times more money than they did on the farm. But everybody can not live in the city, consequently the farmer must raise his calling in dollars and cents to a level with other callings. If a lawyer's time is worth \$20 in a case against a railroad company for damage for killing a twenty-five dollar cow, which other lawyers swear is a reasonable fee, and the farmer brought his labor up to that standard he would get one hundred dollars a bushel for wheat and fifty dollars for corn. But we haven't the cheek the lawyers have and would not ask that much. A brickmason gets 60 cents per hour, or six dollars for a day of ten hours, and a farmer's time is surely worth as much as a brickmason's, and his team and implements and use of land are worth as much, which would be twelve dollars a day the farmer, his team and implements should earn. It takes three days' work to raise, gather and market an acre of corn, making it cost thirty-six dollars at mason's wages. The average crop of corn is 25 bushels per acre; the farmer gets two-thirds, or 16 2-3 bushels, for his labor, for which he should get \$2.16 per bushel on the mason's standard. But we don't want that much. However, the farmer is entitled to \$3 a day for himself and \$2 a day for his team and implements, which would make corn cost \$1.08 per bushel. The average crop of wheat is 10 bushels per acre. The farmer gets two-thirds, or 6 2-3 bushels, per acre. It takes three days to raise, harvest, thresh and market an acre of wheat, and at \$6.00 per day for farmer, team, wagon and farming tools is \$18.00, or \$2.80 per bushel. Corn at \$1.08 per bushel would make hogs cost \$10.80 per hundred and cattle the same. With such prices the farmer could solve the good roads question and make times better for everybody. But at present prices there is no hope of the farmer being any better than the negro in slavery. The average crop of wheat is 10 bushels, the average price given the farmer 60 cents per bushel. The farmer gets two-thirds, or 6 2-3 bushels; take off 1 1/4 bushels for seed and you have 5 5-12 bushels at 60 cents is the magnificent sum of \$3.25 for three days' work of himself and team, wagon and farming tools. Now, brother farmers, I think it is time for us to quit begging for a fair price and go to work on the same plan as other people do, and thus redeem ourselves from bondage. Now, I will start the ball rolling by setting January 25, 1904, as the day to commence holding our products for the following prices: Wheat, \$2.80 per bushel; corn, \$1.08 per bushel. Hogs, sheep and cattle, \$10.80 per hundred, Chicago market. Every farm paper please copy; also every county paper, and every farmer make himself a committee of one to see that it gets into his county papers. And if papers refuse to publish it, stop taking the paper, whether it be a county or farm paper. Don't forget, 'united we stand; divided we fall.' You will be astonished to see things go up if we stand together."

Edgar F. Leeds.  
Mt. Carmel, Ill., R. F. D. No. 1.

The only thing we criticize about Mr. Leeds' letter is the price he sets on the crops. Farmers must be moderate in their demands. They must not attempt to set prices that will encourage such small yields as mentioned. The farmers' movement is not to encourage poor farming, but rather

to encourage better farming, which a liberal reward always brings. If farmers will regulate their marketing to make their prices we will soon see our average yields increase. Fair prices for crops will mean restored fertility in our farms and increased yields on a smaller acreage with less labor.

We commend Mr. Leeds' recommendation that every farmer should see that his county and farm paper help in this campaign for fair prices. If the farm papers would unite with the farmers in a demand for equitable prices it would be done in a few weeks. If they would always stand for fair prices in the future the serious problems on the farm would never appear again.

Farmers, if you want these things you can have them, but they must come through you. The time is past for temporizing. You've got to get together in some society that has the right plan and is working for the right objects. The only such society on earth at present is the American Society of Equity. This society has proposed in the January 15th issue of this official paper to meet other farm papers on a broad, unselfish basis, to jointly build the machine of co-operation. We are not begging, as we know it can be built without them. We know, however, that it can be built more quickly with them. The official paper of the A. S. of E. has no desire to monopolize the agricultural field, but if other papers do not help now, when the farmers want them to help, we will be compelled, as the farmers' movement develops, to publish official editions for the farm, garden, fruit, stock, poultry and every other branch of agriculture.

### FARMERS TO COMPEL EQUITABLE GOVERNMENT.

The Pittsburg Post prints a story to the effect that Mr. Rockefeller and his associates are devising a combination of the steel and railroad interests which will result in a monopoly of the steel traffic. Commenting on this the Chicago Record-Herald says:

"The truth is, that he has become a resistless force in the industrial world, and that he will proceed from one monopoly to another regardless of all that is said and done to prevent. If he could live to the age of the patriarchs, the United States would come to be merely one of his appurtenances."

The Commoner says regarding above:

"Mr. Rockefeller need not live to the age of the patriarchs in order to make the United States of America 'merely one of his appurtenances.' That deplorable condition for this proud government would, at the present rate be brought about within comparatively a few years."

Here again is a danger that waits on the farmers to correct. In fact, there is not an element in our whole body; industrial, social or political, in which the farmers movement will not prove beneficial. Read from The Third Power as follows:

"It is, of course, quite impossible to consider this question, (the farmers) apart from politics. Few questions in this country can be considered in this detached way. In this case it happens that there is a very direct and intimate connection between the reform proposed and politics—not party politics, but politics in the larger and more scientific sense. The air is full of talk about political reform. The abuses, injustices and oppressions incident to the business of government in this country are dwelt on with much emphasis. All know that corruption abounds on every hand, that graft is almost the law of our political life, that extravagance is the rule, that favoritism is prevalent, and that those with the strongest "pull" get the greatest consideration. There is discrimination everywhere, and it is in favor of the strong and against the weak. The law itself is too often the mere agent of the rich and powerful for carrying out their doubtful schemes.

"Why is all this true in a country in which the people are supposed to govern? None of us can be made to believe that the people are corrupt or that they deliberately prefer bad to good government. The people are not corrupt, and so far from preferring bad government it is they who chiefly suffer from it. The trouble is that the people do not govern. Nominally a democracy, this government is the oligarchy controlled by a comparatively small class in its own interest. The people simply take what is given to them. Thus we have turned our system upside down and are false to

the fundamental law of our political being. When a scoundrel in the postoffice department is caught with money in his hands that does not belong there we all know that it is the people's money that he has stolen. When a rascally law is enacted taxing the people for the benefit of a few greedy and grasping individuals, it is not the people who are guilty of the oppression, for it is they that are oppressed. Divided into parties, the respectable and decent men of our cities are powerless to checkmate the rogues who prey on all alike, no matter what party they may belong to. The combination between men in office and corporations seeking franchises and favors is a combination in the interest of the politicians and the corporations and against the interest of the people. The people everywhere suffer, not because they govern, but because they are governed, and really without their consent. Pulls, influence, money, party trickery, corporate corruption in politics practised by our leading citizens—these be our rulers. And to this perversion of our government from its true aim and purpose are due all the ills from which we suffer.

"Who are the men directly and keenly and continuously interested in politics if not those who work simply that they may get something out of the game? The men who speak in political campaigns are, as a rule, men who, if not paid outright for their services, expect to get appointments if their side wins. Year after year you see the same men hanging around the polls, and hoping, through their connection with the organization, to be "taken care of." Gradually the government has been wrested from the hands of the people, and more and more—and as a consequence—the people have lost interest in it and influence with it.

"Now the proposition is to restore to the people that supremacy which is rightfully theirs, and which they must have if this is ever again to be a government of the people. As this is even yet pre-eminently an agricultural country, the farmers are the people. With the millions of men directly interested in furthering their own interests, which are those of the people, and bound together in an organization, the usurpation of the politicians and corporations would be broken, and the real rulers would govern. Considered in this light the American Society of Equity—the Third Power—is an instrument in the United States, regardless of name of party. No administration would dare to disregard such an influence, or would think of tying itself up to the politicians and those who now use them. Under such a system nothing would or could be done without the freely expressed will of the people. If they governed themselves badly, they would still govern themselves, and would be responsible for all mistakes and crimes. With this power and influence the people would regain their old interest in public affairs, and the government would no longer be forced to rely on the professional politician "for continuous activity in giving effect to its decrees." In a word, it is proposed to broaden the base of government and to put the power and responsibility in and on the people. Favors enjoyed by all are not favors, but rights. A favor is something enjoyed by one at the expense of others. If we can secure the granting of justice to all and the withdrawal of privileges enjoyed only by the few, we shall destroy the "pull" and the whole system based on it. So this is a movement for democratic government—government for all and by all, in which all shall participate. With this secured most of the evils from which we are now suffering would disappear. The pull would not work when there is nothing to be gained by it. The people would not be interested in stealing from themselves. If there was nothing for corruption to win there would be no corruption. In brief, the remedy is to be sought in a simple adherence to what is the true American system, from which we have so widely departed, and in a loyal adherence to the old American ideals."

### INVESTIGATE A LITTLE.

"This is the season of the year for investigating, and we have a most excellent opportunity to learn many things about farming without the expense of experimenting. We will spend many hours next fall discussing the political questions, because a whole lot of jack-leg, lawyer-politicians come out to the township center and stir up affairs among us. Let us, before that time, stir ourselves about the great question of modern farming. Let us learn how our neighbor manages to grow more corn than we do; how he feeds to make more pounds of meat with the kind and amount of feed; how he gets his animals through winter on less feed than we do, and in the spring his stock is in better condition than ours; and many other things let us discuss before the storm of politics is upon us."—Farmer's Guide.

"But don't investigate about how to get a fair price for what you raise," the Guide editor might have added.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

Look for the badge. Farmers you will know your brethren by this badge. Whenever you see a fellow farmer who does not wear one, tell him about the A. S. of E. and profitable prices.

## WAR CRY SUBSCRIPTION CARDS

These are postal cards that we offer at a special price. See offer elsewhere in this paper. Each card is good for a year's subscription and membership in the A. S. of E. When you take an order the name is written on the card and the card is dropped in the mail box or post-office. We have a bundle for you! They cost you nothing.

The year 1904 is to be to the farmers not only a year of edification, but a year of graduation, of organization. The force of circumstances is doing more to bring farmers together than argument.

\*\*\*

The above fact leads to a renewed appeal to the local unions. There is an important field work that they alone can do. Are they equal to the occasion? We believe they are; they inspired that confidence when they were chartered, and we look to them to fill their high mission. Activity on their part will hasten success; easy going, half hearted effort will retard it.

\*\*\*

We appeal to the local union to make every meeting a means of advancement. Have an interesting and instructive program, and spare no pains to induce every member to take a part. Seek constantly and diligently for ways to increase the membership. That million must come. It is much easier to get them now than it was a year ago, for the A. S. of E. has fully established its right to live, and has proven its ability to do things.

\*\*\*

This department has continually and persistently argued the bringing in of the young people. They should be made the life of the local union meetings, and wherever they take a part the older people will be interested. See to this; work it out, and very local union meeting will be a success. Then think of the influence this education of the young must have upon the future of the A. S. of E., and the farming world.

\*\*\*

Does your local union meet regularly? I cannot conceive of anything but an affirmative answer. And if you meet regularly with an interesting program, how can you fail to exercise a powerful influence in your neighborhood? Are there any farmers near you who do not attend? Appoint a standing committee on invitation, and at each meeting take up this subject, and make a list of those whom the committee are to specially invite to the next meeting. A farmer, or a friend of the farmers, must be stubborn indeed who would refuse to accept such an invitation. Once in attendance, it is the work of the union to interest them and enlist them in the cause.

\*\*\*

Don't fail to give prominence to the fact that the A. S. of E. is not an exclusive society, that while it is primarily a farmers' organization, it is not a rigid class institution, but welcomes the presence and membership of all friends of agricultural advancement, and of right and justice; it excludes no sincere and honest man or woman. It is founded upon the broad principle that whatever benefits the farmer, must benefit every institution whose foundation rests upon the success of agriculture.

\*\*\*

Let it be constantly kept in mind that the A. S. of E. does not strike at any legitimate industry or calling. The industrial world is a very complicated machine, and farming constitutes only one part of it. Smooth running and effective work depends upon the proper adjustment of every wheel, belt and pulley. The A. S. of E. recognizes this fact, and would not do anything to disturb the harmonious working of the entire great machine. It proposes to see to the proper working of its own part, and will aid rather than interfere with the harmonious working of all the other parts.

\*\*\*

Recent developments add many fold to the importance of farm organization. It must be confessed that in some instances labor unions have run into extremes and have taken action not in line with the general welfare. However great

any class may be, and however important its special interests, no part of anything can be greater than the whole. Special interests must therefore yield to the interests of all; that is, special interests must not promote themselves to the injury of the general interests, the interests of all. It cannot be denied that this has sometimes been done; or, at least, seriously attempted. The great conservative power of agriculture may well stand in the breach, and hold the extremes to the meridian line of equity. This is the mission of the A. S. of E., and who will say it is not a great one, worthy of the support of every industrial element on earth?

\*\*\*

Is anybody in the A. S. of E. betraying the confidence reposed in him? Every organizer has been appointed with the utmost confidence that he would do work worthy of the appointment, and add fresh laurels to his name by pushing out actively and organizing unions at every available point. Every local union that has been chartered, was chartered with the explicit understanding and confidence that it would be an active and efficient worker in its locality; that it would hold meetings regularly, and see to it that every available person was brought into the society, and that new unions would be organized wherever it was possible to organize them. Is anybody betraying this confidence? Has anybody fallen short of the work those at headquarters reasonably expected them to do? Examine your record and see.

\*\*\*

"Every man to his tent, O Israel!" was the command that went out to a great people in an ancient emergency. This department feels like repeating that command to a great people now. Every man to his local union; O, farmers of America! A struggle of the ages must be brought to a successful close, and victory must perch upon the banners of the oppressed. The farmers must be redeemed from the thralldom of mere "hewers of wood and drawers of water." They demand the right to own themselves, to possess their own property, to price the products of their own labor. There is nothing startling in this demand, there is nothing revolutionary in it. It is simply claiming the right that has been enjoyed by everybody else since human industry became an element in the world's affairs. But it cannot be won without a struggle. "Every man to his tent, O Israel." General Apathy has mustered his forces in our own ranks, and he must be defeated. Let us repeat the injunction: Every man to his local union, O, farmers of America!

\*\*\*

Organizers, local unions, members, I am anxious to know what each of you is doing. Why do you not write? J. S. Walker, Enfield, Ill., writes as follows: "I am working for the A. S. of E. at this time, and I think I am doing more in one day to benefit the farmers than I did all the time I was in any other society. I have enrolled the leading people of this town, and in fact all the large land owners, or nearly so, and am still adding to the number. I think that White county will soon be organized, and that the million mark will soon be reached." E. D. Gee, of Tennyson, Ind., whose songs have enlivened hundreds of enthusiastic farmers' meetings, writes to the editor of this department as follows: "It seems like it would be appropriate for me to address you 'Dear Father,' for I have learned more from your teaching in the past than from any other source. I love to call to mind the good times we used to enjoy in the F. M. B. A. It was a wonderful source of education. I am now enlisted in the band of Equity, and doing all I can." How glad I am to hear from those noble men. Let more of them write. Every such letter is a bright spot in this department of Up-to-Date, and a link in the chain which binds us all together.

## THE ARREST OF UNCLE ALF.

### How One Local Union Did It.

Uncle Alf. Marlin was a farmer whom everybody loved. Careful and intelligent management had made for him one of the best farms in Clinton county, and industry and frugality had brought him a competence. He was one of those men who never grow old, and his home was one of the bright places in the neighborhood, where young or old always found a hearty welcome, and were always glad to be.

A local union of the American Society of Equity was organized at the school house, but to the surprise of everybody Uncle Alf refused to join it or attend the

meetings. He had nothing to say against it, spoke well of its aims and purposes, and wished the movement success, but could not be induced to take any part in it. This was often a matter of discussion in the local union, and committee after committee was appointed to see Uncle Alf, and try to induce him to become a member, for they knew that his joining would bring in every farmer in the neighborhood that was still out. All had the same report to make, "Uncle Alf can not be induced to join."

Jim Wheeler at last said in a meeting that he had a matter of importance to lay before the union, and moved an executive session, that what he proposed might be kept within the bounds of the membership. The motion carried, and

the injunction of secrecy was imposed upon every one present. What was said or resolved upon, of course, we cannot know, but it was noticed that a smile was on every face when the meeting broke up, and many a glance was turned significantly in the direction of Uncle Alf's.

During the next few days the whole neighborhood seemed enveloped in mystery. Something was on hand, something was doing, but no one could tell what. There were few callers at Uncle Alf's, and his nearest neighbors passed without stopping to exchange a friendly word, a thing very unusual, and the old gentleman began to fear that something had occurred to offend his friends, but it was in vain he tried to think what it could be. On Thursday morning he was surprised to see the town constable (he was a member of the union) hastening

CONTINUED ON PAGE 11

## How to Calculate the Farm Value of Crops

The American Society of Equity is being built for every farm, garden or orchard crop. It is for the grain grower, the stock feeder, the dairyman, the poultryman, the tobacco grower, the fruit grower, the cotton grower, etc. As soon as it is in operation it will benefit the largest operator, no difference where situated or in what line, and also the owner of a few rods of ground, by securing stability of price which means stability of prosperity.

The central head or national union of the society will print in the official paper a price that any crop is equitably (to producer and consumer) worth. This will be done as soon after the crop in this country is secured as it is possible to decide the yield from reports from members and local unions. This price will be known as the minimum price, and will be based on some leading market. For instance, grain and stock prices will be based on Chicago; cotton on New York; markets elsewhere and the farm price can be calculated from this base, being enough less to equal transportation and the cost of handling. Of course, there will be many places where the local markets will take all the products and the price under those conditions is usually higher than where a surplus is produced. The home market should be cultivated to the greatest extent possible.

Refer to the map and let us see what the farmer in Central and Western Kansas ought to have for his wheat on the basis of \$1.00 at Chicago. The rate of freight to Kansas City is 16 cents per cwt. From Kansas City to Chicago is 14 cents, total 30 cents per cwt. or 18 cents per bushel. Deduct

this from \$1.00 and we have 82 cents. If the farmer in Central and Western Kansas receives less than 82 cents now the difference must go into the pockets of middlemen.

There is another thing farmers should notice. The railroads charge 16 cents to carry wheat 200 miles west of Kansas City but only 14 cents for the 500 miles from Kansas City to Chicago, or as 8 to 3. This looks like an injustice that should be wiped out, also the through export rate from Kansas City to Great Britain and other foreign ports range from 29 cents to 33 cents, only twice as much as is charged to carry grain less than across one state. There is no equity in such an adjustment and it is clear such inequalities can only exist because farmers have not put themselves in a position to resist them.

Referring again to the map, the rate of freight from Chicago to New York is 20 cents, therefore wheat that is worth 82 cents in Kansas, \$1.00 in Chicago, is worth \$1.12 in New York, plus a fair price for handling it. This should be the case as the populous east must get its supply from the grain fields of the west. Yet we find cash wheat quoted as high as 94 cents and May wheat at 87½ cents, in Chicago on January 15th, with no cash quotation from New York. But May wheat is quoted at 90¼ cents in New York. This is only 2½ cents over Chicago price and we cannot understand it. The distance by rail from Chicago to New York is 913 miles, the freight rate 20 cents per cwt, against 16 cents for 200 miles in Kansas, or as 1 to 4.

The entire agricultural business needs reorganization in its distributing end. Gross discriminations must end. Equity must prevail and these things all depend upon the farmers. Elevators and shipping associations in the Mississippi Valley won't cure the trouble. Nothing less than a National organization of farmers when a million or more will speak though an authoritative head will be effective.

CONTINUED FROM PAGE 10

toward his front door. The officer opened without knocking, and came hurriedly in as if he was afraid somebody might escape. Apparently out of breath and much agitated, he blurted out:

"Uncle Alf, I am sorry, but I have to do my duty. You are under arrest!"

"Under arrest! What do you mean?" asked the really startled old man. But there was no time for explanations. A glance toward the road showed team after team rapidly approaching, the vehicles all filled with men, women and children. Prominent among them was Squire Bailey, the town justice. As the teams stopped, and the company filed into the yard, Uncle Alf was puzzled. He tried to treat all pleasantly, as was his never failing custom, but he felt that he was making a very poor job of it, and he thought he detected an unusual coolness among his friends.

tons of hay, and the droves of fat hogs and cattle, he had never put a price on a single ounce of it all. Somebody somewhere, whose methods were entirely unknown to him, and who had not the least interest in his welfare, had priced it all, and the defendant had been compelled to sell at the price named without any regard to whether it was at a loss or a profit. Uncle Alf began to look serious.

"Now," said one witness, "there is a fight on. The armies of fairplay and justice are marshalling under the banner of Equity, and are demanding the right, which is conceded to all other classes, to put a fair price upon their own products, and thus knock out the artificial price fixers that, in the palaces of the cities, reap their unearned profits, even before we reap our crops in the sweat-drenched fields. This defendant here, whom we have respected and loved, who is one of us, and whose struggles have been the

**"Once Grown Always Grown"**

The Maule motto for more than 25 years. My new

**SEED****BOOK for 1904**

Cost over \$50,000 to publish. If you have a garden you can have a copy for the asking. Send a postal for it to

Wm. Henry Maule, Philadelphia, Pa.

The constable reported to Squire Bailey, and formally delivered his prisoner. With a great show of dignity the Squire took a seat, declared the court open, and ordered the constable to summon a jury, which he did with a facility that was very suggestive of a cut-and-dried affair. Uncle Alf felt sure there was a joke somewhere, but for his life he couldn't see where it was. All formalities of beginning a trial were complied with. Bill Meeks appeared as attorney for the prosecution, and the court magnanimously appointed Joe Watson as attorney for the defendant. Of course Watson, with a show of indignation, demanded to know the charges against his client. The prosecuting attorney rose with a great flourish, and said:

"If the court please, this defendant is here arraigned on a very serious charge, that of aiding and abetting the enemy. A great struggle is now taking place. The embattled hosts are confronting each other, and mighty results hang upon a single breath. The defendant, Alfred Marlin, to the great sorrow of all his neighbors, who thought they had a right to expect better things of him, is charged with helping the enemy, when his every interest, and those of all his best friends, are clearly on the other side."

Uncle Alf was worse puzzled than ever; he could not see what they were driving at. His attorney made a not very assuring statement of his side of the case, and the trial began. The witnesses were called and duly examined, but if any one had thought of it, he would have noticed that the Squire forgot to swear them. It was proven beyond question that the defendant was a farmer, that he had worked hard all his life, and had become fairly prosperous in spite of the most unfair conditions; that, of the thousands of bushels of grain he had raised, the

same as ours, stands aloof and thus gives aid and comfort to the enemy."

Uncle Alf's eyes opened perceptibly, and a comical smile began to play around his mouth.

"This is my case," said the prosecuting attorney, and Uncle Alf's "lawyer" said he had no evidence to offer, and that he was willing for the case to go to the jury without argument. To this the prosecutor agreed, and a verdict of "guilty" was promptly handed up. Squire Bailey adjusted his glasses, and, trying hard to look wise and solemn, pronounced sentence:

"It is the judgment of the court that the prisoner at the bar, who is proven guilty of the charge beyond all doubt, be and he is hereby sentenced, when the ladies of the neighboring local union of the A. S. of E. shall have ready the dinner they are soon to spread in the grove yonder, to preside thereat and give thanks for the blessings God has given him in spite of his own indifference. The constable will take charge of the prisoner, and see that the sentence is properly executed."

"Hold!" cried Uncle Alf, with the old time merry twinkle in his eye, "I move an arrest of judgment until I have time to pay my fee and attach my name to the membership roll of that local union. I never looked at it in that light before!"

Of course, there was handshaking and cheering, followed by a hustling of boxes and baskets, and rattling of dishes, while the odor of good things floated out on the breeze, and joyousness and good feeling swept through that crowd as never before.

Uncle Alf presided at the picnic, one of the happiest persons there, and more than two dozen names were added to the roll before those teams turned their heads homeward. All declared it was the jolliest time they ever had.

Headquarters Indianapolis, Ind., which is called The National Union.

National President, J. A. Everitt.  
National Secretary, L. N. Staats.  
National Treasurer, H. W. Miller.  
National Counsel, Mark P. Turner.  
National Organizer, C. O. Drayton.  
National Statistician, John Auld Forsythe.

National Vice Presidents—Seldon R. Williams, Fort Worth, Texas, present vice president; Eli A. Hirshfield, Indianapolis, Ind., present vice president; R. C. Bertrand, Crystal Spring, Ark.; Henry A. Risely, Camden, Ind.; John Burton, Trenton, Ill.; Hon. W. W. Stevens, Salem, Ind.; Chas. L. B. Mills, Cooperton, Okla.; Thos. W. Carr, Arta, Ala.; Andrew Snyder, New London, O.; J. C. McClure, Manhattan, Ill.; Edward Bittle, Lisbon, Iowa.; Z. S. Branson, Lincoln, Neb.; Chas. Reiner, Riverside, Cal.; Wm. Ranch, Tribune, Kan.; Wm. Butterfield, Independence, Mo.; Erastus Jones, Clide, N. C.; Samuel Bittle, Cressona, Pa.; S. A. Steadman, Judson, Okla.; C. A. Brewster, Carlisle, Pa.; A. R. Carhart, Barton, Fla.; Hon. Chas. Weatherby, Sterling, Ill.; Hon. Chas. Hughes, Dixon, Ill.; J. N. Hike, Colby, Kan.; T. N. Luce, Kalamazoo, Mich.; Dr. S. L. Henry, Morgansfield, Ky.; John B. Cambron, Morgansfield, Ky.; Edw. W. Hayes, Arlington, Ky.; James Butler, Topeka, Kan.; Hon. R. B. Scarborough, Conway, S. C.; C. Hayes Taylor, Gillaspie, Va.; Henry Burns Geer, Nashville, Tenn.; Hon. Jas. Barlow, Plainfield, Ind.

### State Organizers

ILLINOIS—L. N. STAATS, Trenton, Ill.

MICHIGAN—Geo. G. Winans, Hamburg, Mich.

OKLA. AND IND. TER.—Willard J. Conover, Palace, Okla.

WASHINGTON—Wm. C. Pittman, Spokane, Wash.

Matters relating to organizing in these States and Territories should be addressed to the State organizer; all other matters should come to the National Union.

It is desired to secure State organizers in other States as soon as possible. Correspondence solicited from people who are qualified for such important positions.

## Handy Farm Wagons

make the work easier for both the man and team. The tires being wide they do not cut into the ground; the labor of loading is reduced many times, because of the short lift. They are equipped with our famous Electric Steel Wheels, either straight or stagger spokes. Wheels any height from 24 to 60 inches. White hickory axles, steel hounds. Guaranteed to carry 4000 lbs. Why not get started right by putting in one of these wagons. We make our steel wheels to fit any wagon. Write for the catalog. It is free.

ELECTRIC WHEEL CO., BOX 170, QUINCY, ILL.

## CORRESPONDENCE, CLIPPINGS and COMMENTS

I think if every farmer would read "The Third Power" you would have TEN MILLION members instead of one million.

L. F. T., Brooklyn, Mich.

\*\*\*

I received the ten War Cry Cards yesterday and sold them all out today. Issued seven at one sitting. Am delighted at the result of the day's work. It looks as though any farmer could do as well if they would only try. We mean to organize at once here and go to work to get out of the rut. You may look out for old Alabama. She will come on with her part if you will only get some one in each neighborhood to tell the people of the great plans and possibilities of the A. S. of E. We have first got to hear of, and be educated along the line of Equity. Jan. 7, 1904, C. B. D., Hopeful, Ala.

\*\*\*

I cannot do without Up-to-Date as it contains information and advice that cannot be obtained from any other publication. It is the paper above all others for the farmer to read, and I for one am delighted with it, and speak a good word for it at all times. I am in the army for "A Million, A Million United," and inclose 75 cents for two year's subscription. Wife also, wants New London Ladies' Tailoring System. Jan. 7, 1904, J. L. W. Meridian, Texas.

\*\*\*

I had a copy of Up-to-Date Farming handed me recently by a neighbor. I am very much pleased with it. Just think what a great thing it would be if we could get the farmers of Minnesota, North Dakota and South Dakota in a solid body. How it would help in making prices on wheat and flax seed. These are the three leading flax states and we should get \$1.50 per bushel. We now get only 80 cents per bushel.

J. A. YODER.

\*\*\*

My father has received several numbers of your paper and we like it. We would like for several of our neighbors to receive some of your sample copies. This is a good neighborhood, but it seems but few of the people have seen your paper. So I thought possibly it might be of benefit to you to get their names, for they are all good reliable citizens. We have scattered the papers you sent us to different friends. I hope to see the farmers all united, for there certainly is nothing more pleasant than a nice farm home. I have been raised on a farm, and want to always live in the country. We have a rural route, free mail delivery, and not far from trolley lines and steam railroads. So country life is far from being desolate. Here are the names, send them some sample copies which may awaken them to the truth. Miss—Ind.

\*\*\*

Please find inclosed ——— for your paper "Up-to-Date Farming." I cannot invest in a better way than in The American Society of Equity. I. H. G., Felton, Pa.

\*\*\*

I have been a subscriber to Up-to-Date Farming ever since it was a little 15 cent sheet and have always been gratified at every step of its success, and now since it

has become the official organ of the grandest cause, according to my opinion, the American people ever had presented to them, I am more than ever interested in it.

I received the book, "The Third Power," and I think if Mr. Everitt had been inspired from on high, he could not have written a clearer, more comprehensive and logical book on any subject than is here presented to the farmers of these United States.

T. H. MILLER, Hodgenville, Ky.

\*\*\*

Farmers, do you hear the call? Unite and demand profitable prices. Do NOT SELL anything until the INDICATOR POINTS TO YOUR PRICE.—Ed.

\*\*\*

Our union is in line for the Million Members and we will get a share of them. While our Northern brethren are working for dollar wheat, we of the South are talking ten cent cotton, but it ought to be fifteen cents. We could get it if we were organized.

J. C. WILLIAMS,  
Walker, La.

## Seeds, Plants, Roses,

Bulbs, Vines, Shrubs, Fruit and Ornamental Trees

The best by 50 years test, 1000 acres, 40 in. hardy roses, including 45,000 of the famous **Crimson Rambler**, 4 greenhouses of **Palm**, **Ferns**, **Ficus**, **Geraniums**, **Ever-blooming Roses** and other things too numerous to mention. **Seeds, Plants, Roses, Etc.**, by mail postpaid, safe arrival and satisfaction guaranteed. **Elegant 168 page catalogue free.** Send for it and see what values we give for a little money, a number of collections of **Seeds, Plants, Trees, Etc.**, offered cheap which will interest you.

**THE STORRS & HARRISON CO.,**  
Box 103 PAINESVILLE, OHIO.

**Try the New Majestic Tomato**

This grand variety we claim to be the largest and most productive kind in existence. It yielded 11,000 bushels per acre on our place last season, grown under ordinary conditions, and will, we believe, double it by special culture. The fruit is not coarse and rough like other large sorts, but of fine shape and unsurpassed quality. The seed is scarce this year and sells at 40 cents per packet of 100 seeds. We desire, however, to place our catalogue in the hands of every one who has a garden and have decided to send a trial packet of 25 seeds **FREE** if you mention paper in which you saw this advertisement.

**\$100 in Cash Prizes**  
\$35 for largest tomato grown, \$10 for largest yield from one plant.  
\$25 for best photograph of a plant. Postal brings 10c worth of seed, a chance to win a valuable cash prize and the finest seed catalogue published. Our Iowa Seeds are unsurpassed.

**IOWA SEED CO.,**  
Des Moines, Iowa.

## Invest Some Money in GINSENG FARMS

Coming great industry, where your money will double. Absolutely safe. Illustrated Book and special inducements on application. Address, **CONSOLIDATED GINSENG FARMS, Box E, Ross Hill, N. Y.**

**60 VARIETIES** Strawberry Plants, \$2.00 per 1,000 and up. A general line of nursery stock. Send for 1904 catalog now. **H. W. HENRY, LaPorte, Indiana.**

# The Strongest Fence Made

To sell direct to the farmer the strongest fence in the world, we must not only use the best **HIGH CARBON SPRING STEEL WIRE**, heavily galvanized, but we must build so that the greatest textile strength of material is maintained. Sixteen years, spent in perfecting **Coiled Spring Fence**, each year showing an added degree of perfection, has brought us to a point where we can proclaim with a confidence born of attainment that

## OUR FENCE IS THE CHEAPEST AND BEST

Cheapest because the highest skill of the craft has been utilized to reduce the cost of manufacture, and this achievement, coupled with the largest output of the largest and best equipped plant in the United States devoted to fence manufacture, enables us to name you the **VERY LOWEST PRICE AND WE PAY THE FREIGHT**. Buy direct. We sell to you as cheap as dealers can buy. Put the dealer's profit in your own pocket. Examination permitted at your station; your money back if not as represented. Completion of sale rests wholly upon your judgment. Write us; we have something more to say to you. After correspondence is opened, you have your judgment to defend your interests at every advance of the deal. Our Catalogue is free, and is full of fence lore.

**COILED SPRING FENCE COMPANY,**  
Winchester, Indiana, U. S. A.

Box 88

Objects and Plan of the American Society of Equity Briefly Stated

**OBJECTS**

1. To obtain profitable prices for all products of the farm, Garden and orchard. This is the first and main object.

2. To build and maintain elevators, warehouses and cold storage houses in principal market cities or in all localities where necessary, so that farm produce may be held for an advantageous price, instead of passing into the hands of middlemen or trusts.

3. To secure equitable rates of transportation.

4. To secure legislation in the interest of agriculture.

5. To open up new markets and enlarge old ones.

6. To secure new seeds, grain, fruit, vegetables, etc., from foreign countries, with the view of improving present crops and giving a greater diversity.

7. To report crops in this and foreign countries, so that farmers may operate intelligently in planting and marketing.

8. To provide institutions of learning, so that farmers and their sons and daughters may be educated in scientific and intensive farming and for the general advancement of agriculture.

9. To improve our highways.

10. To irrigate our land.

11. To prevent adulteration of food and marketing of same.

12. To promote social intercourse.

13. To settle disputes without recourse to law.

14. To borrow and loan money and do a banking business.

15. To do an insurance business, both life and fire.

16. To establish similar societies in foreign countries.

**PLANS**

The plan of the A. S. of E. is very simple. Farmers all over the country will be enrolled. They will represent every crop that is grown on the farm, in the garden or orchard.

The members will be directed and advised by the official paper which will reach each member twice a month at present and four times a month later.

This official paper, will give all members the same advice about prices, crops, markets, etc., at the same time, so unity of action may be had.

Each member becomes a crop reporter. This feature alone is worth all it will cost to build the machine of co-operation. The false crop reports that are now circulated are against the farmers and to the advantage of the speculators.

Members should belong to local unions. If none are forming in your locality, send your name direct to the National union. A farmer no matter where located can cooperate with farmers in all other parts of the country in marketing and maintaining prices on principle crops if he belongs to the National union only.

Values and a minimum (lowest) price will be decided by the board of directors of the National union. This price will be communicated at once to members everywhere. Every crop will be affected. Members will be expected to ask

this price when marketing, yet they will not be compelled to hold for it, also they may hold for more if in their judgment prices will go higher.

A booklet giving the objects, plan, constitution, and by-laws, etc., will be sent free to all applicants. A book—The Third Power—275 pages that covers every phase of co-operation by farmers and what will be gained by it can be bought at prices quoted elsewhere in this paper.

**THE A. S. OF E. BELIEVES**

That if marketing was controlled, prices can be made and maintained.

That the people who produce the stuff should control it until the market (consumers) are ready to use it instead of dumping the bulk of a crop on the market as soon as raised, creating a large "visible supply" which is used as a club by speculators to beat the price of the balance down all the year.

That if farmers can, (and they do) to a large extent control their marketing and regulate prices when unorganized, they will be an irresistible force when organized, on this plan, even to a moderate extent.

That if farmers under the old order of things did have any influence on the market, not withstanding the false crop reports, uncertainties and opposition of speculators and gamblers in farm products, they will simply be irresistible when they have reliable information about crops, prices and markets.

That all farmers don't need to hold their crops at any time.

That the markets will take an enormous amount of supplies every day.

That the consumption will be as large at a fair price as at an unfairly low price.

That only a small portion of the farmers need to make an effort to maintain prices by holding back that portion of their crops which other wise, if marketed, would produce the temporary surplus that causes daily fluctuations on the old plan.

That when a large number of farmers each have the same price before them, and the same impulse to market when the buyers will pay their price and stop as soon as they won't take more; enough will hold so prices will be maintained.

That in the A. S. of E. there will be much greater incentive to hold than under the old system. Each person who holds will get a little more each month.

That each additional person who holds under the new system will make a better market for the farmers who cannot hold.

Finally we know that one of the greatest troubles with farmers under the old system has been to hold too long. Without a definite price in view they did not know when to sell and it is a fact that the freest deliveries came on a falling market. Millers and shippers have been known to put the price down to frighten farmers into selling. These conditions will be impossible with a fair price known over the length and breadth of our land, and benefits will come to all farmers, fair middlemen, millers, merchants, etc.

MY PIGS AT 5 MONTHS OF AGE WEIGH 250 LBS.

International Stock Food Co.

DELL ROY, O., Sept. 24, 1903.

GENTLEMEN:—I am showing a herd of Berkshire hogs that I have fed "International Stock Food" from the time they came, and I am a winner in the show ring. I have pigs that came in April that weigh 250 pounds each. I sold one pig just nine weeks old that weighed 86 pounds. Its mother was fed "International Stock Food" three times per day after the pigs were four days old. I fed her "International Stock Food" six weeks before she had her pigs.

I have a herd of shorthorn cattle that I fed "International Stock Food" to all the year around, and it paid me big. I fed it to my ewes and lambs with the best results. To make a long story short, I can't nor won't be without it. I recommend "International Stock Food" to all breeders of fine stock.

Very respectfully, CLARK GAMBLE.

We Have Hundreds of Thousands of Similar Testimonials and Will Pay You \$1000 Cash to Prove That They Are Not Genuine and Unsolicited. Write Us About "International Stock Food."

A \$3000.00 STOCK BOOK FREE

**BOOK CONTAINS 183 LARGE ENGRAVINGS OF HORSES, CATTLE, SHEEP, POULTRY, ETC.**

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 6 1/2 by 9 1/2 inches. It cost us \$3000 to have our Artists and Engravers make these Engravings, which are the finest engravings of Horses, Cattle, Sheep, Hogs and Poultry that you have ever seen. They are all made from actual photographs and are worthy of a place in any library. It also gives Description, History and Illustrations of the Different Breeds of Horses, Cattle, Sheep, Goats, Hogs and Poultry. It contains Life Engravings of many very noted Animals. It contains a finely illustrated Veterinary Department That Will Save You Hundreds of Dollars, because it describes all common diseases and tells you how to treat them. The Veterinary Illustrations are large and scientific and better than you can obtain in any other book regardless of price.

**WE WILL PAY YOU \$10.00 CASH IF BOOK IS NOT AS DESCRIBED**

## HOW THE COOPERS' STRIKE WAS SETTLED

By Henry Burns Geer.

**BEVERLY** is a milling point of considerable note. In fact, the big flour mills situated there furnish employment to about one-fourth of the male population of the town. And, because the managers of the mills have found it more profitable to make their own barrels, than to buy them elsewhere, quite a large contingent of barrel makers, or coopers, are on their pay-rolls. In addition to the large cooper shop connected with the mills, there is also a stave factory where the staves and heading used in the barrels are made. The hoops are also of local creation, being grown in the form of young hickory "withes"—on small trees of the smaller sapling order, on the farms adjacent to Beverly.

The price paid for making the barrels was quite small—it could not be called equitable, for even an expert cooper could not earn over two dollars a day, while the majority of them made a fourth to a third less, as they all worked by the barrel, or piece.

So, after a meeting or two of the coopers were held—meetings rather on the indignation order—it was decided to appoint a committee to wait on the mill managers, and present to them a petition for an increase of three cents per barrel.

The committee of workmen met with a polite, but rather cool reception, and were told that their request for an increase was unreasonable, and could not be granted.

When this information was conveyed to the general body of coopers, another meeting was called, and a series of strike resolutions were adopted, with the result that the committee again appeared before the managers with the information that if their request for an increase was not granted they would make no more barrels. This threat did not move the mill owners, however, and so, the coopers went out on a strike.

This was towards the latter part of the summer, after harvest, when the farmers had sold most all their wheat, and the mills were running over-time turning it into flour, at a very handsome profit to the millers. However, the bosses held out for two weeks—or until their stock of barrels began to shrink to alarmingly small proportions, and then they sent for the strike leaders. A conference was held and after a good deal of see-sawing, a compromise was effected by which the coopers should get an increase of two cents per barrel. It seemed then, that everything would soon be moving smoothly; but, the very night that a settlement appeared to be in sight, the large store-room and vats in which the green hoop-poles were kept, took fire, and the whole was consumed—the

poles drying and burning too, as soon as the bulkheads to the vats burned and the water ran out.

Here now, was a very serious situation indeed—a condition that neither the capital, nor the labor utilized in the making of barrels, had counted on; for it brought in a third factor, and that factor was the farmers who had made the hoop-poles—or rather cut and marketed them during the winter when they could do but little else. It was now autumn, and the farmers were all busy with their fall plowing, preparing the ground for the next crop of winter wheat. They could hardly be expected to stop that important work to get out hoop-poles—besides it was out of season for cutting the hickory withes—the sap being up.

However, the mill managers called on several of the farmers, and urged them to bring in a few loads of poles; but this they declined to do, to a man. Then the millers and their coopers held another conference, in which it was agreed that the latter would go to the woods and cut the poles, if the farmers would sell them to the millers, as so much per thousand, standing. To this proposition, the farmers agreed—putting an equitable price, only, on the withes, as they stood in the brush. This seemed to surprise the men of money, as they had rather expected a "squeeze down" on the farmers' part, under the existing conditions. In taking this view, however, they had not calculated on the fair and square methods of the sons of the soil.

It was a novel situation, nevertheless, and one that excited much comment; and it led the farmers themselves to do a little thinking.

"It seems to me, boys," remarked Ralph Dean, a young farmer to a number of his friends, after meeting was out, at the school house religious services, one Sunday. "It strikes me, that they'd have a blamed sight harder time making flour without wheat than they've had doing it without hoop-poles."

"Now, you've said something, Ralph," assented old man Wilson; "that thought's been in my mind ever since that fire, and the coming of the coopers to the woods to cut hoop-poles. Maybe if we'd be in less of a hurry to market our wheat, they'd send out for it, too; and pay us a better figure for it?"

"That's the idea," rejoined Ralph, "what we ought to do, is to store a good part of our crop—our wheat, I mean, and put it on the market gradually—along as they need it, and not dump it all in at once as we usually do."

By this time quite a crowd of farmers, young and old had gathered about the speakers, and several others joined in the discussion.

"To do that," said Seth Williams, "we

oughtn't have a sort of a combination, or neighborhood store-house—something on the co-operative plan. Ever heard of the 'Society of Equity'?"

"Yes," said Ralph; "I've been reading about it some. Guess we'd better send for some papers and investigate it, and the way it works with farmers like us."

"Sure, we oughtn't do something to get better prices for our wheat and other crops. Say, Ralph, you write to the head men of the Society at Indianapolis, and

find out all you can about it," said Mr. Wilson.

"That's right," spoke up Frank Bruce, "I'm tired of this thing of letting my wheat go at the other feller's price. Let's get in line with the new movement, so that we may get some of the benefits of it. This coopers' strike business shows a feller what's what, when it comes to a show down. The coopers never'd get anything in the way of wages, if they couldn't get our hoop-poles first. Neither would the mill men have any barrels to put their flour in."

"Hoop-poles cut a small figure in the great question of farm products, and farmers' rights," put in Ed. Taylor, the man who generally "orated" at the farmers' gatherings of the neighborhood. "Send for the papers, Ralph, and let's get on board this new craft, that's headed for the port of Equity, and farmers rights."

After a good deal more talk of a similar character, the men dispersed, with the understanding that they should meet again the next Wednesday night at the school house, for further discussion with a view to organizing.

So, he upshot of the coopers' strike, and it's final settlement, was the birth of independence and thoughts of self-protection on the part of the third factor—the farmers, who were indirectly involved in the settlement of the strike.

### THE STEMMING OF THE TIDE

By Henry Burns Geer.

Down in the Valley of Industry—down between the river of Plenty, and the river of Want, there live a people of which there are two classes. One class is called Capital, and the other class is called Labor—and the latter class works

for the former.

It came to pass one day, that the river of Want began to rise, and it rose to such a height that it threatened to overflow the valley, and engulf the laboring class, because they had no boats with which to float away, like the Capitalists. So labor had to remain in the valley, and fight for it's life. But Capital said:

"Why have you fear of this river of Want? Are you not employed, and is not the pay for your services weekly forthcoming in the pay envelope?"

And Labor answered, saying:

"You have spoken truly, as to the service and the pay; but, this exchange of labor for gold, or gold for service, is only a surface feature in the struggle of life. We design, we carve and we beautify, but we do not create. Therefore we fear this river of Want, because we shall be engulfed unless we get closer to the heart of nature, and woo from her motherly bosom, that which imparts life, and strength, and joy."

"We shall build a wall," said Capital, "A wall of stones and bricks embedded in mortar, higher than the river of Want can possibly rise, and then we shall be safe, and may rest in peace."

But Labor was not quieted, for it had fear of the tide in the river which continued to rise; so Labor had recourse to outside help, and it appealed to the producers who lived in the land of Growth and Harvest:

"We live in the valley of Industry, and we work for gold, but, the river of Want is rising, and we have not whereof to stem the tide; for man cannot consume gold and live, neither can he build a dyke of brick and mortar that will withstand hunger and want."

The Producers hearkened to the cry of Labor, and from their bountiful supply they brought down to the valley of Industry bags of wheat and corn and oats, and they brought hams and bacon, fruits and fish, and some of all that on which man exists; and Labor in the valley of Industry was made glad, for immediately the tide in the river of Want began to recede, and there was no longer danger of it over-flowing the valley.

There were many of the class called Labor which went up into the land of Production and did not again return to the valley, for they met with favor in the other land, and they found happiness and peace in laboring in the fields, the gardens and the vineyards, where there was real production, and not a bare exchange of Labor for Capital only.

## THE FARMER

ON THIRTY DAYS TRIAL.

## PRACTICAL THOUGHTS ON CO-OPERATION

The only way to control a crop, and the price of it, is to hold it until the buyer calls for it, and then sell it to him. This means that any crop shall be sold as long as he will pay the farmer's price and stop selling the moment he won't take more at the price. This is the system that will maintain a steady demand, an active market and a profitable price to the producer, while at the same time it will benefit the consumer by eliminating the speculator, and cut off all fictitious prices. It means a center of abundant supply, but at no time a glutted market.

But, in order to maintain this happy and profitable condition, something back of it is necessary to give it stability. In fact, that something is the American Society of Equity; but, in practical application and support, it is storage room—storage adapted to each and every locality where a local union is maintained, or close enough to be in touch with it.

We cannot accomplish anything without practical and serviceable appliances, or conveniences. We cannot get a dollar a bushel for wheat by talking about it wholly, and then selling it at 75 or 80 cents, and letting it get into the hands of the speculators, and the big elevator men, that it may drift into a "corner," surrounded by a powerful syndicate. To control the price of wheat, or anything else, we must have it on the farm, and there put the price on it before we turn it loose.

Wheat is mentioned here, as it has

been made the chief, or first article in the list, to get under farm control. But, all of the leading farm products are included in the storage plan—the only practical plan to control any of them. This thought should be uppermost in the minds of the membership everywhere, and the plan of local storage, through co-operative local store-houses and elevators, advocated by the general management of the National union, should be embraced and executed whenever and wherever practicable. If this plan is followed up, the influence of the society will soon be felt by the general public, and to the advantage of all concerned, too; for the consumer has naught to fear from this society.

It will cease to be then, like it was with the small boy who went to town with a load of pumpkins:

"What do you ask for your pumpkins?" asked a would-be buyer.

"Dad told me to ask a dollar a dozen for these big ones, but, if I couldn't get that, to take less."

Pumpkins will be pumpkins, when there is ample farm storage for all the surplus.

## CONTROLLED MARKETING

(Concluded from Page 1)

wheat, leaping to the lash of the hurricane, struck him fair in the face. He heard it now; he heard nothing else. The wheat had broken from his control. For months he had, by the might of his single arm, held it back; but now it rose like the upbuilding of a colossal billow. It towered, hung, poised for an instant, and then with a thunder as of the grind and crash of chaotic worlds, broke upon him, burst through the pit and raced past him, on and on to the eastward and to the hungry nations.

"What if the farmers had controlled that 'undrunk ocean of the wheat,' and had refused to let any of the ocean get through the dyke? The price would not have broken, and the corner would have won. The next deal would have smashed Jadwin. And what right had he to control the price of wheat for months? Neither he nor any of his tribe could do it if the farmers would assert their power."

## A TALK ABOUT SEEDS

By Henry Burns Geer.

No farmer can be an Up-to-Date farmer, who farms with questionable, or second-class seeds—either garden or field seeds. Indeed, this question of seeds is all important, for verily: "The seed is the life." Soil plays an important part, skilled labor and proper cultivation counts for much; but the very foundation is wrong, when the seeds are not right. Hence, the wisest plan is to plant the best seeds or none at all.

There are well-bred and poorly bred seeds. Thoroughbred and scrub seeds. There is really as much difference in seeds as there is in the quality of live stock or poultry, and every one can see at a glance the difference in quality between things of the latter class, for they are above the surface. And, it may be said that the farmer who puts things of which he has no assurance as to quality—seeds that are not reliable—beneath the soil with the expectation of getting good results from them, commits a greater folly than the one who breeds scrub stock. For, the latter is sure of some sort of an output, whereas, there are some seeds that will not come up at all, thereby entailing a clear loss.

When a farmer knows of a source of reliable seeds, he should utilize them at any reasonable cost, for in planting such seeds he plants that which will be a source of comfort, pride and profit to him. No man can make a success when he starts wrong, and the planting of questionable seeds is the first step in the wrong direction. True, a first wrong move of this kind may be in some degree offset by patient labor and the application of expensive fertilizer; but the satisfaction and the pleasure, and full and rounded success will have been sapped at the bottom by the planting of seeds devoid of virtue and strength.

It is a wise farmer also, who experiments with new seeds—seeds of new varieties of corn, wheat, potatoes, or any other cereal or plant that is useful or ornamental. But in making such experiments, the seeds should come from reliable sources, for there can be no profit derived from inferior seeds, no matter what purpose they may be used for—unless it be to feed them to poultry or stock.

In experimenting with new things in the seed line, the scriptural injunction to "try all things, and hold fast that which is good," should be observed. This is an age, or era of progress, and the sun scarcely rises or sets nowadays, without greeting something new—Solomon to the contrary, notwithstanding.

There is still another thought: The far-

(Continued on page 18.)

## AN EGG TESTER FREE

THE GEM FOLDING EGG TESTER, is a most useful and a very neat apparatus, which is constructed in a really ingenious and scientific manner. It will tell you in less than half a second whether an egg is fresh, stale or bad. This Tester can be used in the day time as well as at night; it will never get out of order, and will, when handled with ordinary care, last a life time. A whole case of eggs can be tested within five minutes, and the Tester will report the exact condition of the eggs with a promptness that never fails.

A limited number of these Testers will be GIVEN AWAY FREE, and if you will send to **GEO. H. STAHL, Quincy, Ill.**, he will send you one free of charge, if you will mention UP-TO-DATE FARMING. He will also send you full directions for testing eggs, both for table use and hatching purposes, together with a handsome new Catalogue containing 14 colored views of Incubators and Brooders, including one showing the "Development of the Chick" from the first to the twenty-first day. Write at once, for the supply is limited.

We carry a full line of high-grade Harness, sold direct to the user at wholesale prices.

**THE OHIO CARRIAGE MFG. CO., (H. C. Phelps, President) 2222 Sixth St., Cincinnati, O.**

(Concluded from page 17)

mer who has been successful with any particular crop, or variety of grain, on his own particular farm, should not discard it for the mere sake of a change, for there is virtue in old things which have been tried and found true; and there are certain crops which are best adapted to certain soils and localities, and where they thrive best and are found the most profitable, they should be continued—the choicest and best specimens, or seed being reserved for home use the next seeding.

What a pleasure there is in planting, in hoeing and reaping. There is no pleasure equal to the pleasure of creation, propagation, and cultivation in the gardens and the fields. The farmer who does not love his work—who is not enthused by the glories of nature, should not be a farmer. God called man to agriculture first, which fact makes it the grandest calling of all. And the seed—the seed is the germ that he is to nurse into life under the action of nature's forces. Therefore, let the seed be pure and strong and undefiled, that it may grow and blossom into perfection, according to its specie.

## NOTES.

The day is not far distant when politicians will champion the farmer's movement from the stump and the rostrum. They will advocate home prices for farm-grown produce; and they will do it because the tide will be too strong for them to dodge it or overlook it.

This fight for equity and the right to say what a farmer's work and produce is worth, is not a political question; and it will be settled outside of the political ring, no matter how much the politicians may chip in, in the way of talking for the sake of votes.

The lay of the hen—the glorious American—her song and her eggs are cheering signs of prosperity that will glow with a perpetual halo, when the farmer's wife shall say: "I am selling eggs at thirty-five cents a dozen to-day." And the corner groceryman shall say: "Thank you, ma'am, I'll take twenty dozen today. Do you think you will sell at the same price next week?"

After all—all that is said about wheat and cotton—the corners, the bulls and the bears—the hen-fruit of this country brings more comforts to the country home than both of them combined. It's a song and an egg to-day, to the basket tonight, a rest of a few days as the eggs accumulate, and then to market, and the shoes and stockings, the little fancy articles, and the table delicacies. They are bought with the egg money.

"Be just and fear not." The essence of equity—the call for square dealing between man and man. Is it just for one man to say what the produce of another's farm is worth, per pound or bushel. Is it in keeping with the great principles of the brotherhood of mankind to ask a brother man to work with indefinite prospects—without any assurance of equitable returns for one's labor. No. There will be injustice on the farm just as long as the town man and the speculator price the farm products.

Co-operation is the foundation stone of society. Without co-operation on the part of husband and wife, the golden ties would part asunder; for "a house divided within itself cannot stand." Neighborly co-operation means a happy community and neighborly success. Let us help one another.

The signs of the times point to high prices for farm produce. This without reference to the action of the farmers themselves in the matter. The question of war, or no war, in the far east, is not yet settled; and it looks now as if the dogs of war will be called out. This is a time when the farmers should keep as much of their produce at home as they can, for the chances are that "war

prices" will prevail before the world is a year older.

The country boy who thinks the city is a "snap" should get that idea out of his head as soon as possible. The man who is putting this down on a typewriter now, has tried both lives—country and town—and is prepared to say that his happiest days were spent on the farm. There is a sweetness, a freshness, and a joy in life on the farm, that is found nowhere else. Some people get lonesome there; but, let it be said now, that the loneliest place on earth is the crowded street, to the man or boy who is away from home and friends. While to the unsuccessful and the moneyless man, it is more barren of pleasure than the desert of Sahara.

"Woman to the front," the frontispiece to the January 1st issue of this magazine, was pleasing to the writer, because it was prophetic, whether the publisher intended it to be so or not. The women of America are coming more and more to the front. They are today aiding men in the grand achievements of our country, more than ever before. Not only do they strengthen the home more and more; but the community, the state and the nation. Indeed, our glorious womanhood is the sweetest and dearest flower of all the earth.

When you have read "The Third Power," think. And after a mental review, act. It is written for a purpose, and that purpose is the betterment of the farmers of America. The author would go even farther than that. He would have every one who tills the soil, even in the remotest corners of the earth, receive a fair and equitable reward for his labor.

## LETTER FROM DAVID DOBETTER

No. 38.

NEAR WILLIAMSPORT, Ind.,  
Jan. 15, '04.

DEAR MR. EVERITT:—I have been pretty busy all day and I hear the clock striking twelve as I draw up to my desk to write to you. I might put the letter off a day or two, but there is a thing on my mind that I want your advice about. If ever I did need good sound advice in my life it is now. When the thing was first presented to me it worried me more than anything that ever came along.

The fact is, they want me to be township trustee! Think of that! Me, David Dobetter, with all my work on hand, the young folks away at school, a candidate for the best office in the township! I don't understand why they thought of me. Surely there are plenty of men in the township better qualified for the position than I am. Why don't they pick out one of them instead of coming to me? I must confess, it completely stumped me when I first heard of it. It dazed me so that I lay awake some time the first night. Wife says I talked about it in my sleep. I think she was just putting it onto me. I never talked in my sleep nor snored in my life. I know it. You never saw a man that did, either. It is a slander the women folks like to get off on us to silence us when we have been robbed of our sleep two or three nights by their nasal symphonies, and feel as if we would like to crawl off somewhere and die. But I will own up that I am troubled about this proposal that I shall be township trustee. I have done my best to fight it off, by telling them I had so much else to do that I could not do justice to the public work. But they tell me that is just the kind of man they want. The busy man is the one that does business. I also said that I made no pretensions to being a politician. And here, too, I found that I had made no argument. The voters have come to the point in this township where they don't intend to be bossed by the ring politicians any longer. I have seen signs of that coming some time. The people are sick to death of the ring politics of this county.

And so, I have told them that they should have my answer two weeks from today. That will be just in time for the spring election; and I wish you might let me hear from you before that time. I have written to Ben and John about it and shall try to make up my mind after getting the best advice I can. I don't want to be made a fool of in my old age. I know I shall have the vigorous opposition of the machine politicians, and as they have all the money they can spend the chances might be against me. I do not know anything about making a political canvass, and if I am nominated I shall spend little time and no money looking up voters. If the people want me, all right, if not, there is plenty of work to do at home.

Jan. 16, '04.

Before my letter to you got into the mail, I received the following from the children. I will send them along so that you can see how they feel about the matter. The first is from John. You can see that he looks at the matter enthusiastically. He says: DEAR FATHER: Go in and lick 'em all out! I'll come home and work like a tiger for you all day election day. Wish I could vote for you, but if I can't I can take old Bill and Nellie and bring in men that can. I will get Uncle Tom Markham out, and you know he never has voted in his life.

He's got too now! I say, tell 'em you'll take the place.

Your Son  
JOHN.

P. S. Mary says what I have written is all right. Hurrah for Pa!

DEAR FATHER:—It makes me feel good to think that the folks are beginning to find out what there is in you. I am proud of that, and if you go into it you've got to win! Can you do it? This is out of my line and I never thought a thing about such matters. You are there where you can look the ground over. How much sentiment is there against the machine? Whom do the men represent who have talked with you? Will they stand by you when it comes to the election? There are things I think you ought to find out before you say you will or you won't be a candidate. You need not get on top of the barn and shout all over town what you are after, but go at it quietly and learn just what there is to this. Then act accordingly. If the people want to shake off the party bosses and mean business in what they say to you, I see no other way for you than to stand for the office. That is every man's duty and privilege. I would like to see you in the place and am sure you will do well in it if it comes to you.

Your Boy,  
BEN DOBETTER.

So you can see something about how the young folks look at it. I think I will take Ben's advice and cast about me a little. But I shall look for your answer with some interest. You know more about such things than I do, and will, I am sure advise me as seems best to you.

With best wishes, I am,

Yours truly,

DAVID DOBETTER.

\*\*\*

DEAR MR. DOBETTER:— It seems to us that your son Ben has said the sensible thing, and we can add very little to it. The times demand the services of the very best men, not only in the more important offices of the state and nation, but also down nearest to the people. We have taken pride in watching your rapid advancement, and feel certain that the people of your township have made no mistake in selecting you to be their standard bearer. After making the quiet canvass your son spoke about, if you find that there is a strong undercurrent against the old party abuses, it seems to us it will be your duty to make the fight. You may be defeated. The cause of right does not always triumph at first, but public sentiment will crystalize rapidly, and in a little while, even if you should not win now, the independent movement will gain strength enough to carry the day.

With heartiest good wishes we are,  
EDITOR UP-TO-DATE.

## OFFICIAL VOTE IN ELECTION CONTEST

January 16th we received the following:  
DETROIT, MICH., Jan. 15, 1904.

GENTLEMEN:

"We are this a. m. in receipt of the official certificate of the Secretary of State for Iowa, showing the official number of votes cast for Governor, November 3rd, 1903, as 417,919. The official vote for Governor of Ohio is 866,376. The official vote for Governor of Massachusetts is 396,479. Total number of votes cast for Governor in the three states are 1,680,774.

The accountant appointed by the committee on awards is engaged with his staff of assistants in tabulating the estimates, and we expect the committee on awards will be able to announce who are the winners on January 25th.

A list of winners with full particulars will be mailed to you on the day the awards are made."

Yours truly,  
PRESS PUBLISHING ASS'N.

The winning numbers will be published in February 15th issue.

## Factory Price

Direct to You

We are the only general merchandise house which owns, controls and directly manages a vehicle factory. We build our vehicles from the ground up and know what's under the paint. We add but one small profit to the cost of material and labor, hence our customers are getting a better made job in a finer finish and at a lower price than can possibly be secured elsewhere.

\$19.80

"LEADER" Road Wagon — Imitation leather trimmed; carpet, wrench and shafts; just as illustrated. Write for further description.

\$25.50

"CHALLENGER" Buggy—24 in. body, cloth trimmed; top, back and side curtains, storm apron, carpet and shafts. Write for details.

We also have better grades up to the very best and most stylish that can possibly be put together.

VEHICLE CATALOGUE FREE. Send for it today. It will give particulars about the above work. It also illustrates and describes the newest and best line of Runabouts, Stanhopes, Buggies, Phaetons, Surreys, Carriages, Carts, Spring Wagons, etc., ever quoted direct to the buyer. It explains the difference between good and unreliable work—between the hand-painted and the dipped buggy—and also explains our Guarantee of Satisfaction and

30 Days' Trial Offer.

Send a postal today for our Vehicle Cat. No. E1.  
**Montgomery Ward & Co.**  
Chicago

A special circular quoting our entire line of Sleighs, Sleds, etc., will be sent at the same time, if you request it.

40

## Send No Money

But let us send you our regular \$12 TAILOR MADE ALL WOOL SUIT, guaranteed to fit, for only \$7.95

C. O. D., (with privilege of examination) provided you will hand our circulars, samples and special offer to ten men who in your judgment will be interested in our Tailor Made Suit Offer.

Send us your name express office, and the following measurements: Chest (around body over vest close to arms.) Sleeve (inside seam.) Waist (over pants.) Seat (six inches below waist.) Length of pants (inside seam.) Length of pants (outside seam.) State whether you wish all wool Black Clay Worsted, Black all wool Thibet, or fancy brown mixed pure Worsted.

You do not run the slightest risk. We cut and make the suit exactly as ordered and instruct your Express Agent to allow you to examine it thoroughly. Try it on, notice the style, fit and high-grade tailoring. Compare it with suits for which small tailors charge \$30.00, and if convinced that it is as good as any suit you ever saw sold for \$12.00, pay your express agent our special price of \$7.95 and express charges, and the suit is yours. The ten sets of advertising matter which you are to distribute will be sent with your suit.

You can readily see that if our suits were not just as represented we could not afford to make and ship them without a deposit. We are the only Mail Order Tailoring House that will. If you prefer to see samples of our All Wool Black Clay Worsted, Black All Wool Thibet, or Fancy Brown Mixed Pure Worsted, write for samples, tape measure and instructions. We refer you to the Milwaukee Avenue State Bank of Chicago. Capital Stock \$250,000.

O. T. Moses &amp; Co., 188 W. Chicago Ave., Chicago

**TO HOMESEEKERS**

Good farms can be secured on the Nashville, Chattanooga and Louisville Railway in Tennessee, Kentucky, Alabama, Georgia. Prices reasonable. Climate healthful, never very cold or very hot. All marketable crops grown. Rainfall ample and well distributed. For particulars address Department C.

H. F. Smith, Traffic Mgr., Nashville, Tenn.

**No Smoke House. Smoke meat with KRAUSERS' LIQUID EXTRACT OF SMOKE.**

Made from hickory wood. Gives delicious flavor. Cheaper, cleaner than old way. Send for circular. E. Krauser & Bro., Milton, Pa.

# Farming From an Up-to-Date Standpoint

BY AN UP-TO-DATE FARMER

No. 22.

In nothing is the tendency to better farming more clearly indicated than in the improvement of stock. The cow which would have been called extra a few years ago is now discarded and one which will make more and better butter put in her place. How best to bring this change about is a problem that is engaging the attention of some of the best thinkers of the country. Perhaps there is no better way than through a good sire. We used to ask always when we went to buy a cow, "what is the record of her mother?" And that was all right. It is important that the mother shall have behind her a good story of achievement; but now we do not stop with the mother. We want to know something about the father, too. There comes in the wisdom and the signs of up-to-date farming.

The day of the scrub bull is gone, and it is a good thing that this is so. It always looked to me like a foolish thing to see a lot of nice cows, perhaps thoroughbreds, headed by a scrawny, ill-shaped bull. I cannot help feeling that that procession is headed in the wrong direction, and the worst of it is, it is taking the owner along with it. For surely there can be no genuine success until the herd has at its head a bull in every way as good as the cows he attends.

It costs to get a thoroughbred bull? That is a fact. One cannot go to any of the first-class stockfarms of the country and buy a bull calf worth taking home for less than twenty-five dollars. Now and then one may find a calf of good parentage on the farm of some man who has been working up to better things that can be had for, say ten dollars. Even this seems a fancy price to the ordinary farmer; but really that calf is a bargain and should be purchased without a moment's hesitancy; for he is the foundation of greater things to the man who owns him.

It takes some time to work up a dairy of highbred stock in this way. That is true. But if a man saves his best calves year after year, it will not be so very long before he will have a splendid lot of young cows from which excellent returns may be expected. And one fine thing about it is, that the farther along one gets the more pride he takes in his undertaking. He will take better care of his stock and will want all his neighbors to see his heifers, and will try to inspire them to get into the same line with him. So the whole community will be helped.

In the winter season the up-to-date farmer's time is largely taken up in caring for his stock; and his attention is then turned as perhaps at no other time of the year to the matter of fastenings for his cows. That this is a subject that has engrossed many men may be seen by taking up any of the agricultural papers and noting the advertisements of stanchions there displayed. One would think that everyone was making it a special study; and when we think to what an extent the health, comfort and usefulness of the cows of the country depend on the manner of their confinement during the long winter months it may readily be seen why this should be so. The old-fashioned rigid stanchion served a good purpose, but at best it was a hard thing in which to confine a cow. It is no wonder that one who has spent much time with cows should set about to devise some way of making them more comfortable.

No doubt the box stall is par excellence the finest way of keeping cows in the barn. But that requires more room than most of us think we can devote to stable purposes. It may be doubted, however, whether we could invest money any more economically than in space and lumber for box stalls. For surely we could devise nothing that would add more to the comfort of the cow than that, and comfort means profit, which will run up grandly in the course of a few years. But if we cannot, or think we cannot, put so much expense into this form of fastening, we may surely invest in some one of the up-to-date stanchions that are now on the market. And of these perhaps none are better than the swinging stanchions. Some of these swing on chains perpendicularly, while others are made to swing up and down, being fastened by chains about the neck to a bow of light wooden frame. Both of these styles are excellent, affording freedom of movement for the animal, so that she may turn and lick herself or carry her head in an easy position while resting or eating. To these advantages we may add the fact that they are perfectly safe.

Farmers everywhere, and especially in the west and middle will be highly interested in the project, now being perfected in New York for the construction of a great barge canal. Men everywhere who have grain to ship are seeking the most favorable rates for handling that can be had. Those who favor the barge canal argue that we are at the mercy of the railroads and that the canal will afford needed relief. If this be true, and there is much reason to believe that it is, surely we all ought to favor the canal. But it does seem to the unprejudiced observer that its building should be made a federal matter, instead of expecting the people of a single state to do it.

This view is taken by the people of some of the cities of New York, notably Rochester, which had its common council and board of supervisors send a call to the legislators of the state urging them to favor surveys by the Federal Government before further action is taken. This may presage national action in the line of canal building. There is danger that the co-operate interests which secured the passage of the barge canal scheme will, however, be powerful enough to defeat any measure looking to the construction of a national waterway from the lakes to the ocean.

The fact of it is, as farmers we are hampered everywhere and always by the great money powers of the country. Now, I am not going to set myself up as a faultfinder; I do not believe in that way of doing business. But no argument is needed to convince us all that corporate power rules this nation today as it never did before in the history of the country. Somewhere every farmer must come into

touch with this power; and whenever we do come in contact with it we are harmed. From the federal senate, that great hive of money autocrats, down to the smallest common carrier, the thought would seem to be to get every thing possible out of the farmer and give the least possible in return. Robbery? That is no name for it. The aim appears to be to crush and kill. I know there are many professions of friendliness, especially on the part of those who make business of politics, particularly about election time. This year we shall hear a great deal about what the parties have done for the farmers. But the fact remains that all the farmers have ever gained from the parties has been at the point of the sword. This ought not to be. It must not long continue or the safety of the public will be endangered.

Only \$1 per doz. by express. Big thing for agents. Send today for eggs and territory. Circulars and terms free. **NETHAWAY & HANSON, Dept. 5, Wahoo, Neb.**

### WORK FOR THE MONTH

This is the last month of winter, but the conditions which governed the poultry yard in January are unchanged. The warmth of the fowls during the day, as well as when on the roost, should be looked after. Your pens of breeders should all be mated now and in full operation for the coming season. Remember that only the best should be used as the parent stock, and none too good for that.

### FEEDING FOR EGG PRODUCTION

If situated in a cold climate the deficiency of heat must be artificially supplied, not in houses alone, but likewise in the food which assists in maintaining animal heat. If, on the contrary, the poultryman be situated in a

hot climate he will endeavor to so regulate both the house and food that the hens will not be made to suffer on account of heat. When comfortable quarters are provided for the fowls, the nutritive ratio of the food should be about 1:4; that is, one part of protein or muscle-producing compounds to four parts of carbohydrates or heat and fat-producing compounds. Each fowl of  $3\frac{1}{2}$  pounds live requires average daily total food throughout year of the weight of 3 $\frac{3}{4}$  ounces, of which 3-1.5 ounces is dry matter. Under similar conditions each fowl of 5 $\frac{1}{2}$  and 7 $\frac{1}{2}$  pounds requires 4 $\frac{3}{4}$  and 5 $\frac{1}{2}$  ounces respectively.

Give the hen a sufficient variety and quantity to meet all the needs of her system and leave a margin for egg production. The custom throughout the country has been to feed too much corn. When yellow corn is given in proper quantities it imparts a deep yellow color to the yolk. The Mediterranean can better stand a large ration of corn. Good, plump, whole oats, fed dry is so good an egg food that a hen which has the persistent, prolific laying habit bred in her will actually lay herself out of condition on oats alone, for this reason, a small percentage of wheat and corn should be fed to keep up the wear and tear of the body. Buckwheat, like wheat, has too wide a nutritive ratio if fed alone, and produces a white flesh and light-colored yolk if fed in large quantities.

It is generally conceded by poultrymen of experience that it is best to feed a part of the grain food in the soft condition, that is, in the form of a mash. From the fact that the digestive organs of the fowls in the early morning, contain the least amount of food, it is thought best by many to feed meal or soft food at this time, for the reason that it will be digested and assimilated quicker than whole grain. A mixture of equal parts by weight, of corn and oats ground, added to an equal weight of bran and fine middlings, makes a good morning food if mixed with milk or water, thoroughly wet without being sloppy. An ounce of salt should be added for each 100 hens. Table scraps and paring may be thus utilized. Beans are rich in nitrogen and increase the egg product when added two or three times a week. A quart will ordinarily feed from 12 to 15 hens. A mess of four parts of bran

15 Wesson Ave., DETROIT, MICH.

and one part linseed meal, once a week, is an excellent change and invigorator.

Some authorities tell us to MAKE THE FOWLS scratch for their feed. A more correct way to say it would be LET THEM scratch for their feed, they would rather do it than not, besides, it does away with gorging and encouraging a lazy disposition. The grain ration should consist of whole wheat, some oats, and a little cracked corn. This should be fed in six inches or more of litter where the hens will be compelled to scratch for all they get. In the fall, when pullets are first housed, the straw should be about two or three inches deep to start with and they become accustomed to working for the grain the amount may be increased. Oat straw is best as it is tough and does not break up so easily as wheat or rye straw. If the fowls are fed three times a day they should not be fed all they will eat at noon. At night, just before going on the perches, they should have all the whole grain they will eat up clean. Full crops are desirable at this time as digestion and assimilation are the only requirements of the organization.

### WATER FOR CHICKS

Drinking fountains require close attention. Small chickens drink frequently, and oftentimes their beaks are loaded with food which is left to a greater or less extent, in the water supply. As it is necessary to keep these fountains in a tolerably warm atmosphere, they soon become tainted and emit a disagreeable odor. This condition must not be allowed to exist, for all food and drink consumed by fowls should be wholesome. Nothing less than frequent scalding with steam or hot water will answer the purpose. A cheap, efficient drinking fountain may be made by taking an empty tomato can, bend in the ragged

edges where it has been opened, make a hole in the side one quarter of an inch from the edge, fill it with water, put a saucer on it and quickly invert both. The water will then stand in the saucer constantly at the height of the hole. Chickens can drink but cannot get in the water, which remains clear.

### CHARCOAL FOR POULTRY

The habit of mixing grit, shell or charcoal in with the mash food is detrimental to the fowls. It is very wrong, indeed, to either clog up the crop or overload the gizzard with these necessities, the supplying of which the fowls know very much more about than we do.

The grit box should hang against the wall and always have four compartments; one for grit, one for shell, one for charcoal and the other to be used for sand or gravel.

It is not necessary to feed powders or condiments of any kind to healthy poultry that is properly housed, cared for and fed. When they need anything in the way of a condiment, a mixture of equal parts of cayenne pepper, ground ginger, cloves and allspice is good, about a teaspoonful in the mash for each dozen fowls twice a week is sufficient.

### GOVERNMENT WHITEWASH

Slack half a bushel of unslaked lime with boiling water, keeping it covered during the process. Strain it and add a peck of salt, dissolved in water; three pounds of ground rice put in boiling water and boiled to a thin paste; half a pound of powdered Spanish whiting and a pound of clear glue, dissolved in warm water; mix these well together, and let the mixture stand for several days. Keep the wash thus prepared in a kettle or potable furnace, and when used put it on as hot as possible, with painters' or whitewash brushes.

This recipe is recommended by the Lighthouse Board of the U. S. Treasury Department.

### BUILD YOUR OWN INCUBATOR

You can do this easily with common tools and Save More Than Half. Our Complete Book of Plans instructs fully. We sell you at cost all fixtures like Tank, Lamp, Regulator, etc. No Experience. Handsome Catalog Free. CHANNON, SSOV & CO., Dept. M Quincy, Ill.

### RAISING THE PIGS

After the first week the sow should be allowed a run to clover or rye daily, leaving the pigs in the pen meanwhile treated to an allowance of sweet milk and corn meal. If they show any indication of scouring, the sow should have less feed, and be given strong lime water to drink. If the pigs are old enough, they should be given scalded milk in which a little wheat flour has been mixed, add an egg stirred in with the milk for each two pigs will be beneficial. If the pigs are too young to drink they should be given 4 or 5 drops of paregoric or a small quantity of baking soda.

Encourage the pigs to eat as soon as possible. For this purpose when about 3 weeks old, divide off a corner of the pen, inaccessible to the sow; have a board raised above the floor 4 or 5 inches under which the pigs can creep. Here feed them regularly milk and soaked corn; a few grains scattered on the floor will get the pigs to eating. Afterwards give them ground oats and wheat made into a swill with the water that has soaked the corn. After they learn to eat fairly well shorts or oats may be given.

By the time the litter is 3 weeks old the pigs should have the run of a lot in company with the sow where they can get sunshine, exercise, and fresh grazing. Never allow the pigs to run in wet grass.

#### Weaning

At eight weeks old the pigs should be separated from the sow and fed bone and muscle making food. Feeds rich in protein, together with skim milk produce the strongest bones in pigs of any food given them. In connection with shorts and pasture you will have no trouble in keeping them as large as it is profitable to grow. Remember it is not economy to grow a frame that would carry a 600-pound hog when they are usually sold at 200 to 250 pounds. A hog should have sufficient strength of bone to carry his weight when fattened, but in growing more bone than this, there is a loss.

The American hog grain is corn, but Prof. Henry has shown that if this grain is made the sole ration for young pigs it dwarfs their growth, they have less blood in their bodies, smaller livers and kidneys, lighter skeletons and hides, and a smaller proportion of lean to fat meat than hogs fed mixed and more nitrogenous rations. With hogs that have matured their growth there is no better or cheaper grain for finishing

them off on than corn. For growing hogs and the production of the largest percentage of lean meat in the carcass skim milk, peas, or some similar nitrogenous ration should be fed with corn. This is especially true with hogs grown for breeding purposes where vigorous, active, well developed, strong boned pigs are desired. Where corn is fed exclusively 25 per cent less is required to make a pound of grain and the strength of bone-meal or hardwood ashes. By feeding a mixed ration the muscles of the hog reach their fullest development and thus increase the proportion of lean to fat meat.

In weaning the common method is to shut the pigs up and let the sows go out in the pasture. The music begins. Better have an inclosure for the sows where they may be fed. Allow the pigs every access to them. Feed the sows all the oats they can eat, give them all the water they can drink. The pigs are fed all they can eat. They go in and can get to the sows. By the end of a week the sows will be dry, and the pigs so disgusted going in and finding nothing that they'll just quit. You will find by the end of the week not a pig will go near its mother. You can turn the sows right out to pasture with the pigs and there is no trouble. There is no theory about this, for it is a very easy thing to dry a sow by feeding nothing but oats on a dry floor, and letting her have plenty of water.

At weaning the pigs should weigh 50 to 60 pounds each, and be pushed as rapidly as possible thereafter, for the sooner they can be made to weigh 200 pounds each the more profitable they will be. The market demand baby pork at about 200 pounds when 5 or 6 months old and 250 to 300 pounds when 8 or 9 months. Breeding animals should not make these weights at the ages given, only those fitted for market should do so.

Bear in mind it is not what the pigs eat, but what they digest. In whole grain, the nutrients are enclosed in insoluble envelopes, and protected thus from the action of the stomach juices, should it escape mastication. By using finely ground feed, the entire nutrients of the grain are released from their digestible fiber, and with proper proportions in feeding, the juices of the stomach reach all the nutrients and utilize them.

Dry whole wheat has not been fed satisfactorily. The best results have been obtained where wheat has been fed ground in a mixture with corn and fed moistened with water or milk. Generally speaking a bushel of wheat will produce twelve pounds of pork; about the same feeding value as ground corn. Barley meal and water in the proportion of one to three is thought especially desirable for growing hogs and to add variety to the ration. Oats in the proportion of one-third ground eats to two-thirds corn meal have been fed with good results. Experiments with potatoes for hogs indicate that it requires about 4.5 pounds of cooked potatoes to equal in feeding value one pound of corn meal. Hence when corn is worth 60 cents a bushel, as a feed for hogs, potatoes are worth but 15 cents. Bran is not so good as shorts and ground cowpeas or soy beans may be used in place of the latter when the price exceeds \$20 per ton.

Try to feed your pigs regularly. Never feed late, especially the evening meal. It is better to abandon the evening meal than to feed it late. Another mistake often made is having the bulk of feed sloppy, thus forcing the pigs to drink so much useless water to get a certain amount of nutriment. Salt should always be placed where they can get it at will, just as human beings do. Clean the beds twice a week and keep them free from dust.

### VEAL CALVES.

The demand for veal is growing. Calves may be started on whole milk, gradually shifted to skim milk, and finally finished off with whole milk for a week or ten days, to give a smooth appearance which the butcher desires. In a number of careful tests calves gained one pound in weight from ten to sixteen pounds of skim milk. The main item is to get a fine finish on a young calf—say a weight of about 120 to 150 pounds when six or eight weeks old. Such a calf will bring from \$3 to \$15.

## DE LAVAL CREAM SEPARATORS

## Veterinary Department

[Conducted by C. C. McCue, Akron, O., to whom all communications should be addressed, before the 1st of the month to insure insertion in the following month's issue. All subscribers are invited to submit questions. All communications must be signed in full, not for publication, as only initials will be used, but to show good faith.]

**LAMENESS**—My horse is lame, in stifle joint; think it was caused by a kick. Have blistered the stifle, but get no results. Can you advise? A. S. P. Kalamazoo, Mich. Do not blister any more. Take fluid extract of opium, fluid extract of cloves and alcohol, equal parts, and rub well into stifle morning and evening.

**SCOURS**—Several of my cattle are troubled with scours. Would like a remedy. H. I. O. Kokomo, Ind. Mix half an ounce of ground ginger in each one's feed once a day for a week or until the desired effect is produced.

**COLD**—Have some sick sheep. They get stiff, fall away in flesh, scour a good deal and die. Opened one but could find no trace of disease. A. R. G., Lebanon, Ind. Give one dram subnitrate of bismuth twice a day. Your sheep took cold, which caused the stiffness, which is followed by purging. Tincture of ginger or essence of peppermint in one dram doses will do them good.

**INDIGESTION**—Had a cow fail suddenly to give milk. Her udder is swollen and she has no appetite. I. L. M. Lemars, Ia. Give half pound of Epsom salts, and follow that with two ounce doses bicarbonate of soda three times a day in feed, and keep salt in front of her all the time. Be sure to keep her bowels open.

**FISTULA**—Have a horse that has fistula in his withers. Can I do anything to cure it? P. O. F., Sioux City, Ia. Wash out the diseased parts with soft warm water once a day. Dry out all moisture with soft cloth. Fill opening with a good antiseptic powder twice a day.

**QUESTION**—Have a mare twenty years old that switches her tail when spoken to or tapped with the lines. When touched around front legs, and when standing tied to a post, she will squeal and sometimes strike with her front feet. She has been this way for the past few years. W. A. B., Randolph, O. In the first place your mare is old enough to be pensioned. It might

help to spay her. If she will breed, turn her out and raise colts and let her squeal.

**LICE**—My heifers have rubbed themselves until their hair and hide is off. Believe they have lice. Z. B. W., Delphes, O. Mix hog's lard three parts and coal oil one part. Rub it all over the heifers' bodies, using care to rub it well in, and do not let it get into their eyes. After ten days if they have ceased rubbing, wash the lard and oil off them with warm soft water, sal soda and soap. Press into sores an antiseptic powder twice a day. When you wash your heifers, do so in barn where they will not chill. If you cannot do this do not wash them until warm weather. The lard and the oil will do them no harm if you do not wash it off till spring.

**WEAKNESS**—Have a young mare that is stiff in hind legs. It is difficult for her to step over anything. W. Q. R. Decatur, Ill. Do not work your mare. Give her large roomy box stall well bedded. Keep her warm. Take alcohol and water equal parts, and rub well into back twice a day. Keep her bowels open.

**THUMPS**—I feed a number of lambs each year. They are sometimes troubled with the thumps. Please tell me what to do. V. B. I. Huron, S. Dakota. Give one ounce Rochelle salts and one dram tincture of ginger once a day until well. When they are constipated, use soap, and water injections.

**CRIBBING**—I am a reader of UP-TO-DATE and would like you to give your best remedy for a cribbing horse, if there is any sure cure for them. S. T. M., Indiana, Pa. A horse that has once acquired the habit of cribbing is very seldom cured, especially if he is an aged horse. Colts should be kept out of the same barn where a horse is allowed to crib. If they are not, you will soon have them all cribbing. You should cover all places that the horse can take hold of with tin. Do not leave any nails sticking up, or any ragged edges of tin, make it smooth. If he still takes hold of the tin, paint it with pine tar. Sometimes a muzzle kept on the horse will prevent it. Another remedy, is to buckle a half inch strap around neck where throat latch comes. Buckle it pretty snug when his head is up. When he lowers his head, the strap will be loose. He cannot take hold to crib when his head is down. You could then feed him off the floor. Be sure you do not buckle

strap too tight, or you will choke your horse. You can prevent the horse from cribbing, but it is a doubtful proposition to effect a cure.

**SORE THROAT**—I have a fine young Berkshire boar that makes a peculiar gurgling noise in breathing, and now has violent coughing at intervals. He is five months old. I desire to keep him, as he is a thorough-bred. Please tell me what I can do to clear up his breathing. He is very fat around the throat. B. F. S., Henderson, Ky. I think your hog is troubled with a sore throat. Take all whole grain from him. Feed him ground feed in form of a slop. Keep him away from the rest of the hogs.

Bathe the throat with hot salt water twice a day. Rub in a little turpentine twice a week. Use care so as not to blister throat. After ten days' treatment, report to me.

**WHITES**—Have a mare that has the whites very bad. She is eighteen years old. H. R. B., Denver, Col. Inject her once a day with the following solution: C-U-R-A Powder one ounce, soft warm water three quarts. Place the C-U-R-A Powder in the water and shake well before using it. Before treating with the above solution, wash thoroughly with warm water.

**DEHORNING**—Had a fine ram dehorned six months ago. Wound did not heal as it should. Insects and flies bothered it during warm weather. H. F. B., Stillwater, Minn. Clean all dirt out of sores and rub in a good antiseptic twice a day. After all moisture is dried up, rub in an ointment twice a day until well.

**THRUSH**—Have an eight year old gelding that has thrush in all his feet. C. W. T., Ralston, Ia. Work all dirt out of crevices, and cut off all ragged pieces of frog. Work in an antiseptic powder. When crevices are nearly filled up with the powder, work in a piece of old cloth, to keep antiseptic in and dirt out. Treat once a day. You can work your horse during treatment if he is not too lame. Get all dampness out of stall. Clean it thoroughly, and sprinkle over bottom of stall, saw dust about two inches deep, and then put your straw on top of this.

### REQUEST ADVERTISERS WANT TO

Know in what Paper their Advertisement was seen. Therefore We TO Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.

### FREE VETERINARY ADVICE DURING FEBRUARY

Until March 1st, Dr. Hess (M. D., D. V. S.) will furnish every reader of this paper a letter of advice, and a special stock prescription, free of charge. This information is free to the users of Dr. Hess preparations at all times, but this month we offer it to those who have never used our goods as a means of demonstrating Dr. Hess' ability to formulate stock preparations. If you are in need of special veterinary advice, describe your difficulty fully in a letter to Dr. Hess & Clark, Ashland, Ohio, care Information Bureau, and the letter of advice and prescription will be furnished you free, providing you state what stock you have (number of head of each kind), what stock food you have fed, and mention this paper. Enclose 2c stamp for reply.

Milk is a very complex fluid, containing all the elements of the animal body. The food, therefore, to produce it should be rich in all these elements. The error too frequently committed by dairymen is in supplying a ration from one kind of food instead of giving a variety. It is a fact that butter has a higher flavor when produced from hay cut from an old meadow, because old pastures seldom contain less than 12 to 15 species of grass. It requires two thirds of the full ration of the dairy cow to keep up the animal heat and supply the necessary waste. If the system of the animal is in poor condition, it requires more. By adding Dr. Hess Stock Food, the great cow tonic, to the food regularly as directed, the digestion is kept in perfect order and every particle of the nutrition is extracted from the food eaten, and is applied to fat, bone, muscle and milk formation; thus, less food is required to keep up the animal system, and more goes to produce profit.

## Dr. Hess Stock Food

is the only scientific stock food on the market. It is sold on a written guarantee; it is formulated by Dr. Hess (M. D., D. V. S.). If these institutions of learning know of nothing better, it must be good. No unprofessional manufacturer can equal it.

**Our Information Bureau.**—For any disease or condition for which Dr. Hess Stock Food is not recommended, a little yellow card enclosed in every package entitles you to a letter of advice and a special prescription from Dr. Hess (M. D., D. V. S.). In this manner you are provided with a universal treatment for all stock difficulties either in the stock food itself or in the special prescription to which the little yellow card entitles you. Endorsements from physicians, scientists and stock feeders furnished on application.

**DR. HESS & CLARK, Ashland, Ohio.**

Also Mfgs. of Dr. Hess Poultry Pan-a-ce-a and Dr. Hess Healing Powder.

**Instant Louse Killer Kills Lice**

# Up to Date GARDENING AND TRUCKING

Enclosed find 50 cents for copy of "The Third Power" which I have just finished reading, and loaned it to Prof. J. A. McDowell. I would not part with what I learned in this book for a considerable sum.

J. H. HARPSTER,  
Millersburg, O.

### TIMELY WORK

Over so wide a range of territory as is traversed by Up-to-Date, much of the garden work must to some extent be anticipated, or rather the timely topics for one locality will be in advance of other sections. So some of our readers must read ahead of time and treasure up for the time of need. Included among the timely things for February, there is none more important than

#### The Hot Bed

Whether considered from the home or commercial standpoint, we can hardly ignore the importance of thorough equipment in this line; and the present month is none too early for careful preparation. To those interested in this kind of work, the study of local requirements is a safe policy to follow. For instance, the equipment that is ample for one section is entirely inadequate for another. In the far south there is little need at any time for the more elaborate structures necessary farther north. In the former sections, little if anything more than the cold frames are required. A very cheap and servicable bed where too much is not required, is easily made entirely above ground and covered with cloth. A six and twelve inch board will make the one side, and a twelve inch wide board the other. Any desired length is allowable, and the cover frames are best made in sections to cover the bed crosswise. Stretch medium weight sheeting tightly over the frames and paint with raw linseed oil and egg, in proportion of one egg to the pint of oil. Apply three or four coats, allowing the dressing to dry well before putting on the next. This will stand any reasonable amount of rain and does well enough for the later spring work in the far north. The same bed is used extensively in the north, but is better covered with glass, especially for the earlier work.

The more servicable beds and those best adapted for late winter and early spring work are made largely below ground. The excavation may be two feet or more in depth and lined with plank or boards from the bottom to one foot above ground for the lower side, and eighteen inches for the higher side. If substantially made they will last for years, and all told are cheapest in the end.

The large manure space available by the excavation gives long and steady heat, as also strong heat for cold weather. Then, too, they are available for cold frames or storage beds, when not otherwise in use. When the expense (which is not very large at most) can be afforded, it is better to build from the first on this plan.

#### Some Accessories

Successful work with the hot bed depends very largely upon the manure, both as to kind and handling. As to kind, the best of course is grain-fed horse or mule droppings. It should carry a good proportion

# CASH FOR YOUR FARM NO MATTER WHERE IT IS

Do you want to sell your farm?  
Do you want to sell it quickly and with the least possible expense?  
Do you want to sell it at a reasonable price instead of sacrificing a good portion of its value?  
Do you want it sold without publicity?  
If these are your wants, I can fill them.

For eight years I have been filling these wants for people in every section of the country. The result is the largest real estate brokerage business in the world. Isn't that proof that I have been fulfilling my claims and isn't it sufficient evidence that I can sell your property?

Eight years' experience, offices in principal cities from Boston to San Francisco, hundreds of special representatives and an expenditure of over \$100,000 a year in advertising, give me better facilities for selling your property than any other broker anywhere.

It doesn't matter whether your property is worth \$500 or \$500,000 or in what state or territory it is located. If you will send me a description including your lowest cash price, I will tell you just how and why I can quickly sell your property for cash and at the least possible expense to you. It will cost you nothing to get this information and I am sure you will be glad you asked for it.

If you want to buy any kind of a property in any part of the country, tell me your requirements. I will guarantee to fill them promptly and save you some money at the same time.

W. M. OSTRANDER, 406 NORTH AMERICAN BUILDING, PHILADELPHIA.

of straw, and ought to be kept sheltered until desired for use. Frequent forking over will prevent burning, which is very destructive to its after use.

The soil is also an important item and should be carefully selected. Rich sand or clay garden loam is best, but at all events it should not contain clay sufficient to cause it to bake or work into lumps. One pint of air-slacked lime to the bushel of soil, thoroughly mixed will be very beneficial in most cases, and the more time the lime can have to work upon the soil before sowing the seed, the better. Special care and attention to the detail is of the greatest importance in the successful outcome of the work.

#### Seed Selection

This is of the utmost importance and applies to general garden as well as the hot beds. One of the most vexatious contingencies as well as fruitful sources of loss to the garden is poor seed. The injury is well nigh irreparable, and too much caution cannot be exercised. In this connection we speak more particularly of varieties rather than seed vitality. If it is corn, potatoes, cabbage, onions; whatever sort it is, be sure that it is strictly up-to-date.

This subject is entirely far too broad to be treated of here, and only the starting point can be suggested. Get started right then keep eternally at it, by following the rule invariably, that only the fittest shall survive.

#### Seed Testing

Uncertainty is the most uncertain quantity with which we have to deal, and could that element be eliminated from the garden problem then gardeners would indeed be a happy race of beings. One which bears with especial weight upon success or failure is the uncertainty of seed germination. Fortunately this in most cases can be nearly or quite guarded against by the simple means of testing our seeds and knowing for

### The "Hardie"

Is so powerful that it sends its fog-like spray to the tops of the tallest trees.

So simple in construction that a boy with a monkey wrench can take it apart and put it together again.

All its working parts are heavy brass, so finely fitted that there is no friction, no leather or rubber about them.

That's Why They Work So Easy.

We make them in many sizes and styles. Our catalogue tells you all about them. FREE—send for it.

THE HOOK-HARDIE CO., 64 Main St., Hudson, Michigan.

a practical certainty as to their germinating powers.

The most feasible plan of testing is with porous saucers such as are used with flower pots. Set them into earthen plates or tin pans containing water, and the moisture will soon percolate and soak through the saucers in sufficient quantities for the needs of seeds. A sprinkling of sand upon the seeds, just sufficient to cover them will keep them nearer their natural condition for germination and will thus be of assistance. Of course they must have heat to some extent, but this is an easy matter with the kitchen range or cook stove.

Other means, as pans or boxes with damp soil, or spreading between two damp cloths are fairly successful. By whatever means the tests are made keep as close to nature as possible; then results will be just so much the more reliable. The points to watch are sufficient heat, moisture, and chief of all the number of seeds tested in order to get the exact percentage. With any of these methods of testing if the germination shows 60 to 70 per cent. or even a little less, the outdoor results will be satisfactory. By way of these methods the results cannot be expected to be nearly up to those in actual field operations. But a careful trial upon all garden seeds will amply pay all trouble and many times will be the saving of an entire crop.

#### Planning the Work

In many localities, there will still be considerable time before actual operations either in the hot beds or open ground will begin. It is now an opportune time to plan just as nearly as possible, the work for the future. We want to decide just what crops are best adapted to our individual conditions, and just what soil is best suited to certain crops. No doubt, certain portions of the land will be better adapted to certain crops than will other parts. Some crops will require different feeding than others for best results. So there is opportunity for study and research that will open up wide and interesting fields. If we can only know our soil and its needs, we then hold the key to success.

Let us also plan better and cheaper methods. When we can cut down the cost of production to the minimum, we hold a great advantage even over the producer at a medium cost, to say nothing of the more expensive methods. This proposition alone embraces many points for careful thought.

#### On Time

-If we only stop to consider what even a few days in time often means in the price of vegetables, we will be able to see the importance of promptness in our work. "The early bird catches the worm," and it is true of vegetables as well as birds. There is hardly a vegetable among the first early sorts that is not effected to a greater or less extent, and no time should be lost in getting them started when once soil and weather conditions are right. Neither should there be any lack of fertility and culture, for these also, are inseparable from early maturity.

#### COLD FRAMES.

In most localities, the cold frame is a great convenience, and they are easily constructed so that if desired, they can be used for hot beds as well.

A southern exposure protected from the North and West is desirable, and good drainage is also necessary. Five feet six inches by twelve feet is a convenient size, or better, make outside measurements to accommodate the hot bed sash. Excavate two feet in depth with length extending east and west. Set posts of 2x4 or heavier three feet high from bottom of pit, for the north side; and two feet six inches for the south side. Cut top of posts the right slant to give

proper slope. Line up the pit with solid boards, or better still plank, from bottom clear to top of posts. This extends the sides respectively six inches and one foot above the ground. When securely covered and thoroughly banked with manure it affords safe storage for such plants as require winter storage, and if desired, can be easily converted into a hot bed for late winter and very early spring work. Board covers may be substituted for the sash, or the contrary just as desired.

#### A GREAT MACHINE

We are showing herewith a cut of the Bi-Pedal Sickle and Tool Grinder which the Luther Bros. Company, No. 55 Penn. Street, Milwaukee, Wis., are advertising in this paper. For many reasons, some of them briefly given in the advertisement, this machine seems to solve in a most satisfactory way the problem of grinding the farmer's tools. It is a compact little machine, in reality four machines in one, covering the

whole field of tool grinding and is most easily operated by the feet. The laborious task of turning the grindstone is done away with. Better than sandstone or emery, the Carborundum grinding wheel with which is fitted and about which we all hear so much these days, makes short work of cutting the finest tool steel. The pressure required is but one twentieth of that required on the ordinary grindstone which explains why it is so easily run with the foot pedal. Any reader wanting a first class tool grinder will find something to the purpose in the Luther Brothers' machine. Look at the advertisement and write them direct.

## FREE—Great Crops of STRAWBERRIES

And How to Grow Them

A strawberry book written by the "STRAWBERRY KING," so called because he discovered the way to develop the fruit organs in a plant and make it grow two big berries where one little one grew before. He grows the biggest crops of the biggest berries ever produced and the book tells all about how he does it. It is a treatise on PLANT PHYSIOLOGY and explains correct principles in fruit growing. It is worth its weight in gold to any fruit grower. Will be sent free to all readers of UP-TO-DATE. Send your address now. The finest THOROUGHbred PEDIGREE PLANTS in the world. R. M. KELLOGG, Three Rivers, Mich.

## Buy from Our Factory and SAVE A THIRD

Our plan of selling direct to user cuts out two profits and saves a third on retail prices. Our assortment of carriages and harness is larger than any dealer can show you. We guarantee all our goods. We are bona-fide manufacturers—not a commission house. Send for our free illustrated catalogue.

THE COLUMBUS CARRIAGE & HARNESS CO.  
Columbus, Ohio.

Readers are invited to ask questions. Address Orchard Department, Up-to-Date Farming, Indianapolis.

### WHAT IS OUR AIM

It goes without saying that every farm should be at least provided with ample orchard and small fruits. With this point settled, it is up to us to decide whether we shall plan from the standpoint of simply the home or from the broader base of the commercial orchard.

It is unwise to measure our chances of failure or success by the standard of thirty years ago. Then we could, so to speak, fairly find the fruit. Today, eternal vigilance is the price of success. So today we have to deal with fruit husbandry as a special rather than a general enterprise. It is safe then, before beginning to build, to sit down and carefully

### Count the Cost

Many contingencies will group themselves in the cost columns; and none perhaps more conspicuously than personal inclination. This after all is the key note to success, and lacking it, we had better turn our attention to more congenial pursuits. What the future has in store is beyond our ken; but at present there is no brand of husbandry so seriously assailed by pests, fungi and climatic conditions as is the fruit in-

# The "Little Doctor" IN THE Home

To Cure The Ills Of All The Family. Always Handy

A box of BEECHAM'S PILLS should always be kept in the house, as, like a "stitch in time," they may save much future worry and expense. On the first sign of any derangement of the system a dose should be taken, and they will invariably have the most beneficial effect.

**THEY WILL RESTORE YOU TO HEALTH IF YOU GIVE THEM A CHANCE.**

"Prevention is better than cure," we are told. Next time you feel "out of sorts," just take a dose of BEECHAM'S PILLS, and so prevent a seemingly small ailment growing into serious trouble. BEECHAM'S PILLS prevent illness as well as cure it. Most people take them to keep themselves in good health. These are wise and happy ones—they hardly ever know what bad health is. There is no medicine in the world to compare with BEECHAM'S PILLS. They will not harm the most delicate—and the strongest will benefit by using them. They are a tried remedy—the trusted friend of thousands of families all over the world.

# BEECHAM'S PILLS

Women suffer all about us with headache, backache, loss of energy and spirits, Nervous Dyspepsia and many other ailments which make life almost unbearable. Every woman can be immediately relieved of this suffering if upon the first sign of derangement she would take a dose of BEECHAM'S PILLS.

Sold by Druggists at 10c. and 25c. Or mailed by B. F. ALLEN CO., 365 Canal St., New York City, if your druggist does not keep them

dustry, and the inclination and determination to stay by and fight it out to the end, are the only elements that will win.

Soil and climatic conditions, market facilities, etc., all must enter into the cost account, and until these become the base of reckoning, our undertakings are insecure. Much more might be said in the way of thorough preparation for our undertakings before beginning them; but leaving these as suggestions, let us see what is before us in the way of

### Timely Work

In some sections of the country pruning is now in order, and doubtless is somewhat under way. To a certain extent, this work is timely at almost any season of the year, but there is a limit. I do not believe it good practice to remove large branches until freezing weather has passed. In fact, with the exception of dead wood (which may be removed at any time) it is better to leave them until growth starts, and stubs of any considerable size should be painted as soon as possible after the removal of branches.

The old rough bark may be removed at anytime during winter, and this winter is

none too soon for the work. A hoe is a good tool and doubtless the most convenient for this, only care is necessary in order not to damage the under bark.

Follow this with a thorough scrubbing with lye (not too strong) and see how the appearance of the trees will be improved. Lye from wood ashes is safest, but concentrated lye will answer, only it must be much reduced in order not to burn the trees.

Spraying is also timely for many sections now, or at least, a little later on. The best mixture for this first work is the sulphate of copper solution. The formula is 4 pounds of the sulphate of copper, vitriol or blue stone (as it is variously called) to 45 or 50 gallons of water. This spraying should be done while the wood is still dormant, and the safe rule is to apply just before the swelling of the buds. This first spraying, if thoroughly done will nip lots of mischief right in the bud, but this by no means argues that the second, third or even the fourth should be omitted. If we only remember that it is an all-season's fight, and that nothing less is safe; then we have a fair chance for success.

**STARK BRO'S, PORTLAND, N. Y., Louisiana, Mo.**

### THE SMALL FRUITS

Unfortunately, in some sections, especially of the west, the tree fruits will succeed only indifferently if at all. These drawbacks will doubtless be overcome to a greater or less extent, by acclimation, forest planting, irrigation, etc. Until these agencies effect the desired changes, the lack of home-grown tree fruits must be otherwise compensated for. Fortunately, a partial relief is already in sight in the vine and bush fruits. There is hardly any section, where with proper care, these will not succeed, and thus for the present must be the main dependence.

### FRUIT TREES FOR ADORNMENT

Why not sometimes combine utility and beauty, and plant here and there a fruit tree for ornament? True, variety is the spice of life, and while the apple, pear or peach may be made very beautiful and useful as well, we also like other trees and would by no means discard them. The nut trees are also welcome guests, and there is abundance of room on the ordinary farm for all; so let us give them all a place and never let this spring pass without a generous planting of some or all of them. I wonder if any of us fully realize how a slight expenditure of cash and labor will enhance the real value of our homes? But this is not all, for the higher side of life is thus intensified and developed and this can never be reckoned in dollars and cents.

### WIND BREAKS

There is no doubt that forests have a great influence upon the climatic conditions of the country, and that their rapid depletion has had inestimable bearing toward bringing about the great changes that have been wrought. Some, no doubt, have been beneficial; others quite the reverse. Recent investigations prove pretty clearly that forests or even hedges or wind breaks exert very preceptible influence upon the atmosphere and moisture, and to considerable distances. So while the forests can never be replaced, is it not reasonable practice to provide protection to some extent through hedges and other available means? Their ability cannot be doubted in protecting buildings, roadways and especially orchards. In the latter instance they are of especial value in many ways, and perhaps in no sense greater than in fertilization of the flowers. It is said that the reproductive period of the blossoms remain active for only a short period at best, some placing it at only a few hours. At this period the whipping in the wind may seriously effect the fruiting powers of the trees, and thus such protection may prove of the highest utility.

Thus it seems that evaporation of moisture, temperature and fertility are all affected to a great extent by the presence or absence of forests, or hedges even, and hence, their value is far greater than appears on first sight.

### As to Kinds

As to best varieties to plant depends largely upon adaptation. Even the rapid growing deciduous trees may be utilized, but of course to less general advantage than the evergreens.

The Norway spruce is one of the most useful of all and readily adopts itself to a wide range of country. To this, however, Providence has adjusted the balances pretty evenly, and there are few sections, if any, where some kinds will not grow. The essential point is to select the best adapted and most available sorts. No less important, however, is the location which in all cases should be to bar the prevailing winds. All contingencies of course, cannot be provided against, but whether as protection to orchards, buildings, as snow sheds or ornament, their purpose should first be determined; then the location becomes entirely a matter of the greatest possible utility.

### Five Million Fruit Trees

painted with **OTWELL'S TREE PAINT** last year. Trees benefited and pests kept away. More farmer agents wanted. Terms and circulars free. **W. H. OTWELL, Carlinville, Illinois**

**Send Me No Money—Simply Write Me About Your Case and I Send You the Secret by Return Mail Absolutely Free**

After years of research along the lines of the deeper scientific mysteries of the occult and invisible of Nature-forces I have found the cause and cure of deafness and head noises, and I am enabled by this same mysterious knowledge and power to give to every unfortunate and suffering person perfect

**I Have Demonstrated That Deafness Can Be Cured.—Dr. Guy Clifford Powell**

hearing again; and I say to those who have thrown away their money on cheap apparatus, salves, air pumps, washes, douches, and the list of innumerable trash that is offered the public through flaming advertisements, I can and will cure you and cure you to stay cured. I ask no money. My treatment method is one that is so simple it can be used in your own home. You can investigate fully, absolutely free and you pay for it only after you are thoroughly convinced that it will cure you, as it has thousands of others. It makes no difference with this marvelous new method how long you have been deaf, nor what caused your deafness, this new treatment will restore your hearing quickly and permanently. No matter how many remedies have failed you—no matter how many doctors have pronounced your case hopeless, this new magic method of treatment will cure you. I prove this to you before you pay a cent for it. Write today and I will send you full information absolutely free by return mail. Address **Dr. Guy Clifford Powell, 345 Auditorium Building, Peoria, Ill.** Remember, send no money—simply your name and address. You will receive an immediate answer and full information by return mail.

TRUE SONG OF EQUITY

(Air: My Country 'Tis of Thee)

BY PEARL ULILLA DAVIS

Our noble cause in thee,  
True hand to make us free,  
Great Equity;  
Light have you made our toil,  
Gave gain instead of spoil,  
Led us beyond the foil  
Of slavery.

Our past despair you see  
Now lifted high in glee  
Through Equity.  
Farmers have joined in pride  
With friends on ev'ry side  
To prosper as they glide  
In Equity.

Let millions swell our cause,  
Get power before we pause,  
Our word command.  
May voices sweep the land,  
Grow links on ev'ry hand.  
Make Equity to stand  
One million grand!

Let all our nation thrive,  
While farmers learn to hive  
Their just reward  
Then fortune is not far  
With Equity our Star.  
God made us, as we are,  
Great toil, our Crown!

WONDERFUL  
MEDICAL  
DISCOVERY

Remarkable Remedies That Cure  
All Diseases

The Famous Doctor Discoverer and  
Scientest James W. Kidd Now  
Offers to Every Afflicted  
Person a Free Treatment

It has only been a short time since there appeared in the columns of nearly all the prominent newspapers of the world an announcement of the remarkable discoveries made by Dr. James W. Kidd. Physicians, scientists and professional men marveled at the wonderful cures which he performed with ease. Invalids who had suffered for years without hope were, it seemed, almost miraculously restored to health. The doctor was

DR. JAMES WILLIAM KIDD

besieged by thousands of letters asking for information and assistance, until at last he determined to give his secret to the sick and afflicted of the world. Thousands have taken advantage of his liberal offer, and his mail is now flooded with letters of heartfelt gratitude from cured patients.

All Diseases Cured

Every disease to which human flesh is heir is represented in these letters, the so-called incurable diseases being as numerous as the less serious ones. A letter from Cliff Latimer of Loveland, Ohio, gives the details of his miraculous cure of consumption as follows: "I had Consumption, as examined by four prominent doctors, one of whom a specialist made an examination of the

sputa, and pronounced my disease pulmonary consumption, and told me that there was no hope. I weighed 120 pounds. Now I am well and strong. Every trace of the disease has left and I weigh 170 pounds. It has been over a year since I took Dr. Kidd's treatment, so I know the cure is permanent." Abraham Trauger, of Lambertville, N. J., afflicted with locomotor ataxia, a disease pronounced incurable by the medical profession, tells of his cure after years of suffering: "When I commenced treatment with Dr. Kidd for locomotor ataxia I could not walk across the floor. Since finishing treatment I have not lost a day from my work as foreman of the Lambertville Rubber Co." Thomas J. Halferty of Brimfield, Ind., writes as follows: "Dr. Kidd cured my son of a severe case of Bright's disease after he was passing large quantities of blood in the urine." The record of such miraculous cures would fill a book. Sufferers from consumption, Bright's disease, dropsy, paralysis, heart disease, locomotor ataxia and other dangerous diseases have been restored to health. The common chronic diseases, such as rheumatism, kidney trouble, catarrh, female troubles, bronchitis, epilepsy (fits), chronic coughs, lumbago, bladder troubles, scrofula, impure blood, skin disease, goitre, piles, bowel troubles, general debility, nervousness, lost vitality, contagious blood poison, etc., are cured in so short a time that it seems almost a miracle.

A Home Treatment

An important feature which recommends this wonderful treatment, rightly called "The Elixir of Life," is the fact that it can be used at home by anyone. The remedies are simple in composition, harmless to the most delicate system, but a secret known to no other living doctor.

Dr. Kidd's Honesty and Reliability

These National Banks in Fort Wayne vouch for Dr. Kidd's reliability, Ministers, City and County Officials, Professional and Business Men all unite in giving him the heartiest endorsement. Fort Wayne is proud of her distinguished doctor. One and all say that his success is deserved by his ability, honesty and industry. To the doctor the good-will of his fellow townsmen and the expressions of gratitude from the thousands to whom he has given the blessings of vigorous manhood and womanhood are sufficient to pay for the years spent in patient study and experiment. To make known to every suffering person in the world the fact that there has at last been discovered a treatment which will positively cure all diseases he has made the following remarkable offer:

A Free Treatment

Dr. Kidd offers to send to every applicant a free treatment. There are no restrictions whatever. No matter what your disease, no matter of how long standing, or how many remedies, or doctors you have tried, this treatment will cure you and it costs you only a postage stamp to find this out for yourself. The doctor's generous nature, his sense of fairness and his faith in his remedies are all clearly shown by this liberal offer. Nothing can possibly remove all doubts as quickly as actual trial. When this is offered absolutely free, every sick person should take advantage of it. You cannot afford to be skeptical when your health is at stake. In applying for a free treatment give the doctor a description of your case or state what disease or diseases you want cured. You will receive the free treatment by return mail, postage paid.

To secure personal attention address the doctor's private office as follows:

DR. JAMES W. KIDD,  
83 Balfes Block, Fort Wayne, Ind.

SANTA CLAUS' BADGE

BY PEARL ULILLA DAVIS

"Papa, said his little daughter,  
As she climbed upon his knee,  
"Mamma says it's Christmas-eve,  
Is it Christmas Equity?  
Papa, if our dear, old Santa  
Has joined this great Equity,  
Maybe he will want a dollar  
For the presents he gives me!

"For in Up-to-Date I read it,  
Read about the prices high;  
'Bout the dollar wheat and others,  
And old Santa is so sly!  
Papa, what if he'd leave my presents  
With a bill right in the way?  
Wouldn't he get rich though, papa,  
If he'd do us all that way!"

"No, my child," her father answered,  
"Santa has joined Equity,  
But he's prospered so since then, dear,  
That he's richer, don't you see?  
He will bring you many presents,  
More than he has ever brought;  
For in Equity, my darling,  
He has joined a noble Thought."  
"Oh, papa, won't that be jolly?  
I shall lie awake and see  
If Santa Clause now wears a badge  
Like yours of Equity."

EVERY LADY READ THIS

Years ago when I was a sufferer an old nurse told me of a wonderful cure for the diseases of women. It cured me in one month. It is a simple, harmless lotion, a positive cure for all dangerous and annoying ailments in women. It can easily be prepared by anyone having the recipe. I send it free to every suffering sister who writes me. Address Mrs. D. L. Hudnut, South Bend, Ind.

WHY ARE YOU WAITING

BY FANNIE E. POOL

Farmers, why are you waiting?  
Come join our union today.  
You do not care for the money;  
The dollar you're asked to pay.

Now while you are waiting and hoping,  
That times may grow better again,  
The gamblers of Wall Street are plotting  
And setting the price on your grain.

The grain that you planted with promise  
And tended so careful and nice,  
Gone into the hands of the gamblers;  
You've nothing to do with the price.

They say, get out you old hayseed,  
We have no further use for you now,  
You've finished your part in this program,  
You'd better go follow the plow.

Then tarry no longer my brothers,  
If you wish to be happy and free,  
To escape the clutches of Wall street;  
Unite with our A. S. of E.

RHEUMATISM

Cured Through the  
Feet

The Success of Magic Foot Drafts  
Has Been So Great That the  
Makers Have Decided  
to Send Them

FREE—On Approval

We want everyone who has rheumatism to send us his or her name. We will send by return mail a pair of Magic Foot Drafts, the wonderful external cure which has brought more comfort into the United States than any internal remedy ever made. If they give relief send us One Dollar; if not send nothing.

Magic Foot Drafts are worn on the soles of the feet and cure by absorbing the poisonous acids in the blood through the large pores. They cure rheumatism in every part of the body. It must be evident to you that we couldn't afford to send the drafts on approval if they didn't cure. Write today to the Magic Foot Draft Co., G. A. 3, Oliver Bldg., Jackson, Mich., for a trial pair of drafts on approval. We send also a valuable illustrated book on Rheumatism.

WHEN DRUGS FAIL

To cure you of LAGRIPE, NERVOUSNESS, DYSPEPSIA, CONSTIPATION, HEADACHE, and ill-health generally, turn over a new leaf, and try hygienic treatment. On receipt of 25 cents (silver) I will send full details of a System of Treatment by which you can cure yourself at home without further cost. There is no disease but that yields to its power. I have no medicine to sell, nor electric batteries. Your money refunded if you are not benefited. Address  
Flavius Williams, Asheville, N. C.

**FITS CURED** I wish every one suffering with Fits, Epilepsy or Falling Sickness, to send for one of my large sized 16 oz. bottles FREE. My Remedy Has Cured, When All Others Failed.  
DR. F. E. GRANT, Dept. 16, Kansas City, Mo.

## \$3.75 SENT FREE

The Eminent Chicago Heart Specialist,  
Franklin Miles, M. D., LL. B., will send  
\$3.75 Worth of New Treatment  
Free to Our Readers

There never was a better opportunity for our readers suffering from diseases of the heart, stomach, nerves or dropsy to test free of charge New and Remarkable Treatments for these disorders, whether complicated or not.

A thousand references to, and testimonials from, Bishops, Clergymen, Bankers, Farmers, and their wives will be sent free on request. These include many who have been cured after from five to twenty physicians and professors had pronounced them "incurable." Among them are H. A. Groce, 504 Mountain St., Elgin, Ill.; Mrs. Sophia Snowberg, No. 282 21st Ave., S. Minneapolis, Minn.; Mrs. A. B. Colburn, Blessing, Ia.; Mrs. M. B. Morelan, Rogers, Ohio, and the presidents of two medical colleges, etc.

## CREAM EXTRACTOR FREE

This is a genuine offer made to introduce the Peoples Cream Extractor in every neighborhood. It is the best and simplest in the world. We ask that you show it to your neighbors who have cows. Send your name and the name of the nearest freight office. Address

PEOPLES SUPPLY CO.  
Dept. 187 Kansas City Mo.

## RHEUMATISM

The New Cure by Vibro Discs Sweeps  
All Before It—Doctors Amazed  
and Sufferers Rejoiced

FREE TREATMENT of this "WONDER" CURE  
Sent Promptly to All Applicants

The success of Vibro Discs is simply phenomenal. They are curing cases of Rheumatism that have baffled medical skill for almost half a lifetime. Those who use them are astounded to find their pains relieved and symptoms vanishing as if by miracle. It is certainly very wonderful, but in no

sense miraculous. Vibro discs are in fact a strictly rational and scientific treatment. They differ from all other systems in rooting out the last vestiges of uric acid from the system. This is the only complete and final cure of Rheumatism; no aftermath, no relapse and no fresh attacks. I want every Rheumatism in the land to know and test my Vibro Discs. Hence I send a Free Treatment promptly to all who ask. I can give proof incontestable that hundreds are cured by this Free Treatment alone. It costs absolutely nothing but the trouble of writing your request.

PROF. S. M. WATSON, Dept. 19, Battle Creek, Mich.  
**YOUNG MEN, BECOME INDEPENDENT**

Diploma granted and good positions obtained for successful students. Cost within reach of all. Satisfaction guaranteed. Write for full particulars at once. THE ONTARIO VETERINARY CORRESPONDENCE SCHOOL, LONDON, ONTARIO, CANADA.

## LITERATURE FOR LITTLE FOLKS

Very much may be done to cultivate a taste for good literature, even with the babies. As soon as baby begins to understand English and take notice of things, take pains to show him pretty pictures and tell some bright, but short and simple story about each one. Try this whenever your little folks start to cry, whether from some hurt or from fretfulness (which generally means sickness.) Do what is necessary to relieve bodily pain, but DON'T talk about it. Give the little one a kiss, wipe away the tears and start some funny story, a new one if you can possibly invent one, and before you know it Johnny or Susie will be laughing merrily, his troubles all forgotten as he listens to the adventures of "Piggy-wig," "Turkey-lurkey, or "Goosey-loosey."

There's one thing I would NOT do, and that is, allow the colored supplement of the Sunday papers to come into the house where children are just in the formative state. "Buster Brown," "Billy Bounce" and others of the same sort cultivate a liking for slangy impudent characters, which are all too prominent in real life. If we want our children to grow up to be manly men and womanly women, we must start right. Barr out all that is coarse and pernicious either in song, story or picture, if you would have the little ones pure and good. Good literature is a powerful factor in arousing ambition and moulding a GOOD CHARACTER. For the little ones nothing nicer than Margaret Sidney's "Pepper Series" or Martha Finley's "Elsie" books, "Bird's and Animals" or "Child's Natural History," "Little Men and Women," bound volumes of "Babyland," "Chatterbox" and "St. Nicholas" are all charming.

## HELPS FOR HOUSEWIVES

Those who have small kitchens will find a kitchen cabinet very convenient. If you find them too expensive get the husband or son who is handy with tools to fill the space under the kitchen table with drawers and shelves for holding the rolling pin, spice box, soda, salt mixing spoon, kitchen knives and various other things that you have been trying to find a place for. The shelves may be protected from the dust by a curtain or door. Now cover the top with tin, and you will find it one of the most useful articles of kitchen furniture you ever had.

It is not necessary to raise a cloud of dust every time a carpeted floor is swept. Dampen a cupful of coarse salt and scatter it over the carpet, then sweep with quick firm strokes. It would clean the carpet and leave the colors bright and fresh. Upholstered furniture should be covered while the sweeping is done.

Floors that are stained and oiled are easily kept clean. The material costs very little and anybody can apply it. For an oak stain, take raw sienna, add a little umber to it and mix with half a pint of linseed oil and a quart of turpentine. A tablespoonful of Japan dryer put in the turpentine will make it dry quickly. Apply with a clean paint brush and give it two coats if one does not make it dark enough. After the floor is stained give it a coat of linseed oil. If the oil is reapplied once a year the floor will always look well.

Linoleum or oilcloth is often ruined after it has been cleaned a few times. Dissolve a heaping teaspoonful of borax in a gallon of soft, luke warm water, and rub a little good laundry soap in it. Wash the oilcloth, changing the water frequently as it grows dark. Nothing causes oilcloth to look dull and greasy so quickly as cleaning with an insufficient amount of water, and using a very strong suds. You will not need much soap when borax is dissolved in the water. This is the best method for cleaning stained or painted floors also.

Cane or willow chairs can be cleaned a few times by washing with strong salt water. After that they may be stained with any kind of wood stain, applied boiling hot. Two coats will be needed, then apply a coat of varnish. E. J. C.

## ECONOMY IN THE KITCHEN

There are so many ways in which carelessness will result in loss, that a housekeeper should make a careful study of her work in the kitchen. If the management is left to hired help there are apt to be many small leaks which will amount to considerable in the aggregate.

Lights are left burning when not in use; soap is left in the dishwasher to melt; vinegar is put in tin vessels, causing them to rust, and making the vinegar unfit to use. Fruit is left to decay instead of sorting it over and keeping it in a cool place or using it. Tea and coffee are kept in paper sacks or in cans that do not have close

# ELECTRIC BELT

## FREE

**IT IS YOURS**

for the asking without one cent of cost.

**This is no deposit scheme; no 30 days trial scheme.**

**PHYSICIANS' INSTITUTE, 1788 Unity Building**  
Chicago Illinois

fitting lids, and they lose their strength. Silver knives and spoons are used to scrape kettles.

Water in which meat has been boiled is often thrown out. A better plan is to let it stand until it is cold, skim the grease off and use the broth for soup. The grease may be clarified, and is a very good substitute for lard or butter in cooking.

Send your address and we will send jewelry postpaid; when sold, send us \$2 and we will positively send you the WATCH and CHAIN.

**LIBERTY JEWEL CO., Dept. 38 CHICAGO**

### LIGHTING THE RURAL HOME

Everyone realizes the immense strides that have been made in lighting during the last century. From the tallow candle of our fathers to the electric light of today, has been an immense stride. But the electric light, wonderful as it is, has failed as yet to be of any practical value to those who live on the farm, far from the wires of the electrical power plants of the cities.

The question of lighting becomes an interesting one for the rural household, and nothing has so nearly approached its proper solution as the system of gasoline lamps which has been produced in the last year or two. Gasoline is a highly volatile fluid which is refined from crude petroleum. When heated to the proper temperature it forms hydro-carbon gas, a gas that greatly surpasses the ordinary lighting gas in city mains for the brightness and clearness of the light it gives.

A number of reliable lamps have recently appeared on the market which are operated by gasoline and which are fully as safe, if not safer than kerosene lamps. The principles by which these lamps are operated are quite similar. The method is as follows: The gasoline is conveyed to the burner through a fine tube, which is heated before it reaches the burner. This heat causes the gasoline to change into hydro-carbon gas. Over the burner where the gas is lighted, is suspended a hood or mantle of fireproof gauze. This white gauze diffuses and whitens the light of the burner in a way that greatly increases its power and efficiency. Just before the gas passes into the burner it is mixed with air, which greatly improves its burning qualities, as well as reducing the amount of gas consumed.

The light which is produced from the gasoline or hydro-carbon lamp is very clear and white, and is beautiful in its unusual brilliance. Besides being altogether superior to the kerosene lamp, it is cleaner and cheaper. It does not accumulate grease and it does not smoke. The cost of running a gasoline lamp is less than 1/4 of a cent per hour. The ordinary family uses a lamp about 3 hours every evening, or 90 hours a month. The cost of maintaining a 100 candle power light by the gasoline lamp for a month

is therefore, less than 25 cents, while the same amount of light from kerosene would cost \$1.61, by electric light \$5.48, and for gas without mantle \$6.39. The economy of the gasoline lamp is very evident.

### Bookkeeping Taught Free

By special arrangements with the British-American School of Correspondence of Rochester, N. Y., every reader of this paper who acts quickly may have a complete course of bookkeeping free.

To the agent who will sell a small quantity of our household supplies we will give free a beautiful Black Cooney Fur Scarf. It has two large Martin Tabs is 58 inches long and is the very latest style; or if the agent prefers we will give our 50-piece Dinner Set. This set is full size, one of this season's newest designs, with filled-in flowers and gold traced and looks exactly like hand-painted ware; or we will give our 10-piece set of granite-ware. This is a complete kitchen outfit, all steel enameled. We also give Curtains, Conches, Rockers, Parlor Tables, Sewing Machines, Parlor Lamps, Musical Instruments of all kinds and many other premiums for selling our household specialties. Easy to sell as every family uses them every day. We allow you 15 days to deliver the goods and collect for them. We give cash commission if desired. No money required. We pay all freight charges. Write to-day for full set of plans. You will find many useful premiums, and we guarantee satisfaction. **SALVONA SUPPLIES COMPANY, 507 Publicity Building, ST. LOUIS, MO.** We can assure our readers that Salvona Supplies Co. is thoroughly reliable and trustworthy.—Editor

# FREE SEEDS AND PROFITABLE PRICES

## Farmers Do You Want Them? YOU CAN HAVE THEM

WE don't suppose there are any people in the country who prize fine crops in the garden and on the farm more than do the readers of UP-TO-DATE FARMING.

To read UP-TO-DATE FARMING leads to a desire to become up-to-date in methods and crops on the farm. To be up-to-date in crops the best seeds must be planted, and here is where we are going to help our readers this year. We are going to give them seeds of some of the finest grain, potatoes, etc., it has ever been our good fortune to possess. We are not giving them to make up for any deficiency in the value of the paper, as we would dislike to think there is a single name on our list the possessor of which did not consider UP-TO-DATE abundantly worth the subscription price.

They consist of an Extraordinary Variety of Corn, that bears ears 25 inches long; a New Early Potato, the Earliest of all a Pumpkin that Beats the World; a Wonderful Watermelon that is the Greatest Novelty of the Season and a Special Offer of Other Seeds. See below:

**400 Grains** Yard Long Corn. A remarkable variety. Ears the longest of all. Yellow grains. One customer writes: "I send clipping from your paper. It reads as follows: 'The reporter and two others went to see J. L. Perkins' big corn. We measured, by tape, a square rod, gathered the corn, and weighed it. The yield was at the rate of 165 5-7 bushels per acre.' The newspaper report is entirely correct. The corn is immense. I have one ear that measured 25 inches. It is the finest corn I ever saw and the greatest yielder. Instead of farmers trying to grow 100 bushels per acre they will now try to grow 200 bushels with this new variety. J. L. PERKINS, Harrison Co., Ia. Nov. 5, 1903.

**One-half lb.** Early Success Potatoes—Strictly new variety, now introduced for the first time. Earlier than 6-Weeks

Market and Red Triumphs. Will produce fine

potatoes for market in thirty-eight to forty days with favorable weather, and beat all others under equal conditions. Color white. Shape round. Yield twice as much as early Red Triumph. This is a great potato, probably the most valuable of any ever introduced. To each subscriber we will send a simple plan to raise 6 to 8 bushels from the half lb. each bushel of which will be worth \$5 at introductory price. Every farmer wants a start of a valuable potato like Early Success; now you can get it for nothing.

**Early Success**  
Earliest and Best.  
Early Potato.  
Ready to use in  
38 to 40 days.

**1 pkt.** White Wonder Watermelons—This is a wonder in several respects, and distinct from all other melons. Shape round. Shell 1/2-inch thick, as hard and white as an egg shell. Succeeds on any soil; ripens all melons perfectly. Ripe melons when taken off the vine will keep ninety days without deterioration if not bruised. Have been marketed in Dec. at 5c a pound. Does not cross with any other melon. It is the highest type of melons and refuses to associate with anything beneath it. It is a prize winner, money-maker and the handsomest, most luscious and valuable melon in America. As a novelty and valuable vegetable unequalled. It is one of the most interesting things you can grow this year.

**1 pkt.** King of Mammoth Pumpkin—The largest, the heaviest and one of the most productive. Have been grown to weigh 250 lbs. Read the following: "I had a vine of King of Mammoth Pumpkin that surpassed anything ever heard of here."

There were 21 matured pumpkins on this one vine. Largest, 82 lbs.; next 70 lbs., 78 lbs., 75 lbs., etc., etc. I did not weigh them separately, but the combined weight was over 1,000 lbs. I exhibited them at our Farmers' Institute and here is the report printed in our paper. "Perhaps the greatest exhibit was twenty-one pumpkins grown on a single vine. Their average weight was 50 lbs. and total weight over 1,000 lbs."

MRS. JAMES A. SEED, Lawrenceville, Ill.

Nov. 4, 1903.

**EXTRA SPECIAL**—To make this offer so attractive that not one reader can refuse to accept it, and to induce all new readers to subscribe and all old ones to renew, we will in addition to all the above, send a due bill, good for 25c worth of pkt. garden or flower seeds, selected from the catalog of a leading seedsman. Your choice. This extra special offer is good only if you send the address of ten good farmers written plainly on a separate sheet. See coupon in the pumpkin.

Read a few letters: It is scarcely necessary to print any testimonials about UP-TO-DATE FARMING. A single copy speaks for it. This copy is a fair specimen of 24 copies you will receive in a year. Except each succeeding number is better than the last.

Your sample copy was a great surprise to me. Did not know there was such a paper published so full of excellent thoughts and ideas.

You seem to have some far-reaching and good ideas about the interests of farmers and as expressed in UP-TO-DATE FARMING.

UP-TO-DATE has been a great help to me. The ideas it advocates for farmers are grand. It is an educator that gives large dividends.

I am an old subscriber to UP-TO-DATE FARMING and will continue to take it because it shows us how to better our condition. No farmer should try to get along

INDIANAPOLIS**

# THE GREATEST BOOK EVER WRITTEN

It should be read by every farmer, banker, doctor, lawyer, merchant, school teacher and laborer in the country. It will do every one who reads it, good. 275 pages. SEND \$1.00 FOR A COPY IN HANDSOME CLOTH BINDING OR 50c FOR STRONG PAPER COVER. IF, AFTER YOU GET IT AND READ IT, YOU DO NOT AGREE THAT IT IS THE GREATEST BOOK EVER WRITTEN, AND WORTH MANY TIMES ITS COST, SEND IT BACK AND WE WILL IMMEDIATELY RETURN THE PURCHASE PRICE. We run all the risk. You are the judge. If you don't want the book for the great good it will do you, we don't want your money. Funds received from its sale go to establish the great farmers' society, therefore you are helping the great and good cause for the greatest of our people. SEND IN YOUR ORDER TODAY. DO NOT WAIT UNTIL TOMORROW. YOU NEED THE BOOK NOW.

## THE AMERICAN SOCIETY OF EQUITY INDIANAPOLIS, INDIANA

*"It Is the Thought and Purpose of a Man of Affairs and a Patriot as Well—  
That Reveal Themselves  
in These Pages"*

THE THIRD POWER. Here is indeed a great book for farmers, and for all people who are interested in social problems from the farmer's point of view. The author is president of the American Society of Equity, a society of farmers numbering many thousands and growing rapidly. He has come to be widely known as a champion of the best industrial interests of the agricultural classes and an ardent advocate of co-operation. In the dedication of his book he refers to the farmers as "the largest class, the most dependent class, the hardest working class, the poorest paid class of people in the world." The book is ably and forcibly written, displays an intimate acquaintance with the agricultural conditions of the country, portrays the cruel and disheartening facts, but is itself never disheartening but full of a strong, sane hope of better things, and a program for their attainment. It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in these pages. The book ought to do much toward stirring up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties. As a believer in the method of industrial cooperation, I most heartily recommend this book to farmers everywhere.

Part I, is entitled "The Third Power."

Part II, "International Consolidation of Agricultural Interests."  
Part III, "The American Society of Equity."—The American Co-operator, Lewiston, Me.

### *"It Will Create a New Mind"*

"THE THIRD POWER" is being read by our association which now numbers 22 members, and they prize it as the book of all books—coming next to the Bible—and unapproached for its benefits to mankind. It is just the book that furnishes the knowledge that the masses of people are now seeking for, and also teaches the classes how they should deal with the masses so equity will be secured to all. Again I say it is ahead of all other books because it will create a new mind in the reader.

W. P. BRYANT,  
Corona, Cal.

### *Thought and Effort Are Heaving the World's Wide Breast*

In the furtherance of the interests of the American Society of Equity and co-operation by farmers, J. A. Everitt, the president of the society, has written a book entitled "THE THIRD POWER" in which a plan for national co-operation by farmers with the benefits that must result, are fully set forth. Governing by star-chamber methods is shown to be out of date. Fairness appears to have been studied in every detail. By this plan governing is done from a central point. From this center will radiate as from the sun of our solar system all the influences that promote the general good. In that

state of society from which men are slowly passing the law of business was "competition is the life of trade," and this cut-throat system strewed its pathway with poverty for many, and gave more than plenty for a few. "THE THIRD POWER" teaches the more humane idea that "co-operation is the life of trade." Co-operation means helpfulness for others; competition means helplessness for many. Hence here is a sign of advancing civilization—a sign that the purposes and thoughts of men are changing for the better. The purpose of this farmer's movement as stated in Mr. Everitt's book, is not to interfere with established industries so long as others will concede to the farmers their rights. \* \* \*

Plainly if organized the farmers can meet others on their own ground and overthrow them if necessary for the common good. The trust problem will be solved, and solved in such a way as to benefit all. We refer to this matter to let our readers know that thoughts and efforts are heaving the world's wide breast, and betoken coming changes that shall bring about better conditions for humanity.—The Sunday Patriot, Jackson, Mich.

I have read your book, "THE THIRD POWER" and value it more than ten times its cost. Its doctrines are plain and explicit; its objects are noble and just; its truthfulness cannot be disputed. It is a book that should be in every home in the country.

H. F. MARCUSON  
Harpers Home, Va.

## UP-TO-DATE FARMING

J. A. EVERITT - Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club, (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2 - for \$ .75  
A Club of 3 - for 1.00  
A Club of 10 - for 2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept  
Your Own Subscription 2 yrs. for \$ .75  
3 " " 1.00  
For Membership in the A. S. of E. add 50 cents to any offer.

The emblem of the A. S. of E. as shown above, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgement.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. **Don't Neglect This.** See Special Subscription Offers elsewhere in this number.

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent. discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of January 15, 1904, Circulation

Indianapolis, Jan. 15, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the January 15, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 150,000. S. E. Cullum, State of Indiana. Before me, Charles E. Brigham, a notary Marion County, as public personally appeared S. E. Cullum and swears to the foregoing.  
[Seal] Charles E. Brigham, Notary Public.

**60c corn.** Farmers how would you like it?

All options on corn were above 50c at Chicago when writing this.

Why should the 1903 crop of corn bring less than the 1902?

Farmers hold for **60c** corn you will get it. If you buckle right down to the job in earnest you will get it soon.

**\$1.00 wheat.** What did we tell you?

Farmers are you getting all you are entitled to on the basis of your base market or are the railroads and middlemen taking part of your just reward? Organized you can protect yourself.

There are many thousand farmers quietly doing what the A. S. of E. recommends and reaping the benefit without paying the small fee to support the society.

This is a mild case of stealing. Fair, broad-minded, generous farmers will not be guilty of such underhanded conduct. When you hear of a farmer who is holding his wheat or other crops for the union price ask him why he don't display the badge—look on his wall in his home and see if the society certificate is framed and hanging there.

Holding your crops is simply controlled marketing.

(Continued on Page 4.)

## Dollar Wheat Has Come

### FARMERS WON OVER THE SPECULATORS

The battle for dollar wheat has been fought and the victory won by the farmers.

For once in the history of agriculture the farmers have undertaken to assert their right to place an equitable value on their own product and won. They are to be congratulated on this victory because there were many predictions that it could not be done, and even now it may be denied that they are responsible for the results. One of two things, however, is true. Either the farmers have held up their crop more this year than ever before, or the crop was much shorter than any estimate or predictions.

The credit for dollar wheat may be given to Armour and his clique of speculators by the uninformed and the unthinking. But it is a mistake. The farmers produced the conditions that made the price possible. No corner on grain was ever successful except the farmers were the power behind the throne. Armour may temporarily swing the speculative market, but the actual demand is dependent upon the supply the farmers let through the dyke of controlled marketing. The farmers supply the chips with which the speculators do the gambling.

We are constantly in communication with farmers in all parts of the country, and we know there is a large lot of wheat back in farmers' hands. Millers want this wheat and the world asks you for bread. They have met your demands. Will you now keep your promise and feed them? The American Society of Equity will be nothing if not equitable. It as strenuously opposes an unfairly high price as an unfairly low price. Therefore it appeals to farmers all over the country to market their wheat on the basis of \$1.00 a bushel, at the base market.

Remember, another crop is coming on. The only way to maintain profitable prices is to feed the world all it will take at fair prices. We cannot too strongly urge selling on the basis of the price you have been asking. One dollar at Chicago means \$1.00 in the central cities; \$1.12 at New York and Eastern market cities; 91 cents at Kansas City, 82 cents in central Kansas, etc.

Just a word of caution. There is only one way to keep wheat or any other crop at your price, and that is by controlled marketing. Figure what the farm price is. Sell all the buyers will take at the price, and the moment they won't pay the price don't sell a bushel more.

### "THE THIRD POWER."

Organizers and deputy presidents must keep a supply constantly on hand. Many can be sold. They will do the farmers' movement more good than any other thing. Write the National Union for terms.

Controlled marketing. Who did we hear say: "It can't be done?"

Farmers are doing it every day.

What does it mean when the receipts of wheat, or corn, or hogs, or cattle, or cotton are large some days and the price goes down. Then in a few days the receipts are small and the price goes up?

Does this not mean that when the farmers market less—control the marketing—the price goes up?

The trouble however is, that there is no system about marketing—no head, no advice—Each producer must use his own judgment or we will express it better by saying—must guess for himself. As Mr. Jessie Moore expresses it—"gigantic commercial combines on every hand vs. one wee wobbly farmer."

Controlled marketing! That's what we want and every other thing the farmers need and in equity should have will come. When a million farmers are in a society with the object of controlling marketing. The question will not be "will they hold enough to make the price?" but it will be, "will they sell enough to keep the price down?"

Mark our prediction. Holding crops is one of the farmers hobbies. In the past it has been one of his chief faults. Every body knows how loth farmers are to sell on a rising market.

With a definite aim there can be no reasonable doubt about farmers controlling their marketing to make the price. With a million or more farmers banded together there will always be enough of them to control the small portion that goes on the market and which under the present system makes the temporary surplus.

No difference how many farmers are contrary, there will always be enough to turn the trick.

If there were only a thousand farmers we would have doubt. Then ten or a hundred might prevent the working out of the plan. But with the immense number of farmers there will always be enough after eliminating the stubborn ones and the incables. Don't you see the supposed element of weakness, will be the element of greatest strength.

All these things are very clearly explained in "The Third Power."

Have you sent for a "Third Power" book? Don't refuse to do so. The writer has been modest in stating the value of this book, preferring that readers should judge, some judgments are passed in this paper. Read them. When readers place this book "next to the Bible in its value to humanity." When they say, "It will create a new mind in the reader" and make the statement that "thought and effort are heaving the world's wide breast," as expressed in The Third Power, then we can honestly and consistently urge every citizen of American to procure the book. We advise you to not measure the book against the monetary price, after you read it you will say, no price would be too high.

There are many good things in this issue, yet this is only a fair sample of each issue of UP-TO-DATE. Encourage us with your renewal and your subscription. Bring some more with you. We urge upon you the importance of supporting this paper, and the A. S. of E. and you will support yourself and other farmers who are making an effort for better conditions on the farm.

Have you taken up the matter of controlled marketing and price making on the farm with your agricultural papers?

This is an important matter. It means much for the farmers movement. We don't want any meritorious farm paper to suffer loss of subscribers, but they must do their duty. This is the time for farmers to know their friends and to work with their friends and compel their pretended friends to be real friends and work with them.

We defy any publisher or editor of any farm paper or any other paper to advance one single argument against farmers organizing and cooperating. Also we defy them to show even reasonable evidence that farmers can not organize, cooperate and accomplish all the objects the A. S. of E. stands for. All

we ask is that they will send the Editor of UP-TO-DATE a marked copy, we will annihilate his argument by the light of reason, truth and equity, and let farmers be the judge and jury.

**70,000 MEMBERS FEBRUARY FIRST. A gain of 11,000 since December 24th. This is the best growth since the A. S. of E. was incorporated. We will be able to report even more rapid growth in the future.**

## Have Farmers a Moral Right To Price Their Products

PUBLISHER OF UP-TO-DATE FARMING:

"DEAR SIR:—I approve of your policy to teach farmers how to get a fair price for what they now grow, in preference to devoting all your space to telling them how to grow more stuff which if successful means lower prices. Recently I wrote to the Editor of the Farm Journal and asked him to devote a little space to teaching farmers of the plan of the A. S. of E. He replied that he could not spare the space. But in his next issue is the article I enclose herewith. We hear much about the organization of farmers in our section now."

J. M. TABER, Kirby, O.

Parts of the article referred to are as follows:

\* \* \* "Yet there are problems that may not lightly be overlooked; problems that seem to have in them germs of future troubles far more serious than we care to contemplate over the Christmas dinner, but which must be met and solved. We see on one side of a world-wide conflict, vast combinations of capital, re-enforced by monopolistic powers; on the other organizations of men proclaiming the divine right of labor. Self-seeking is the mainspring of both these contending forces. In this great agricultural land of ours nearly one-half the population is engaged, or interested directly or indirectly, in agriculture. What is this great army of men and women to do to stay the tide of battle that impends between labor and capital? Shall the farmer join the self-seeking, but self-losing game of industrial and commercial war, or shall it be his mission to usher in the reign of peace? It is a time to consider this question. It is not an abstruse one, nor is it a remote one; but a live, imminent, vital question, and upon its answer depend results of vast importance to the world.

"We hear much about the organization of farmers for the purpose of maintaining prices; organizations of the character and purpose of our special-privileged monopolists. Well, two wrongs never were known to make a right; there's the moral side of it. The business side of it is that such an organization is impossible. Before he gets through with this question the farmer will be glad of one fact concerning which we hear many complaints these days, namely, that the farmer can not control the market for his own products. It is a wise law that this is so—no human being, or any number of human beings, ought to be able to control the markets.

"And the farmer also will find that, however else it may seem, other people can not control for long the market for their products, save as they are given some special privilege or monopoly over such products. The farmer ought not, must not, if he would save himself and others, seek to control the markets—to raise prices at will. But he should combine to crush out private monopoly that forces others to sell at low prices while it commands extortionate figures for whatever it may have to sell. This is a good thing to reflect upon at Christmas-time, for it means justice and fair play—two of the great principles which the Master proclaimed."

We wish the writer of the above would read "The Third Power." Solutions are given in that book in minute detail. We would that every person who is threatened by this possible "world-wide conflict" of "vast combinations of capital, reinforced by monopolistic powers" on one side and "organizations of men proclaiming the divine right of labor" on the other could read "The Third Power." The solutions of these stupendous problems must come through the farmers. How they will come is fully set out in this work; also the results, which will be for the good of all, are predicted.

"Shall the farmer join the self-seeking but self-losing game of industrial and commercial war, or shall it be his

mission to usher in the reign of peace?" Read from "The Third Power."

\* \* \* "The farmers propose to take the field in a campaign for lower prices on the things they buy where lower prices should prevail, and they are going to use a force the operation of which will be irresistible. It is not so much a high price or a low price, but an equitable price all around that is demanded. The entrance of the Third Power through the American Society of Equity into the economic problems of the world marks an epoch in the history of the race. Although the last of the great powers to be organized, it is yet the fundamental or first power or force which will dominate all others. The development of this society and the power it will represent and wield may be compared with the development of the force, electricity, which has revolutionized the industrial world. The awakening of the agricultural classes, the organization of them into a great national and international co-operative body, which is now being accomplished, will make possible the control by them of practically all the material that enters into the manufacturing and commerce of the world, and on which human and animal life depend. Such a revolution might appall us were it not for the fact that in working out this stupendous movement everything will be in the direction of improvement and better conditions for everybody and for every legitimate enterprise.

"It will be so in the matter of prices. There will not be one price for the farmer and another for the working man and professional man. Whatever conquests the farmers win in this direction will be for the benefit of all. What the farmer gets, all will get. In fighting his own battle the farmer will fight the battle of every American citizen. It will be impossible to charge the farmer a fair price and to charge other classes an unfair price. So the American Society of Equity does not come to oppress or enslave any class, but to give liberty and independence to the greatest class of citizens, and through that to all others—not to destroy or cripple any institution, but to benefit and strengthen all institutions, including the government itself."

\* \* \* "Many schemes have been devised, and many more suggested, for the regulation and control of trusts. The law does something, and more stringent legal enactments might do more. But no curb can be as effectual as an organization of American citizens greater and stronger than the trusts themselves. Through this and through this alone can trust extortion be prevented, and fair treatment be secured for all. The people can do it for them. And the trust magnates understand this. With the help of shrewd and unscrupulous attorneys they can usually find a way to evade the most formidable statute, and to organize so as to get within the letter of the law. But they could make little headway with the people organized against them, and when the farmers are organized the people will be organized. How could the cotton or woolen manufacturers get along without the farmers' cotton or wool, or the packers without his cattle? This but indicates the power which the farmer could exert as a member of the American Society of Equity. He could oppose his trust—if you choose to call it so—to the manufacturing trusts, and in such a contest the farmer must, of necessity, win. This is a force—this new force, this Third Power—which the industrial trusts would understand and respect. Thus organized, the farmers could meet their enemies and oppressors on their own ground, and overthrow them, if necessary, for the common good. The trust problem would be solved, and solved in such a way as to benefit all. And the farmer, enabled both to buy and sell advantageously, would enjoy a prosperity and freedom such as he has never known, and that prosperity and freedom would be shared by all our people. The world has been waiting long for this Third Power. Now it is at hand."

"Two wrongs never made a right; there's the moral side to it." Does the Editor of the Farm Journal want to go on record to the effect that after the farmer has raised a crop, through the unceasing toil of himself and his family from spring to autumn, that he—this farmer—has not a moral right to put a fair price on it? That the producers of the fine grains, vegetables, fruits, meats, cotton, wool, etc., that are so desired, have not a moral right to demand a price for them that will repair waste of their farms and machinery, interest on investments, a fair wage that means the comforts of living and possibly some of the luxuries, and a margin beside to provide against the proverbial rainy day, and old age? No moral right to put a price on the product of your toil? Perish the thought. If the Editor of Up-to-Date has ever made a mistake he is morally certain that it was not because he championed the farmer's right to put a price on the result of his labor. This is a Divine right. "The laborer is worthy of his hire." Somebody sets the price on the farmer's labor; somebody sets the price on the farmer's crops. Who has a better right than the farmer himself? Who knows better than he what they are worth in investment, skill, toil and self-sacrifice? Referring again to "The Third Power," that remarkable book that meets

every objection and throws the searchlight of truth and equity on every dark question, we read as follows:

\* \* \* "Ought any man, with a proper sense of obligation to himself, to his family and to his country, to be satisfied with anything less than equity? Is it not what we all pretend to want for ourselves, and profess to be willing and eager to grant to others? The American farmer is very patient—proverbially so. He has been compared to Issachar, of whom we have this record in the Bible:

"Issachar is a strong ass crouching down between two burdens, and he saw that rest was good and the land that it was pleasant, and bowed his shoulder to bear, and became a servant unto tribute."

"Rest may be good, and the land may be pleasant, but he who consents to become 'a servant unto tribute' will know little of what is good or pleasant. It is on the patience and docility of the farmer that the capitalists and politicians have traded. And even now they are predicting the failure of the American Society of Equity, because, as they say, the farmer is contented and happy, and doesn't need it. Are they right? It is for the farmers themselves to say. If they want 'rest' and would enjoy 'pleasant' country that they have made their own, they must make up their minds that they will have to free themselves from 'tribute,' assert their rights as American citizens, and at the same time show that moderation of which we all boast by demanding only what is equitable. So the American Society of Equity offers them the means by which they can demand and secure fair prices."

Has the farmer no moral right to throw off the burdens? Must he always be the strong ass that crouches down and receives the burdens? Must he always be "a servant unto tribute?" We let the farmer judge.

When the banker opens his vault and says to the public help yourself to my money and pay the interest you please; when the merchant opens the doors of his store and says come and help yourself and pay the price you choose; when the manufacturer says to the farmer what will you give for this machine; when the patient and the client fix the price for professional services; when the shipper and receiver make the transportation rates; then and not before will we advise the farmers to submit to have prices made on the food and clothing material representing the hardest but poorest paid labor on earth. Yet which is the most needed?

"The business side of it is that such an organization is impossible."

Will the wise Editor of the Farm Journal enlighten us and tell us how he knows it is impossible? Has he tried it? Again we will answer him by quoting from "The Third Power."

\* \* \* "Will the organization work? Unless there is good reason to believe that it will not, we are almost justified in asserting, even in the absence of affirmative proof, that it will, since the presumption is so strongly in its favor. At any rate we may say that the only way to find out positively whether or not it will work, unless it can be absolutely demonstrated that it will not work, is to try it. The man who builds a flying machine does not hesitate to put it to the test. Many men were sure that no ship could ever cross the ocean under steam. Yet when the trial was made it was found that the doubter was mistaken. So it is here. There is, as I believe, a great, new machine. That it can be built has already been proved. Now we want to know whether it will operate. The machine is being built for benefits. We will leave you to judge if the plan as explained does not provide for every needed timber, all the wheels, levers and cranks; is there a nut, screw, bolt, rivet or nail lacking? Doesn't it look that all it needed is the co-operative help of one million American freemen to man it, when it will start and continue forever to supply the needs of the entire agricultural needs of this greatest of countries? In order to be sure either that it will or will not work we must give it a trial.

"We have seen what it would accomplish, assuming that it will work. Are not these objects worth taking some risk—especially when the risk is so slight to secure? If the machine breaks down the loss to each individual will be inappreciable; if it moves, his gain will be tremendous. You risk infinitely more on every crop you put out or every head of live stock you put in the stall, not knowing whether you will get your money back or not. If the machine works, it will insure you a liberal return for every dollar invested, or every hour employed in all future time. But why should it not work? It all depends on the farmers. If they come into the organization, are loyal to its rules, are true to one another, and co-operate faithfully and intelligently for the general good, there can be no possible doubt of the success of the plan. No, I will not expect this. All do not need to be loyal, considering the great number of farmers, and the fact that only a small portion of any crop needs to be controlled at any time. If we admit that the great majority of farmers are stubborn, in fact rebellious, yet they can not affect the accurate working results of this machine. There will still be enough loyal ones left

at any time to insure success. In this respect the great numbers of farmers which, in the past, was considered the great element of weakness in a farmers' organization will be its greatest strength, when working on the plan of the American Society of Equity. Give us a number equal to what were in some former farmers' organizations and the definite results will work out almost without an effort on the part of the individual farmer. Farmers should remember that they are not to be ruled from the outside. When the voice of the American Society of Equity is heard, it will be the voice of the farmers themselves.

"So what we are to learn is not whether the organization can succeed, but whether the American farmers honestly want it to succeed; therefore, to doubt the practicability of the plan is to doubt the farmers themselves; after the organization has been effected the farmers can kill it if they wish to, but so can a man rob his partner. Railroads combine successfully, and yet how often do we hear of secret cutting of rates in direct violation of the agreement between the roads. So I admit that some of the farmers might play the traitor to the organization, and yet I hold that the organization would win in spite of their treachery. But there would be few such men among the American farmers; having once decided to give the American Society of Equity a trial they would see to it that it had a fair trial.

"The only people incapable of working together in organizations are savages, idiots and the insane. Among these a perverse individualism prevails. Are we to class the farmers in either of these categories? Organization is the great weapon of civilized and enlightened men, and so it is peculiarly the weapon of the American farmer. In his 'Notes on Virginia,' Thomas Jefferson wrote:

"Those who labor in the earth are the chosen people of God, if He ever had a chosen people, whose breasts He had made His peculiar deposit for substantial and genuine virtue. It is the focus in which He keeps alive that sacred fire, which otherwise might escape from the earth. Corruption of morals in the mass of cultivators is a phenomenon of which no age or nation has furnished an example."

"And writing to John Jay, in 1785, Jefferson said:

"Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, and they are tied to their country and wedded to its liberty by the most lasting bonds."

"What they were in Jefferson's day they are now. Yet it is of such men that we are asked to believe that they, like the insane and savage, are incapable of organization. The farmers are as intelligent as the mechanics, who combine without difficulty and make their combinations effective. They are even as intelligent as the so-called captains of industry, who, through their organizations, control both the business and the politics of the American people. What the mechanics and capitalists do, the farmers can and will do. To say that they can not organize effectively is to put them in a class by themselves and to rank them infinitely below all other classes. And that is absurd.

"One objection remains to be considered: There are those who say that the scheme is too great—that it is beyond the power of men to achieve. This is but another way of stating an objection already considered. But what are men put in this world for, if not to achieve great things? The very greatness of this enterprise, instead of being an objection to it, ought to be one of its chief recommendations. Further, if it has been shown that it is practicable, what matters it how great it is? The greater the better, one would think; besides, system is the servant of the twentieth century business man, and great enterprises frequently work out more definitely than small ones. It is a stupendous campaign in which the farmers are asked to enlist. But that very fact ought to stir their ambition and inflame their zeal. Instead of saying that the plan can not be put in operation, we ought to set ourselves to a consideration of those qualities that are necessary in those who would make it work. Ralph Waldo Emerson—an American prophet who was never staggered by the great or impossible—has said that 'nothing great was ever achieved without enthusiasm.' It is so. Therefore, our duty is, not to pick flaws in the proposed scheme; not to make up our minds beforehand that it can not win, but to kindle our enthusiasm to such a point as to make failure absolutely impossible. The cause is worthy; the weapon is at hand and effective; the only weakness, if there is weakness, is our own doubting spirit. The appeal is for men to fight in the cause and to wield the weapon. With them—and they will be had—the Machine of Co-operation will be built. The Third Power will be a real power; the grand American Society of Equity will be a triumphant success, and agriculture will be lifted to the plane where it rightfully belongs."

## Merchants Benefited

Frequently it comes to our notice that merchants are inclined to antagonize the American Society of Equity because they think an organization of farmers will be against their interests. This is natural, because all former farmers' organizations were designed to pull the merchant's business down by dictating prices to him and establishing

stores in opposition. Heretofore farmers thought they must antagonize and fight every other business institution and even the government to get their just dues. It is entirely different in the A. S. of E. The farmers, when converted to this plan, see clearly that they have no fight against any other people, class, institution, business or the government. This is made very clear in "The Third Power." We will not consume space to make lengthy quotations here. But this part of the book would many times repay the cost to every farmer and every business or professional man who has dealings with farmers or whose business is in any way dependent upon agriculture. The farmers organized in the American Society of Equity would elevate their business on an equality with the best in the country, at the same time they would give stability and increased prosperity to every other business.

It is evident that merchants are awakening to the importance of the farmers' movement, and they are beginning to realize that through this movement for greater equity they may also realize benefits. To show the tendency of the times, we print the following letter addressed to Deputy National Organizer Mr. Sherman:

OLMSTED COUNTY MERCHANTS' ASSOCIATION,

W. C. Webber, Secretary.

Rochester, Minn., January 15, 1904.

Hon. H. B. Sherman,

Deputy National Organizer A. S. of E., Greensburg, Ind.:

Dear Mr. Sherman—At a meeting of the Executive Committee of the Olmsted County Merchants' Association, held the 13th inst., it was resolved to call a convention of the farmers of Olmsted County for the purpose of organizing a local union of the American Society of Equity, to convene at 1 o'clock p. m. Wednesday, February 10, 1904.

It is the earnest desire of the farmers and merchants that you address this meeting, and I am instructed to close an arrangement with you to be present and proceed in the usual manner to organize this county. We have twenty-three townships in this, the richest agricultural county in the world, and we expect to get out a goodly number of farmers. \* \* \*

We intend to advertise the convention thoroughly with posters, handbills, display ads. in the newspapers, editorials, etc., besides having committeemen in the various parts of the county to agitate the matter.

I understand, from our former correspondence on the subject, that the membership to this organization is \$1.00 a year in advance. \* \* \*

I am not familiar with your plan of organization, but presume you would expect to leave us with a perfected organization and plan for extending same. Do you make trips into the country yourself for the purpose of completing the organization while here?

We have secured the Masonic Temple hall for the purpose, thinking it would be more convenient than the opera house.

Kindly let me hear from you in regards such other details as it will be necessary to have arranged before the meeting.

Mr. Dell Sheldon, Pine Island, Minn., called upon me recently in reference to your visit to Minnesota. This gentleman is president of the Pine Island Commercial Club, and informed me that the proposition to organize the farmers of that county—Goodhue County—which is north and west of Olmsted County, had been projected and he thought likely the Commercial Club would feel disposed to foster such a movement. Mr. Sheldon wondered if it would be possible for you to "kill two birds with one stone" and make a visit to Goodhue County immediately after you finished up here. I promised to mention the matter to you and would like to hear from you about it.

Not presuming to make any pertinent suggestions in regards the subject matter of your address, I do not hesitate to say that all of our merchants, and most of our farmers as well, would appreciate it if you would urge upon our farmers the necessity of keeping their money and patronage at home, and the utter folly of patronizing foreign houses and thereby contributing to the support of distant cities at the expense of their own community.

You will understand this suggestion and, judging from what you have said upon the subject, I infer that these sentiments are in keeping with your own views, the plans and objects of the society you represent, and that you will feel justified in dwelling upon the subject thoroughly.

Trusting the date fixed will be satisfactory to you, and awaiting your further suggestions, I remain,

Cordially yours,

W. C. WEBBER, Secretary.

While on this subject we will reprint from April 1st, 1903, issue of this paper as follows:

"MERCHANTS, BANKERS AND PROFESSIONAL MEN WANT THE FARMERS TO CO-OPERATE."

"In the correspondence that comes to the editor's desk there is a well-defined sentiment in favor of farmers' co-operation among the merchants, bankers and professional men of the towns and cities. They know absolutely well that anything that helps the farmers—insures them good prices for good crops and guarantees them uninterrupted prosperity—will help them in the same proportion. There was never any movement proposed or accomplished that was even to a small fraction as beneficial to this

class of people in the small towns and cities as will be the American Society of Equity. In the past the profit of handling the farmers' products has largely gone to the large cities. We have seen these wonders—the cities—the age grow like mushrooms. Every acre of the hundreds of millions of our farm land contributing their golden and silver harvests to build them up and the millions of farmers giving unceasing toll from the cradle to the grave that the great commercial centers might exist and that the few men who own them might add to their fortunes. With the American Society of Equity in operation these things will be tempered. Each farm will be a commercial center to fix prices of its own products, and more of the money that has been unjustly extracted from the consumer will find its way to the farm, and from there enter the channels of trade through the country merchants in the small towns.

"We invite any of our readers to take this paper to their merchants, bankers or professional men. Have them read this article, and ask them if they don't want the farmers to co-operate, and whether they won't join the movement."

Also we reprint from April 15th, 1903, as follows:

"The only part of a person's income that can safely be expended is the profit. Hence if large crops or small crops can not be sold at a profit, the farmers will have no money to spend unless they cripple their capital and cover their property with mortgages. Under the old, uncertain system, when prices were put on farmers' products in large cities, these same cities grew like mushrooms and are largely monuments to the farmers' lack of wisdom and business acumen. Under the new system the producers—farmers—will take their profits first before the middleman and speculator take their margin or before the railroad puts its tax on per cwt. Then will the country prosper regardless of whether blessings or blight falls upon the commercial centers."

Also from "The Third Power" we have the following bearing on this important subject:

\* \* \* "With the farmer out of the market, or in it only to a limited extent, the market is bound to suffer, and all industries be harmed."

"The first thing that the merchant wants to know, when he sends his commercial travelers out to the smaller towns, is whether the farmers are buying, and whether they are paying their bills promptly. The credit to be extended to the local merchant depends largely on the financial condition of the farmers. If they are buying liberally, and paying their bills with reasonable promptness, the city merchant knows that he can afford to sell larger bills of goods to the local dealer, and give him better terms than he could do under other circumstances. All this is elementary, and yet we often forget it. We seem to feel that prosperity is maintained solely by the buying of the rich people in the cities who are so lavish with their money. But it is not so. The farmers are the great consumers, and when they cease to buy, or curtail their expenditures, they not only limit the market by just that much, but they lessen the power of people in the cities to buy. Smaller stocks in the stores mean a smaller output from the mills and factories, and that means reduction of wages and of the labor force. So the workingman consumes less. So, too, less freight is hauled, earnings and wages fall off in the railroad industry, and consumption again suffers. Thus the farmer is inextricably bound up with all other classes of society."

\* \* \* "In seeking to buy at fair prices the farmer, through the American Society of Equity, will help all the people. Economically the struggle of man is for cheapness. Men in trying to satisfy their wants always endeavor to do so as cheaply as possible. The call for cheapness by the farmer has, in the past, been of necessity, and this necessity has been of such a degree that they not only got cheapness but nastiness—low grade. Witness the volume of trade to some catalogue houses, where the chief recommendation was cheapness. The success of the American Society of Equity will benefit the home dealer who will keep a high grade of goods and sell at equitable prices. We look for a turning from the cheap, low grades, to high grade goods at equitable prices."

\* \* \* "Present uncertainties as to price will be removed, farm values will increase, thus adding billions of dollars to the wealth of the country. Business everywhere will be stimulated, and there will be a more equal distribution of wealth, a much larger proportion of it remaining in the country."

\* \* \* "The success of the American Society of Equity will make it possible for the farmers whose tastes run in that direction to have comfortable and even luxurious homes, and will make of the country a veritable paradise. And prosperity will be general and permanent because based on the prosperity of that industry on which all other industries depend. An ambitious program surely, but it can be carried out if the farmers will but loyally and intelligently co-operate. This is no dream—or, if it is, it is one that can be easily realized. The farmers of the United States can make it come true. The future of the United States of America is the future of agriculture; mark this prediction. So the appeal is to the patriotic as well as to the selfish motives of the farmers. Through their salvation the salvation of the country must be worked out."

Merchants' and farmers' interests are mutual. The prosperity of the farmers in any community insures the prosperity of the merchants in the towns, and we know many country towns that reflect their condition exactly

as they are in a prosperous agricultural section or otherwise. Merchants should make this cause of the farmers their cause. Farmers should invite merchants to co-operate with them and they will thus secure in their movement the business training and sagacity that they at present so sadly lack on account of past conditions.

When farmers get fair prices for their products they will have more money to spend and will be glad to consider quality of goods they buy rather than cheapness only. They will patronize home merchants rather than being compelled to seek the great houses in the city where oftentimes cheapness is the chief recommendation. If the farmers want to buy co-operatively, which is their privilege when organized, any of their home merchants will be glad to quote them wholesale prices, and we always recommend giving the home merchant the first opportunity to figure on their requirements.

A local union of the A. S. of E. composed of farmers, merchants and in fact all reputable citizens of town and country may be the social and business center in any community. It will be the most effective means of promoting all the interests of the town and surrounding country. And why should the town people antagonize the country which is their very physical and business life? Instead of the antagonism and social ostracism that one section too often sets up against the other, there should be cultivated the most intimate relations—social and business. The local union may be made to contribute to the happiness and welfare of every family as well as to the material prosperity of the entire community. Through the local unions many things can be accomplished that never have been possible before. Besides the good general neighborly feeling that will prevail, disputes may cease, differences may be settled. Schools and churches may be better maintained, roads improved, politics purified, and a thousand things will be done for the welfare of the community, and done quickly, which could not be accomplished outside of such an organization.

Members of the National Union and officers and members of local unions, interest your merchants in this movement. Don't be afraid that the merchants will rule and ruin you. They can not possibly do it. This movement is for profitable prices on your products. These will be decided by the National Union, and can not be fixed by your merchants. By co-operating with the merchants and having strong local unions in the towns you can have better meeting places and the whole matter will take on more of a business nature. One strong local union in the town will ordinarily have a better prospect for doing good and being permanent than several scattered around at the school-houses.

This is primarily a movement to put farming on a sound business basis. Nothing that is recommended in this plan is new but we think the time has arrived for a strong effort along the line as indicated.

Correspondence is invited with merchants, no matter where situated, and the National Union will afford them such assistance as is necessary to organize their community or county.

### MILK TRUSTS

Our dairy readers are asked to recall the appeal of National Organizer C. O. Drayton, in January 15th issue, for milk producers to organize. As an additional argument why the producers should organize, we report that there is an epidemic of organization by milk handlers in many of the large cities. Companies in St. Louis, Chicago, Cleveland and other cities have organized in a short time with millions of capital stock. The Chicago company has a capital of \$4,000,000, and proposes to absorb all the principal firms handling milk in Chicago. With such a powerful company between the unorganized producers and helpless consumers, it is clear that the former will be kept on a mere existence basis and the latter will be pulled for all they can pay. An organization of the farmers to

secure equitable prices for themselves and to reach the consumer without the latter paying dividends for water in the milk and water in the capital stock would be a God-send to the overtaxed consumers.

If this appeal awakes a sense of equity and fair dealing and a spirit of independence in any of our readers who are victims of milk handling monopolies, let them write to us. We will tell them how to proceed to correct the evils and secure their independence.

### CAN FARMERS CONTROL MARKETING

We submit the following table of receipts of wheat at primary markets, and ask the doubting Thomases to explain the receipts in any reasonable way except that in former years farmers let go of their crops soon after harvest while this year they marketed them gradually. The time from July 1st is divided into six periods of five weeks each. The figures given are weekly averages:

	For this Season.	For Ten Years.
First period .....	2,749,000	3,930,000
Second .....	4,049,000	5,497,000
Third .....	6,992,000	7,403,000
Fourth .....	7,746,000	6,969,000
Fifth .....	7,101,000	5,151,000
Sixth .....	5,110,000	3,109,000

Considering the ten-year averages the wheat was evidently very well out of the farmers' hands by the time the sixth period was reached. While this year the marketing was more gradual and the volume was well maintained up to and including the sixth period. Everybody knows that the system of marketing this year has resulted in a gradual appreciation of prices, until at the end of the sixth period the cash value is 30 cents a bushel above the first period. If this system would always prevail and would be admitted by growers, shippers and millers it would be infinitely better for all concerned. What is true of wheat is also true of other grain, and we predict will be true of cotton, meat, vegetables, etc., in the future.

Up-to-Date Farming, as the official organ of the A. S. of E., is responsible for this condition—controlled marketing and stiffening of prices. One of our subscribers in the spring wheat belt, after commending the Society, writes as follows about what it has done for him and his fellow farmers in the Northwest:

I know, too, that it is owing to your effort in educating our farmers that the trend of prices for wheat has been gradually but surely toward the dollar mark. In former years our best prices for wheat has been in the early fall, then gradually downward till about the first of May, when the bulk of it had been disposed of or the rush of farm work precluded any possibility of farmers hauling, if they had anything to haul.

I know that the prices quoted by the Chicago Board of Trade for September wheat last year would have compelled our farmers to sell at about 45 cents per bushel, but thanks to you and our organized farmers in the winter wheat belt, they made many of the bears dig up and liquidate, and finally compelled those who wanted their wheat to offer prices that, while not up to our mark, would at least let many out whole instead of at considerable loss. The courage of the farmers in the winter wheat belt caused our spring wheat Dakota farmers to get from 68 to 74 cents a bushel for their wheat, a price seldom recorded in years when the government crop estimates indicated, as it did last year, "a bumper crop."

I know, also, that you knew all the time the power that would be exercised by organized farmers. I wrote you last October asking your opinion with regard to May wheat and May options. At that time May options were fluctuating from 77 to 79½ in Chicago. There were no "ifs or guesses" in your answer, but you said plainly that "the price for May wheat would be gradually upward, that even our imperfect organization would affect the situation." On the strength of your judgment I made very satisfactory winning. I merely mention this to show our brother farmers that your plan is the only feasible and right one and that it is safe to follow the head of our society.

The farmers along the Red River valley who have always been in the habit of rushing their crops to the market, profited by your advice (even if they were not in our society), and built granaries on their fields and have exercised better judgment in marketing than formerly, and are now realizing handsomely for following your advice.

We want to put a question to every person who is acquainted with the plan of the American Society of Equity, and who has watched the course of the market this season, as follows:

When the farmers are organized to the extent of a million or more, will the question be: Will farmers hold enough to realize the minimum price? Or will it be: Will farmers sell enough to prevent the price from going above the minimum? As we have said before, we believe it will require a stronger organization to get enough farmers to sell at the minimum price to maintain it, than it will to get them to hold to make it.

### OBJECTS AND PLAN OF THE AMERICAN SOCIETY OF EQUITY BRIEFLY STATED

#### OBJECTS

1. To obtain profitable prices for all products of the farm, Garden and orchard. This is the first and main object.

2. To build and maintain elevators, warehouses and cold storage houses in principal market cities or in all localities where necessary, so that farm products may be held for an advantageous price, instead of passing into the hands of middlemen or trusts.

3. To secure equitable rates of transportation.

4. To secure legislation in the interest of agriculture.

5. To open up new markets and enlarge old ones.

6. To secure new seeds, grain, fruit, vegetables, etc., from foreign countries, with the view of improving present crops and giving a greater diversity.

7. To report crops in this and foreign countries, so that farmers may operate intelligently in planting and marketing.

8. To provide institutions of learning, so that farmers and their sons and daughters may be educated in scientific and intensive farming and for the general advancement of agriculture.

9. To improve our highways.

10. To irrigate our land.

11. To prevent adulteration of food and marketing of same.

12. To promote social intercourse.

13. To settle disputes without recourse to law.

14. To borrow and loan money and do a banking business.

15. To do an insurance business, both life and fire.

16. To establish similar societies in foreign countries.

#### PLANS

The plan of the A. S. of E. is very simple. Farmers all over the country will be enrolled. They will represent every crop that is grown on the farm, in the garden or orchard.

The members will be directed and advised by the official paper which will reach each member twice a month at present and four times a month later.

This official paper, will give all members the same advice about prices, crops, markets, etc., at the same time, so unity of action may be had.

Each member becomes a crop reporter. This feature alone is worth all it will cost to build the machine of co-operation. The false crop reports that are now circulated are against the farmers and to the advantage of the speculators.

Members should belong to local unions. If none are forming in your locality, send your name direct to the National union. A farmer no matter where located can cooperate with farmers in all other parts of the country in marketing and maintaining prices on principle crops if he belongs to the National union only.

Value and a minimum (lowest) price will be decided by the board of directors of the National union. This price will be communicated at once to members everywhere. Every crop will be affected. Members will be expected to ask

this price when marketing, yet they will not be compelled to hold for it, also they may hold for more if in their judgment prices will go higher.

A booklet giving the objects, plan, constitution and by-laws, etc., will be sent free to all applicants. A book—The Third Power—275 pages that covers every phase of co-operation by farmers and what will be gained by it can be bought at prices quoted elsewhere in this paper.

#### THE A. S. OF E. BELIEVES

That if marketing was controlled, prices can be made and maintained.

That the people who produce the stuff should control it until the market (consumers) are ready to use it instead of dumping the bulk of a crop on the market as soon as raised, creating a large "visible supply" which is used as a club by speculators to beat the price of the balance down all the year.

That if farmers can, (and they do) to a large extent control their marketing and regulate prices when unorganized, they will be an irresistible force when organized, on this plan, even to a moderate extent.

That if farmers under the old order of things did have any influence on the market, not withstanding the false crop reports, uncertainties and opposition of speculators and gamblers in farm products, they will simply be irresistible when they have reliable information about crops, prices and markets.

That all farmers don't need to hold their crops at any time.

That the markets will take an enormous amount of supplies every day.

That the consumption will be as large at a fair price as at an unfairly low price.

That only a small portion of the farmers need to make an effort to maintain prices by holding back that portion of their crops which other wise, if marketed, would produce the temporary surplus that causes daily fluctuations on the old plan.

That when a large number of farmers each have the same price before them, and the same impulse to market when the buyers will pay their price and stop as soon as they won't take more, enough will hold so prices will be maintained.

That in the A. S. of E. there will be much greater incentive to hold than under the old system. Each person who holds will get a little more each month.

That each additional person who holds under the new system will make a better market for the farmers who cannot hold.

Finally we know that one of the greatest troubles with farmers under the old system has been to hold too long. Without a definite price in view they did not know when to sell and it is a fact that the freest deliveries came on a falling market. Millers and shippers have been known to put the price down to frighten farmers into selling. These conditions will be impossible with a fair price known over the length and breadth of our land, and benefits will come to all farmers, fair businessmen, millers, merchants, etc.

## FARM FENCE

Don't hesitate. Rely on our statements. Years of experience with an ardent ambition to excel has made us master of fence construction. We use only the best, High Carbon, heavily galvanized Coiled Spring Steel Wire. To get this good enough, we make it ourselves. The weave is so perfect that full strength of every wire is preserved. The strain is equally distributed. Every twist is an expression of strength. Every line a suggestion of symmetry. The whole fabric so flexible that it staples to the posts as you would nail a board. Confidence in our product rests on a foundation of practical experience, guided by practical sense. Don't worry. We'll Pay the Freight, yet sell to you direct at WHOLESALE PRICES.

## DIRECT TO

### HORSE HIGH, BULL STRONG, PIG TIGHT.

Horse High is high enough, Bull Strong is strong enough, Pig and Chicken Tight is tight enough. SENT ON TRIAL, with privilege of returning same at our expense, any time within thirty days if not found entirely satisfactory, you to be the judge. Write us. This will get you in communication with us. We have something more to say to you. Our catalogue is full of fence sense, and shows the various styles we make. It's free.

KITSELMAN BROS.,  
Box 289 Muncie, Indiana.

## THE FARMER

ON THIRTY DAYS TRIAL.

This hen lays eggs for the farmers worth 10c to 15c per dozen in the summer but they are worth 30c to 40c per dozen for the trusts in the winter. With farmers in the A. S. of E. they can have storage houses where they can hold their surplus and get 25c the year around.

**OFFICERS OF THE AMERICAN SOCIETY OF EQUITY**

Headquarters Indianapolis, Ind., which is called The National Union.  
 National President, J. A. Everitt.  
 National Secretary, L. N. Staats.  
 National Treasurer, H. W. Miller.

# Shall We Pay Something to Market Our Crops

M. WES TUBBS

It is wonderful with what tenacity people will cling to a system or theory. The ancients were sanguine in their belief that Apollo was the god of music, poetry and art; that Cupid was the god of love, and Mars the god of war. Up to the fifteenth century the world almost to a man believed the earth to be flat. Even in our own day can be seen traces of clinging to the mythical and the superstitious. Certain crops must be planted in certain moon phases. It is bad policy to begin a piece of work on Friday; a sure foreboding of evil to raise an umbrella under cover, and an omen of ill luck to re-enter the house after starting on a journey. To be sure no one (?) believes in these things, yet many are found who will do, or not do them with amazing regularity. The same is true of systems, as is illustrated by the persistency with which the Chinese cling to the ways of their ancestors. In our own country we see men seemingly content in doing in the way of their fathers. This is particularly true in business methods. To illustrate: Judge So and So established a store in a certain town away back in the early thirties. His business grew and prospered. Good goods and fair prices was his motto. Time passed; the town grew. Other stores were established, and in spite of the fact that our venerable Judge and his sons were well and favorably known for miles around the new stores seemed to get the greater share of the town's business. The old Judge clung to his early system. It was a waste of money to advertise. He would not "beg for trade." The new and progressive business man spent money liberally in attracting attention to his goods. He told the people what he had. He invited them to his store. It was but natural that they became interested and went to his store. That was what he wanted. When there, he knew his skill as a salesman would enable him to sell them his goods. His business grew. The old Judge saw all this but could not apply himself to the new conditions. He must work it out in the "old way." He grew feeble. His sons assumed full control of the business. They believed as their father, but in spite of all their efforts in other ways the business grew less and less each year until the "old store" that had stood the storms of nearly a hundred years passed into the hands of the more progressive—the modern up-to-date business man. He will clear the ground and erect a magnificent business block, where, within a month after opening he will do more business every month than was done in the "old store" in the "old way" in a year.

This is a true story, brother farmers. Many of you have seen the same thing. It is a common sight. People are wont to cling to the "old way" even if it means ruin. What is the matter? Why are men so loth to accept and adopt new and better ways? Why must the average person insist on getting full value for his money the moment it leaves his hand. Look at John Wanamaker signing a contract with one daily paper for twenty thousand dollars' worth of space to be used within one year. Twenty thousand dollars to be spent with one paper for "begging trade" in the words of the old Judge. Note the difference. One starves an established business to death; the other nourishes a small business to gigantic

proportions.

Farmers, are you not following in the footpaths of the old Judge? Do you not market your fine products in exactly the same way as did your father, your grandfather, and even your great-great-grandfather? Did they not take their products to the old Judge and let him tell them what they were worth? Did they not also pay him whatever price he asked for his goods? Did they ever spend a dollar in creating a market or trying to join with other producers in establishing a fair, profitable price on their wheat, corn, oats or other products? Come, be honest, did they? Refer to the beginning of this paragraph and answer the first question. How about it? This is something worthy your careful consideration. Think about it.

Supply and demand are mighty factors in business. We will admit that, but modern business methods and business systems are a mightier factor, and can and do control supply, hence manipulate demand.

Without doubt farmers are the greatest consumers of rubber boots. Within a few years they have nearly doubled in cost. Will any one assert that the supply of rubber boots has fallen off, that the manufacturers can not make them fast enough to supply the demand? Oh, no! It is simply a business system which does not supply more than will be bought at the advanced price. The writer's home is in the apple-growing belt of New York State. The crop of apples for 1901 and 1902 was very small, almost a total failure. Late frosts killed them. The season of 1903 produced a "bumper crop." It literally broke down the trees. Fall apples rotted on the ground. The finest winter fruit, Baldwins, Spies, Greenings, etc., were marketed at a price hardly sufficient to pay for gathering and hauling to the car for shipment. Seven thousand bushels of apples equally as good as I saw being sold in one of the Indianapolis groceries for 15 cents a quarter peck on December 24th, were sold for 25 cents a bushel. Freight and cartage would not cost over 8 cents a bushel to put them on the Indianapolis market, yet the "good old way" suffices, and New York State farmers "kick" because they are compelled to sell their apples so cheaply, while the laboring classes of Indianapolis and many other large cities can not afford to use apples because they are so expensive.

Oh, farmers, wake up. Apply modern business methods to your business. Control supply. Look for, and if necessary, create a demand. With modern shipping facilities a large production in any locality ought not to make the crop unprofitable. There are always sections where the crop can not be raised, and many times sections where it is a failure where usually raised successfully. It is imperative, if you would be successful, to so adjust your business that your products can be put upon a seeking market instead of being dumped upon an unwilling market.

True, there seems to be no other way but by organization and co-operation. Why need there be any other way? Has this plan not been successful in other lines? Was it not poor policy for the venerable Judge to cling to an antiquated system? Did John Wanamaker make any mistake in signing that advertising contract? Would it not be better for the Indianapolis con-

sumer and the New York State apple grower to get together and exchange products on an equitable yet profitable basis for both? Indeed it would?

But in "the good old way"  
Of those "good old times"  
Supply and demand did rule;  
And it's hard to get  
The farmers to quit  
Unbusinesslike methods for new.

The American Society of Equity offers farmers a certain and comparatively inexpensive plan for putting their business at the head of the list for making it the preferred profession, and at the same time doing it in such a way as to benefit every other legitimate industry. The official paper is the key to the treasure-box, which contains everything the farmers need and should have. When one million farmers have this key the box will be opened and farmers will be in absolute control of their own business, and the world will pour out its treasure if need be to secure the farmers' wheat, corn, meat and other products.

If you desire success, if you wish to be happy and enjoy prosperity, having for your own what you have justly earned, do not longer cling to the skeleton of "the good old way," but don the armor of the modern enterprising business man, and embrace the opportunity offered you. Do it this day.

Meet regularly these long winter evenings. Learn co-operation. Be sure to have non-union farmers meet with you and teach them the plan of the A. S. of E. Then when the season comes for active operations in the field you will have built the foundation for the machine of co-operation.

What shall we do at the local union? If you don't do a thing but talk and discuss co-operation by farmers on the plan of the A. S. of E., you will do plenty. If you exert yourselves to get every farmer in the neighborhood to come in, and convert them, you will do more. If you will get a copy of "The Third Power," read and discuss it, you will have profitable work for many meetings. Every issue of the official paper will suggest an abundance of topics to make any meeting interesting. There are many local matters, business, social and political that you can profitably bring up at every meeting. You can buy co-operatively while waiting to sell co-operatively. There is no dearth of work for the local unions.

#### AWARD IN ELECTION CONTEST

Early in the year 1903 we printed the estimating contest, promoted by the Press Publishing Association of Detroit, Mich. It was based on the total votes cast for governors in the states of Ohio, Massachusetts and Iowa. The election occurred last fall, but the awards could not be made before on account that the official announcement of the vote in Iowa could not be announced until the legislature met in January.

The total official vote was 1,680,774. All estimators holding certificates from 1,680,648 to 1,680,900 won prizes.

1,680,774 won first prize; 1,680,773 and 1,680,775 won second prize; 1,680,772 and 1,680,776 won third prize, etc.

There were twenty special prizes of \$1,000 each. First was won by estimate 1,680,765; second by 1,680,772; third by 1,680,767; fourth by 1,680,771; fifth by 1,680,776; sixth by 1,680,774; seventh by 1,680,774; eighth by 1,680,777; ninth by 1,680,773; tenth by 1,680,

774; eleventh by 1,680,781; twelfth by 1,680,773; thirteenth by 1,680,779; fourteenth by 1,680,776; fifteenth by 1,680,769; sixteenth by 1,680,783; seventeenth by 1,680,774; eighteenth by 1,680,777; nineteenth by 1,680,772; twentieth by 1,680,774.

We can not print the full details of the winnings, but a sheet giving the names and all particulars can be obtained of the Press Publishing Association, as at head of this article.

#### APPLICATION OF THE SCORE CARD TO THE FARM

At the farmers' institute at Rushville, Ind., last year, the management arranged a score card for a model farm.

Points (100).	
1. Soil—condition for producing plant growth .....	8
2. Soil—freeness from weeds, stones, stumps, etc. ....	5
3. Drainage—amount, quality, and distribution .....	4
4. Fencing—amount, condition, quality, arrangement .....	6
5. Water—amount, distribution, and arrangement .....	4
6. Buildings—barns, proportionate size, convenience, construction, condition, location.....	6
7. Residence—proportionate size, condition, convenience, location.....	8
8. Fruits—variety, amount and quality .....	4
9. Specials—location of farm, silos, lawn, walk, ornamental plants, garden .....	10
10. Crops—proper distribution over farm .....	7
11. Crops—condition and quality.....	5
12. Woodland .....	4
13. Live stock—horses, adaptable breeds, number .....	4
14. Live stock—cattle, same .....	4
15. Live stock—hogs, same .....	4
16. Live stock—sheep, same .....	3
17. Equipment—implements, machinery, harness, etc.....	4
18. Summary—general appearance ....	10

#### LONG STAPLE UPLAND COTTON

Satisfactory results are recorded with the hybrid or long-staple upland cotton, and extensive tests are now under way. If the result of the present season's work is satisfactory seed will be grown for distribution. At present we pay Egyptian growers \$7,500,000 annually for their cottons.

The wilt resistant Sea Island varieties of cotton distributed by the department last year have proved very satisfactory.

## OUT THEY GO OUT THEY GO

To buy a farm in North Dakota, 640, 320 or 160 acres for \$7½ per acre, \$1 per acre down balance \$12½ per month, FREE HOMESTEAD adjoining. Free coal. We have for sale small farm mortgages netting 7 per cent. Call and see or write W. H. BROWN CO., Tacoma Bldg., Chicago, Illinois or Mandan, North Dakota.

#### TO HOMESEEKERS

Good farms can be secured on the Nashville, Chattanooga and St. Louis Railway in Tennessee, Kentucky, Alabama, Georgia. Prices reasonable. Climate healthful, never very cold or very hot. All marketable crops grown. Rainfall ample and well distributed. For particulars address Department C, H. F. Smith, Traffic Mgr., Nashville, Tenn.

#### LAWN FENCE

Many designs. Cheap as wood. 32 page Catalogue free. Special Prices to Comeries and Churches. Address COILED SPRING FENCE CO., Box 417 Winchester, Ind.

#### This Tubular Fence Post

made of Galvanized Metal, will not rust, rot nor burn, and will last a lifetime. Cheap as the best wood post. Takes any kind of woven, barb or smooth wire fence. Made plain or ornamental. For farm, lawn, cemetery, etc. Circulars and prices on application. Bloomfield Mfg. Co. Box 107, Bloomfield, Ind.

#### DON'T YOU WANT

to try a fence, this year, that will stay in better shape for years than the one you put up last year is in now. A trifle extra cost will buy the PAGE.

Page Woven Wire Fence Co., Box 81, Adrian, Mich.

Highest award. World's Fair, 1903. 4 to 10 inch \$2.50; 12 inch, \$6.00. Sample at special price to introduce. Show to your hardware dealer or write for particulars. IWAN BROS., DEPT. 21, STREATOR, ILL.

#### ALL STEEL LAWN FENCE

WE make all kinds of Lawn, Farm, Park and Cemetery Fence, AND SELL DIRECT TO YOU at manufacturer's prices. SAVE AGENTS COMMISSION by writing for our FREE CATALOGUE.

UP-TO-DATE MANUFACTURING CO., 973 North Tenth Street, TERRE HAUTE, IND.

## Strongest Fence Made.

We originated the direct to the user plan, and are the largest manufacturers in the world today, selling direct to the farmer. Sixteen years of experience has taught us that the best fence is made from heavily galvanized Coiled Spring Steel Wire

**Closely Woven from  
Top to Bottom.**

The fence that turns everything from the small chicken to the most vicious bull. **Notice how closely it is woven.** Compare it with other makes. See the difference? We ship it direct to you

**At Wholesale Prices,  
Freight Prepaid.**

The coil provides for contraction and expansion, and prevents sagging between posts. Once tight, always tight. Every pound of wire that goes into our fence is made in our own wire mill from the very best of High Carbon Steel. **Every Rod is Guaranteed. If it don't suit it costs you nothing.** Beyond our merchant. Buy direct and save money. Our Catalogue is full of fence information. If you want a modern fence write for it at once. It will be mailed free. Address,

**COILED SPRING FENCE CO.**

Box 88 WINCHESTER, INDIANA.

**WIRE FENCE** at Wholesale. A 48-inch stock fence 29¢ per rod. Send for price list and FREE catalogue of Wire Fence and full line of Fence Supplies. W. H. MASON & CO., Box 71 Leesburg, Ohio.

# Save the Farmers' Ship

G. T. HOPKINS, M'GAHNEYSVILLE, ROCKINGHAM COUNTY, VIRGINIA

Brethren, awake! Arise! Or in abject posture have you sworn to be forever the underdog in life's struggle? Poetry, like faith, imparts vitality to facts and throws on them the radiant brilliancy of the X-rays' light. Will you organize?

"My soul is dark, O quickly string  
The harp I yet can brook to hear,  
And let thy gentle fingers fling  
Its melting murmurs o'er my ear.  
If in this heart a hope be dear,  
That sound will bring it forth again;  
If in these eyes there lurks a tear,  
'Twill flow and cease to burn my brain.

But let the strain be wild and deep,  
Nor let the notes of joy be first;  
I tell thee, minstrel, I must weep,  
Or else this heavy heart will burst.  
For it hath been by sorrow nursed,  
And ached in sleepless vigils long,  
And now 'tis doomed to know the worst  
And break at once, or yield to song."

Will you organize?  
We, as agriculturists, may take courage that the low mutterings of discontent are heard in dim distances and unseen shadows. It will inspire us to action before we are startled and electrified as if by a live thunderbolt or a wild mother's cry over her famishing brood. You are of the multitudes who constitute the bone and brawn of the country, but—

Gathering chaff ye tread the wheat,  
Rich and royal, 'neath your feet.

Your labor has made this country long the granary—now the workshop of the world—the commercial giant that it is. You are diligent in business, true to all duties and loyal to all obligations, but you will not get your rights by deserv-ing them.

You must demand them.  
You are the men to whom in great crises the nations of the earth have ever turned and can be relied upon to save the republic, though the drum tap may prove futile and the barracks empty. But you have failed to save yourselves. You have lavishly sown, reaped and marketed, but the speculators, middlemen and trusts, like spiders deeply ambushed in their dens, have ever been in line at the harvest.

Without united, prompt defensive action on your part they will take the field.

They have often brought worry and mortgages where there should be peace and plenty.

The whole atmosphere has become infected by their baneful exhalations. They have caused the soil in the fields to look tired, the buildings to look tired, the few lean cattle to look tired, the men and women and babes to look tired, everything looks like it needs a parasite killer and needs it quickly.

When they reach their full development, your sons will buy the finished product at the prices the trusts and speculators fix. They will sell raw material at the price which they fix, and if they work for wages, they will work for such compensation and upon such conditions as they may determine.

Both ourselves and our lands need the "Rest Cure."

We work through spring and winter,  
Through summer and through fall;  
But the trusts work the hardest

And the steadiest of us all.  
Worm or beetle, drought or tempest,  
On a farmer's land may fall;  
But for a first-class ruination  
The trusts can beat them all.

Admitting that sloth, like rust consumes faster than labor wears and that labor true and loyal, is the crowing glory of man, and that our highest ideal of manhood is to be found with those who appreciate the dignity and value of labor as essential to true manhood and good citizenship, would it not be well for us to inquire whether or not eight hours of labor before noon, with eight hours of it in the afternoon and the interval often devoted to minor duties, has, or has not destroyed its dignity; and whether or not the nonproducing classes in the meanwhile get only a part or all of the profits?

Our average earnings and often sad conditions indicate that they get all, and as for dignity, any occupation that does not yield sufficient remuneration to afford some leisure for intellectual and social improvement and is constantly confronted with the possible approach of financial collapse must of necessity be degrading; and it follows that the tillers of the soil will henceforth be almost entirely confined to the humblest social class.

There is no question of the silent sorrow and gloom with which the occupation he loves—consecrated to him by the tenderest ties and sublimest memories—must forever pass from him and his kindred. If this condition exists, no self-respecting farmer can, ought, or will permit it to continue. Though her sails are shivered and her compass lost, and black waves with crests of snowy foam run high, we can and will, by the aid of the American Society of Equity, save the ship.

No successful business or profession now exists without organization, and they have been found to yield great power and to be convenient and profitable, and as they are with us, and are here to stay, and in view of the fact that it is possible for us to organize into a body that could defy the world, would it not be sensible for us to quit complaining and make a combine of our own on honest, equitable, principles?

Some one of you "worse off" or "better off" please answer. I will simply state that if we allow these conditions to remain the final result will be that we will perhaps quit this scene of being without expressing much satisfaction at what we have found either in it or in ourselves, and I will add that if we want Equity, not the name, but the real thing, we have to work at it ourselves.

Since writing the above a good old farmer of average standing amongst

the "worst off class" happened to pass, and, being aware of the fact that Jack, his mule, which, after thirty years of underfeed and overwork, is now reposing in peace on eternity's shore, and that his old flop-eared sow had with remorseless cruelty and unappeased appetite eaten all his chickens, save Dick, the red rooster, which his wife had given the parson, and that his cow, in dire need of something to eat, had broke into his garden and destroyed the cabbage; in reply to inquiry as to how he was getting along, he remarked:

FARM  
TELEPHONES

save millions of dollars for farmers every year. Every up-to-date farmer should have one. It keeps you in touch with the markets—connects you with the city—the doctor—the depot—and your neighbors, and are the best of all. Write to us and we will send you FREE our booklet, How to Construct a Farmer's TELEPHONE LINE. Address Julius Andrae & Sons Co., 235 West Water St., Milwaukee Wis.

Absolute Range Perfection

Sold for Cash or on Monthly Payments \$10 to \$20 Saved

Freight paid east of the Mississippi River and north of the Tennessee Line; equalized beyond. Your money refunded after six months' trial if

CLAPP'S IDEAL STEEL RANGE

is not 50 per cent better than others. My Superior location on Lake Erie, where iron, steel, coal, freights and skilled labor are cheaper and best, enables me to furnish a TOP NOTCH Steel Range at a clean saving of \$10 to \$20. Send for free catalogues of all styles and prices, with or without reservoir, for city, town or country use.

CHESTER D. CLAPP, 204 Lynn St. Toledo, Ohio (PRACTICAL STOVE AND RANGE MAN)

Pope Manufacturing Co.

With 4-Inch Tire Steel Wheels

ONLY

\$21.95

Low and handy. Saves labor. Wide tires, avoid cutting farm into ruts. Will hold up any two-horse load. We also furnish Steel Wheels to fit any axle. Any size wheel, any width of tire. Catalogue free.

EMPIRE MANUFACTURING CO., Box 68, Quincy, Ill.

"As to grub and work, pretty much like old Jack," and added: "We are to be sold out next week to pay the doctor, and the parson has just told us that we would all go to h—l if we do not mend our ways."

Seventy thousand of your brethren are already in the field enjoying advantages to be found nowhere else but under the banner of "The American Society of Equity."

J. A. Everitt, builder of this Ship of Equity, and the directing mind, stands at the head ready to greet you with a warm enthusiasm, that tugs at the heart-strings and intoxicates with fervor. Write to him and he will tell you in words that spring straight from the heart that this is the day of organization, and that counter-organization on your part has become a necessity. That singly you are powerless, collectively you are irresistible. That the A. S. of Equity has given the farmer the power to fix a uniform, equitable and reasonable price on farm products, to regulate freight charges, legislation, taxation, and to purchase their supplies at wholesale prices, and that it has placed their business affairs in their own hands, and stopped every other vocation from fleecing them, much to the advantage of both the humble producer and oppressed consumer, and whether or not the trusts have as yet reduced everybody, and the "rest of mankind" the negro, too, to abject slavery, compelling them to buy in the dearest and sell in the cheapest markets, and as Congress has the power to regulate commerce between the States, why it allows prohibitory rates to be charged on the railroads, and the beef trust to cause an annual loss to the producers of meats of \$65,000,000, to the injury of both producer and consumer. He will tell you to regulate your marketing and distribute a year's supply over a year's consumption, and thus obtain a just equivalent for the cost of production. Last,

but not least, he will tell you that the A. S. of Equity has given the farmer influence and business standing, by which he commands sufficient capital to develop in a profitable manner the great agricultural interests of the country, and also why other organizations among farmers have failed. He will tell you how to get the best lamb out of every flock, the richest sheaf in every harvest, the best girl to throw roses of bliss over your thorn-covered way, not as a drudge but as an artist, feeling that she is the almoner of the bounties and glories of nature, which it is her privilege to administer to her family and her guests.

"He only lives who seeks to place  
On higher plane his age and race."

No class has ever been elevated without manly effort on the part of its leaders. Eternal vigilance on your part is necessary.

"He who would be free, himself must strike the blow."

Brethren, organize, and teach your sons to love the soil they stand on and the broad acres that sustain them. Organize, and prevent the road you are traveling from being divested of its flowers. Organize, and prepare the way for the Third Power to appear.

Then ancient fraud shall fail, and returning justice will lift aloft her scales.

To organize effectively, you've got to get up in your soul of souls, and the work is your very own.

You can't be saved by your tears,  
It's been tried for thousands of years;  
You must look into your souls and know

That your God is at home in you.

Rise up and stand the strongest test,  
And God will guide you through the rest;

Then after awhile the world shall see  
That you are what you ought to be.

Don't mind the laughing of Jim and Jack,

Just keep running on Equity's track,  
And you will fill your empty sack.

Should a call for organization on the plan of the American Society of Equity be made, I am informed that large numbers, not only in East Rockingham, Va., but everywhere, stand ready to respond, who aspire to erect a vast and enduring monument, not of oppression and terror, but of equity, liberty, wisdom and justice, upon which the world may gaze with admiration forever.

Future sons and daughters yet unborn,

In letters fair will write the name of  
J. A. Everitt there.

**FARMS** For rich farming, and fruit growing.

## Storyettes

### WHOLE SOME LITTLE STORIES WITH A MORAL

#### Take Into Account the Third Power

—It so happened that a banker and a successful labor organizer bought each a small summer home near a city. And it happened, farther, that their lands met at a corner where a farmer's meadow sorter dovetailed in; and right down in that corner there was a lusty little spring that threw out a beautiful stream of clear running water. The banker and the organizer each had his land resurveyed there, in order to see if the coveted source of water was not on his land. The official edict landed the spring on the organizer's estate. This did not please the banker, who coveted it muchly. And, as the land was rather sloping there, and his corner was a few feet more elevated than the organizer's, he very shrewdly put some workmen to digging, and in a very short time, to his great delight, he struck the underground source of the spring, and, walling up the lower end, he diverted it to his own use, putting in a nice little carp pond, generously letting the wastage drip over on to the organizer's land. This brought on a lawsuit, and they were having a high old time over it, when something unexpected happened. The farmer, in shifting his stock, turned about a thousand head of sheep into the meadow which cornered in above the coveted water-course, and early one morning he come trooping down with his sons, and his sons-in-law and the other male members of the family, each armed with a good hefty shovel.

"I 'low as the old pond were about here," he said to the boys. "Let's clean out the rubbish in this holler, and dig her out a bit."

The array of shovels was soon making the dirt fly. You see, they were a little up the slope still, from the banker's corner.

"Here she comes," chuckled the farm-

er, as the water began to sipe up through the loosened soil and trash. "We'll soon have the old pond back to water the sheep in, boys." Hearing something of a rumpus below, he stepped to the fence at the lower side and looked over. Two men down there were talking and gesticulating excitedly.

"You durn thief," shouted the banker, "you've stolen my spring again."

"You're another," cried the organizer; "I ain't seen that spring since you stole it from me." The old farmer laughed at this, and, sticking his head over the fence, he hollered at them:

"Say, you fellers, the next time you start out to rob a farmer, you'd better strike a little higher up."

Those two fellows belong to two classes that don't often take into account the third power, which is right down at the source of things.

#### It Pays to Cooperate

—Three neighboring farmers started to town one day, each with a load of cordwood. The price was up that day, for a big river steamer was at the landing waiting for a stock of fuel. Two of the farmers had a small pair of mules each to his wagon. The third was behind a pair of fine large Norman horses, and he viewed his neighbors' rather insignificant animals with a look of commiseration, not entirely free of contempt. A part of the road was corduroy, and at one end the poles fell short of their purpose. One of the mule teams, which was in the lead, got stalled; but the farmer driving the other team promptly unhitched from his own

### MAKES HOGS FAT AND PREVENTS DISEASE

International Stock Food Co.

SHANNONDALE, IND.

GENTLEMEN:—I have now used "International Stock Food" for more than two years and I cheerfully recommend it to all feeders of stock, especially for hogs. It increases the appetite, prevents disease, promotes digestion, enhances the value of the grain fed, increasing the weight, and insures a thrifty condition of stock at all times. My neighbors have repeatedly sustained heavy losses in their herds while mine have remained almost immune, a result I attribute almost wholly to the specific effects of "International Stock Food." Respectfully yours,

G. W. SHANNON.

## A \$300000 STOCK BOOK FREE

### BOOK CONTAINS 183 LARGE ENGRAVINGS OF HORSES, CATTLE, SHEEP, POULTRY, ETC.

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on It. Size of Book is 6 1/2 by 9 1/2 inches. wagon, and, doubling teams with his neighbor, pulled him out safely, and they started on their way again rejoicing. To their great surprise, their neighbor with the big horses stalled in the same spot. They stopped, and, going back, offered to assist him with their mules:

"Go on with your Jack Rabbits," he said; "I can get out of this all right by myself." So they left him there whipping and cussing, and drove on to town. They were just in time, and got top price for their wood. Returning, they found their former companion, with his wagon and team safely out in the dry, and just throwing on the last of the wood, which he was compelled to take off before his big team could pull out of the mud. When he finally got to town, the boat was gone, and he had to sell at a sacrifice.

It sometimes pays to co-operate with our neighbors.

### A Little Effective Co-operation

—Young Bob Houston thought himself "It." He loved Clara Norton; but his manner was just a little egotistical for a high-spirited American girl, of which kind we have several millions. So, when Bob began to play rather fast and loose in his game with her, she gave him the ice-house. It happened after she had agreed to go with him to a party to come off a few evenings later. Bob smiled, and hid himself out after pretty Alice Gordon. Why, yes, she would go with him, of course, and go walking with him that very evening, too. Somehow, the road led right up past Clara's front gate, and she happened to be coming out, just as they were passing by. Alice knew her, but Bob did not on that occasion. It was a great victory for him. He went home that night greatly pleased with one Bob Houston and his clever ways. Yes, it did surprise him a little bit the next afternoon, when he received a sweetly perfumed little note from Alice, saying that she was O, so sorry, but mamma had been taken suddenly ill, and she must regretfully cancel her engagement with him for the party. It made Bob feel a little foolish, and when he heard from a friend later of the chance meeting of two pretty girls, and the long confab they had under the old elm tree that morning, he got real sick. Bob Houston stock went down several points. But, he wasn't a fool. He just bled out and made the best terms he could with Clara, for, you see, he loved her.

When some people get too gay, a little effective co-operation will generally bring them down off their perch.

### Black Sheep in Every Flock

—It happened down in Georgia, where they raise water melons right. Some one had been stealing Major Bright's watermelons from the patch in the plateau at the top of Ranger Bluff. It got so bad that the major told Old Si to watch the patch, day and night. This was an impossibility on its face, for Si prided himself on his long daylight naps, while at night he was like the sleeper under the rails. That's why 'Rastus Perkins wasn't seen, when he scooped out the insides of the biggest "Rattlesnake" in the whole patch one moonlight night, leaving the shell lying there like a sugar barrel, with only one end knocked out. But that wasn't

enough for 'Ras. So he came prowling around the next evening before it was good and dark. This time Old Si was awake, and happened to be on the inner side of the bluff, with the Major's old single barreled shotgun. When he saw 'Ras he laid the muzzle of the gun on the top rail of the fence and pulled the trigger. But she only snapped, and 'Ras was well on to the game just as Old Si landed off the fence on the inside. There was no time for arguing, and no way to go but down the bluff, and it was steep and rocky. What did 'Rastus do? That was a smart nigger. He just shot head first into the empty rind of that old "Rattlesnake" watermelon which he had scooped out—gave a kick or two, and rolled off that bluff like shot out of a gun! When Si reached the bluff, 'Ras was a running down along the river like a scared wolf, the old rind lying there at the foot of the bluff with nary a crack.

There are black sheep in every flock, but we should not condemn the boat that carries us safely over.

# HANCOCK DISC PLOWS

**THE PLOW EVERYBODY IS TALKING ABOUT**

## Genuine Hancock

### Disc Sulky and Gang

Changes the Old Method of Plowing as the Twine Binder Did the Old Method of Harvesting.

We dare not tell you half the facts. We want you to see it in the field. Sent on trial. Not one cent in advance. We guarantee to do fifty per cent more work with the same team and do it better than any other Disc or Mould Board Plow on earth. Will plow hard, dry ground where no other plow will work. We furnish hundreds of letters from farmers that it will plow almost anything either wet or dry. We want you to see it in the field, and will pay you to hold an exhibition where we have no agents. We are exclusive manufacturers for two-thirds of the United States of the Genuine Hancock Disc Plow, the only plow branded or advertised as "Hancock." Beware of cheap imitations that look like our plow but which lack the essential features (covered by our patents) that make the Hancock Disc Plow the wonder of the age and the ONLY SUCCESSFUL DISC PLOW ON EARTH. "Imitation is the sincerest flattery," but do not be deceived by imitations. See that the name "HANCOCK" is on the plow. Write now and get ready for Spring work. Circulars and hundreds of testimonials from prominent farmers furnished on application. We do not ask you to take our word for it.

**HANCOCK DISC PLOW CO., Exclusive Manufacturers, 115 Langdon St., ALTON, ILL.**

## DON'T BUY GASOLINE ENGINES

less to buy and less to run. Quicker and easier started; has a wider sphere of usefulness. Has no vibration, can be mounted on any light wagon as a portable. Weighs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 3½, 4, 5, 6, 8, 10, 12 and 16 Horse Power. Please mention this paper. Send for catalogue. THE TEMPLE PUMP CO., Meagher and 15th Streets, CHICAGO, ILL.

until you have investigated "THE MASTER WORKMAN"

A two-cylinder gasoline engine superior to all one-cylinder engines. Costs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 3½, 4, 5, 6, 8, 10, 12 and 16 Horse Power. Please mention this paper. Send for catalogue. THE TEMPLE PUMP CO., Meagher and 15th Streets, CHICAGO, ILL.

# A Great Snap

—The tendency to take things easy, and to pick out the "snaps" as they come along is liable to make a fellow lose his job. There was once a farmer who had an orchard of apple trees which bore abundantly, but the apples were wormy and unsound and dropped from the trees prematurely. Some one told him that it was because of the codling moth playing with the blooms, and laying eggs therein. Others asserted that moths of the kind named were honey-loving insects, and only entered the blossoms at night to sip the nectar while the bees were asleep. The farmer was a philosopher in his way, and a great trapper withal, and so he decided to set some traps for the codling moths. He chose for his traps several tubs, each of which he filled half full of sweetened water, placing a single plank across the tops, respectively. Then, at night he set a lighted lantern over each tub of water. When the moths came on duty that night they saw the lights, and smelled the sweetened water, and each moth said unto himself: "Ah! here is a great snap—I'll see into it." And straightway they batted against the lanterns, fell into the water and perished; with the fair apple blossoms still swaying in the breezes overhead.

Some young men leave the farm, looking for bright things, and the sweets of life without the aid of hard work, which things, alas! are only too often mere Will-o'-the-Wisps to lead them on to destruction in their inexperience.

# Let's Garden the Wheat Field

—Zad Perkins and Jake Munroe were farmers whose estates were separated by a rail fence only. But Zad was an unhappy man, for his wheat field contained but forty acres, while that of Jake's measured a good round hundred, and every harvest time Zad grew sad when he saw the wheat sacks piled up three to his one around Jake's thresh-  
er. Now, it so happened that Zad's wife

saw differently, and to her all things looked bright. She was a gardener after her own heart and manner, and there were none in those parts who raised a better garden. You see, she knew how. And so, when she saw the wrinkles growing on Zad's troubled brow, just after the harvest, she said to him:

"Zad, do you like my garden?"  
"Like your garden!" he exclaimed.  
"Of course I do, Kate; ain't it the best garden hereabouts? Everybody says so."

"Well, Zad, ain't Mrs. Munroe got a much bigger one?"  
"Well, yes; but she don't raise as much truck as you do."

Then the good wife looked serious, and as she leaned over towards her husband she whispered: "Zad, let's garden the wheat field!"

Then they talked and talked. The next day Zad Perkins commenced hauling manure. He hauled out the old pile back of the stable and all that he could find on the place elsewhere. Then he went to town and agreed to clean out the livery stable free once a week, and all the town stables that he could engage. He got enough of this sort of freewill work to keep his spare time full up. Every road seemed to lead to his wheat field, and every load found a dumping place there. When he got through plowing and mixing things up on that field that fall it looked like a sweet potato hotbed. When the wheat dropped from his drill in seed time it laid down and laughed. When the warm rains and sunshine came it threw up sprouts that rejoiced that they lived. When the stalks matured he could not see the rail fence. At harvest the speary heads bent over in graceful golden curves; and at the threshing he had to borrow sacks from Jake to hold the overflow. For the first time in his life he had raised more wheat than his neighbor, and the smile on his face could be seen around a corner in the dark. We mean Zad Perkins's smile, but it was Kate, his wife, who put it there.

With some people a fair-sized ground plan is all they ask—with brains and fertilizer they do the rest.

## The Court of Equity

—There was nothing unusual in the fact that Peter Mallory worked as a farm hand for old Col. Sam Brandon. It was Miss Sallie, the beautiful daughter—a real daughter of the “Old South”—who worked in the “unusual” feature. Of course, Miss Sallie was also Col. Brandon's daughter, and it so happened that she was his only child, too. The colonel set great store by the fair feminine sprig from the old ancestral tree, and had more than once sworn: “By Gad, sah, my daughter shall marry a gentleman, by Gad, sah!”

Of course Sallie was looking for the same kind of material, and after Pete Mallory had made a few passes at her in his honest, straightforward way, she was quite convinced that she had found it.

“Marry you! Marry my daughter! By—Gad! I'll discharge the clown.” And so, Pete was fired, but not before he had fixed it up with Sallie all right. The moon was casting ghostly side-lights on the tall, white-limbed sycamores below the meadow, when they stole away between two days and were married at daylight by “Squire” Milton. You see, Miss Sallie had the nerve of her granddaddy left over, and it was very smooth.

When they got home that noon the storm broke:

“A thousand acres to my hired hand, and all this race stock, and cotton gins. Never! You're no daughter of mine—you are not a Brandon—Sallie Mallory. Begone, you and your clodhopper!” And the colonel fairly fumed and frothed. When his will was sent to probate a couple of years later, after he had passed over, it was then known for the first time that “Brandon Hall” and all the rest of the estate had been left to a distant relative who had nothing to recommend him but the family pride, which he sat up nights to nurse. The will made the lawyers laugh. They fell over each other in their rush to get a chance to break it. “It won't stand,” they cried in a chorus; “the court of equity will throw it out on first reading.”

You see, the colonel hadn't read “The Third Power,” and was unaware of the fact that a great and growing army of honest men, women and children are now marching on the halls of inequity, demanding their demolition.

## Hit's a Dang Fine Thing

—Some things are good, when conditions are good; and other things are good things regardless of conditions. It's the latter way with the A. S. of E. They had a meeting of the Brentwood local the other day when Sam Britt, Democratic candidate for sheriff, happened in. He hadn't warmed his chair till Bill Nelson came along, and poked his head in the door. Bill's the Republican candidate for the same office. Of course they both worked it to make a little speech each, though it was plain from the start that the idea nettled old man John Burton, from the White Creek District. Sam worked his cue by saying that the society would be a dang good thing if the Democratic party should carry the county election. This riled Bill, who took occasion to say that it was organized under a Republican Sheriff and other county officers, and was flourishing now, but the Lord only knew what would become of the local society if the Democrats should happen to get in.

When Bill sat down, old man Burton jumped up, and took a stand at the front.

“I'll tell ye, boys,” said he, “I've voted

both 'em tickets lots of times—first one and then 'tother—an' dang my hide if I see yet what good it's done me. An' my idea about this organization bisseness, with the American Society of Equity, is that hit's a dang fine thing, no matter who the h—l is in power.”

Sometimes there's more truth than poetry in what an honest man says.

## How the Note was Paid

—Out in Bedford County, the other day, farmer Wilkins got into deep trouble about a mortgage that the county bank held on his farm. The trouble was, he could not meet one of the notes for two hundred dollars, and the bank told him it would have to close him out. The officers agreed, however, to give him till the next day to settle it. He was a farmer, and a husband wise in his own conceit, who rarely told his better half of his troubles. But on this occasion, when he went home, he unbosomed himself, and told her all about his financial straits, and the trouble then hanging over him and their home.

“Why, Ralph,” exclaimed his wife, “you ought to have told me all this before now.” He said nothing but looked a little silly, while the good woman opened an old trunk and took from it a good sized shot bag. She emptied the contents on the dining-room table before her astonished husband's eyes. There was a great rattle and clinking as the pile settled down. Then she fell to counting the dimes, nickles and odd quarters.

“Two hundred and thirty-six dollars and four cents,” she said, promptly.

“Where did you get it, Nellie?” gasped the husband.

“Saved it out of my butter, eggs and chicken money during the last two years. Take it to the bank tomorrow and pay that note.”

There are others. Many of them who think the little things on the farm don't count much, while some farmers' even belittle themselves with the thought that they count but one in organizing, and so won't be missed. This is a great mistake.

## A SAW MILL PLANT

The saw mill plant of the DeLoach Mill Manufacturing Company, Box 850, Atlanta, Ga., who are regular advertisers of ours, is said to be the largest of the kind in the world. They not only have size to their credit, but have every other advantage, such as cheap labor and an abundance of the best lumber, steel and iron at hand to turn out a superior product. They thus have every facility for making good their claim of making the best saw mills in the world for the money. Upwards of twelve thousand of the DeLoach mills are now in use in all sections of the country.

The DeLoach catalog is a valuable machinery book for any one interested. Mention Up-to-Date Farming and it is mailed free.

## REQUEST ADVERTISERS WANT TO

Know in what Paper their Advertisement was seen. Therefore We TO Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.

Buy your carriage, buggy, surrey, etc., direct from our factory and gain the profits that go to the jobber and the retailer. We are manufacturers and sell only high class vehicles and harness direct to our customers at factory prices.

## PROFITS SAVED

We give a broad guarantee. If goods not entirely satisfactory we will refund money and pay freight both ways. Write for our free catalogue which shows our immense stock and explains our plan. THE COLUMBUS CARRIAGE & HARNESS CO. Columbus, Ohio.

## Good Health

should be the possession of everyone. Machinery left unoiled is soon on the scrap heap. A building left unrepaired quickly goes rocky. So with the human body. Food is necessary to repair waste tissue, but unless the food is properly digested and absorbed it is useless. Sluggish liver—a disordered stomach—or inactive kidneys—destroy digestion and so upset the whole system. When organs become deranged no better corrective can be taken than

## BEECHAM'S PILLS

This tried and proved remedy should be in every home to keep each member of the family in good health. They are a veritable “little doctor” in the house. Nine-tenths of the BEECHAM'S PILLS sold are purchased by those who have used them before, and have found them indispensable as a Family Medicine.

Sold by Druggists at 10c. and 25c., or mailed by B. F. ALLEN CO., 385 Canal St., New York City, if your Druggist does not keep them.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

## THE SPIRIT OF OLD TOGY

Up-to-Date Farming

### Part I.

Characters—Two men or boys, one with a reap hook, the other with an old-fashioned flail. Time 1830. Scene, man with flail apparently threshing grain. Enter man with reaphook.

Reaphook—Hello, Neighbor Flail, I am glad to see you knocking the yellow grain out so rapidly. This is a fast age we are living in now.

Flail—Yes, Brother Reaphook, and I was just thinking of you, and congratulating the world on having so perfect an implement as you are. How swiftly and perfectly you cut the straws from which I am now beating the golden grain.

R.—Yes, I don't boast when I say I do my work well, and fully meet the requirements of this fast age. But what good would it do for me to cut it if you were not here to thresh it? We are both great blessings to the toiling farmer.

F.—Very true, and I don't see how our work could be done any better than we do it. The farmer has only to grasp a great handful of the ripened grain, thrust you in, give one little pull, and the entire handful is cut at once. I have known from forty to fifty stalks cut at a single thrust, and it is all done so quick, too. It was a smart man that invented the reaphook.

R.—I accept your words as kindly truths, but I must still contend that farmers would be in a bad fix without you. After I have cut the wheat it is of no use until the grain is separated from the straw. It could be done, of course, and once was done, with straight sticks, but the world is too smart for that now. With the two pieces fastened together, so that one may swing freely, as you do so gracefully, threshing is no longer a task but a pleasure. See how the yellow grains fly every time you come down.

F.—Yes, the world would sure miss us; but after I beat out the grain, it is still in the chaff.

R.—God provided for that difficulty; He made the wind to blow, and all the farmer has to do is to take the grain up in a vessel of some kind, hold it as high as he can reach, and pour it down gently; the wind takes out the chaff, and cleans it for him.

F.—But sometimes the wind don't blow just when he wishes to clean his grain.

R.—Then he must wait till it does, or two men may take a sheet and fan

while a third one pours down the grain, and clean it very nicely that way. The grain grower has no cause for complaint now; he has everything ready to his hand in perfection. Human wisdom couldn't make it any better.

F.—Yet I have been hearing some very strange things lately. I understand some smart Aleck is fool enough to believe he can make a thing that will cut grain better than you can.

R.—I'd like to see that fellow, but I guess I would have to go to the crazy house to find him. What is the thing like, I wonder?

F.—It seems to be like a great hand with fingers half shut.

R.—I don't care what shape it is, it can't cut more than I can, for I cut all the farmer can grasp, and that is all anything else can do.

F.—But the farmer don't have to grasp the grain at all. He has a long handle to the thing, and walks along swinging it in the grain ahead of him, and each time he swings it it cuts several handfuls, eight or ten times as much as you can cut.

R.—Ha! ha! ha! That is a good one. The fool that tries it will wear it out on the fool that made it. Don't you know that, if you cut the stalks without holding them, they'd fall every which way, and that it would take a gang of pigs and a flock of geese to gather up the grain? Better let it stand in the field, and go and gather a head at a time than to try to use such a thing as that.

F.—That is the way it seems to me. Besides, the reaphook has done its work so well and so long. Why didn't somebody think of that new machine before? Does that fellow think he is smarter than all the men that have lived and cut their grain with the reaphook?

R.—All the same, nothing will ever be discovered that can beat the reaphook.

F.—And the flail.

A Voice—And the wind to blow out the chaff.

### Part II.

Scene—Apparently a wheat field—Characters—Two men, one with a grain cradle, the other in the act of tying a bundle. Time, 1850.

Cradle—What a wonderful invention this is over the reaphook! How did people live when they had nothing to cut their grain with but that puny little piece of crooked steel. No more broken backs leaning over that old reaphook.

### WAR CRY SUBSCRIPTION CARDS

These are postal cards that we offer at a special price. See offer elsewhere in this paper. Each card is good for a year's subscription and membership in the A. S. of E. When you take an order the name is written on the card and the card is dropped in the mail box or post-office. We have a bundle for you! They cost you nothing.

## Seed Oats

65c a bu. and up.  
The cleanest, heaviest, best yielding oats are Michigan Northern Grown. Hammond's Morgan-Feller, Hammond's English Wonder, Czar of Russia and Michigan Wonder, the four best varieties. Rust proof, stiff straw, have yielded 220 bu. per acre. Catalogue describing these oats and all other farm seeds free on request. HARRY N. HAMMOND SEED CO., Ltd., Box 55 Bay City, Mich.

A Postal-card Will Bring Them.

**GREAT NORTHERN SEED CO., 300 Rose Street, Rockford, Illinois.**

All you have to do now is to balance your weight with that of the cradle, throw yourself forward, give a steady swing, bring the cradle to your left side, draw it quickly forward, and there lies the grain in an even swath, just ready for you to come on and bind it into bundles. It was a long time coming, but perfection in harvesting has been reached at last.

Binder—I think you are right, but I heard some news the other day.

C.—What kind of news?

B.—You know Jim Venter. Always tinkering at something, but too lazy to work at anything useful. They say he is making a machine to be drawn by horses, that is to go right through a field like a wagon, and cut a wider swath than can be cut with a cradle, and cut it as fast as the horses can walk, bunching the grain ready to be bound, and that it takes at least four good binders to keep up with it. All the farmer has to do is to sit up on the machine and drive the team.

C.—Do you believe such stuff? Haven't they got sense enough to know that it takes a swinging, circular motion to cut grain? If I walk ahead and drag the cradle after me, it scarcely cuts a stalk, but drags over it and mashes it down. Whenever he starts his horses through a wheat field with that new fangled machine hitched to them he'll have such a mess as he never had before. His grain will be mashed and thrashed and pulled out by the roots, all at the same time. He'll never try his machine but once. If the fool killer would come around by Jim Venter's he would sure find a job. They'll never find anything that can beat the graceful swing of the trusty cradle.

#### Part III.

Scene—Anywhere. Characters—Neighbor Thrifty and Uncle Threadbare. Time, now.

Neighbor Thrifty—Well, Uncle Threadbare, how do you do this morning?

Uncle Threadbare—I'm well enough, but the price of hogs and cattle has gone down mighty low. Bill says if it gets much lower it will take a ten-foot pole to reach it.

N. T.—Yes, prices have dropped, but there is no more beef and pork in the country than is consumed every year. There is no surplus.

U. T.—There's a big minus so far as my gains are concerned.

N. T.—What do you reckon is the trouble?

U. T.—It is them boards in the cities. If I had 'em I'd give 'em a board where it would do the most good.

N. T.—Is that what was the matter with wheat last harvest and corn last fall? The crop yields compared with consumption fully justified a dollar for wheat and sixty cents for corn.

U. T.—Yes, it was the boards. They make the price low when they want to buy and high when they sell.

N. T.—How do they do that? Don't supply and demand regulate prices?

U. T.—Supply nothing! The big buyers get on a board in Chicago; then they tie a string to another board in St. Louis, and another in Kansas City, and another in Omaha, and when a big fellow jerks the string it shakes all the boards, and whatever price one says they all say, and that's it.

N. T.—That is pretty hard on the farmers, isn't it?

U. T.—It's hard on the whole push except the board fellers.

N. T.—How would it do for the farmers to have a board of their own?

U. T.—Can't do it. They won't stick.

N. T.—But suppose they should. Couldn't the farmer's board fix prices just as well as the other board?

U. T.—Can't do it. The city boards have done it allus, and they allus will.

N. T.—But the city boards could not buy at their prices if the farmers wouldn't sell, could they?

U. T.—But the farmers will sell. They have to.

N. T.—They don't all have to sell. Many of them can live without selling only as they wish to. On the other hand, consumers must buy or starve. The farmers are really the ones that don't have to; the other fellows are the ones that have to. If a board of farmers should put fair prices on farm products, food products, and farmers enough to represent the excess of supply should refuse to sell at a lower price, don't you believe the price so fixed would be the market price in spite of the city boards?

U. T.—Can't do it. No use to kick agin natur.

N. T.—But the present method of fixing prices is not nature, it is art, the art of greed and speculation.

U. T.—I guess if there was any better way it would have been found out before now. We are not smarter than our daddies.

N. T.—As to that, we may or may not be; but we know prices are made by boards of trade for purely speculative purposes, so that the speculators can make a profit on every article the farmer produces, without any care as to a profit for the producer. Then they turn the wheel the other way and grind out another profit from the consumer. If the city boards can do that, and everybody admits they do it, why could not a board representing the farmers themselves put such prices on products as will give reasonable profits to the farmers, and then for a selling price add such a per cent. as will pay the cost of this method of price fixing. This is equity. It gives profits to those who have earned profits, and also insures reasonable prices to the consumers of the products, prices that will enable them to consume that much more, and thus justify the farmers in extending their acres and increasing their productivity.

U. T.—I say you can't do it. We've got the best that can be done, or something better would a' been struck before now. Guess we've reached perfection in price making, and nobody 'll ever find anything better. You can't do it.

N. T.—That is exactly what the reaphook said to the cradle, and it is what the cradle said to the reaping machine, the scythe to the mower, and the flail to the threshing machine. It is what Old Foggy has said of every improvement that has ever been suggested, and the Uncle Threadbares never fail to throw their weight on the wrong side of the balances. But in spite of Old Foggy, the improvements came, and in spite of Uncle Threadbare, the speculative boards will be overthrown, and the producer of products, through intelligent co-operative methods, will put equitable prices upon them. Then will the farmer have a reward for his labor,

**FREE—Great Crops of STRAWBERRIES**

And How to Grow Them

A strawberry book written by the "STRAWBERRY KING," so called because he discovered the way to develop the fruit organs in a plant and make it grow two big berries where one little one grew before. He grows the biggest crops of the biggest berries ever produced and the book tells all about how he does it. It is a treatise on PLANT PHYSIOLOGY and explains correct principles in fruit growing. It is worth its weight in gold to any fruit grower. Will be sent free to all readers of UP-TO-DATE. Send your address now. The finest THOROUGHbred PEDIGREE PLANTS in the world. R. M. KELLOGG, Three Rivers, Mich.

and his customer, the consumer will be met with like fair treatment, so that he may eat of the good things of the farm and be satisfied. Then will the boy and the girl love their home in the country, the fields will respond with more abundant harvests, and agriculture will awaken from its long and restless sleep, during which it has been preyed upon by every creeping thing, and it will walk forth in newness of life, the giant of human callings.

(Close with the following song, which some one should be ready to start promptly. Sing with life and spirit, to the tune of "Rally Round the Flag. Sing the chorus first.)

Song and Chorus.

The farmer forever, hurrah, boys, hurrah!  
Onward our motto and justice our law;  
For we'll rally on the farm, boys, rally once again,  
Shouting the glad cry of equity.

There'll be equity around us and equity above,  
And honor and love for our calling;  
Our society is moving and darkness disappears,  
With the sunlight of truth on us falling.

Chorus—

The farmers forever, hurrah, boys, hurrah!  
Onward our motto and justice our law;  
For we'll rally on the farm, boys, rally once again,  
Shouting the glad cry of equity.

Farm products will be priced by the men that guide the plow—  
Prices with equity in them;  
The speculative gambler will lose his job, you know,  
For games such as his can not win them.

Chorus—

#### FRAME YOUR CERTIFICATE

Who can estimate the advantage to agriculture in America and throughout the world if the above certificate was framed and hanging in a million or more American homes. We don't say farmers homes only, but American homes? While the A. S. of E. is primarily a farmers society, it is not exclusively such. It is an American Society of Equity—a society for every true American who wants to see liberty, justice and equity prevail.

We want every member to frame their certificate. An inexpensive plan and at the same time very pretty is as follows:

Procure from your photographer or furniture dealer a bolt of passe paitant—which is simply gummied muslin—1 inch wide. This is for the frame and may be had in several different colors. From your glass dealer get a glass the size of the certificate. For the back use heavy card or paste board to which first sew or attach a small ring or brace, cut the passe paitant a little larger than the ends and sides of certificate. Dampen one half the width with a wet cloth and press firmly to the face of the glass. Be sure to cut the ends so as to form a neat mitered corner. Turn the glass face downward, place the certificate and back on and press firmly while you paste the remaining half of passe paitant to the edge and back.

Care should be exercised to keep the edges and surface smooth. Have certificate with margin, glass and back all of same size. The same instructions apply for all pictures. Framed in this manner they are dust proof, will not fade, are novel and very ornamental. The expense is a mere trifle.

## FREE STOCK PRESCRIPTIONS

**Eminent Veterinarian Will Diagnose Cases and Send Special Advice to Every Stock Owner, Free, During February**

ANY day of the month of February any reader of this publication who has an ailing or injured animal may get, ENTIRELY FREE, advice as to treatment and special prescriptions from Dr. Hess (M. D., D. V. S.) one of the most successful of American veterinarians. The only conditions are that you fully describe the animal's condition; state what stock you have (number of head each kind;) what stock food you have used; mention this publication. Send a two-cent stamp for reply, to Dr. Hess & Clark, Ashland, Ohio, care of Information Bureau.

Dr. Hess is a graduate of famous American medical and veterinary colleges, and these well-known institutions and the profession generally recognize his written works as authoritative, and his preparations for cattle, horses, sheep, hogs and poultry as formulations beyond criticism. No matter how much money you may be willing to pay a veterinarian, you cannot get better service than Dr. Hess will give ABSOLUTELY FREE during February. But this offer is good only for this month.

While waiting Dr. Hess' reply, get a package of Dr. Hess Stock Food and use as directed on the package. You will notice a marvelous change in the condition and appearance of your stock.

It is a scientific preparation that tones up the vital organs of an animal—producing perfect conditions, vigorous health, greater weight. A wonderful tonic; a marvelous invigorant; a positive weight producer. Dr. Hess Stock Food is a scientific compound, the result of lifelong, earnest study, successful practice in medicine and a wide experience in handling stock of all kinds, as breeder, grazier and shipper.

No unprofessional manufacturer can equal it. 100 pounds, \$5.00 (except in Canada and Pacific Slope); smaller quantities at a slight advance; fed in small dose sold on written guaranty. For every disease and condition for which Dr. Hess Stock Food is not recommended, a little yellow card in every package entitles you to a letter of advice and a special prescription from Dr. Hess, at any time, free of charge.

If your dealer can't supply you write Dr. Hess & Clark, Ashland, Ohio.

## Seed Corn

\$1.00 bu. and up.

Michigan Northern Grown is the earliest and produces largest crops. **Hammond's Sixty Day Flint, American Pride, Race Horse Dent and Thoroughbred White Dent** are the 4 famous varieties today. **DON'T BUY A ROLL OF WALL PAPER UNTIL YOU SEE OUR FREE SAMPLE BOOK OF NEW PAPERS**, and learn our astonishingly low prices, wonderful values in gilt, embossed, bronzed and ingrain papers, at 6 cents to 20 cents per roll, same as dealers everywhere ask 12 cents to 60 cents per roll. **THE BOOK OF SAMPLES IS FREE**, explains in 60 to 80 pages how to tell how much to order, tells all about how to hang paper, how to make paste, how to select harmonizing colors, etc. Write and ask for Wall Paper samples and the complete book will be sent to you by return mail, postpaid, free.

Address, **SEARS, ROEBUCK & CO., CHICAGO, ILL.**

## THE LOCAL AT THE CROSSING

The subject for discussion at the local union at the Crossing was "The Choice of Corn Land." James Barton had been appointed to open the discussion, which he did by saying:

"Whatever else may govern the choice of corn land for the coming crop, I wish to say with emphasis: Don't try to raise corn on the poor land. If you have no land available for corn but poor, thin land, better get land from some one else, or not try to raise a corn crop at all. To make a profitable corn crop there must be a good yield, and you can't have a good yield on thin, poor land. Much, of course, depends upon the season, but no matter what the conditions, you can't raise corn on land where corn cannot grow. Starved and sickly corn, trying in vain to grow where there is no food for the corn plant, is the chinch bug's surest pasture, and there is where he gets in his fatal work, and from that he will move to attack the better corn."

John Williams argued that it is possible to raise a fair crop of corn on poor land, but that it took extra work to do it; work that the farmers of today seem very little inclined to do on account of its slowness. He said: "Of course you can't put in so many acres, and the most of the work of the crop must be done before planting; you must richly fertilize every hill, but this must not be done with raw barnyard manure, because such manure, instead of fertilizing the plants, will burn them out during the heat and drought of summer. Black, rich dirt must be used. A well rotted chip-yard earth, where rubbish, brush, etc., have rotted, old piles of manure about the barnyard so well rotted as to be unrecognizable as manure, leaf mold from wood lots and from rich points along creeks—these are the things to use."

James Manley—But does not that involve a great deal of extra work?

Mr. Williams—Certainly, but it must be counted as work necessary to the production of a crop of corn on land which would not produce it otherwise. You will have to be content with fewer acres. If as much corn can be grown on five acres with this extra work as you can get from fifteen acres with out it, there is a saving in land and in work also, for the ordinary work on the fifteen acres will be more than the extra on the five.

Joe Riley—I have land just such as has been described, and I also have plenty of rich, black earth that is entirely worthless where it is. I would be glad if Mr. Williams would give us his process in full.

Mr. Williams—If it is worn out clay land, I would not break it too soon; wait until it is in thoroughly good condition, then break and pulverize as deep as possible—pulverize by rolling or dragging and harrowing. Lay off both ways three and a half or four feet apart. In applying the manure or rich earth, straddle a row with the waggon and then you can easily take three rows at a time, putting a shovelful of the rich dirt in each cross. Follow at once with the planting, dropping by hand and covering with a hoe. This is slow, too slow, modern farmers all think, but you must remember that you are now working for a crop on poor land and you are getting valuable material away from where it is of no use, out upon the field where it is needed. The after cultivation is easy and simple.

George Bowers—I believe it will pay to do the work that has been described, and it will not cost as much to take that rich dirt to the field as it will to buy and apply commercial fertilizers, and I believe the good results will be surer. But it is my opinion that the best thing to do with the thin lands of the old fields is to seed them to pasture and forage crops. They may not at once be very valuable for pasture, but let plenty of stock nurse them to sleep, and they will wake up greatly refreshed.

A son of Mr. Bowers then recited the following:

There was an old farmer from Sleptown,  
Who said he had troubles to keep down  
The poverty weed  
And tickle grass seed  
That nothing on earth would eat down,  
So he bought him a heap  
Of cattle and sheep,  
And now he is living in Richtown.

## DE LAVAL CREAM SEPARATORS

are the most efficient and durable in the world, excelling in every feature all other creaming machines and methods.

SHEPPARD CO., Indianapolis, Indiana**

"36 YEARS A STANDARD PIANO"

# The WING PIANO

A Wing style—45 other styles to select from

You need this book <sup>IF YOU INTEND TO BUY A PIANO,</sup> A Book—not a catalogue—that gives you all the information possessed by experts. It makes the selection of a piano easy. If read carefully it will make you a judge of tone, action, workmanship and finish; will tell you how to know good from bad. It describes the materials used; gives pictures of all the different parts, and tells how they should be made and put together. It is the only book of its kind ever published. It contains 116 large pages, and is named "THE BOOK OF COMPLETE INFORMATION ABOUT PIANOS." We send it free to any one wishing to buy a piano. Write for it.

Save from <sup>We make the WING PIANO and sell it ourselves.</sup> \$100 to \$200. It goes direct from our factory to your home. We do not employ any agents or salesmen. When you buy the WING PIANO you pay the actual cost of construction and our wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

**This Piano** is a representative Wing style, being our concert grand, with longest strings, largest size sound-board and most powerful action, giving the greatest volume and power of tone. It has  $7\frac{1}{3}$  octaves, with overstrung scale, copper-wound bass strings; three strings in the middle and treble registers; "built-up" wrest plank, "dove-tailed" top and bottom frame, "built-up" end case construction; extra heavy metal plate; solid maple frame; Canadian spruce sound-board; noiseless pedal action; ivory and ebony keys, highly polished; hammers treated by our special tone-regulating device, making them elastic and very durable; grand revolving fall-board; full duet music desk.

Case is made in Circassian walnut, figured mahogany, genuine quartered oak, and ebonized; ornamented with handsome carved top mouldings and hand-carving on the music desk, trusses, pilasters, and bottom frame.

## In 35 Years 36,000 Pianos

We refer to over 36,000 satisfied purchasers in every part of the United States. WING PIANOS are guaranteed for 12 years against any defect in tone, action, workmanship or material.

**Wing Organs** are just as carefully made as Wing Pianos. They have a sweet, powerful, lasting tone, easy action, very handsome appearance, need no tuning. Wing organs are sold direct from the factory, sent on trial; are sold on easy monthly payments.

For catalogue and prices write to us.

## SENT ON TRIAL

**We Pay Freight      No Money in Advance**

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask any advance payment or deposit. If the piano is not satisfactory *after twenty days' trial in your home, we take it back entirely at our expense.* You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

Old instruments taken in exchange.

## EASY MONTHLY PAYMENTS

## Instrumental Attachments

A special feature of the Wing Piano; it imitates perfectly the tone of the mandolin, guitar, harp, zither and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachment has been patented by us, and cannot be had in any other piano, although there are several imitations of it.

## "THE THIRD POWER"

[Continued From Page 2.]

### I Like the Spirit in Which It Is Written

I have read the "THE THIRD POWER" with pleasure and profit. I like the spirit in which it is written; and the showing you make in behalf of agricultural organization should, and no doubt will, command the attention and consideration of that most important, but hitherto neglected class—the farmers.

M. H. CHAMBERLAIN,  
Lebanon, Ill.

Pres. McKendree College.

### May Be Called "The Looking Forward" for American Farmers

I have only had an opportunity to sketch "THE THIRD POWER." I must say that I am greatly pleased with both the argument and its presentation. I congratulate my brother farmers in having this able exponent of their rights, and I congratulate the author on the merits of the work he has performed. The results that must follow the principles of co-operation by farmers as proclaimed in "THE THIRD POWER," will be a praise that will make words seem empty and hollow. To my mind it has only one equal in late economic literature, viz. Edward Bellamy's "Looking Backward," which contains idealisms without immediate practicability. "THE THIRD POWER" may be called the "Looking Forward" for American farmers—the book of industrial idealism, with all its ideals immediately practicable and possible. Many thinkers and students in economics will find an echo of his thoughts in this work, and many a farmer will be started to thinking on sound lines by its perusal. I personally am glad you wrote it. Every farmer should read it, for the principles it teaches must be known, understood and put in operation ere farmers will secure commercial emancipation that will place agriculture upon a sure footing for prosperity. \* \* \* "THE THIRD POWER" is a book able to stand alone on its merits as it certainly does. It should be studied.

C. HAYES TAYLOR,  
Gillaspie, Va.

### A Book \* \* \* That Will Carry Conviction to Thousands Who Now Doubt

A copy of "THE THIRD POWER" by J. A. Everitt, president of the American Society of Equity, is before me. This book is ripe fruit—it is wheat without chaff. \* \* \*

It is logically, forcibly and suggestively written.

The style of the author is fresh and interesting.

The manner of treatment is bold and original, with new and valuable thoughts scattered all through.

No one can read this book without being convinced that the purpose of the American Society of Equity is a good thing; that the chief objects—organization, co-operation and the farm pricing of farm-grown products is necessary to the prosperity of the farmers, and through them the prosperity of the nation.

The one open question—that of united action and consequent success, is laid down at the farmers' feet, and the road is pointed out with no uncertain hand. It shows plainly that the men at the head of this farmers' movement are working—both pushing and pulling—AND THAT A MIGHTY EFFORT IS BEING MADE TO GET THE FORCE ON THE FARM IN LINE FOR THE GREAT VICTORY THAT IS WITHIN THEIR GRASP WHEN THEY SHALL RISE UP AS ONE MAN, AND PLANTING THEMSELVES SQUARELY IN THE HIGHWAY OF INEQUITY, SHALL STAND THERE AS A GREAT TOWER OF STRENGTH—the great power on earth, the grand and new, The Third Power. A power that shall cause a parting of the ways; that shall obtain equity for the

farmer because it is his by right. A power that shall cause injustice and inequity to recoil upon those who would perpetrate it; and which shall strengthen social and the commercial conditions of the country, by first strengthening the foundation—the source of original production.

"THE THIRD POWER" is a book that no one can do full justice in a short review. It is a book that must be read to be fully appreciated. It does not beg favors of any class, nor does it threaten any one. It is clearly and cleanly written—a work that invites inspection and criticism from those who may differ with the author, and carry conviction to tens of thousands who now doubt. It may be set down now, and here however, that, "The Third Power"—the power of the producers united, is a power that will eventually revolutionize trade conditions as they now exist, by putting the farmer in control of the products of the farm—to be disposed of at an equitable price, both to the producer and consumer, and not at rates fixed by non-producers in Chicago and New York.

HENRY BURNS GEER,  
Nashville, Tenn.

## THE JOLLY FARMER LAD.

By E. D. Gee.

Come, lads and lassies, one and all,  
And listen to my ditty,  
For if you lose a single word  
I think 'twill be a pity.

I'll tell you how I used to live  
When but a little codger,  
And how I often got outside  
Of pumpkin sass and dodger.

And how, for falling in the fire,  
I got a dozen lashes,  
Because I landed square upon  
The hoeck in the ashes.

And how my pants was pulled so soon  
That I could hardly wear 'em,  
But every time I stooped a bit  
I was sure to rip or tear 'em.

And how the bosom of my pants  
Looked like they needed patches,  
And every one that saw my legs  
Said, "Bub, you've got the scratches."

But since my dad joined the A. S. of E.  
I'm fed on balanced rations.  
I can dress as well as any kid  
That follows out the fashions.

I've got a bran new chopping axe—  
I tell you it's a dandy—  
And money in my trouserloons  
To buy my girl some candy.

I've got a daisy riding horse  
That never gives me trouble,  
For when I meet my girl a-foot  
I make him carry double.

You'll rarely find a jollier pair  
If you hunt the wide world over,  
And if ever you come to our house  
You'll find us both in clover.

"To be or not to be: that is the question:  
Whether 'tis nobler in the mind to suffer  
The slings and arrows of outrageous fortune,  
Or to take up arms against a sea of troubles,  
And, by opposing, end them?"—Hamlet.

### THE FIELD IN GENERAL

J. A. EVERITT, Editor:

DEAR SIR:—In the issue of Jan. 15th of Up-to-Date Farming you intimate that you have thought of setting over or otherwise disposing of the official paper of the Society of Equity, and ask your readers to write their views on the subject. Your quandary is similar to the above quotation. Having been a publisher for some years, and being now a farmer, I can see on both sides of the fence. Your publication, with many others, came to my desk as exchanges long before the Society of Equity was mentioned, and was considered one of the most valued exchanges for the field it covered.

Your time, money and energy have been devoted to establishing this publication, and later bringing to the front the organization of the society, and by reason of the publication you have been able to make greater progress in the work than in any other manner. In fact, I doubt if the society could ever have been successfully organized without the aid of some publication, for no man or body of men could be induced to advance the vast amount of money required to obtain the necessary publicity. The cost of completing the organi-

zation with the aid of the publication will not be one-quarter what it would cost without.

Now, regarding the attitude of the agricultural press, would say that I presume the managers of the various publications are human, and naturally jealous of the success of a rival that is increasing its subscription list by thousands, and they foolishly lose sight of the fact that on the success of the undertaking depends the success of their patrons. If they will spend half the time in giving the matter a boost that they spend in denouncing it as a scheme of the originator to increase his subscription list, they will all be better off in the end.

I consider it extremely fortunate for the farmer that the idea originated with a man who had nerve enough to put it in operation and the tools to work with, and trust that Mr. Everitt will go on along the lines laid out, regardless of any and all criticism. It is a matter that concerns the farmer to a greater extent than any other, and if a vote was taken on the subject by the 60,000 members, I don't believe there would be 60 to vote for the divorce.

No; I believe the combination a good one. The President has a medium for expressing his views, he can publish whatever seems proper to him at any time he sees fit. Go on with the good work you have started. The agricultural press will swing into line. Already a number of them are following the procession quietly, but you can see them continually getting nearer the band wagon, so it will be handy to clamber on when the band begins to play. A FAIR FARMER FROM FAIRFIELD, WASH.

MR. J. A. EVERITT, President:

We farmers in Oklahoma have received benefits from co-operation, and the A. S. of E. deserves the credit. When asked what we do to keep up interest, I tell them we attend to business—everything that is brought before our meeting. We discuss matters and are getting to understand all the farmers' problems, thanks to the semi-monthly visits of the official paper. This is an educator. While we are learning we can well afford to wait awhile to work out all the objects for which our society stands. Of course, only those attending the meetings are getting this knowledge. I would that all would attend, so they may be prepared for co-operation on this grand and equitable plan.

WM. J. TONKINSON, Geary, Okla.

While I am a miller, I am in hearty sympathy with the A. S. of E., as I believe by bettering the farmer's condition you help all. All are dependent upon him, and none more so than the small miller. Wishing you success, I am, very respectfully yours, A. W. HUTCHINSON, Lemar, Va.

KENTUCKY BLUE GRASS SEED From first hands. Grade, extra clean, in lots of 1 bag or more of 9 bu. each at 40c. per bu. F. O. B. Paris, Ky. Sample free. L. A. SOFER, Little Rock, Ky.

St. Louis, Mo.

**BROTHER FARMERS:**—As I am a member—also a Deputy President—of the A. S. of E., I feel it my duty to say a few words on the subject of publication.

We farmers have never before had the opportunity of setting a fair living price on our farm products, as we have at the present time through the A. S. of E.

The ball that we have started to roll in the A. S. of E. should be kept rolling, as we used to roll the snowball on the country school ground. Put your shoulder to the ball; keep it rolling. It will gather more and more as it rolls. The time has come when we should co-operate. Everything else is organized—why not the farmers? Not one person in fifty has figured what it costs to get a crop to market. The farmer, his wife, sons and daughters all work to raise these crops, but can not set a price on a single one of them. Are we obliged to feed the balance of the world at a loss to ourselves? I say, no. The riches of the earth are ours. Why not take our share before others touch them?

Some say the F. M. B. A. failed; so will the A. S. of E. If our wheat, corn, oats or fruit fail this year, do we sit down and say it will fail next year? No. We keep at it with renewed energy.

The farmers need to know each other better. Keep your local meetings up for education and co-operation by the presence of your whole neighborhood. Have some important point each meeting to make it interesting for both old and young.

What is the cause of our young men leaving the farm? Uncertainty of both crops and prices. We can make our prices if each one will do their part. A good many agricultural papers tell us how to grow crops, but not one of them tells us how to sell them. Up-to-Date Farming attempts to solve both problems through the A. S. of E.

Farming should be an independent life, but how many men have we that have confined their business to farming all their lives can sit down and take life easy and take their yearly trips, as other business men do? I think if we will all get in the push, get out among our friends, explain the plan of the A. S. of E. to them and persuade them to join, in after years they will thank us and say it was the freest dollar they ever spent.

Wear the emblem. It is something no man need be ashamed of, as this organization means to elevate the farmer and benefit all others. Look around you and see how many brothers there are unconverted, and don't stop until you bring the last one into the fold.

Hoping that every farmer will see the  
W. NEWHALL, Deputy President.

THE A. S. OF E.

DEAR SIR:—Your circular at hand. I will look them over and prepare to do all I can for our Society. I'm getting prouder of it every day.

They are coming. They are coming, Keep an everlasting humming in the ears of the honest husbandman.

When "The Third Power," unlimbers, With a mighty million members, It will scatter peace and plenty o'er the land.

Is it any wonder that the farmer goes around with patches on his pants, and a sort of a "fare you well" look in his eye. Look at the picture. Gigantic commercial combines on every hand vs. one wee little wobbly farmer. That's it as long as he is alone. What we must do is to organize and stop that wobble. Isn't that the idea?

I'm sending you some names of farmers in our country. It stormed us out on our last meeting night. But the days will get longer too. Did you send Mr. Shireman, Sec'y, the booklet and seal?

JESSE W. MOORE, Rosedale, N. D.

Mr. Moore also sends us the following:  
MR. J. W. MOORE,

DEAR SIR:—I have yours of Jan. 11th and also enclosures which I have read with interest. I had read before the literature of the A. S. of E., and I believe that much can be accomplished by the co-operation outlined by the Society. I have always felt that it was a great wrong for the majority interest of the American Nation and the majority of American voters to not only have no representation in either branch of Congress, nor in the State, but that it was manifestly unfair for every farmer producer to be compelled to ask "how much must I pay," whenever he makes purchase and "what

will you give" for everything he has to sell.

I do not mean that the farmers have no influence, state or national, or no representation, but what he has is so scattered that it amounts to exactly zero. You can take our own state for an example, being a purely agricultural state, and yet the farmers of this state, casting 90 per cent of the votes have absolutely no influence in the naming or election of practically a single official, county or state. Only through organization can wrongs be righted. I do not mean that farmers should be encouraged to become politicians but the margin of profit should not be absolutely in the hands of others. As it is now, it matters not what you raise or what it is worth, the non-producers and speculators squeeze out for themselves, every penny except what is necessary for the farmers living. They say that parasites seldom actually destroy their host, but keep it depleted and sickly, allowing it life enough to prolong their own existence. In a similar way the non-producing and speculating class will not and does not intend to destroy the farmer, but keep him in good condition to produce the wealth which they propose to enjoy. I do not blame them; I blame the farmer and until they unite and cooperate conditions will remain exactly as they are, possibly grow worse. I wish that, or some similar organization would take hold of our grain and stock producing territory, and elevate agriculture not only to larger and surer production but insure a fair margin of profit on what is produced.

Yours truly,

J. H. WORST,  
Pres. N. D. Agricultural College.

MR. J. A. EVERITT:

speedy need of the A. S. of E. and keep their subscription up to this paper, I remain, yours for success,

DEAR SIR:—After studying your plan of the A. S. of E. carefully one year, I can safely say that I have received one hundred fold for money invested in our farmers' union for membership and official organ. Equity for the farmer is here to stay. Thanks to you for the noblest, grandest, simplest, most far-reaching plan ever handed to producer and consumer. Yours ever for equity,

D. C. HARKER, Gladwin, Mich.  
January 27, 1904.

J. A. EVERITT:

MY DEAR MR. EVERITT:—Replying to yours of the 13th, I thank you for your courtesy in sending me a copy of "The Third Power." I have read it, and a review will appear in this week's American Co-Operator. I wish to congratulate you upon the book. It ought to stir up the farmers of this country to a sense of their power, and I hope it will have a very wide circulation.

I also wish to congratulate you on what you are doing in the American Society of Equity, and give you my Godspeed. Yours very truly,

RALPH ALBERTSON, Lewiston, Me.

MR. J. A. EVERITT, President:

DEAR SIR:—I have been silent for some time, but it was for an object. Last summer I talked A. S. of E. and dollar wheat strongly, but my brother farmers were skeptical, and they appear to have acted on the opposite, because they sold their wheat as quickly as ready. They are now the meekest lot of citizens you ever saw. Each of them has lost from \$50 to \$200 by not taking your advice. There is very little wheat left in this State, and I can

say the same of Kansas and Minnesota. I have read of the Jews and Gentiles and of the peculiar Israelites, but I have never known or read of a class of people that ignorance and lack of self-interest so absolutely ruled as our farmers. I think with the lesson they have had they will be ready to organize.

ALFRED SMITH, Truesdail, Mo.  
MR. J. A. EVERITT, President:  
I am a member of the A. S. of E., and like the plan to substitute co-operation for competition. A large number of farmers enrolled in this movement will cause the Merchants' Exchange to have a very friendly feeling for the A. S. of E. As soon as capital takes down the almighty dollar that is dazzling his eyes and sees things in their true light—the glory of harmony and good will—then it will no longer be capital vs. labor, but this notion may incorporate under the name of "Labor and Capital."

A. R. SHECKELL, Cape Sandy, Ind.

I have been a subscriber for your paper, Up-to-Date Farming, for two years, and can not do without it. I hope to see the time when farmers can say what their produce is worth. Success to the American Society of Equity.

N. A. WHITENER, Hickory, N. C.

MR. EVERITT:  
Your paper—Up-to-Date Farming—is the best farm paper I have ever read, and I wish you and the A. S. of E. success.  
M. P. SHADOAN, Eubanks, Ky.

The "Third Power" is well written, full of telling facts and a powerful argument that should be in every farmer's hands.  
E. B. OGLESBY, Cloverport, Ky.

I received my commission as Deputy President, and will start out at once to organize local unions. It is plainly evident that the farmers are interested in this great and important movement. I believe the farmers of the United States, in order to form a more perfect union, establish justice, provide for our common defense, promote the general welfare and secure the blessings of liberty to ourselves and posterity, will ordain and establish the American Society of Equity throughout the land.

In the past few years nearly all industries have abandoned the competitive system and adopted the co-operative system. Among the exceptions are the scissors grinders, hand organ men and farmers. Yet this latter is the most important of them all, and have the best chance to control their business of any, because it is the industry on which all others are dependent; the source of nearly all wealth; the one which directly or indirectly pays nearly all the expenses of the governments of the world. The representatives of this industry toil harder than any other class, and then, when they market, they must degrade themselves and the calling they represent by asking some non-producer, "What will you give me for my produce?" And when it comes back as a finished product, they ask again, "What will you take for it?"

It is the eleventh hour in the salvation of agriculture. There is no more time to lose. Let us establish unions of the A. S. of E. all over the United States and Canada. In these unions let us gather together, bring our neighbors, and study farmers' problems, and learn how to co-operate, so when the number is secured we can strike—strike for high aims and strike hard—so no people, class or party can ignore the equitable demands of the farmers.

I recall a Labor Day parade at Grand Rapids last summer, and was amazed at the long procession of unions, headed by bands and marching under their banners. Who ever saw the farmers turn out in processions like this? The only process-

sions they march in are of the political parties. To them farmers have been loyal for no good reason from time immemorial. I pray that such an awakening may come to the farmers this year—1904—and such a wave of co-operation sweep our country this year that before the next general election farmers will be marching in the most imposing processions that the world ever witnessed—marching under the banner of "Equity for All."

**500 STOVES MUST GO**  
**Excelsior Steel Air-Tight Heating Stoves at Remarkably Low Prices to Close Out**  
The "Excelsior Air-Tight" is a wonder. It burns wood, either dry or water-soaked. It will burn saw-dust, knots, chips, straw, hay, trash or cobs—anything used for fuel excepting coal. The Excelsior is double lined for 12 inches from the bottom. The air is heated before it reaches the fuel, thus causing perfect combustion. This stove will produce more heat, on the same fuel, than any other stove in the world. Will hold a fire over night, and if wood is put in every ten or twelve hours will hold fire the year round. Wood is used in big chunks and does not require splitting.  
**LIMITED OFFER** To close out our stock we are selling at a great reduction. We have only a few of these excellent stoves left so order at once or they may be sold. The only cheap thing about this stove is the price.

Number	Height Over All	Length	Width	Height	Price
18	29 in.	19 in.	15 in.	15 in.	\$1.40

**PEOPLES WHOLESALE STORE** Stove Dept. Indianapolis, Ind

**LICE** Gibson's Liquid Lice Killer saves handling the fowls. Paint it on the roosts and bottom of coops. That's all. YOUR MONEY BACK if you don't kill the lice. GALLON CAN \$1.00. AGENTS WANTED. Attractive circulars free. Write today. GIBSON & LAMB, West Alexander, Pa.

**50 CENTS.** Eskridge's Elegant Mineral Cabinet of glittering, gold-bearing ores, in all their native purity, from highest gold mines (12,000 feet altitude) of the great Rocky Mts. Rare curiosity. By registered mail 50 cents.  
J. W. ESKRIDGE, Newmire, Colorado.

J. A. EVERITT, Publisher, and President of A. S. of E.:

DEAR SIR:—Every copy of Up-to-Date has been good, but in my opinion the last issue—January 15th—is away in advance of all former endeavor. I have read every article, and some that were particularly interesting several times. In article, "No Intention to Monopolize the Agricultural Field," I was greatly impressed with the two generous propositions therein made. I know and appreciate the reasons that impel you to offer such a generous sacrifice on your part. I know that it is your anxiety to quickly build the machine of co-operation. But is it necessary that you should think of such a proposition? Have you not already made many personal sacrifices for the purpose of being a benefactor of the agricultural interests? What other publisher of a farm paper ever suggested to our farmers that it was possible by co-operative marketing to secure profitable prices for the products of their toil? What other publisher, even had he been sufficiently gifted to formulate a rational plan, would have had the temerity to have gone ahead at his own expense, incorporated and expended many hundreds of dollars in preparing the printed matter that you distributed free, broadcast, all over the land, to let the farmers and their friends know that the day of their emancipation from tyrant rule was near at hand? I know that few—very few—publishers would have even invested the postage necessary to carry the printed matter to the farmers. I also know that you expended many hundreds of dollars last year in mailing free copies of Up-to-Date Farming to every farmer whose name you could get. I think you have done your part in good earnest. \* \* \*

I want to say to my brother farmers all over this land whom our metropolitan press and our farm papers are trying to make believe are imbibing in large quantities the so-called wave of prosperity, that all of the papers, by whatever name they are designated, that try to injure or belittle our endeavor to effect perfect organization should be cut out slick and clean. They depend on our dollars, and their advertising is compensated for on the basis of their circulation. Cut them out. Let them work as we've done for years on a very meagre income. Yes, even write and tell them your reason for chopping them out. There are too many old fossil agricultural newspaper editors who don't want to say a word for our society, but who would like to have us think that the "grange" is the only balm-of-Gilead-sure-cure for all the ills we suffer. I would not say a word against the grange, if I had reason to commend it, but the promoters of it are working along the wrong track. They never thought of farmers co-operating and getting a fair profit on all farm products. Evidently their idea was to de-grade all other industries to the farmers' level. They made us, as farmers, plenty of enemies, but no money. Our society's plan makes us friends among all the commercial classes. Last fall one of our brothers wrote to the Farm and Home, inquiring why they did not support our plan and assist us in our effort. The kind editor did not think the plan just suitable, and thought the grange would solve the problem. That editor is like some doctors—only one panacea for all our troubles—and his is the grange. I've cut that editor out till he gets off the fence.

I want to say to you Mr. Everitt that our over 60,000 present members are of the young and progressive class, and if we have a few old ones like myself, they are not fossils. Therefore, I do not think they will lay back and depend on you and our official paper alone to wage our battle. Get out, brothers, and do yourself proud by securing new material to build up our society. You all have made money by following our plan, and if you have not followed the plan, you've made money by reason of others following it and helping you to get a better price for your produce. Get us one or two new members. If your man is too poor to afford the dollar, loan him one. Or make him a present of a membership. Then get him to get one more. Help build our machine solid and sure before another crop is garnered.

We have already had proof that our machine works very satisfactorily while yet in an embryo state. How much better it will work when fully manned with one million loyal members, every one of us can

easily imagine. Therefore, I say, let us get the machine complete, and you will be amazed at the results, and the tyrants who now hold partial sway will be driven from the field, or will come to our terms. Brothers, we are all proud to be called American citizens. Let us all take pride in aiding ourselves, and help Mr. Everitt and the National Union get the million members, and to those who are not members, but enjoy the free copies of Up-to-Date they receive, would say: Don't be poltroons. Don't be afraid to invest your big dollar. If we win, as we surely will, then you, too, will have the joy of knowing that you did your part and disdained accepting your emancipation through any financial sacrifice on the part of our president. Remember, brothers, this is not a fight for Mr. Everitt's benefit. It is your fight, and Mr. Everitt is only commander-in-chief. You owe it to yourself to do your part. Don't depend on one man to lead you to victory. If you do your part you will feel ever so much better for so doing. Let each of us resolve to get one or more new members at once. There are very few farmers who are worthy the name living in our township but who are members, but I will be one of our 60,000 to hustle two more. Then, as spring election time approaches, let us go to the caucus, and let us talk and hustle for a few more recruits. Farmers, you waste some hours every week. Why won't you put that waste time to good service and help us? Remember the old adage, "God helps those who help themselves." This applies to every one of us.

NATIONAL MEDICINE CO.

Doll Dept. 133, New Haven, Conn

MOST POPULAR DOLL MADE

HIGH HONOR FOR MYERS

F. E. Myers, President-Elect National Association Implement and Vehicle Manufacturers.

Mr. F. E. Myers, president F. E. Myers & Bro., the well-known pump and implement manufacturers of Ashland, Ohio, was signally honored at the recent convention of the National Association of Implement and Vehicle Dealers, at Cleveland.

From among the 500 odd members present he was chosen president for the coming year; and the enthusiasm with which his name was received demonstrated that Mr. Myers stands as highly with his fellow manufacturers as do his products among farming people throughout the country.

F. E. Myers is an example of what intelligence, indomitable will, and willingness to "shed-the-coat-and-hustle" will accomplish.

He was born upon a farm six miles from the location of his present factories' his "college course," as Mr. Myers laughingly puts it, "was three months' attendance in the winter at the country school."

He began his career as dry-goods clerk in the county-seat town, later engaging in the sale of implements, and from that starting in a small way in the manufacturing business, producing first a new idea in force pumps, the invention of his brother, Mr. P. A. Myers.

The business has steadily advanced until F. E. Myers & Bro., now have a factory employing several hundred men and representing a capital of several millions.

"Take Off Your Hat to Myers," is a trade phrase that is known wherever the force pumps and farm implements are used, and Mr. Myers attributes no small measure of his success to judicious advertising in the better class of farm papers.

DIFFICULT CHURNING

C. S., MARCH, WIS.—In the winter when the cows are on dry feed, it is frequently difficult to make the butter gather.

Skim as thick a cream as possible. Keep it cold, below 50, until enough is secured for churning. It should then be warmed up to 65 to 70 degrees and held until it becomes sour and has a pleasant acid taste. If the cream was sweet it will usually require 18 to 24 hours to sour it, no cream should be added to that to be churned for at least 12 to 18 hours previous to churning.

Two hours before churning cool the cream to 50 to 56 degrees. Hold at this temperature makes quick churning but large loss of butter in the butter milk and soft butter. At a temperature of 50 to 65 degrees 20 to 40 minutes will be required for churning. The speed of the churn should be sufficient to carry the cream to the highest point allowing it to fall the full length. The agitation which results from concussion is more desirable than that from friction.

SEND FOR FREE LIST OF RECORDS & TALKING MACHINES.

has never been given free for selling \$3.60 worth of goods as some want you to believe, but if you send us your name and address, we will send you post-paid, and Trust You with 36 of the handomest and finest selling articles ever made; easily sold in half an hour at 10c. each. When sold send the money, \$3.60, and we will send you a guaranteed A. C. Columbia Graphophone with three-song record. In case you are not pleased with the Graphophone, send it back to us and we will allow you \$3.50 on the purchase of any machine you may select from our catalogue. We will forfeit \$1,000 to any one proving any trick or catch about this offer, or that we give a toy machine or one that must be turned by hand. Our machine is a key winding, self-playing Columbia Graphophone, and with three-song record, is the greatest premium ever offered. Send for free list of records and graphophones. Send your reply to us at once and be treated fairly. A trial costs nothing. Address plainly, W. S. SIMPSON, Dept. 19, New York.

WEST MICHIGAN TREES

are "bred for bearing." That's why we cut all buds from the best fruited, bearing trees. It also insures stock true to name and variety. Over three million trees—913 acres. All new and standard varieties of Apple, Peach, Pear, Plum, Quince, etc. Also ornamental trees and shrubs. We sell direct at wholesale prices. Illustrated catalogue free.

WEST MICHIGAN NURSERIES, Box 18, Benton Harbor, Mich.

MAKE \$2,000.00. THIS YEAR GENERAL AGENTS WANTED

The SEGMENT Corn and Bean Planter, 2,000 dozen sold last year. Never cracks a kernel nor skips a hill. Simplest, lightest, most durable and most accurate. Frictionless slide. Genuine Chinese bristles brush, which never mats. Hopper and spout galvanized iron. Working parts stamped out of sheet steel, which means absolute uniformity, extreme lightness and great strength. Will make favorable contract with men competent to handle territory and control sub-agents. Ask for Contract No. 2.

Greenville Planter Co., Greenville, Michigan

\$3 a Day Sure

Send us your address and we will show you how to make \$3 a day absolutely sure; we furnish the work and teach you free, you work in the locality where you live. Send us your address and we will explain the business fully, remember we guarantee a clear profit of \$3 for every day's work, absolutely sure. Write at once.

ROYAL MANUFACTURING CO., Box 1044, Detroit, Mich.

RUPTURE CURED while you work. You pay \$4 when cured. No cure, no pay.

ALEX. SPEIRS, Box 265, Westbrook, Maine.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE \$2.00 trial bottle and treatise.

DR. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

PILES

Instant relief, final cure in a few days and never returns; no purge, no salve, no suppository. REMEDY MAILED FREE.

Address, C. J. MASON, Box 519, New York, N. Y.

LYCOSITE

cures pains instantly at any part of the body without taking a drop of medicine. Price \$1.00. Address

F. J. CONNELLY, Baldwin Place, Westchester Co., N. Y.

Heart Disease Cured at Home

To prove the extraordinary powers of his Neurophatic Treatment for Heart, Stomach, Liver, Kidneys, Nerves and Dropsy, Dr. Miles, the great specialist, will send \$3.75 worth free as a trial. Twenty-five years' experience, thousands cured, 60 assistants. Write at once for free Book and Treatment. Mention this paper.

THE GRAND DISPENSARY

584-594 Main St. Elkhart, Indiana.

RHEUMATISM Cured Through the Feet

Don't Take Medicine, External Remedy Brings Quick Relief. Sent FREE ON APPROVAL. TRY IT

We want everyone who has rheumatism to send us his or her name. We will send by return mail a pair of Magic Foot Drafts, the wonderful external cure which has brought more comfort into the United States than any internal remedy ever made. If they give relief, send us One Dollar; if not, don't send us a cent—you decide.

MAGIC

Magic Foot Drafts are worn on the soles of the feet and cure by absorbing the poisonous acids in the blood through the large pores. They cure rheumatism in every part of the body. It must be evident to you that we couldn't afford to send the drafts on approval if they did not cure, even after everything else has failed.

Since I used the Drafts I walk without crutches. They do just what you claim.

ANNIE LEE GUNN, Augusta, Ark.

I am much pleased with your cheap and simple remedy. I have found it to be just as you promised.

J. H. DIRKMAN, Danube, Minn.

I never found anything that would help me before trying your Drafts. JOHN WHITE, Grafton, Mich.

I have suffered with rheumatism for the past ten years but Magic Foot Drafts have entirely cured me. I have felt no pain since using them.

MRS. MARY ST. ANGE, Woonsocket, R. I.

We have thousands of long letters of gratitude from men and women cured of rheumatism by Magic Foot Drafts. Will you let them cure you? Write today to the Magic Foot Draft Co., C. A. 4, Oliver Bldg., Jackson, Mich., for a trial pair of drafts free on approval. We send also a valuable booklet on Rheumatism, free.

## CARE OF HARNESS

This should concern the farmers in spring, and all harness should be put in order before the work begins. It is highly important that harness be oiled at least once a year. Twice would do better. Unbuckle every strap and wash thoroughly, using warm, soft water and good soap. A stiff brush is better than a sponge to take off the gum and dirt. After drying, apply some good black oil with a rough cloth, using as much as the leather will absorb. Let the oil dry in well in a warm room, but not too near a fire or in strong sunshine.

After the leather has absorbed all it will, wipe all the straps, mountings and buckles with a piece of flannel, to remove the superfluous oil. Then with a small sponge apply lightly to all parts a leather dressing to give a nice glossy appearance. Any stitching or repairs should be done before the oil is applied.

After the harness has been put in condition, if it is sponged over two or three times a week with a good harness soap, it will always look nice, be easier for the horses and wear many years longer.

## TABLE DECORATIONS

I wonder how many of our girls know of the dainty and artistic decorations to be had in paper for embellishing the table at luncheons, teas, etc. There are doilies of every shape and description in Teneriffe, crochet, hemstitch, lace and embroidery designs, that so perfectly imitates the real linen and lace as to deceive the elect. Paper cases for serving salads, sherberts, ice-cream, nuts, fruits and confections. The frills for croquets of chicken or game, the chop holders, pie collars, almond cups, snapping mottoes with costume caps and favors, as well as the table cloth, center piece and napkins may all be had in paper. One may serve a dainty luncheon and throw away the linen and china (?) as well as the utensils in which she has creamed the oysters or cooked the rarebit. Being impervious to grease or dampness, the paper cases may be used in cooking individual portions in the chaffing dish; and when the frolic is over we can burn everything but the stove, and my lady's dining hall is changed to a parlor or drawing room as if by magic. Our youngest found a new use for the heart-shaped lace doilie. The smallest size was used. In the plain center of each was gummed a photo of herself (postage stamp size) beneath which was written some nonsense rhyme. These were sent as valentines to her girl chums. Invitations to a Valentine party might be written on these and would be treasured as souvenirs.

## CAR OF BROOMS

Brooms are expensive articles, and we wish them to last as long as possible. When you are buying a broom select one that has a tinge of green about it for it shows that the corn was cut when it was young and pliant. Make it a rule that whoever uses the broom shall hang it up as soon as the sweeping is done, and it will keep its shape much longer than if it is thrown behind the door until it is wanted again. The springs sold for that purpose are good and can be fastened to the door frame or any other convenient place; or a screw eye may be screwed into the top of the handle and the broom hung up on a nail or hook when not in use. A new broom should never be used to scrub with. This advice has been given so often that it seems useless to repeat it, yet we see it done every day, and housewives wonder why their brooms wear out so soon. E. J. C.

## A TIMELY TOOL

Elsewhere in this issue there is advertised an article which is worth to any farmer, many times its cost. It is the Mend-a-Rip outfit, made and sold by our advertisers, the J. W. Foote Foundry Co., Fredericktown, O. This device not only rivets most perfectly, but it is a very convenient machine for stitching. It will take a heavy waxed end and give splendid results. These people not only wish to sell the device but want agents, and any of our readers who are in a position to take up the sale of such an article, will find it a good seller and one which will make them nice profits. Address them as above, and please mention Up-to-Date Farming in writing.

## THE EVERGREENS

"Evergreens are all out of style" said my neighbor one fine day last summer while commenting on the hedge and trees of our lawn. As we lived on a rented place we didn't feel like it reflected on our ignorance or lack of good taste in planting, so let it pass; truth to tell we did not admire them overmuch ourselves just then, but now that the ground is white with snow we're glad we have them. The big pine tree looks indeed like a "big white ostrich plume tree," as little Helen called it the other morning when she awoke to see the first snow fall. I certainly do not admire an evergreen

hedge across the front of the lawn when it is as small as ours is, but at the sides it would be beautiful, or in front of a very extensive lawn, provided it were kept low, but there is the trouble, nearly every one lets them grow so high one can scarcely see the street from the house, and the passer-by sees nothing of the beauty of the lawn.

There is much of beauty in the leafless trees and shrubs these frosty mornings; every twig is tipped with silver; the grasses and weeds are like lace work, and the world seems almost as beautiful as when clothed in summers finery. So each passing season has a charm all its own, and our picture gallery is ever changing and ever satisfying.

# FAMOUS NOVELS BY POPULAR AUTHORS

## A CHOICE LIST OF BOOKS PUBLISHED IN A NEW AND HANDSOME EDITION.

The following list of books is comprised in a new and very attractive series, recently issued. Each is a large and handsome volume containing from one hundred to two hundred double-column octavo pages, well printed in good readable type, and bound in handsome illustrated paper covers. Included in the list are the most popular works of some of the most celebrated authors of America and Europe, and each book is published complete, unchanged and unabridged. It is the finest series of popular novels ever sold at the price, and our offer presents a grand opportunity to all lovers of bright and fascinating literature. Look the list over, and we are sure you will find therein a considerable number that you would like to read and own:

**OUR OFFER** We will send any two books, your selection, free with a subscription to *UP-TO-DATE FARMING* at 50 cents or any five books for two subscription at 50 cents each (\$1.00). For 50 cents additional subscribers can be enrolled as members of *The American Society of Equity*. Address, *UP-TO-DATE FARMING* or *J. A. EVERITT, Pub., Indianapolis, Ind.*

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

(Continued from Jan. 15.)

"Yet, Monsieur, what can Florine do? There is no way for a weak woman to do anything in this wretched Paris. If I do not bring players to the house my aunt beats me. See," she drew up her sleeve, and exposed the welts of cruel cuts across the bare white flesh. "She denies me food in my garret. So I must work, be merry and work—and weep all the day for the misery of the nights." My heart went out to the girl with all sympathy, but, every whit as helpless as she, I only wondered what could be done.

"Monsieur, it was not of my choosing, believe me, believe me, it really was not. My father thought his sister so well off in this fine Paris, when she offered to bring me up as her own child, and sent us presents, he made me come with her. We were so poor, so cruelly poor. My mother could not come for me, and now how can I go back? I dare not let her know how I am treated. It would break her heart, and she is so old and tottering. If I seek other employment no one will take me, no one would give me a character for service. All the world is open to you. You go where you please, do what pleases you. All the world is shut to Florine. And you, Monsieur, my only friend, I hoped when you were well again, such a rich gentleman could find me a place among his friends; find me some quiet place where I might live and be of use, not bringing evil to all I touch. What an evil life, what a wicked life I lead. Oh, Monsieur, save me from it; save me! The horrible man you defended me from that night pursues me everywhere; my aunt is jealous because of him. She hates me now and would like to drive me out upon the streets—ugh! the terror of it. But her husband won't let her; he is kinder than she. See, I am pretty, I bring custom. She can not tell her husband why she hates me. No, no, Bertrand would kill her. And I dare not tell him. They would kill me—"

Her speech rambled on now, disconnected and incoherent. Still by catching sentences here and there the whole pitiful story was clear to me. My eyes would always overflow at sight of woman's suffering, my throat choked up; I could speak no word to her. Of a truth what a horrible life it must be; what iron webs do sin and circumstance weave round their victim. The cowering girl sobbed convulsively on the floor at my feet. I laid my hand tenderly upon her head.

"Florine, I have but two friends myself in all this land of France. You have served one of these faithfully in helping me. I will commend you to him, and am sure he will reward you well."

"Monsieur, I seek no reward; I served you not for money."

She shamed me, though I persisted. "Not a reward, Florine, but surely you can let him send you back to your mother. Here is money; his money, not mine; he is rich, I am poor. He can pay you for valuable service, I can only give you my undying gratitude."

I bent down and kissed her pale forehead, whereat she wept afresh.

"Claude's wife will keep you here safe until we come again. Then we will find means to protect and provide for you."

I bade her rise now and calm herself, for a bustle in the street announced the noisy arrival of several horsemen. A few moments, and Jerome's voice called me from below to make all ready.

I called Claude's wife up and delivered the girl to her keeping, then turned to look out into the street. There were now drawn up in front of the door four sturdy equerries, well mounted, and leading two excellent nags, which I took to be those Jerome had provided for our own use.

Jerome obliged me once more to dress with exceeding care, but I fretted much for my own easy garments which permitted a man to use his limbs with the freedom God had given them. Verily there would be no regret when all this frippery could be cast aside, and by my faith, it was much simpler to lay it off than to array one's self in. I never did learn all the eccentricities of that remarkable rig my fashionable friend had adorned me with.

"Had we better not strap on our pistols?" I asked, not knowing what he purposed.

"No; gentlemen do not wear them. Beside, at Sceaux one sharpens one's wits, and lets even his good blade dull and rust."

"I mustered six stout swords as we clattered away from the Austrian Arms, and I could not but note, despite what Jerome had said, he took good care to provide trusty fellows and swift horses."

"A lean hound for a long race," Jerome laughingly remarked, noting my inspection of the not over-fed nag I bestrode.

We took that road leading past the heights of Villejuif, which in hardly more than an hour's brisk

ride brought us to the park of Sceaux, overlooking the beautiful Fontenay valley of which I was destined to learn much. During this ride I had leisure to speak with de Greville of Florine, for the girl's story had roused a real desire in my heart to see her bettered.

"There are thousands such in Paris," he replied, shrugging his shoulders unconcernedly. "The few tell you truth, the many lie to you. You know not when to believe them. If you like, though, I will see what may be done. At least she may be placed in la Salpêtrerie where no present harm can reach her, to earn a living. It is not a pleasant life, and no wonder young and pretty girls prefer the gay world to the seclusion and labor of Salpêtrerie. Yet we will try."

He treated the matter lightly, as a thing of common occurrence, yet was Jerome tender-hearted. Men who live in great cities become so hardened to the vice and crime about them that they no longer feel keenly, as we provincials do, the appeal of misery.

I might say here that Florine was one of the next ship-load of girls who were sent to the colonies. There she found a very worthy young planter who took her to wife, and after the manner of the mistreated girl in the fairy tales you children used to read, "lived happily ever afterward." She became, from all accounts, a good wife and devoted mother; her children yet live in Louisiana, happy and prosperous.

### CHAPTER XIV

#### THE SECRETARY AND THE DUKE

Those reflections which I set down at the end of the last paragraph drifted me somewhat from the regular thread of my narrative. This, perhaps, is not the only reason why I should stumble and shy along like a balky palfrey when I approach one of the trifling accidents which transpired immediately after our arrival at Sceaux.

Thinking now this matter over, my withered cheeks lose their ashen hue, and burn again with the hot, tumultuous blood of youth and shame. But I may as well tell it with all the resolution a man summons before plunging into an icy bath at mid-winter. It came, the unexpected prelude to one long, sweet song. It was in this wise:

Jerome seemed a welcome guest at Sceaux, and from the hearty greetings, yet respectful withal, which were accorded him, must have been a man of more consideration in the world than I had heretofore supposed. Before this, I received him at his own worth, and our short acquaintance had been so filled with matters of serious moment, I made no inquiries beyond the scant stray bits of information he had himself volunteered. However that might be, his welcome at Sceaux was sincere. Nor did I wonder at his being a favorite, from the jovial jests and flings he cast at those who crowded round, which set them all a-laughing. His familiarity with the doings of the day, and the quick repartee he used to men of different parties, astonished me greatly.

Having disposed of our horses, and given quiet orders to the groom, Jerome made me acquainted with his friends. Some part of their good-fellowship fell to my lot as a friend of Jerome's, and put me upon my mettle to return it.

As good luck would have it, Jerome's friend, the Chevalier Charles de la Mora, was then at Sceaux, and came up early on learning of our arrival.

He was a splendid fellow of thirty-five, stalwart and unusually graceful for a man of his inches. His frank and cordial manner was his greatest charm to me, though a woman would doubtless have raved more over those dark, dreamy eyes, which while mild enough, betimes gave promise of fire and to spare.

He spoke most affectionately to Jerome, and bade us both be sure his wife would receive us with sincerest pleasure. Several of the gentlemen had seen service, and with them I was immediately on easy terms.

Before entering the Villa I paused in a doorway at the head of a short flight of steps, bowing and posturing through my new catalogue of behavior, anxiously watching for Jerome's approval, or a cue. The rascal, I could not for the life of me tell from his expression whether he applauded my fine manners or laughed secretly at the folly of it all. But I went on as I was taught, bending myself pretty well double, half backing into the door which led to an inner hall. Holding this position, which however elegant it might have appeared to those in front, was certainly neither graceful or attractive viewed from within. I felt a sudden jar from the rear, and being thus struck at a point of vantage, came near to plunging forward upon my face. Before I could recover my equilibrium and turn about, I heard the jingle of a tray of glasses and a cool shower of spray flew about my ears. Then the dazed and bewildered eyes of a timid girl looked full into mine; she courageously paused and essayed to stammer out an apology. Her gaze, though, wandered past me, and one sight of the drawn features of those who had seen it all and now sought in vain to restrain their laughter, was too much for this startled fawn. She turned and fled as the wind, just when their merry peal burst out.

**CARDS** Send 2c. stamp for New SAMPLE BOOK of all the FINEST Styles in Gold Beveled Edge, Hidden Name, Silk Fines, Envelopes and Calligraph Cards for 1904. We sell GENUINE CARDS, Not Trash. UNION CARD CO., 113, Columbus, Ohio.

Please write for Catalogue; it's worth its weight in gold to anyone interested in Diamonds.

**BOYLSTON DIAMOND CO.**  
308 Boylston Building,  
CHICAGO, ILL.

"THE BLACK WOLF'S BREED" began in the September first issue of UP-TO-DATE FARMING. The eleven back numbers containing the first installments will be sent for 30c. UP-TO-DATE FARMING, Indianapolis

"Well, my little lady had best look where she goes, and not run through a door with eyes behind her," roared de Virelle, when the girl had well escaped.

"His clothes are ruined, and so fine, ah, so fine," drawled Miron.

"By my soul, Captain, you have flowers to spare," chimed in Le Rue. "That's right, gather them up, for Mademoiselle is not usually so generous with her guerdons that any should be lost. The little icicle."

His speech was suited to my actions, for, like a fool, I had already dropped upon my knees, busied about picking up the scattered roses and replacing them in the vases from the which they had fallen. The try was still rolling and rattling around on the floor. Verily, I felt my shame must consume me, and took refuge in this humble occupation to hide my face. There is some sort of a confused recollection now abiding with me, that a man-servant at length came to sweep up the fragrances, while I watched him vacantly, a tangled bunch of roses in my hand.

In all their laughs and jests and jibes hurled at my embarrassment, Jerome never for a moment lost sight of the main purpose of our visit. As all roads led to Rome, so did he adroitly turn all topics of conversation into those channels where might be supposed to run the information we wanted.

I felt myself, especially in my present frame of mind, ill-fitted for such a play. The blunt and awkward directness of the camp suited better my ways and speech. Though I might discreetly hold my tongue, I could never use it with the credit I could my sword. Nor could I rid my mind of the childish vision which for one short instant confronted me at the door. Even then I pondered more on her amazed expression and youthful innocence than upon our own chances for success or failure.

From the comments of those about me, I gathered she was a protegee of Madame's, whose reserved manners made her no great favorite with dissolute throng which collected at the gay Villa of Seaux. I took little part in their conversation, and was glad when Jerome by a gesture called me follow him away.

"Let us go to see Madame," he said simply, when we were entirely out of hearing.

"Du Maine?" I inquired, vaguely wondering why we should venture into the lion's den.

"No — Madame — the other," he replied with some degree of hesitation.

I followed him without further questioning. He led the way, which was doubtless a familiar one, and the maid at the door, knowing him, admitted us at once to Madame's apartment. The woman, who sat alone in the dainty silk-hung boudoir, rose and came swiftly forward to greet Jerome, the radiant girlish smile changing quickly when she perceived me enter behind him. It was more the grande dame, and less the delighted woman, who acknowledged my presentation with courtly grace. Intuitively I felt her unvoiced inquiry of Jerome why he had not come alone. Yet was she thoroughly polite, and chatted pleasantly with us concerning the news of the day.

"We are to have a fete this afternoon; you must both come. Each guest is expected to contribute in some way to the entertainment of the company. You Jerome — M. de Greville, will doubtless favor us with a well-turned madrigal. And you, my dear Captain de Mouret, in which direction do your talents lie?"

"I have no talents, Madame; a plain blunt man of the camp."

"Ah! a soldier; so interesting in these stupid times, when men are little but women differently dressed. Ah, it has been too truly said that 'when men were created, some of the mud which remained served to fashion the souls of princes and lackeys.' But surely you could give us a story?" and so she talked on, not discourteous, but heedless of my protests. I was really alarmed, lest she seriously call upon me before that stately company.

The tiny clock upon her table chimed the third quarter, and she volunteered that at eleven she expected other callers. Acting upon this hint Jerome proceeded at once to tell her why we came, yet I noted in all his confidences he ever kept something to himself for safety's sake. The maid's reappearance interrupted us. She announced "M. de Valence."

A gleam of anger swept across Madame's face. "Bid him wait my pleasure in the anti-room. He is ten minutes early. No, the sooner he comes the sooner it is over; wait; bid him come in. M. le Capitaine de Greville, will you gentlemen please to retire in that small room for a short space? I will speedily be free again."

And so it came about we overheard matters which opened my mind to the way affairs of state are managed, and I grew to learn upon what slender threads of love, of malice, of jealousy and of hate the destinies of nations must often hang. From our situation we could not help but hear all that passed between Madame and her caller. The maid withdrew in the slow hurry of a transient on his way to school, but hastened at a sign of annoyance from Madame.

"Monsieur de Valence, you are full ten minutes early. You know I bide you be always exactly punctual," was Madame's petulant greeting of the handsome man who bore himself so meekly in her presence.

No tone was ever colder, no demeanor more haughty than hers, and this proud man who bent

before no storm, who held the fortunes of many within his grasp, bowed like an obedient child to her whim.

"Yes, Celeste, I know, but —"

"Madame de Chartrain," she corrected. (I use the name de Chartrain, though it was not her own.)

"Yes — Madame, I know, but, it is so hard to wait; do you not understand how I count the minutes every day until —"

"Yes, yes, I've heard all those fine excuses before. To your business. The other can wait, business first, then —"

"Pleasure?" he supplemented with an eagerness strangely at variance with the rigid self-control he had hitherto shown.

"I did not say pleasure," she gravely broke in, "your business."

The man submitted with the patience of one quite accustomed, yet not wholly resigned to such a reception and spread numerous papers upon the table before her. Selecting one he began to explain:

"Your wishes in regard to this matter have been carried out; I had the man detained in the city where he is at your command. He suspects nothing, though fretful at the restraint."

"Very good. And the other?"

"Yes, here it is. You see this has been so arranged that the Duke quite naturally selected Menezes to bear these dispatches. You may remind him that Menezes is a brother of the man Perrault, whom he had hanged some years ago. Here is the man's history, which you can look over at leisure. The Duke has forgotten all this impatience to remedy the Yvard fiasco. It will serve, however, to make him think you even more clever and devoted to him."

I listened closely at the name "Yvard."

"Well, now so far so good. And the question of finance? That is of more importance."

And of more difficulty. The Madame often dabbles herself in these dealings involving money, and she is harder to deceive. However she is not accurate at figures, clever though she be otherwise. Look over this; this calculation. See, there is a simple transposition of an item, which results in a difference of near ten thousand livres. It appears there to have been made by the money lender for his greater gain. You can study this copy before the Duke comes. Then you will be quite prepared to point out this error and make the correction. Here is his copy which he will sign."

"Ah, good," she said looking over the memorandum he had given her of the amounts, with the correct calculations all neatly carried out.

"Well, that is enough for this morning; you may go; these things weary me."

"Celeste, Celeste, how long is this to continue? will you never —"

"Madame," she corrected positively, rumpling and smoothing out again the paper in her lap.

"As you will," with an air of hopeless protest. "Do you mean always to send me away when our business is completed?"

"Was it not our agreement?"

"Yes, but I thought —"

"You had no right to think."

"A man must needs think whether he will or no, what is of life itself. Are you a woman of ice? Do you not realize I sell all I hold most dear, the confidence born of a life-time's honest service to my King, my own honor, only to serve you, to be with you?"

"I am weary. It is time for you to go."

"Yes, but is there nothing else? — You agreed —"

"Oh, I know, why remind me?" She turned upon

him fiercely. "Do you wish to make me hate you? Now you are only an object of indifference, objectionable to me as are all men who make love, and sigh, and worry me. Do you wish me to hate and despise you more than the rest?"

"God forbid! But —"

"You still insist?"

"Yes, I must have my thirty pieces of silver, the price of my treachery," de Valence returned bitterly; "men die in the Bastille for lesser offenses than mine."

(To be continued)

## CANCER

30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address **DRS. GRATIGNY & BUSH**, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.

# FREE SEEDS AND PROFITABLE PRICES

## Farmers Do You Want Them? YOU CAN HAVE THEM

WE don't suppose there are any people in the country who prize fine crops in the garden and on the farm more than do the readers of UP-TO-DATE FARMING.

To read UP-TO-DATE FARMING leads to a desire to become up-to-date in methods and crops on the farm. To be up-to-date in crops the best seeds must be planted, and here is where we are going to help our readers this year. We are going to give them seeds of some of the finest grain, potatoes, etc., it has ever been our good fortune to possess. We are not giving them to make up for any deficiency in the value of the paper, as we would dislike to think there is a single name on our list the possessor of which did not consider UP-TO-DATE abundantly worth the subscription price.

They consist of an Extraordinary Variety of Corn, that bears ears 25 inches long; a New Early Potato, the Earliest of all; a Pumpkin that Beats the World; a Wonderful Watermelon that is the Greatest Novelty of the Season and a Special Offer of Other Seeds. See below:

**400 Grains Yard Long Corn.** A remarkable variety. Ears the longest of all. Yellow grains. One customer writes: "I send clipping from your paper. It reads as follows: 'The reporter and two others went to see J. L. Perkins' big corn. We measured, by tape, a square rod, gathered the corn, and weighed it. The yield was at the rate of 165 5-7 bushels per acre.' The newspaper report is entirely correct. The corn is immense. I have one ear that measured 25 inches. It is the finest corn I ever saw and the greatest yielder. Instead of farmers trying to grow 100 bushels per acre they will now try to grow 200 bushels with this new variety."

J. L. PERKINS,  
Harrison Co., Ia.  
Nov. 5, 1903.

**One-half lb. Early Success Potatoes.** Strictly new variety, now introduced for the first time. Earlier than 6-Weeks

**Early Success**  
Earliest and Best  
Early Potato.  
Ready to use in  
38 to 40 days

**1 pkt. White Wonder Watermelons.**—This is a wonder in several respects, and distinct from all other melons. Shape round. Shell  $\frac{1}{2}$ -inch thick, as hard and white as an egg shell. Succeeds on any soil; ripens all melons perfectly. Ripe melons when taken off the vine will keep ninety days without deterioration, if not bruised. Have been marketed in Dec. at 5c a pound. Does not cross with any other melon. It is the highest type of melons and refuses to associate with anything beneath it. It is a prize winner, money-maker and the handsomest, most luscious and valuable melon in America. As a novelty and valuable vegetable unequalled. It is one of the most interesting things you can grow this year.

**1 pkt. King of Mammoth Pump-**  
kin. The largest, the heaviest and one of the most productive. Have been grown to weigh 250 lbs. Read the following: "I had a vine of King of Mammoth Pumpkin that surpassed anything ever heard of here."

Market and Red Triumphs.  
Will produce fine

potatoes for market in thirty-eight to forty days with favorable weather, and beat all others under equal conditions. Color white. Shape round. Yield twice as much as early Red Triumph. This is a great potato, probably the most valuable of any ever introduced. To each subscriber we will send a simple plan to raise 6 to 8 bushels from the half lb. each bushel of which will be worth \$5 at introductory price. Every farmer wants a start of a valuable potato like Early Success; now you can get it for nothing.

matured pumpkins on this one vine. Largest, 82 lbs.; next 79 lbs., 78 lbs., 75 lbs., etc., etc. I did not weigh them separately, but the combined weight was over 1,000 lbs. I exhibited them at our Farmers' Institute and here is the report printed in our paper. "Perhaps the greatest exhibit was twenty-one pumpkins grown on a single vine. Their average weight was 50 lbs. and total weight over 1,000 lbs."

MRS. JAMES A. SEED,  
Lawrenceville, Ill.

Nov. 4, 1903.

**EXTRA SPECIAL**—To make this offer so attractive that not one reader can refuse to accept it, and to induce all new readers to subscribe and all old ones to renew, we will in addition to all the above, send a due bill, good for 25c worth of pkt. garden or flower seeds, selected from the catalog of a leading seedsman. Your choice. This extra special offer is good only if you send the address of ten good farmers written plainly on a separate sheet. See coupon in the pumpkin.

Read a few letters: It is scarcely necessary to print any testimonials about UP-TO-DATE FARMING. A single copy speaks for it. This copy is a fair specimen of 24 copies you will receive in a year. Except each succeeding number is better than the last.

Your sample copy was a great surprise to me. Did not know there was such a paper published so full of excellent thoughts and ideas.

You seem to have some far-reaching and good ideas about the interests of farmers and as expressed in UP-TO-DATE FARMING. UP-TO-DATE has been a great help to me. The ideas it advocates for farmers are grand. It is an educator that pays large dividends.

I am an old subscriber to UP-TO-DATE FARMING and will continue to take it because it shows us how to better our condition. No farmer should try to get along

ELI EAVENSON.

Yard Long  
Longest Earliest  
in Corn

King of the Mammoth  
One Vine Grew  
20 Pumpkins  
Weight over 1,000 lbs.

**CUT OUT THE PUMPKIN.**

PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club, (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2	- for	\$ .75
A Club of 3	- for	1.00
A Club of 10	- for	2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept

Your Own Subscription 2 yrs. for \$ .75  
3 " " 1.00  
For Membership in the A. S. of E. add 50 cents to any offer.

**Acknowledgement.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write; "this club was sent by (name)."

Always state if a renewal or a new subscription. **Don't Neglect This. See Special Subscription Offers elsewhere in this number.**

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent. discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of February 1, 1904, Circulation

Indianapolis, Feb. 1, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the February 1, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum, State of Indiana. Before me, Charles E. Brigham, a notary public personally appeared S. E. Cullum and swears to the foregoing.  
[Seal] Charles E. Brigham, Notary Public.

### IMPORTANT NOTICE

The National Union is prepared to send organizers to assist in the work of developing the American Society of Equity in any section of the country.

Deputy Presidents and farmers are requested to correspond with headquarters. Great good usually results to have the national organizer, deputy national organizer or a state organizer to visit a locality.

Dollar wheat.

Farmers to the Front.

The Third Power is the greatest power.

The farmer power is the irresistible power.

The farmers' union is the greatest union of all, greater than all other unions.

Let us think more, even though we work less.

Controlled marketing will absolutely make the price on farm produce.

It will require a stronger organization to prevail on farmers to sell at the fair price than to get them to hold for it.

With farmers organized you cannot prevail on enough to sell prematurely to break the price.

Cooperation by farmers will make the food trust harmless to producers and consumers.

TO ALL THE MEN AND WOMEN WHO LABOR ON  
FARMS, IN ORCHARDS OR GARDENS

A great movement is sweeping over America. It is an attempt by farmers of every class to control their marketing and compel a fair price for their products. Nearly 100,000 have joined the movement already. The object is so noble, so God-like—"The laborer is worthy of his hire" and its accomplishment will be fraught with so much good to all humanity—that every person should help from the President of our country down to the lowest ranks of people in public or private life.

Farmers! Any person or institution that opposes this movement is your enemy. Every person who does not help it is not your friend. This is a time when the Divine injunction should be suspended and you should punish your enemies and not reward those who are not your friends.

FROM THIS TIME FORWARD REFUSE TO HELP THOSE WHO WILL NOT HELP YOU IN THIS ATTEMPT; AND GIVE ENCOURAGEMENT, COMFORT AND SUPPORT TO THOSE WHO HELP YOU TO ESTABLISH THE AMERICAN SOCIETY OF EQUITY UNTIL JUSTICE IN MARKETING AND PRICING FARM CROPS SHALL PREVAIL THROUGHOUT THE LAND.

J. A. EVERITT, President  
The American Society of Equity

The farmers feed them all. Hence great are the farmers, as on them our very existence depends.

With things so much desired as the food we eat and the raiment we wear, the rule should be for the consumers to seek them rather than for the producers to thrust it on them.

A granary on your farm is better than an elevator under some other persons control.

Controlled marketing means a granary on every farm and ultimately a cold storage warehouse in every county.

One of the results of the success of the A. S. of E. will be to equalize conditions so more people will have an equal opportunity to secure a fair reward for effort put forth. Agriculture will be as profitable as merchandising, manufacturing and banking, the investment considered.

To answer inquiries that have come, and stop others that would come, we will say that our attempt to mail the seed premium to subscribers resulted in the potatoes being frosted. The unusually cold winter compelled us to wait for better weather. We are now mailing them rapidly, and all will soon be supplied.

### NOTICE TO MEMBERS IN OKLAHOMA

Territorial Organizer William J. Conover, is booming the work in Oklahoma. He will go anywhere to start organization or strengthen organizations with a guarantee of railroad fare and hotel bills. Big union revival meetings will be held at Watonga, Okla., March 11 and 12. There will also be a convention of the local unions of Blaine county, at this time and place. All railroads entering Watonga will sell excursion tickets in a territory covering one hundred miles. Address Mr. Conover at Oklahoma City, Okla.

The day that cooperation by farming and controlled marketing is realized that day will see every farm double in value.

There are times when farm produce better spoils at home, rather than to glut a market and put price of the necessary supply as well as the surplus below cost.

The official paper would like to help organizers and deputy presidents by printing announcements similar to what we gave Mr. Conover of Oklahoma in this issue. We must have the facts, however.

May we suggest that when farmers control the food supply some inventive genius will discover a way that life may be sustained without bread, meat and vegetables. Thus the farmers combine will be beaten, but then also people can live without the everlasting scramble for bread and the mellenium will have arrived.

Do the best he can the average farmer can raise only about 13 bushels of wheat per acre; 25 bushels of corn, 27 bushels of oats and other crops in proportion. It is the average farmer who needs better conditions. He must have better prices so he can renew the fertility in his exhausted soil before he can afford to raise crops at the old range of prices. The average farmer is the man the A. S. of E. is seeking to benefit.

What benefit are a few elevators scattered around the country to store your grain in without the ability to put a price on that grain?

Beware of the farmers' companies that want to sell you shares of stock. The will to control marketing of your crops is worth more to you than all the money in the U. S. treasury when it comes to making prices.

The particular attention of all our readers is asked to the editorial in this number, "Shall Farmers Form a Union," also to the one in February 15th issue "Have Farmers a Moral Right to Price Their Products." These articles should settle the question whether farmers have a right to price their own products. We believe no reader of UP-TO-DATE FARMING will oppose the farmers movement after this on account of any conscientious scruples he may have had regarding trusts and unions.

### THE BUSY SEASON

We ask our subscribers, members of the A. S. of E., organizers, deputy presidents, etc., to have patience with headquarters at this time of the year. Do the best we can there may be some delay in executing orders for supplies, and a little delay in getting the paper started to new subscribers. The business has outgrown our printing department, and we have just installed a new press which will help. We request that you anticipate your wants and order in advance of actual needs.

If you receive more than one copy of this paper, hand the extras to neighbors or mail to friends who may not have heard of the effort by farmers to come to the front. After reading your paper pass it around.

We want to apologize to our subscribers for the delay of last two issues of this paper. It was caused by delay in getting paper from the mill which is located in Michigan. Michigan was snow bound for several weeks and railroad transportation badly disarranged.

### NIGGER JOE ON ORGANIZATION

"What's the need of a farmers organization? So's you can act in harmonah, dat's why. Harmonah is de sweetest melody. Harmonah is poetry that rhymes the best. Harmonah is love. All nature is harmonah. When a million men act like one man dey act in harmonah."

### HOLDING CROPS

We want to caution farmers who have wheat against holding too long. We believe the 1903 crop was shorter than any estimate except the estimate of the A. S. of E. (see reprint in this number) and that there is little danger of much being held over into another crop year. To maintain prices however and get a profitable price always, farmers must be cautious about holding crops over and adding on to the next crop. The world will easily consume all our farm products at fair prices if you let them go. The A. S. of E. is not a society to get farmers to hold crops, (except to maintain fair prices) but to sell crops at profitable prices.

There is another wheat crop coming along rapidly. Prospects for it are good at the present time. Clean out your granaries at the good price you can get now. Don't bank on the next crop being short, it may be, but you don't know.

The only good reason you will ever have to hold part of a crop over, under the new system will be when the market won't take it all at the minimum price. If you refuse to sell when you can get the minimum price and run up an unwieldy surplus it will be your fault. This condition is the only one that can beat the farmers when cooperating on the plan of the A. S. of E. As this condition can be prevented by the farmers, we appeal to them to see that it never prevails.

### THE COMING CHANGE

It is only a few years ago that people in nearly all lines of business were trying to annihilate each other, industrially. Then the saying was "competition is the life of trade." Then farmers had a better chance than now, because competing lines of railroads would sometimes haul grain or live stock at cut prices and the farmers got some advantage of the war. Then the manufacturer would try to sell machines under all his competitors and the farmers again got lower prices. These conditions to an extent justified one farmer in trying to undersell all the others. But these conditions have changed with all but the farmers. Now if you don't ship by the first road you will pay the same rate to the other. If you don't buy the first machine that is offered you will pay as much for another equally as good. This calls for the same business methods in agriculture. It is insanity and suicide to delay the change, the old way must be changed to a better way or at any rate to the way that others have adopted so all may be on an equal footing.

The change from competition to cooperation has been rapid in all lines but farming. Few of us realize how rapidly until we stop and consider the evolutions that have taken place. Why should not the change be as rapid in agriculture? We predict it will be, and when the transformation has taken place in agriculture everything in this county will be on a higher plane. Great advances, politically, industrially, financially, and socially, are waiting on the change of agriculture from the competitive system to the cooperative.

### THINK OF THIRTY MILLIONS

Few people have any clear conception of what a stupendous number 30,000,000 is. Even a million when analyzed staggers the average mind. It is well however to think of large numbers in a country of such vastness of area, such great possibilities and such phenomenal accomplishments as in the United States.

We count our farms by millions, our products by millions of bushels, tons or pounds; their value by millions and hundreds of millions of dollars. A very small variation in price of any one of our products represents tens of millions of dollars on that crop. The fluctuations of a day in the market price of any one of our important cereals, meat or fibers affects the farmers wealth by millions of dollars. In fact there is nothing so small in any of our National agricultural operations that can be referred to in figures less than millions.

Farmers are apt to consider themselves just one, and consequently of no consequences in such a great and numerous class. This is only too true. Yet these unites have within themselves the making of a great, powerful, irresistible body. We might illustrate how, if our earth did not cooperate with the other planets, sun and moon and they with it, it (the earth) would fly off or drop into space and be forever lost. How the grains of sand make the pleasant land etc., but what the use. The law of nature is cooperation. The tendency of business has always been toward cooperation, and we find it abundantly exemplified in modern industrial associations. Therefore the farmer should not think of his weakness as an individual, but of his strength as one of the most numerous class, as a representative of the greatest industry, as a factor in the production of all that makes our country great and on which all other people and industries depend—as a unit in what may be the greatest union, the greatest party or great-

er than all other unions combined and that can dictate to all other parties.

It is thus good for farmers to think of millions, of power, of strength, of the good that can be accomplished by such an overwhelming strength of numbers and power when they cooperate for equity. Better to think of millions and the good that the thirty millions can do when united rather than think of thirty million units chained to the drudgery of farm work under the old condition, the uncertainties of values and without hope for better things in the future. Better to think of thirty million people with harmony singing in their hearts, love in their souls and good will toward man, than of thirty millions with the negative qualities—moving away from your neighbor, repelling good offices of your fellowman and ultimately acknowledging life to be a failure.

Think of the fruits of your labor representing millions of dollars that you are not allowed to gather under the old system. They go now to the speculators, food trusts, middlemen or to feed the balance of the world at unfairly low prices. Think of the improvements you could make and which you should make on your farms if you were able to gather as you sow, and labor, and reap. Think of the comforts and luxuries your family could enjoy—and which they are entitled to—if you were a part of a great, grand, majestic sweeping army of cooperating farmers instead of just one, wee, wobbly atom without attractive force and without cohesion. Then think of millions of families situated just as you are.

If you will think in millions you will rise above your narrow self and realize what it is to be one of our great agricultural class. Think of your possibilities, what you can accomplish, then put your hand to the plow, ever press onward nor cast a glance behind.

## The Farmer and the Presidential Election

The farmers, as is well known, constitute the greatest class of our citizens. Therefore, if either of the great political parties will array themselves on the side of the farmers, or can array the farmers on their side, it means very much in a presidential election.

There are about ten million farmer voters. At present there is nothing before the people affecting government that particularly interests them. You cannot work up the farmer's enthusiasm over the Philippine question nor the isthmian canal project. They are not much interested in these matters, and as they have no real representation in Congress they must be content to leave such matters to the politicians to work out as they please. The free silver bubble burst four years ago, none of the old campaign cries seem to fit the farmer's case, and the parties probably depend upon the farmers

To walk up to the secret voting booths,  
The aged and younger and hopeful youths,  
And vote for men that others may choose  
Over them to rule.

There will probably be an attempt made to bamboozle them by the "good roads" movement, that is now receiving much attention. But we want to say right here that the farmers don't need to expect much from the government in this direction, until they are in a position through organization to demand it and enforce the demand. When this time comes, however, they will also be in a condition, through increased earnings, to build their own roads. We will have more to say about the "good roads" bill in a future number.

But will the farmers be a great factor in the coming election? Who will deny that they can be if they will? Without a pledge from either party that the agricultural interests will receive more attention than in the past the farmers will probably vote their old ticket, and that will be the end of it. However, should either one of the old parties come out boldly to help the farmers realize better and more certain conditions in farming that party could very safely count on victory.

In this connection we will quote from "The Third Power" on this subject, as follows:

"Something has been said of the influence that the farmer can exert through organization on the politics of the country. One of the purposes of the American Society of Equity is to enable him to exert such influence. Here, again, it is not because the farmers, organized, need to look to politics for relief or strength on their account, but for the general welfare of humanity. The farmers, through their society, not only intend to do equity, but to get equity; not only to give equity, but to demand equity. It is not the object of the society to become a political party. But it is intended to secure, through already existing parties, laws in the interest of agriculture. Though legislation is not the first thing sought, nor the most important thing,

legislation is nevertheless needed. The reason that it has not been secured is that the politicians, though prolific in promises, when seeking election, forget all about the farmers when they get to Washington. They quickly fall under other influences. Moreover, they know that the farmers are easily put off; that they do not persist in the pursuit of their aims, and that when election day comes round again they may be trusted to support the party, readily accepting excuses and trusting to new promises. Nor are the farmers adequately represented in Congress by men of their own class. Thus they are largely without influence in shaping legislation. Until they are in a position, through cooperation, to secure what they want, progress will be slow. With the American Society of Equity a success, all these things can be rapidly accomplished.

"It is not necessary to set out here all that the country needs in the way of legislation. But some things may be mentioned. Possibly the first and most important thing is some lightening of the burden of taxation; and this also implies less extravagance with the people's money, less graft, rake-offs and boodle, or, in short, the money wisely and economically expended, when we will see greater results with less tax. The farmer is taxed on everything he buys and yet is protected on scarcely anything he sells. This is an evil that must be righted, and it can be righted, but only by the combined efforts of the farmers. Until there are such efforts nothing will be done. As long as there are a few people who can control the taxing power of the government, and many people who are content to have that power so used, it is idle to hope for relief. The few will control as long as the many will allow them to control—and not one moment longer. Even the slightest measure of relief is denied at the present time. Opportunities have long been presented for making reciprocal commercial treaties with foreign nations that would have had the effect of making a much larger market for farm products, but they have invariably been put aside at the dictation of selfish interests demanding protection. Treaty after treaty of this sort has been killed or allowed to die in the Senate, which has been indifferent to the welfare of the farmer if only the protected industries were allowed to have a monopoly of the home market. Rather than remove or lower the duty on one article manufactured in New England, our Congress has preferred to allow the farmer to get along as best he could—to find his own market. Yet when protection hurts a certain corporation, Congress is quick to grant a rebate of the tax on any product that goes into a manufactured article when that article is exported. But nothing is done for the farmer.

"Yet there are many millions of foreigners who could be taught to consume the fine cereals and meats produced on our American farms, if an earnest and well-directed effort were made to open and cultivate foreign markets. Lower taxes and wider markets could thus both be secured by legislation, and the American Society of Equity will work for such legislation, bringing directly to bear on Congress the influence of over 10,000,000 American voters who now play little part in the business of lawmaking. This constant failure of the efforts to secure reciprocity has another bad effect on the farmer, for it provokes retaliation on the part of other countries from which the farmer even now suffers, and will suffer still more. Our fruits, cattle and meat products have been made the subjects of discriminating taxes and vexatious inspection imposed and resorted to by foreign governments in retaliation for exorbitant duties levied by our government on their exports to this country. There are threats of further retaliation, and we even hear talk of a European combination to save the European markets from the so-called American invasion. Yet we go on in the same old way, and our manufacturers get even for the low prices at which they must sell abroad, by charging the home consumer greatly higher prices. Thus the farmers are kept out of foreign markets that they ought to have, simply that the manufacturers may plunder the home market.

"Such arrangements as these are plainly not the work of the farmers or of the friends of the farmer. They were devised by men who understood perfectly that the agricultural class is docile, patient and most easily fleeced. The farmer is not interested in paying taxes for the benefit of people who never seek to benefit him, in narrowing the market for farm products, or in provoking retaliation from foreign governments. What he wants is freedom, equity, fair play to all, markets as wide as the world, low taxes—and not one of these things is his at the present time. With all these, and with the American Society of Equity at work in his behalf, he probably would need little else from the government. But whatever he needed, he would get. For the politicians, who now so quickly forget the farmer, would realize that it was dangerous to do so, if they found that they were dealing with a great organization acting as a unit—an organization that refused to accept promises as legal tender, but that insisted on a redemption of those promises in honesty and good faith.

Thus may the farmers make their influence felt in the condition of affairs which is rightfully theirs. The Third Power can easily defeat the first, second or third house. The farmers will be ignored as long as it is safe to ignore them, and no longer. The thing to do is to make it unsafe. The American Society of Equity is the means to bring that result to pass."

With this clear statement of one of the purposes of the American Society of Equity—the farmers' society—the political parties should be concerned about the farmer vote. If, in the platform of one of the parties the effort of the farmers to kill speculation in farm products, to regulate marketing and make prices, to prevent adulteration of food, overcharge and discrimination in railroad rates, etc., was recognized, and a pledge made to assist them in putting their business on a better basis, that party would gain enormously by it.

As has been stated, the A. S. of E. is not a political party, but it represents a class of people who must not longer be neglected or misrepresented by the political parties; and when they have put themselves in a position through organization to make themselves felt they will no longer be ignored. The farmers are the independent voters, and it may be expected that they will vote for the party that recognizes their importance and agrees to help them secure the things they need.

The farmer produces the wealth of the land:

In framing the laws he should take a hand,—

Insist upon his rights.

He feeds the whole world by sweat and toil,

Forces great crops from the resisting soil,

From famine a safe and shielding foil,

And no wrong incites.

## Shall Farmers Form a Union

The most frequent criticism we have of the attempt to organize the farmers for the object of making their own prices comes from people who are opposed to unions and trusts. They have seen and probably suffered from the inequities of labor unions and of some trusts until they have come to the conclusion that they are all bad, or that they are bad in principle.

"A good principle, not rightly understood,

May prove as hurtful as a bad."—Milton.

Or a good principle abused in its application may prove bad, and it is often so, as experienced in the modern unions and trusts.

We have a letter from a subscriber who orders his paper stopped, because he is not in favor of a farmers' trust, but is in favor of ridding the country of all trusts. Mr. Leroy Templeton, of Indianapolis, a large farmer and stock raiser, recently spoke before the Farmers' Congress of Indiana. We never before heard a man tell of more troubles that affected his business in the same length of time, and he attributed them all to the trusts and unions. He said: "I am opposed to a farmers' union. It is undemocratic, unfair and wholly selfish for the farmer to form a union to set the price on their crops." He further said: "I hate unions of all kinds, and it is not right for farmers to join a union."

From the last issue of Farm Journal we quote as follows: "We are in receipt of the following from an Indiana subscriber, 'Hit the trusts and monopolies a little harder; but let there be no farmers' trust.'" Replying the Farm Journal says, in part:

"The trusts have been hit so hard lately that we feel like dropping the subject for a while. The larger proportion of them seem to have the stuffing nearly all knocked out of them. As for a farmers' trust, we see little sign of that rising above the horizon. It would be harder to manage by far than most other kinds of trusts, and, as has been proven, is so far an impossible task.

"There have been many things in the past year that have disappointed the wise. Men who thought, a few short years ago, that they saw in vast combinations of capital the solution of all the problems of the industrial world, have come to realize that in this complex civilization, that grows ever more complex as civilization advances, there are laws that will insist upon maintaining an equilibrium; that 'thus far and no farther' is a divine edict, operating in the physical and financial worlds as surely as in the moral world. Numbers bring with them changes which can not be foreseen; a million people may not be dealt with by a municipality as a hundred thousand people may be. A billion-dollar corporation is quite another proposition from a million-dollar concern; a thousand-acre farm bears slight relation to a modest 'eighty.'"

"All this is being learned in the hard school of experience, and we must not doubt that, in the ultimate, the

struggles and disappointments of the present will work for the good of all. The world makes history faster with each succeeding generation, and we are living 'in an age on ages telling.' To have the patience and the courage to live in such a time, and the intelligence to interpret its true meaning, is one of the highest tests of good citizenship. It is a satisfaction to know our bewilderments in this whirl of social and economic revolution are shared alike by the simple and the wise, and that all must bide their time ere full knowledge shall come."

Referring to Mr. Templeton's claim that it is "undemocratic, unfair and wholly selfish" for farmers to set the price on their products: Since somebody puts the price on these crops, why not the farmers? Does he think the farmers would not be as fair as the speculator, gambler, middleman or food trust? Since the farmer produces them and knows what they cost in investment, labor, loss of fertility, wear and tear of material, etc.; since he knows his needs in the way of living, what he should have for his family, for taxes and for profit, why should he not be the person above all others to price the produce of his own creation? If the farmer has no moral right to price his products who has? How can this right be morally claimed by a food trust, the speculators or middlemen? Will Mr. Templeton or any other person answer?

The American Society of Equity is purely and simply a farmers' co-operative society. It is not a trust in any way, shape, form or intent. It proposes to organize the farmers into a union where they can all get reliable information about crops, values, markets, etc. It will, through its board of directors, decide what is a fair and equitable price for each crop that is produced, basing the value on production and consumption. The price will also have a direct bearing on the cost of production. The society differs with the gentlemen who deny that the farmers have a moral right to price their goods. It most unequivocally demands that right for the farmers above any other person, company, corporation or class. Yet at the same time the farmers in this society have all the freedom and independence they have now as to the time they will sell their crops and the price they will take. The A. S. of E. believes a minimum price can be maintained when it is decided upon, but no farmer obligates himself to sell at that price. Witness the case of cotton. While the union price of cotton is 12 cents, any grower who holds his crop until the price went above 12 cents is not obliged to sell on the 12-cent schedule. The same way with wheat. If any farmer thinks the war in the east will cause wheat to go to \$2.00 a bushel he is at liberty to hold for that price. In fact, farmers will not know freedom and independence until they rise through this great national union to assert their divine right to price their produce—the result of their toil. The Farm Journal's statement that to form a farmers' trust has been proven to be impossible may be true, but if it refers to their right and ability to price their own products it is mistaken, or at least the proof has not been submitted to us. We think there is proof quite to the contrary in the behavior of the markets every week.

Is it not a fact that when the farmers market hogs liberally the price goes down, then when the receipts are small the price goes up. It is the same with all other farm crops. The farmers do this, but as long as there is not a head to the whole business, and all farmers have the same advice about the same crop at the same time, uncertainty will prevail. With a known price farmers will quit marketing the moment the buyer won't take any more. Then if the price goes down at the head market it is the shipper's loss. Do you begin to realize the simplicity of the plan and the absolute strength of the farmers' position. Every day we see exemplifications of how this plan would work out as accurately as the addition or multiplication tables.

But to go back to a farmers' union: Let us ask those who oppose unions, or "hate unions," as Mr. Templeton said. Do they hate the union of the thirteen colonies that fought against oppression and through co-operation won freedom and independence? Do they hate the union of the States when they fought to preserve the union of the North and the South, and thus guaranteed the greatest and most glorious country the sun ever shone upon? Do they hate the union of the counties in any one of our States which co-operate to make up our great commonwealths? Do they hate the union of heaven and earth which co-operate to make the great universe? Do they hate the union of sunshine, air, rain and well-directed labor that co-operate to produce the fine crops of grain, fruit and vegetables and the beautiful flowers? Do they hate the union of man and woman joined together by God to co-operate, so the race may not perish from the earth?

Do they really hate the union of capital that co-operates to develop the wonderful resources of our great country, or of laborers who co-operated, and who have truly dignified all labor except that on the farm? Do they not realize that our universe, our nation, our States, our cities, our business, our very being, are all dependent on union and exist only through organization and co-operation. The peo-

ple who howl against unions in toto have shouted without due consideration. The trouble is not that we have unions, but that we have not enough of them. It would be simply preposterous to think of this country without them. They are the natural result of our wonderful development. It is the natural evolution from the savage state to one of the highest development—the passing from a state of guerilla warfare, political and industrial, to a federation of mutual interests, whether national or individual. More union is what this country needs. When everything, everybody and every industry in the country is organized, unionized and co-operating, then we will have reached the millennium of our industrial, political and social existence. Then, when everybody and everything is organized, each will be as strong as the other. There will be no weak to be dominated by the strong. Then will the third power arise, and we believe equity will prevail throughout our land, and America will be the model to shape the destiny of all other nations.

Farmers, don't listen to the false teachers. Others have organized. It was natural they should, and they will not disband their organizations. In fact, it is not wise that they should. It is your duty to organize. It is the mission of Up-to-Date Farming and the American Society of Equity to organize, unionize you, until you are as strong as the other classes, and so you can price your products as they do theirs. The union of the farmers will be the greatest union—greater than all others combined—a union that will temper all other unions and deprive them of their power to extort and injure.

Until the government lets the farmers fix the tax they shall pay; until the banker opens his vault and says to the borrower, "Help yourself and fix the rate of interest you will pay"; or the merchant opens his doors and says, "Take my goods and pay your price"; or the manufacturer says to the farmer, "Use the machine and set your own price"; or the laborer renders his service at the price fixed by the employer and complains not; or the client and patient set the price for the lawyer's and doctor's service; until then we will champion the farmer in his legal, moral, yes divine, right to fix the price of his products, the result of his toil. "The laborer is worthy of his hire."

## EQUITY

The shades of despair were gathering fast,  
But from out the gloom, came a brave man at last.  
A man who bore, 'mid the groans and sighs  
A banner, with a strange device,  
EQUITY.

His brow was glad; his eye beneath  
Flashed like a falchion from its sheath,  
And like a silver clarion rung  
The glorious "War Cry", loud and long,  
EQUITY.

In farmers' lines he saw no light,  
But enduring weariness, day and night;  
With naught that they might call their own,  
And from his lips escaped a groan,  
EQUITY.

"It will not pass," by the Press, was said,  
"The farmers can't do it, they won't be led".  
But they hearkened, a few, with eyes open wide  
When loud that welcome voice had cried,  
EQUITY.

"O, stay, called the gamblers, stay, lest  
They'll find us in sheeps' clothing dressed."  
But justice shone forth from his bright blue eye,  
As he answered with a mighty cry,  
EQUITY.

Beware the scoffers awful glance  
Capital will smother all like an avalanche.  
But, he said in reply, "I will make a brave fight,  
For what seems to me, a cause that is right,"  
EQUITY.

He called, farmers listened, though some with ire,  
For you know that a "burnt child dreads the fire."  
But he still beckoned onward, though oft in despair,  
And at last rose a mighty shout in the air,  
FOR EQUITY.

The sharks cried in chorus, "we're found, yes, found  
Our business, is ruined, might as well shut down.  
Been tracked to our lairs, by a farmer band,  
They're united and calling again and again,"  
EQUITY.

"Yet, said the leader, for our rights we but stand,  
We want no injustice in our broad free land,  
But happy homes near and far,  
Without unlawful gains, nothing to mar,  
JUST EQUITY."

By E. B. S., with apologies to H. W. L. and to EQUITY.

THE WORLD IS FULL OF PIGS  
SQUEALING FOR

Beware of Imitations and Substitutes.

## 111 PIGS FROM 5 SOWS IN 6 MONTHS

International Stock Food Co., Minneapolis.

COIN, IOWA.

DEAR SIR:—I have been feeding the "International Stock Food" for the last three years and find it to be all that you claim for it. Last April I had five sows that farrowed sixty-one head of pigs. Four of the sows had twelve head each, the fifth one had thirteen head. Fifty-five head of these pigs will average over 200 pounds each at six months old, and I must give "International Stock Food" credit for at least part of the large litters and the great growth of my pigs. These same five sows farrowed fifty head of pigs in the September following, an average of ten pigs to the sow, making 111 head of good, strong pigs from five sows in less than six months. Yours truly, A. G. HULLMAN.

Write Us About "International Stock Food." We Have Thousands of Similar Testimonials and Will Pay You \$1000 Cash If They Are Not Genuine.

## A \$300000 STOCK BOOK FREE

## BOOK CONTAINS 183 LARGE ENGRAVINGS OF HORSES, CATTLE, SHEEP, POULTRY, ETC.

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 4 1/4 by 9 1/4 inches. It costs us \$3.00 to have our Artists and Engravers make these Engravings, which are the finest engravings of Horses, Cattle, Sheep, Hogs and Poultry that you have ever seen. They are all made from actual photographs and are worthy of a place in any library. # THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

**READ IT AGAIN.** The editor of this department of the official paper of the A. S. of E., after thirty years of active and persistent labor for farm organization, declares unhesitatingly that he never saw so forcible and unanswerable a presentation of that subject in all its phases, as is found in the first part (the editorial part) of Up-to-Date for January 15. I wish to urge every farmer to read all of Mr. Everitt's articles in that issue again, and try to induce every one else to read them.

**STRONGER WORDS.** Where shall we find any stronger words than have been used in urging farmers to organize? The necessity for such organization, the reasonableness of it, the practicability of it, the justice of it, and the ease with which it may be accomplished, have all been set forth in words as strong as the language knows. Thousands have responded, and are standing like the Spartans at Thermopylae, but millions remain as unconcerned as though they had all that justice and equity could give them!

**NERO DANCED.** It is said that Nero fiddled and danced while his great capital city of Rome was burning. May we not think much the same of the farmer who remains indifferent when he knows that speculative combinations are exploiting his labors, and are unfairly absorbing the profits that should be his? The farmer's greatness is his most serious weakness. His ability to bear burdens makes him content to bear them. His power of recuperation makes him indifferent. He may suffer losses to-day, but his wonderful resources will recoup them to-morrow. And so he goes on from year to year, bearing burdens that do not belong to him, suffering losses for which no act of his is responsible, and yielding the fruits of his toil to those who never earned them.

**THIS IS NO EXCUSE.** This wonderful strength of the farmer is no excuse for his being thus mercilessly ridden. He fills a place in the world; he pursues his calling by Divine Right; the whole world depends upon his labor for comfort and life; God has placed in his hands means of defense and protection commensurate with the greatness of his work. Is it not criminal to refuse to employ them?

**THE GIANT IS WAKING.** "Tramp! tramp! tramp! the boys are marching!" Such was the song a few years ago in a thousand camps, and on a thousand weary marches, and more than a hundred thousand tired soldiers were cheered and rested by it. Again the inspiring notes float out upon the breezes, and their echoes are borne from State to State, and from hamlet to hamlet, as the local unions meet, and send the word of hope and cheer to rural toilers everywhere. The giant is waking. His sleep has been long, and often disturbed by unpleasant dreams, but the sun is rising now, and the cords of the pigmies can no longer hold him. If a sleeping giant, fettered in every limb and muscle, could feed the world and

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

maintain himself as the farmer has done, what may be expected of him when fully awake and free? Nothing unreasonable. Nothing unjust. Equity glitters in golden letters as the sunlight kisses his banners.

**IS ANY ONE SORRY?** Does any one regret that the farmer is at last coming into his own? No one has cause to regret it. The farmer's long inherited conservatism makes his power a safe one, and as the success of every legitimate calling is so interwoven in his, increased prosperity for the farmer will bring increased prosperity to every other useful calling. The preacher will be better paid, the bills of the doctor will be more easily collected; the lawyer may have fewer fees, but they will be better ones; the merchant will have a greater trade and fewer losses;

## Farmers' Handy Wagon

With 4-Inch Tire Steel Wheels

the miller will have wealthier patrons\* all but speculative gamblers will prosper with the farmer, and civilization will not suffer when these close their doors and seek more honorable vocations.

**BACK AND AHEAD.** When we look back and see what the farmer has done amid conditions such as would drive any other calling out of existence—see the progress the world has made through his efforts, the wealth that has been accumulated from his toil, the greatness his labor has brought to the country—what may we not expect when, in the power of his might through organization and co-operation, he shall have shaken from his shoulders the speculation of the Old Man of the Sea, and stepped out in his fields unburdened by gambling price fixers, and enjoying the privilege all other classes, the right to make prices on the products of his labors? This right he stands pledged to exercise in equity, and thus he will hold in his hands the means of enforcing equity in the price making of others. What a bound forward the world and civilization must take! Prosperity on the farm, and prosperity everywhere, not a prosperity dependent upon stocks and bonds or mines and mints, but upon the broad acres of the farmers and God's genial sunshine and fruitful showers. To every prayer for the consummation of this purpose let every human say Amen.

**IS THERE A DOUBT?** Is there still a lingering doubt in the mind of some that this can be accomplished? There is no foundation for such a doubt. Price making is no experiment; it has been done by every productive industry but farming ever since men bought and sold. And prices on farm products have been made by small but powerful organized bodies ever since the improved means of transportation brought products to a central market. If prices can be determined and proclaimed by bodies of this character, may not like bodies chosen by themselves through co-operative organization, make prices on farmers' products? The same means of comparing supply and demand, or production and consumption, are available for them. Indeed, far better means, for cupidity will find no temptation to distort facts, and make prices for personal gain, because the price makers will be statisticians, not traders; determiners of equity, not beneficiaries of speculation; they will be paid for their services by the producers, not by those whom they plunder. There is no comparison between the proposed system and the system now in vogue. The latter is a time-tested fact; the former is in every detail as practical; the bears and bulls have taught us how; it is no experiment.

**GIVE A PREMIUM.** Does any local union feel a need of something to attract people to its meetings? In addition to the regular program, provide for an exhibition of some farm product at each meeting. In the corn belt, a corn show affords a great deal of interest. Offer a small premium on the best ears, or best five ears, of corn that may be brought to the meeting. Have the corn judged by an expert, if possible, who can explain the points of excellence, and thus have a corn school as well as a corn exhibition. At another meeting have a bread, pie and jelly exhibit, with the understanding that, after the awards have been made, the pies, bread and jellies are to be tested by the audience by being served as a lunch. At another meeting have a cake exhibit, to be served to the audience as before. In the fruit region have an apple exhibit, the apples to be passed to the audience after being judged. In this way the local union meetings may easily be made the most important meetings in the neighborhood. How get money to pay the premiums? If no better way can be thought of, take collections. In almost every meeting a nickel collection will make a nice first, second and third pre-

mium.

**UP-TO-DATE FARMING.** Of course every member of the A. S. of E. receives Up-to-Date Farming as the official paper of the society, but there are many in each neighborhood who do not receive it. The National Union has very wisely made every local union an organizer of other local unions; also a subscription agency for Up-to-Date Farming. Aside from the importance of this publication as the official mouth-piece of the society, it is one of the best farm papers published, and it is the only paper of that character that is boldly fighting the farmer's greatest battle for the privilege of putting a price upon his products. Every member of each local union should consider himself or herself a special solicitor of subscriptions for the paper, and an order of business at each meeting should be, "How many subscriptions have been received for the official paper since the previous meeting?" Under this head, all subscriptions could be reported to the secretary, and by him forwarded to the office. Of course, the editor of this department has no authority to make a special rate to such local unions as work in this way, but Mr. Everitt may decide to do so. I know of no better way to do missionary work. I cannot understand the mental make-up of a man who could read Up-to-Date Farming a year or three months and not be convinced of the justice and practicability of the claims and demands of the A. S. of E. and be ready to become a member.

[Wholesale rates for subscriptions are printed on the third page of each issue, also special subscription offers are frequently made in the paper.—Pub.]

"Dollar wheat" is a reality. Where is the man who dares to say the agitation started by Mr. Everitt, and taken up by the A. S. of E., did not lead up to this result? It comes too late, however, to greatly benefit the wheat grower.

## THE LOCAL AT THE CROSSING

## Second Meeting

The discussion at the Crossing took a miscellaneous turn last week. A severe storm was in progress, but the officers were all in their places, and nearly all the members were present.

John Williams, who had been appointed to suggest a subject and open the discussion, did so by asking the question: "Do farmers in general give their stock enough salt?" He said:

"A New York dairyman recently remarked in my presence, that he gave each of his cows four ounces of salt per day, and he declared that they gave more and better milk on account of it. I do not think I have ever given that much to my cattle, but I know that stock need salt. This is proven by the eagerness with which they take it after they have not had any for a time. Some of my neighbors let their stock go weeks without salt, and I am sure the practice is a bad one."

James Barton: "Stock ought to have plenty of salt, and I make my stock their own judges as to quantity, by keeping it where they can get it whenever they want it. This I regard as specially beneficial for sheep; and it is good also for horses, cattle and hogs. Some of these animals, especially hogs, if kept from salt for a long time and then given free access to it, may eat more than is good for them. Under any other circumstances there is no danger of their taking too much."

Charles Lambert: "I have made a practice for several years of salting all the 'roughness' I put up to be fed to my stock, not excepting timothy hay. As it goes into the stack or mow, I scatter salt over it every few inches of depth. The salt sifts all through it, and dissolving, salts the entire stack or mow evenly. This is especially valuable in clover, shredded corn fodder and threshed pea hay. It assists greatly in preserving it, adds, I believe, to its digestibility, and supplies the natural needs of the animals for salt. Stock will eat every particle of these feeds thus treated, and they will thrive on it. But it will not do to so treat anything from which seed is to be obtained, as the salt will likely destroy the germinating qualities of the seed."

George Bowers: "I would like for Mr. Lambert to tell us a little more about the cow pea. I have never made the success with it that other people seem to make."

Mr. Lambert: "I raise the cow pea for two purposes, seed and feed. For these purposes I do not put peas on my poorest land, but on land that I would expect to make a profitable yield of corn or other crops. It may be drilled in rows and lightly cultivated once or twice, or it may be drilled like wheat (usually with each alternate hose closed) or it may be sowed broadcast, and harrowed in. It should be cut after the pods are well ripened, cured in very slim, tall shocks, stacked or put in the barn or shed as soon as well cured, and threshed when quite dry. The peas are generally worth as much as a wheat crop in this locality, and the threshed hay, or pomace, as it is called, I find to be excellent feed for horses, cattle or sheep, better for cattle and sheep than the best timothy hay. As it comes from the threshing machine into the mow or stack, is the time to salt it. If stacked out, it must have a top covering of hay or something that will turn water. I think it pays to bale it, as it is so much handier, is so much better preserved, and can be housed in so much smaller space. I frequently sow peas on my very poorest land, but I do that for an entirely different purpose—the improvement of the land. In that case I pasture lightly with hogs, and turn the crop under. The poorest land treated two or

three years in this way will become productive, and at the same time it may be made to pay expenses as a hog pasture. The hogs should not be turned in until the pods begin to ripen."

The President: "I have been much interested and benefitted by this discussion, but I had some questions regarding the markets that I wished to present. I will, however, defer them until the next meeting. Meanwhile, I wish to urge every member present to talk these meetings up, urge full attendance, and try to get every farmer in the community to join the union."

## MEN WANTED—GOOD PAY

Wanted everywhere, men to distribute advertising matter, tack signs, collect, etc. Steady position, experience unnecessary. Address **NATIONAL ADVERTISING CO.**, No. 10, Oakland Bank Building, Chicago.

## LETTER FROM DAVID DOBETTER

No. 40.

Near Williamsport, Ind., 1904.

Dear Mr. Everitt—Well, we are working along toward spring, and I don't know of anybody about the Four-Leaf Clover Farm that is sorry either. It has been a long, tedious winter in many respects. Started in early and has stuck right to business ever since. We have felt sorry for the poor folks that have not had any good, big woodpile, and whose cupboards have a way of getting woefully empty every day or two. Some way or other Chipper has a way of hunting out such folks. Perhaps it is because he knows how it used to be himself in the days when he did not live with us. Any way, he told us about a family down near the town line the other evening. It must be he had been down there, for he seemed to know just how bad off the folks were in the house and out of it. The next morning nobody said much about it, but Mother got together a lot of clothes our own little folks got through with a good many years ago and made them into a bundle. I am sure I saw some tears in her eyes as she sorted the things over. Mothers never forget the days when the boys and girls were toddling around the house. No matter how far the children go nor what they may do in life the mothers keep a warm place in their hearts for them. That place never grows cold; in fact, and I am sure Mother thought about some things that happened in those far-away days when she was picking out the little dresses and coats she meant to spare for the people down the road.

It didn't take me long to guess out what she was up to; and Tom and I brought up out of the cellar a big bag full of potatoes and another of apples, the brightest and most rosy-cheeked we could find. Then Chipper and I drove down to the little cabin where these poor folks live. The father was sick in bed. The wife and mother was out digging some bits of wood out from under the snow. Think of it! There wasn't a stick of dry wood anywhere to be seen, and I doubt if such a thing had been seen all winter long in that home. That afternoon Tom and I went down and took a big load of nice dry wood. As soon as we reached home I telephoned down town to the doctor to come up and see the father.

Telephoned. Think of that, Mr. Everitt! I don't believe I have said a word about that in any of my letters, have I? And that is one of the grandest things we ever did out here. I must tell you about it right now, before something else crowds it out of my mind. So many things to write about, anyway. Talk about the farm being a lonely place to live in! If there is any busier spot on the face of the earth than an up-to-date farm I don't know where it is.

The way we got at it was this:

I had been watching the progress of the telephone lines in other parts of the country, and somehow it struck me that here was a thing we of this section ought to have. Why not? The neighborhood is thickly settled. We are not very far from the city and on a main-traveled road. What was there to hinder our putting up a line of our own, putting us in communication with our neighbors and the city as well? All that

was lacking was the push and enterprise to go ahead and do it.

A few years ago I would not have thought it possible that I, David Dobetter, could do such a thing; but something has happened at our house since then. We are all different folks for some reason or other. I do not need to tell you just what that reason is; you know all about it, and I am sure you feel just as happy as we do; for was it not reading your splendid paper that fired us up to do all we have done?

I lay awake part of one night thinking about the advantage the telephone would be to us. After the plan was all worked out in my mind I rolled over and went to sleep. That is another blessed thing. Nothing like a clear conscience to make a man sleep well. The next day I hitched up Kit and Billy and Chipper, and I started out among our neighbors between here and the city. We took in every man along the line. The plan I laid before them was that we should all take a share in the line, at ten dollars each. Any man who had poles and would get them out and set them was to be credited so much on his stock. A good many preferred to do that rather than pay in the money. But almost everybody fell in with the idea at once. No trouble at all to get the shares. Then we went at it with a vim to get out the poles. In less than two weeks they were lying along the line ready for setting.

A meeting of the stockholders was held at Four-Leaf-Clover farm, and we discussed the subject of a constitution and by-laws. A couple of bright young fellows toward the city were appointed to be a committee to draft the necessary articles. They chose me to be president of the company. The other officers were regularly chosen, and before you could say Jack Robinson we were ready to do business. Don't take long for a lot of men that mean business to get the wheels moving these days. They authorized me to correspond with a supply house and see what we could get wire for, and one of the neighbors was commissioned to go to town and look up the matter of 'phones.

There was a young chap in that family that had been studying electricity some. I believe he had been away to school a while making that a specialty. He was one of the foremost in getting the line ready for operation. We gave him the job of getting the instruments into our houses and otherwise superintending the construction of the line. Of course we paid him for his work. Enough money was paid in by those who did not have poles on their farms and preferred to pay to buy the wire and string it. We all turned out and helped to dig the holes and erect the poles. Then everyone who had subscribed for stock bought his own 'phone and had it put in. Altogether, the expense was only about \$25 for each shareholder. And think of the convenience of it! Now, if we want to talk with anyone of the neighbors or know how things are in the market down in the city, we can find out in a few minutes. For a few days we kept the bells jingling. Nothing particularly to say, but just wanting to "see how it would go." But the first novelty of the thing is wearing away and now it is a thing of business with us, the same as the rural free delivery. I am sure we will enjoy the 'phone more and more as we get connection with

other lines.

The folks all about us have heard about our line and are taking steps to follow suit. It will not be long before there will be two more lines in operation. Wonderful age we are living in.

The farm operations are progressing as well as possible for the time of year. The stuff for the new barn is all on the ground and as soon as the weather permits we intend to set the carpenter at work. We hope to have the barn up and inclosed in time for haying. No more stacking out hay for us, if things go as we think they will.

We are taking extra good care of the cows now. They are beginning to give new milk now. Probably we will let our milk go to the condensary in the city this year. That will lessen the work in the house while we have so much else to do. After we get straightened around we will see.

But I must say good night, Mr. Everitt. Yours truly,

DAVID DOBETTER.

## PLUMBING SUPPLIES

1-3 Saved by trading on our wholesale prices. Full line in stock. Quality guaranteed. Shipments prompt. Let us describe and quote prices on what you want. **B. M. KAROL, CHICAGO, ILL.**

## Make Manure Hauling Easy

Every farmer dreads the hauling out of the season's manure. He knows it is the heaviest, most slavish, back breaking work on the farm. Manure is heavy. It is never going to be any lighter. Better seek a remedy. If you only had to lift it half as high in loading as you do now it would decrease the labor more than half. The last half of the lift is more than twice as hard as the first half. That's where the strain comes in. A low-down, easy-to-load

## Handy Electric Wagon

will make hauling manure easy. Easier and quicker loaded. Then there are the broad tires—just as broad as you want them up to 8 inches. They don't cut in and rut the soil. They don't spoil meadows or the fall sown grain. Next to a Handy Electric Wagon the best thing is to use a set of our **Electric Steel Wheels** on your ordinary wagon. Can't tell it all here. Write for new **Illustrated Catalogue**. We mail it free for the asking.

**Electric Wheel Co.**  
Box 170 Quincy, Ill.

union, would say: Wake up, brother. Help us in our battle. You can do it either by getting another member, or, better yet, by organizing a union in your own township. Then persuade your neighbors in adjoining towns to do likewise. Think what general organization in any county would mean to all our farmers. They then could hold quarterly meetings at the county seat and agree as to equitable prices for many kinds of farm products that are now sold too low to make a profit. Look, for instance, at the price of beef or pork on foot. Look further and see if the consumer is being benefited by reason of low prices paid the producer. County organization alone would greatly benefit every one of us, and when it came to selling our wheat and other produce, where's the farmer who would not rather have a dollar per bushel and a profitable price for all products than the old price of 40 or 50 cents a bushel

A word regarding the agricultural editors' syndicate that Mr. Everitt mentions. don't think of it. We may not build up our million members so quickly, but that is problematical. Let them be against us and speak their piece openly. My opinion of many of the agricultural editors is that they are better adapted to hustling subscriptions, ads. and a few wood cuts of cattle, horses, sheep, swine and roosters, and telling how cheaply they can be raised and how profitably. They would prefer following the old, well-worn track. They would think that prices of farm products must be governed only by the law (?) of supply and demand. We don't need their boosting, unless it comes freely and voluntarily. If they don't, cut them out, or, rather, let our farmers cut them out.

EDWARD MURPHY, Cary, N. D.

## 30 Day's Free Trial Standard Washer

We prepay all freight charges and deliver this direct to your door, absolutely free of charge. You try it thirty days, if you don't find it all and more than we claim, ship it back; we will pay return charges. This is different from any other washing machine ever made. Takes dirt out of wristbands, neckbands, collars, etc., thoroughly as it cleans blankets, sheets or pillow cases. Washday is a pleasure instead of a drudge. Don't delay but write at once and we will ship you a washer **FREE** by the next freight.

**Don't Send Us a Cent,** but drop a postal card to

**WIARD MFG. CO.,** 72 West Ave., East Avon, N. Y.

## DR. HESS Stock Book Free

This work was written by Dr. Hess (M.D., D.V.S.) and contains the latest treatment of diseases of stock and poultry known to the veterinary profession. It will be sent postage paid to any address if you write what stock you have (number of head of each kind); state what stock food you have fed, and mention this paper.

PROF. W. S. Goss, Dean of Talladega (Ala.) College, says of it: "I think Dr. Hess' book a little gem. I shall keep it near me for reference."

## A Promising Calf

can be quickly forced in growth and vigor—and a stringy calf can be brought to rugged health—by small doses of Dr. Hess Stock Food, the great tonic and revitalizer for all live stock. It is not a food ration itself, but a medicinal tonic and laxative, a doctor's prescription for compelling the conversion of food into fat and solid flesh by giving sharp appetite, perfect digestion, thorough assimilation. It is the only stock food made by a graduate of both medical and veterinary colleges; the only stock food endorsed by these institutions; the only stock food used and recommended by eminent veterinarians. If these famous institutions of learning and these eminent practitioners know of nothing better it must be good. No unprofessional manufacturer can equal it.

## Dr. Hess Stock Food

rapidly forces a yearling; gives greater milk capacity to a cow; gives greater vigor to bulls; gives more energy and a sleek coat to a horse; gives solid fat and flesh to a hog and keeps it free from disease; keeps a sheep fat, with a heavy fleece.

### Our Information Bureau.

For any disease or condition for which Dr. Hess Stock Food is not recommended, a little yellow card enclosed in every package entitles you to a letter of advice and a special prescription from Dr. Hess (M.D., D.V.S.) In this manner you are provided with a universal treatment for all stock diseases, either in the Stock Food itself or in the special prescription to which the little yellow card entitles you. Indorsements from physicians, scientists and stock feeders furnished on application.

**DR. HESS & CLARK, Ashland, Ohio.**

Makers of Dr. Hess Poultry Pan-a-ce-a and Dr. Hess Healing Powder.

**Instant Louse Killer Kills Lice**

Dr. Hess Stock Food is sold on a written guarantee, 100 lbs. for \$5.00 (except in Canada and on the Pacific Slope) smaller quantities at slight advance. Fed in small dose.

### DAIRY HERD

#### When Ought a Heifer Become a Cow

Experience has taught us that the best time is when she wants to be, which is from twenty to twenty-four months of age. Probably eleven months is the youngest period she will have a desire to be a mother, and it may be from one to three months later, which would bring her fresh from twenty to twenty-four months of age. When the first calf is not dropped until the third year, one calf and one year of milking are lost, and the heifer acquires a tendency to use her surplus of feed in the laying on of fat instead of in the secretion of milk—a tendency which will be retained through life and which would have been avoided by earlier breeding. In exceptional cases, where the size and thriftiness of the animal do not warrant the first breeding may be delayed.

#### DOCKING AND CASTRATING LAMBS

These operations are performed to prevent sheep from getting foul, especially when ewes are lambing in the spring. Females are surer to breed if docked, have a better appearance and are more easily sheared.

One argument against docking is that there is too great loss of blood and an occasional loss of the lamb itself; but if the operation is performed properly there need not be a loss of blood or any check whatever in growth. We have docked lambs that ran away and began eating, and not a lamb need ever know it has been docked until it turns around and sees its tail missing. The only humane way, indeed the only safe way, is to take the tail off the lamb with docking pinchers heated to a white heat. In this way there is not a drop of blood, but every vein and artery is instantly seared over. There is no check in the growth, and we deem this a superior method.

Castration and docking should be done as soon as the lamb has gotten out of the "wobbly" state, which is the time it becomes playful. This may be when a week or ten days old. The earlier the better. Castration requires some care

and should precede docking four or five days.

#### Beef Cattle

When the steers begin to shed their hair in the spring, they threaten to rub down the sheds and fences. Cut a tree twenty-five to thirty feet long and haul it to the feed lot. Set one end in the ground and raise the other so it will just clear the back of the tallest steer. Hold in place by bolting to well set up posts. The animals will spend hours of enjoyment in rubbing themselves on these poles.

#### SWINE HERD

##### Baby Tusks

One reason why the sow at times gets ugly, snaps at her pigs, and frequently kills them, is that they have very sharp little teeth, which in their efforts to get milk, they use pretty severely on the sow, and bite into the teat. In order to prevent this, take them when a week old, and with a pair of forceps break off all these sharp teeth, which saves trouble and does the pig no harm. You also attain another thing: These teeth, especially those on the side, are very apt in young pigs to grow in all directions. They are very sharp and pointed. The consequence is, if left, they grow out so as to cut and hurt the lips of the pig when eating, and it does not thrive. These teeth are black, hence the old-fashioned reason that a pig with black teeth will not thrive.

##### Barley for Pigs

This grain is greatly relished by growing pigs and very valuable for giving variety to the ration. It produces greater gains with young pigs. At six experiment stations in the United States and Canada about five pounds of the grain produced one pound of pork, the animals weighing 100 to 150 pounds.

#### BRISTLES

From ten brood sows you should raise eighty good pigs.

A pig should be able to gain one pound per day until it is nine or ten months old.

Give the pig a low trough. Eating over a high trough gives them crooked backs.

A spoonful of bonemeal added to the food once a week will be found beneficial.

For diseases of the digestive system give some sulphur in the food to cool the animal and purify the blood.

For worms give turpentine and castor oil, according to the size of the pigs, using pumpkins as a part of the ration.

For cough in hogs mix linseed oil in the food, a half pint for each animal. Follow this with a teaspoonful of nitrate of potash for each hog in the drinking water once or twice a week.

An excellent cholera disinfectant is made by mixing eight ounces of sulphuric acid and eight gallons of water.

Soft soap and a little kerosene will kill lice on hogs. If only a few are kept, a thorough washing and scrubbing is exceedingly effective.

#### A GOOD TIME TO MARKET

There is always a scarcity of chickens on the market about the first of March. The winter is about over and such surplus stock as could not be cared for during the winter was sold in the fall for what it would bring. In early spring fat hens and cockerels are in demand and a cheap shelter only is necessary to house them during the winter months, as warm houses are only needed for laying stock.

## WHY TAKE CHANCES IN BUYING A Cream Separator?

WHY buy a second or third-class Cream Separator merely because it is well advertised or some agent talks well for it to earn a fat commission for himself?

Every well informed buyer knows that the De Laval machines are in a first-class by themselves. The original machines, improvements have always kept them well in the lead. Other machines are merely cheaper made imitations and partial copies to the extent expired patents made possible.

But other machines lack the patent protected features necessary to perfect separation, slow speed, easiest running, and are so poorly made as to surely not last half as long, while moreover the De Laval machines are cheapest in proportion to actual capacity.

So why take any chances? Send for a De Laval catalogue and the name of nearest local agent.

# \$12.75

## HORSES IN SPRING

Most farm horses are idle during winter, and go into spring work with soft muscles. At this time they need more care than many owners will give. Work pushes and the feeling is the team must pay for the winter's feed by helping to get ground in order for planting as rapidly as possible. It is no fault of the horses that they have been made soft by months of inactivity, and they must be seasoned to hard work if the owner would treat them fairly. A few days hard severe work in the first warm spell of spring can cut flesh that heavy feeding throughout the summer will not replace. Moderation in work the first few weeks is repaid by a moderate grain bill later on, and by more hard work for the season taken as a whole.

Wintering farm horses on a cheap, bulky ration may be all right for a part of the time, and we believe they need a rest from heavy grain feeding, but the month previous to the opening of spring work, the horses should be given a good grain ration. Nothing else puts on the flesh that stays. They should be made to shed their old coat of hair early. A bran mash, a double-handful of oil meal a day and a vigorous use of the curry comb will bring this about. The animal that gets no laxative food and little grooming, and must wait for the heavy sweating in the furrow to start its old coat, cannot do full work and keep in good flesh.

Start the season with the collars tight. Draw the hames in snugly to the neck so that the collar has no play. Wide collars, loose at the top, are responsible for many a sore shoulder. The skin on the shoulders should be toughened before the work begins, by bathing with any good wash. Where white oak trees are convenient, a cheap and good wash is made by boiling the bark in water. The application should be continued for a few weeks after the beginning of hard work. The sweat on the shoulders should be washed out every night with plenty of cold water. Salt water is especially good.

## CREAM EXTRACTOR FREE

This is a genuine offer made to introduce the Peoples Cream Extractor in every neighborhood. It is the best and simplest in the world. We ask that you show it to your neighbors who have cows. Send your name and the name of the nearest freight office. Address

C-U-R-A CHEMICAL CO. 665 MILL ST. AKRON, O.

## WATER FOR SHEEP

Sheep will suffer if not supplied with water in winter, even though they have free access to snow. Don't allow them to eat snow, or so drink ice water. Water them in the middle of the day when it is warmest, and warm the water to above the freezing point a good deal, to about the normal temperature of spring water.

They need water most in dry summer, but when the grass is fresh and growing well less is required. You might as well expect your dairy cows to produce milk, some seventy or eighty per cent of water, as to expect your breeding ewes to raise lambs that are drinking milk on grass alone. In winter when they are eating dry feed more water is taken than when they are supplied with roots or silage. Ordinarily a sheep should have from one to six quarts of water daily, according to weather and feed.

There is no place in which sheep will take water with more zest than in a shed. In such a place the water does not freeze nearly so readily as outside. A shallow trough is best and in very cold weather, if the water is not wanted after the sheep drink it may be drawn off to prevent the accumulation of ice. It is a mistake to try to water them in the same trough in which cattle drink.

## WASHING MILK UTENSILS

Vessels of tin or other metal should first be rinsed with cold or lukewarm water, and then washed in hot, using some good alkali, as sal soda. Afterwards scald thoroughly with boiling water or steam. Hot water, if used first, coagulates the albumen, causing it to adhere firmly to the sides of the vessel. After washing wipe dry and place in the fresh air or sunshine. Use a brush during the process of washing.

Milk buckets with covered tops have come into use and have proved quite efficient in excluding dirt from the milk. These buckets usually have a funnel-shaped part that goes under the udder. Frequently this funnel has a strainer attached, and the milk is strained in addition to having the dirt excluded by the cover.

If the milk has a bitter taste give the cow about two tablespoonsful of sugar at each meal for two or three days.

For every six cows plant four to five acres in ensilage corn. Generally speaking, three tons of silage are equal in feeding value to one ton of hay, and the equivalent of four tons of hay can be produced on one acre.

Cattle eat very much like horses; sheep eat nearly as much in proportion to weight, and hogs eat more than any other of the larger animals as compared with their weight. In proportion to numbers, the calculation is that five sheep will eat as much as a cow and four or five hogs as much as a steer. The feed, too, is largely grain.

**ADVANCE FENCE CO., 7626 Old St., Peoria, Ill.**

## Veterinary Department

[Conducted by C. C. McCue, Akron, O., to whom all communications should be addressed, before the 1st of the month to insure insertion in the following month's issue. All subscribers are invited to submit questions. All communications must be signed in full, not for publication, as only initials will be used, but to show good faith.]

**WORMS:**—My eight year old driving mare is thin in flesh, although I give her plenty to eat. She is a ravenous eater, and is always calling for her feed. Hair is dry and dull. She is not sick, but I cannot get her fat, nor get her hair to look as it should. Have read you letter each month, with much interest, and now write you with the view of getting your assistance. T. H. M., Glen Cove, L. I. Take all whole grain from her for thirty days and feed chop feed, and in it mix a good condition powder. If you do not know how to mix a good chop feed, write me and I will tell you how to fatten a horse, no matter how poor in flesh.

**CALK:**—One of my team horses calked himself a short time ago. He is not lame, but a piece of the hoof is cut out next to hair. How long will it take to grow it out? F. E. S., Wheatland, Pa. It is hard to say how long it will take to grow out the hoof. The growth varies on different horses. Trim off the ragged edges with a sharp knife, and work an ointment into the crevices once a day.

**POOR APPETITE:**—Have a cow that eats all the coarse feed that is put before her, but she will not eat grain. Consequently she is shrinking in milk. H. J. R., Ft. Branch, Ind. Take all whole grain from her, and run your hay or fodder through a cutting box and mix it with ground feed and a condition powder. Dampen just enough so feed will hang together.

**INJURED JOINT—RUNNING SORE:**—My mare had a small cut on the outside of joint on hind leg and I noticed yellowish water running from same, but she did not seem to mind it, and three days after I noticed it, I drove her ten miles to town and back, she commenced limping a short time before I got there, and was very lame when I started home. The next morning her leg was badly swollen, and yellowish water kept running from it. She could not use the leg and seemed to be in great misery all the time. Her leg seemed to draw up and the puss kept running, at times it would squirt out in a stream. I finally got the hurt healed, but the swelling would not go down. After this the leg gathered on inside. I opened it and yellowish water ran from it in a great stream. My neighbors told me the joint water had run out, others said there was something in the leg. She got worse and had a running sore on hip of opposite hind leg. She got so bad she could not stand after being helped to her feet and I destroyed her. There was nothing near her to injure the joint. Please tell me what the trouble was and what I should have done. A. B., Maola, Tenn. The sac containing the joint water, evidently had been slightly punctured, and the drive probably weakened it, so it opened and let the water out. Never knew of a case that was cured where the joint water got away. If you had not given her the drive, she might have gotten well, but it is a question. For old indolent ulcers or running sores, use an antiseptic powder.

**SORE EYE:**—Have a six year old cow that has had a sore eye for three months. Puss runs from it. She can scarcely see. J. M. H., Clinton, Pa. Apply five grains nitrate of silver in two ounces of water once a day. Blow calomel into eye every other day.

**ABSCCESS:**—Young cow has bunch on fore part of brisket. Can it be reduced? M. O. R., Marion, Ind. Open bunch at lowest point, and press out all puss. Do this once a day and work in an antiseptic powder twice a day.

**COUGH:**—Have several head of cattle that have an obstinate cough. Please tell me what to do. R. I. A., Mt. Vernon, O. Give your cattle half ounce tincture wild cherry once a day.

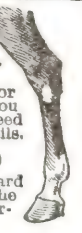

**WARTS:**—Kindly tell me the best way to remove warts from young stock. B. Y. L., Kokomo, Ind. Take stick caustic, dampen it, and rub each wart with it. Do not allow it to get on healthy skin. Trim off dead parts with sharp knife. Rub in caustic once a day until warts have been removed.

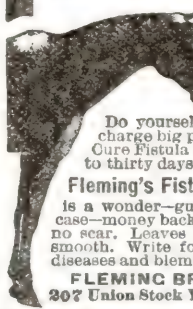

**No Smoke Horse. Smoke meat with KRAUSERS' LIQUID EXTRACT OF SMOKE.** Made from hickory wood. Gives delicious flavor. Cheaper, cleaner than old way. Send for circular. E. Krauser & Bro., Milton, Pa.

This generous offer may be withdrawn at any time, so you should write today for the "Free Supreme Electric Belt." **IT WILL CURE YOU!** Address: **PHYSICIANS' INSTITUTE,** 1788 Unity Building Chicago Illinois

## FARM FENCE

Don't hesitate. Rely on our statements. Years of experience with an ardent ambition to excel has made us master of fence construction. We use only the best, High Carbon, heavily galvanized Colled Spring Steel Wire. To get this good enough, we make it ourselves. The weave is so perfect that full strength of every wire is preserved. The strain is equally distributed. Every twist is an expression of strength. Every line a suggestion of symmetry. The whole fabric so flexible that it staples to the posts as you would nail a board. Confidence in our product rests on a foundation of practical experience, guided by practical sense. Don't worry. **We'll Pay the Freight,** yet sell to you direct at **WHOLESALE PRICES.**

## THE FARMER

ON THIRTY DAYS TRIAL.

Enclosed find 50 cents for copy of "The Third Power" which I have just finished reading, and loaned it to Prof. J. A. McDowell. I would not part with what I learned in this book for a considerable sum.

J. H. HARPSTER,  
Millersburg, O.

### IMPROVE YOUR CROPS

Refer back to page 16, issue of Jan. 15, and carefully consider the offer of seeds made by the publisher of Up-to-Date. It goes without saying that this is not compensation for lack of true value in the paper, but a gift pure and simple. I earnestly desire to see every reader of Up-to-Date avail themselves of this very generous offer, and further, would be very glad to see each recipient enter into a hearty and friendly competition to grow the largest possible crops for each of the varieties offered. Such a contest will be helpful in many ways to every participant, and further, let me suggest that if careful note is made as to methods of culture, habit of growth, time of maturing, yield, etc., and at the end of the season, brief reports of results are sent in, noting yields etc., the work will be

**Seed Corn 10c** Mammoth Yellow Dent, Shenandoah's famous corn, ears often weigh 2 lbs. For 10c in coin or stamps we will mail you, postpaid, enough to plant 100 hills of this corn, which should raise enough to plant your next season's crop. Address, **J. B. ARMSTRONG & SONS** Shenandoah, Iowa.

**KENTUCKY BLUE GRASS SEED.** The pure unmixed seed that is so difficult to get through usual sources on account of mixing in adulterations. Fancy grade at **\$1.35 A BUSHEL** in quantities of 8 bus. or more. Smaller quantities \$1.50 per bu. Extra cleaned 65 cents a bu. in 8 b d lots. Smaller quantities 75c. a bu. Sample 3c. Bags free. **J. A. EVERITT, Seedsman, Indianapolis, Ind.**

**FREE**

**GREGORY'S SEED CATALOGUE FOR 1904**

Marblehead, Mass.

of very great value to every one interested. May we not see every reader enter heartily into the trial or test, and not only be helpful to each other, but assist in the spread of a really good thing.

As to the work for March, that will be various and many. Very many things on the farms, in the gardens and orchards will line up before us and demand immediate attention. But in the midst of all the hurry let us not lose sight of the important first early vegetables. Among these, the peas, lettuce, radishes, cabbage, beets and onions, hold first places. Excepting the first mentioned, all these are available and practical for the hot bed, and in many localities will be started ere this. In all other sections excepting the far north, this month will be none too early for these vegetables.

#### Lettuce

If using hot beds, the earlier the seed can be sown now, the better. Sow crosswise of the bed in drills four inches apart. Give the bed plenty of moisture but do not water soak it; ventilate often (not too long however) and keep the glass free from snow or other obstructions so it may have all the sun possible. As soon as plants are well up and established, thin out in the rows and transplant the little plants thus removed between the drills. Sprinkle or spray occasionally with nitrate of soda or salt peter and water—an ounce of either one to the gallon of water. With the soil well moistened and frequently stirred and loosened, the plants will make rapid growth and soon begin to crowd the space. Thin out the larger as they grow to edible size, as the salad will be relished, and more space will be available for the others to develop. If cold frames are available, with a little hardening off, they can by this time be transferred to the frames and so early in the season, any surplus even if not full grown will find ready sale in almost any locality.

#### Radishes

For the first early radishes, especially when grown in the hot bed, I prefer the turnip or globe shaped to the long sorts. They can be sown same distance as lettuce and by thinning out as fast as they reach table size, the space of one such will produce quite a large quantity. The space can be occupied for several weeks by planting in two or three seeds whenever one is pulled up, or after the first sowing is started, new rows may be sown between the drills. It is surprising how many may be grown in a few weeks time, even on a few feet of space by either of these ways of managing. Personally I prefer to sow between the old drills, as the tender plants are less liable to injury from thinning out. I have grown them in seventeen days from sowing to fair table size. The soil should be rich and kept moist, as they require considerable water to make rapid growth. Spraying or sprinkling with the same solution as for lettuce will be of much assistance.

#### Beets

The early globe varieties should be selected for hot bed sowing. In fact, I much prefer them for all purposes, to the long varieties. Sow same time and in same way as lettuce or radishes. Keep the soil loose and when danger of frost is past, they can be transplanted to the

W. J. BLACK, Gen. Pass. Agent,

Atchinson, Topeka & Santa Fe—Chicago

open ground and will be weeks ahead of any outdoor sowing. They stand transplanting as readily as lettuce, only the leaves should be clipped back. The entire leaf should be removed leaving only the leaf stock an inch or two in length. The leaves need not be wasted as they make a delicious dish of greens, and come at a time when little else of that nature is available. One such space will grow the plants for quite a large setting, and if well hardened off they can go into the open ground nearly as soon as the seeds can be safely sowed, so very much time will be saved in getting them up to table size. The market gardeners are well aware of the fact, that the first early vegetables are the money crops. The city people buy them regardless of cost, but why should not the farmer's families have them also when they are so easily grown? Certainly they have the best right to its first fruits, and not a single farm but that may have them in abundance by taking a little extra pains.

#### Onions

The first early onions for bunching or table use are best grown from the sets. If no provision for these was made during the fall, then the sets ought to be planted out as soon as the frost will admit of working the ground to the depth of two or three inches. If in the ground during the winter, or set as referred to above, they will start growth very early and be ready for use in pretty good time.

For the main crop we must prefer the transplanting method to growing from seed in the open ground. To grow by the former plan the seed should be sown early this month, and for many localities earlier would have been better. But with good care and careful sowing they will mature an early crop in all ordinary localities. Too much care cannot be exercised in sowing the seed and caring for the plants; and some suggestions will not be amiss. The hot bed space should be especially prepared and the manure covered not to exceed two inches. First cover with soil as rich as possible to the depth of an inch, and over this, clean sand (river sand preferable) to the depth of an inch or less. Sow the seed in the sand, cover well but not too deeply, and

# FARMER'S INTEREST CORN

*Absolutely without a peer as a profitable variety to grow  
Unequaled in productiveness  
and all fine qualities*

Photograph of one bushel of Farmer's Interest Corn. This was the highest scoring bushel of corn on record

THE FARMER'S INTEREST CORN has an enviable reputation of winning the leading prizes at all corn shows and expositions where exhibited, including Indiana State Fair for the past nine years. Nine prizes at Illinois State Fair 1902, one of which was for the best bushel of corn open to the world AND GOLD AND SILVER MEDAL AT PARIS IN 1900. Also has won hundreds of prizes at county fairs where exhibited by our customers. It has proven THE LARGEST YIELDING CORN KNOWN IN THE CORN BELT, on all kinds of soil.

It shells heavy and weighs heavy, is high in protein and has high feeding properties. It is a corn that would increase the corn yield many million of bushels if generally grown solely on account of its superior yielding propensities. A thorough bred corn like FARMER'S INTEREST would be cheap at \$10.00 a bushel for seed to any farmer who has been planting mongrel kinds in the past. The best seed is none too good on such an important crop as corn, and the FARMER'S INTEREST is the best variety for all sections south of Michigan that can be found if you would travel the country over. We challenge comparisons and tests.

160 Page Catalog FREE, if you have not received it, where this remarkable corn is fully described.

**Price** By mail, pkt. 10c, large sample ear 30c, 1 qt. 40c, 3 qts. \$1. By freight or express, 1-4 bu. 75c, 1 bu. \$2, 2 1-2 bu. in 1 bag, \$4, 5 bus. or more \$1.50 per bu. A certificate of genuineness is given to each purchaser.

# J. A. EVERITT, Seedsman, Inc., Indianapolis, Indiana

keep the bed moist. The bulbs will fare nicely in their sand bed, while the roots strike deeper down into the rich soil and manure below. The weeds will not thrive especially well in the clean sand, and the plants are easily tended and kept clean. They require frequent airing as too much heat is injurious to onions and tend to make the tops grow spindling. If too much top growth results, clip back as often as necessary. It will do no harm, but rather tend to throw the strength into the bulbs. We like the above general plan for the main crop, and believe it will come more and more into practice.

#### Peas

Of all the first early vegetables, peas, we believe, find the warmest place in our hearts, or rather, appetites. They, of course are not a hot bed plant, but fortunately, under right conditions can be started very early.

The first precaution is to select the smooth varieties for the very early sowings. It is of little use to bother with the wrinkled sorts for extreme early sowing as they are not hardy enough to stand the test, at least, none with which I am acquainted. Preferably, the ground should have been prepared in the fall, but lacking that, do not give up the trial, but do the best possible with whatever is at hand.

Select a warm, sunny spot and as soon as the frost is out sufficiently, work it as thoroughly as possible. A good quantity of fine, well preserved manure will be helpful. By all means, select high ground where the surface water will pass off quickly. This early in the season it is a good plan to work the soil, then let it remain for three or four days, until the air and sunshine have opportunity to act somewhat upon the ground. Then, if necessary, work over again before seeding. Sow in drills and cover well but lightly; they have quite a habit of working out of the ground, and such shallow covering must be done thoroughly. The smooth sorts are all hardy and will stand considerable cold weather.

#### Out-Door Work

In many sections, much sowing and planting in the open ground will be done this present month, and in those localities all the above vegetables, besides many other sorts, will be up and doing even in the open ground. Such favored climates require but little, if any assistance from the hot beds, but Nature and man's skill have so provided that things in general get pretty well evened up.

The winter has been almost unprecedentedly hard, and garden work will be considerably delayed all over the country. No doubt, the damage will be far reaching; and in so far as trucking is concerned, it will be most severely felt in the warmer climates of the south and far west. This may work some gain to northern growers; but it is not wise perhaps to an-

ticipate and count too much upon unhatched chickens. The lesson is, to work faithfully for success, and if failure is unavoidable let us meet it like men.

A Complete outfit of Tools for General Boot, Shoe, Rubber, Harness and Tinware repairing, including a **RIVETING MACHINE**. Consists of 40 First-Class Tools and Materials shown in cut.

**The Most Complete and Practical Outfit Made**

This is the most complete and desirable outfit made. The Lasts and Stands are strong and heavy, and every article is strictly first-class, the best there is made, and the same that practical mechanics use.

The special feature of this outfit is that it contains one of the latest improved Automatic Riveting Machines for setting tubular rivets. With it any one can do all his own harness, strap and belt repairing. The saving on these items alone will pay the user the cost of the outfit in a year, to say nothing of the saving on repairing one's boots, shoes, rubbers and tinware.

**Each Set Packed in a Neat Wood Case**

### FIGHTING AGAINST ODDS

In these days of the rapid spread of noxious weeds, insect pests and fungi, the up-to-date farmers and fruit growers, are waging an unequal warfare. I say "up-to-date" husbandmen, because the other class are not waring at all, but simply stand at "parade rest," while the enemies are actively engaged all about them. Just here, come the inequalities. The former have not only their own enemies to vanquish, but those also belonging to the latter class. It will be thus, until this shiftless easy-going class of men are either brought by moral suasion or legal force to join in the general onslaught. Most of us who have the will and determination, can protect ourselves fairly well against the enemies of our own domains; but to hold them in check at home and repel the attacks from adjacent farms also is altogether an unequal struggle.

#### The Spraying Law

To forestall this state of affairs and equalize matters to some extent, some of the states and notably Michigan, are en-

acting laws to better these conditions.

Omitting the detail, we quote the substance of the law as existing in Michigan, varying from that of some other states, which is as follows: "An Act to prevent the spreading of bush, vine and fruit tree pests, such as cankerworms and other insects, and fungous and contagious diseases. \* \* \*

"Section 1. It shall be the duty of every possessor or occupier of an orchard, nursery or vineyard, or of any land where any fruit trees or vines are grown within the State, to spray with a poisonous solution or disinfectant of sufficient strength to destroy such injurious insects or contagious diseases, all fruit trees or vines grown on such lands which may be infested with any insect pests or infected with contagious diseases; Provided, that no spraying shall be done while said fruit trees or vines are in blossom, except in case of canker worms.

Sec. 2. Provides for the appointment of township boards of three commissioners in any township where such insects or fungous diseases are known or thought to exist, or where danger of their introduction is thought to be. It further provides that in townships where yellows commissioners are already appointed, that the members of such board shall be ex-officio commissioners under this act.

Section 3, in part, defines the duties of such board; and provides that all papers, reports and transactions of the commissioners shall be filed and entered as a part of the township records.

Section 4, provides for the examination of infested orchards, notification of owner or occupant, with nature of disease, treatment, etc., etc.

Section 5 provides that whenever any person shall neglect or refuse to comply with the notice, it shall be the duty of said board to at once see that the work is done, and the expense shall become a charge against the township.

Section 6 provides that if any owner, township officer or commissioner, neglects or refuses to comply with the foregoing sections and within the time specified, such persons shall be deemed guilty of a misdemeanor, and punished by a fine not exceeding fifty dollars or imprisonment in the county jail not exceeding sixty days, or both; such fine and imprisonment in the discretion of the court.

Such a law vigorously enforced will very much simplify the task of holding these pests and fungi in check.

### ORCHARD HINTS

The practice of filling out the old orchards with young trees is very questionable. Better select new ground for the young trees, renovate and care for the old ones until their usefulness is past, then remove them.

Some of us no doubt, had many apples rot or otherwise go to waste under the trees last fall. Embrace the first opportunity now, to clean up all remaining refuse and burn it. Insect pests and disease are lurking there, and will rise up to condemn us.

If disease of the tree or fruit was pres-

## FREE—Great Crops of STRAWBERRIES

### And How to Grow Them

A strawberry book written by the "STRAWBERRY KING," so called because he discovered the way to develop the fruit organs in a plant and make it grow two big berries where one little one grew before. He grows the biggest crops of the biggest berries ever produced and the book tells all about how he does it. It is a treatise on PLANT PHYSIOLOGY and explains correct principles in fruit growing. It is worth its weight in gold to any fruit grower. Will be sent free to all readers of UP-TO-DATE. Send your address now. The finest THOROUGHbred PEDIGREE PLANTS in the world. R. M. KELLOGG, Three Rivers, Mich.

## SPRAYING

That's the Difference Between Success and Failure in Fruit Culture

Big Fruit Crops always follow spraying done with the wonderful

### Hardie Spray Pump

That's because they work with such a high pressure that the fog-like spray is forced into every hole and corner, and it stays there. These high-grade machines cost no more than the inferior kinds. Yet the results are so much more satisfactory.

And They Work so Easy

Our catalogue tells the whole story. It is free—send for it.

THE HOOK-HANDIE CO., 64 Main St., Hudson, Mich.

ent last year, it is liable to be present in aggravated form this season. If such was the case, then by no means neglect spraying with the Bordeaux mixture while the trees are still dormant; then as many times afterward as circumstances may dictate.

The provision against spraying with poisonous mixtures while trees are in blossom as quoted in the article above referred to, is not only merciful but wise. The bees are not only our friends as honey producers, but without doubt, are nature's most active agents in fertilizing the blooms. They attract our valued friends by the thousands; and to poison their sources of supply would be cruel in the extreme. So this must be done before and after their harvest time.

Have you removed the old rough bark from the trees yet? If not, why not? The earlier this is done the better, then wash the bodies and large limbs with lye, and see how the trees will renew their youth.

Some of the apple trees, no doubt, are expensive boarders; taking up both the ground and soil fertility without making any adequate returns. Graft such trees, if vigorous enough, to useful varieties. If too old for this and they still refuse to respond to good treatment, then they better be removed.

Many trees, otherwise vigorous, have large holes occasioned by the rotting of limbs too closely sawed off. Remove the decayed wood clean as possible, and fill the holes solidly with water lime cement. This will often preserve the trees for years.

Some will say, that these things are too much trouble, and are not worth the time; but if well done, the rewards are great.

#### A FEW CHOICE FRUITS

People who are particular about planting choice small fruits, both as to variety and character of stock, should lay their wants before Allen L. Wood of Rochester, N. Y. This is the class that largely makes up his trade. Large as this trade is, if more people knew of the advantage of dealing with him, it would be greatly increased. There's no regret following a purchase from Mr. Wood. His fancy fruit collections this year, at low prices to show the quality of his stock, ought to interest those who have not room for much but want the best. There's an even dozen of these collection offers. He advertises them with us. Some one of them is most likely to meet exactly every planter's wishes.

#### STRAWBERRIES

Are you arranging to set out a new patch this year? It will pay to do it, and will also pay to set the very best plants obtainable. "Blood will tell," and it is true of strawberry plants as well as of everything else.

Were the strawberries mulched last fall? If so, all right, if not it will pay to mulch close around the hills and thoroughly between the rows after they have been cleaned out. The berries will be much cleaner; and far less liable to rot if the season should be wet.

A very successful strawberry grower attributed much of his success to his management of the vines when in blossom, never allowing the sun to shine on them three days in succession without thoroughly sprinkling them. If you have a hose, sprinkler or sprayer, try it and note results.

#### Other Fruits.

What we said above of starting new beds, we repeat regarding the bush fruits. Until we have them in plenty, and accessible at all times during their fruiting season, we never know what we have been missing all the years.

It will pay to spray all the bearing bushes before growth starts, and heavy mulching with manure or even coarse litter will aid them, especially if dry weather in fruiting time should occur. Either the heavy mulching or thorough and shallow culture should be resorted to.

For the currants and gooseberries, good cuttings are very desirable, provided you are sure of your varieties. Plant early in good soil and deep enough so that three to four buds will be below the surface. If thus planted, good culture will push them rapidly, and they will come into bearing in a comparatively short time.

#### Five Million Fruit Trees

painted with OTWELL'S TREE PAINT last year. Trees benefited and pests kept away. More farmer-agents wanted. Terms and circulars free. W. B. OTWELL, Carlinville, Illinois

#### GRAPE VINES

## THIS 50-EGG INCUBATOR ONLY \$6.00

The P. S. is a hot air Incubator, built of first-class material, neatly finished and thoroughly tested before leaving the factory. The improvements in this machine have so simplified hatching that a child can operate it without difficulty. The regulator is highly sensitive metal, extending above and beneath the egg tray. It can be set to any desired degree of temperature, and when so set will hold the temperature within the egg chamber without any variation, regardless of any variation of temperature outside the Incubator.

### This is the Incubator For You OUR OFFER

We will send a P. S. 50-egg Incubator for \$6.00. This machine will hatch eggs just as well as the larger sized ones. It is the best incubator on the market and every person owning one speaks of them in high terms. The 50-egg P. S. Incubator is 14 1/2 x 24 inches. It has one blank tray, one thermometer, etc. Weight 32 pounds; crated for shipping 45 pounds. Each machine is supplied with complete directions for operating. Cut off the coupon and mail it today.

Look at this record. Do you want anything better? Catalog of all sizes of Incubators Free

"36 YEARS A STANDARD PIANO"

# The WING PIANO

A Wing style—45 other styles to select from

This Piano is a representative Wing style, being our concert grand, with longest strings, largest size sound-board and most powerful action, giving the greatest volume and power of tone. It has  $7\frac{1}{2}$  octaves, with overstrung scale, copper-wound bass strings; three strings in the middle and treble registers; "built-up" wrest plank, "dove-tailed" top and bottom frame, "built-up" end case construction; extra heavy metal plate; solid maple frame; Canadian spruce sound board; noiseless pedal action; ivory and ebony keys, highly polished; hammers treated by our special tone-regulating device, making them elastic and very durable; grand revolving fall-board; full duet music desk.

Case is made in Circassian walnut, figured mahogany, genuine quartered oak, and ebonized; ornamented with handsome carved top mouldings and hand-carving on the music desk, trusses, pilasters, and bottom frame.

## In 35 Years 36,000 Pianos

We refer to over 36,000 satisfied purchasers in every part of the United States. WING PIANOS are guaranteed for 12 years against any defect in tone, action, workmanship or material.

**Wing Organs** are just as carefully made as Wing Pianos. They have a sweet, powerful, lasting tone, easy action, very handsome appearance, need no tuning. Wing organs are sold direct from the factory, sent on trial; are sold on easy monthly payments.

For catalogue and prices write to us.

You need this book <sup>IF YOU INTEND TO BUY A PIANO</sup>, A Book—not a catalogue—that gives you all the information possessed by experts. It makes the selection of a piano easy. If read carefully it will make you a judge of tone, action, workmanship and finish; will tell you how to know good from bad. It describes the materials used; gives pictures of all the different parts, and tells how they should be made and put together. It is the only book of its kind ever published. It contains 116 large pages, and is named "THE BOOK OF COMPLETE INFORMATION ABOUT PIANOS." We send it free to any one wishing to buy a piano. Write for it.

Save from <sup>We make the WING PIANO and sell it ourselves.</sup> \$100 to \$200. It goes direct from our factory to your home. We do not employ any agents or salesmen. When you buy the WING PIANO you pay the actual cost of construction and our wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

## SENT ON TRIAL

We Pay Freight

No Money in Advance

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask any advance payment or deposit. If the piano is not satisfactory *after twenty days' trial in your home, we take it back entirely at our expense.* You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

Old instruments taken in exchange.

## EASY MONTHLY PAYMENTS

## Instrumental Attachments

A special feature of the Wing Piano: it imitates perfectly the tone of the mandolin, guitar, harp, zither and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachment has been patented by us, and cannot be had in any other piano, although there are several imitations of it.

# WING & SON

### WORK FOR THE MONTH

The uncertainties of spring during this month will not permit of any cessation of the rules followed in the winter. Set your hens for early chicks. The large breeds should be hatched early to insure full maturity before the cold weather sets in in the fall.

### RAISING TURKEYS

The time for setting the first eggs is in March or April, although the latter month is better in the northern States. Prepare the nest in a building where the hen will be undisturbed. After she has begun to brood, remove her at night to the nest, which should contain a few artificial eggs. Nests which can be closed up tightly when the young are hatching are to be recommended, as the first ones hatched will lead the mother off the nest before all are out.

When the hen has settled down to business give her eighteen or twenty eggs. The extra ones may be put under a common hen, setting at the same time as the turkey. If you are afraid your eggs are going to be too old, put the oldest under the common hen. She may hatch out a week ahead of the turkey, but give all the poults to the latter. Another plan is to set two turkey hens at the same time and give both broods to one. The turkey makes the better mother, being less solicitous and

fussy than the common hen.

Much is accomplished by freeing the hen from attacks of lice during the period of incubation (30 days). When putting in the eggs, and again two or three days before the poults are due to hatch, give the hen and nest a thorough dusting with insect powder. While sitting, see that the hen is off the nest at regular periods, remembering to wash off any fouled eggs with warm water and wipe clean. The albumen and yolk from any that chance to break will clog the pores of the live eggs and kill them.

At the hatching period nothing need be done but remove the shells, and the hen will often attend to this herself. If she does not leave the nest after the poults are hatched, do not disturb her, because many times she stays on for twenty-four hours. They need no food for the first day after hatching, but the hen should be fed cornmeal dough while on the nest. Always dust the poults with insect powder before taking them from the nest, and if you find lice on their heads, rub with a few drops of a mixture of two drop of carbollic acid in a teaspoonful of sweet oil. Continue to dust the poults once each week until they have a good start.

Put the hen and poults in a coop, adjoining which should be a romy pen fourteen inches high. The mother has perfect freedom and will not go far from the brood, while the young secure the necessary exercise. After the poults are a week or so old the hen can be turned out to run through the middle of the day until 4 o'clock, when the coop should be moved ahead, giving them fresh ground every day. When the young are a month old, let them out every morning after the dew is off the grass, provided the weather is favorable. The great secret of turkey raising is keeping the poults dry and from being chilled until they have thrown out the red on their heads, as they have then become quite hardy and may be allowed to roam at will.

### Feeding

Start the young on stale bread moistened with milk, gradually shifting to a dough made of coarse cornmeal, finely chopped eggs, and milk. This should be cooked and an onion chopped up in it. After three days ad potatoes, mashed well. Poults do not require a great deal of food, but want it often. After a month, when they are able to take hard food, feed cracked corn, wheat, etc. A small amount of meat meal in the mash supplies the necessary animal food, also aids in growing feathers. This process is a severe tax on the system, at times making it necessary to remove the flight feathers, which grow more rapidly than the rest, often trailing on the ground. Sea shells make the best kind of grit and should be supplied from the very first. After the fowls are four months old, crushed oyster shells are better.

The water should be placed in a shallow vessel and changed each morning. A teaspoonful of Douglas mixture added to every quart prevents cholera and diarrhea, and is a great help in destroying tapeworms.

Provide a dust box five or six feet square and a foot deep, with a cover that will keep out all storm. Such an arrangement is of untold value in keeping down lice.

The flocks usually break up in fall or early winter; the males go themselves and the females to themselves. In this way they can be separated and the males most desirable for breeding selected. A flock of six turkeys should produce seventy-five young. By this you will know how many to keep over.

### Breeding for Sex

In plain language sex is controlled by natural laws which apply alike to animal life. The same controlling feature keeps the proportion of the sexes well balanced. If a rooster is let run with an undue number of hens, a large proportion of males is the result, this being nature's method of equalizing matter. If, on the other hand, there be a large

Write to Johnson, the incubator man, and find out about the Great \$10.00 Special Offer. New catalogue with egg, poultry and incubation records. Keep books in the home. Plenty of books. They're free. Quick shipments a specialty.

M. M. JOHNSON, Clay Center, Neb.

number of roosters running with a few hens, females will predominate as a result. This is one theory, although there are other conditions which cause variations.

### Feeding Sitters

Most breeders have settled down to shelled corn as feed for sitting hens. As a usual thing this is all that is required. A mixed ration is more liable to produce bowel trouble and lead to befoolment of the nest. When one is seen which does not exhibit a relish for the food, and mopes around in the pen while the others are greedily devouring the grain, she should be given access to some other kind of food.

### Keep a Program of Work

Have a note book fastened with a cord in a convenient place for reference by yourself, as well as your hired men. By jotting down items of work and the time for doing, even if a week in advance, it gives relief to the minds. It is also more reliable than the average mind. Then when you are away your man can refer to the list and work accordingly.

### RAISING SMALL CHICKS

My experience is that chicks two weeks old are half raised, as far as mortality goes. Of course, rats, minks and skunks also some of the family cats, do not care whether the chicks are two weeks or four weeks old. Right here I will mention that cats sometimes are very cunning and get away with lots of little chicks before they are suspected. Yes, cats kill rats, but for poultrymen, one good rat dog and a spade is worth a whole dozen cats. This is my experience and that is what I am writing about.

We should not undertake to raise chicks among rats. Kill the rats, and as a precaution, have the brooder house or coops some distance from barns, cribs and other rat harbors, and still more, the brooders and coops should be rat proof and the dog encouraged to make war on all vermin.

I am confident that not over 50 per cent of the chicks hatched out ever reach marketable age. In some instances perhaps, 10 per cent. escape and live, and in other instances where care and watchfulness are the rule, 80 to 90 per cent. are raised.

A little more about rats. They often do their greatest damage in day light, pick the chicks up in the weeds or wherever they can get them; keeping the weeds mowed down is a precaution and especially so around the barns and cribs. Eternal vigilance is the price of success in the little chick business.

The same method for minks and skunks as recommended for rats, will do. A few steel traps, the trusty dog and a shot gun will discourage the hawks and crows.

Now about feed. The kind of feed is most always blamed for little chicks ailments. I think the greatest number of experienced poultry raisers will coincide with me in saying that bowel trouble and other small chick ailments are more often due to other causes than the kind of feed; over heating, over chilling, wet and cold, etc., etc., are the vital obstructions to success. Mites and lice are blood suckers and I will repeat it again, that coops and brooder houses for small chicks should be some distance from the old vermin breeding hen houses and other buildings.

A good feed for small chicks can be made as follows: Take 2 quarts coarse corn meal, ½ pint coarse sand, ½ pint fine cut beef scraps; mix and bake as a corn cake, only bake it about twice as long or just as dry as you can, then crumble it up fine and feed it once each day. For the other feed provide nick-nacks in the way of cut wheat, steel cut oats, common fan or mill tailings, some millet seed and some curd cheese. Light bread soaked in milk and squeezed dry is good for them, and regardless of the cautions we sometimes see, dampened corn meal in light doses is good. The writer can remember back forty years ago, when corn meal was a popular diet for small chicks and the mortality was not so great as now, however, the nature of the situation suggests that the small chick's natural needs are a variety and lots of exercise in procuring it.

M. M. J.

## A Home for \$600

We publish a booklet telling how to build it yourself without architect or carpenter. Also two other houses at \$800 and \$1,200. Complete plans and specifications. Every detail of construction clearly explained. Also tells how to furnish 6 rooms complete with good grade furniture for less than \$500. A very interesting and instructive book. Will be packed free with orders if requested or mailed on receipt of three 2-cent stamps.

Address Adv. Mgr. Montgomery Ward & Co., Michigan Ave., Madison and Washington Sts., Chicago.

**THE SUCCESSFUL**

Name of the best incubator and brooder made. It's not a chance. They're right in principle, work right. Require least attention and give best results under all conditions. All users say it. Eastern Incubator Catalog free, with Poultry Catalog 10 cts.

This musical instrument can be played without instruction or practice by young and old. It furnishes good dance music; can be used in street parades, or any place where music is desired. It is made of highly polished wood, and is not liable to injury. Full printed instructions with each ZOBO. Get a dozen and sell them to your friends. We will send one for 10c postpaid.

A dozen postpaid for \$1.00. Don't Delay—Send Today.

S. E. Ferry, 642-644 N. Capitol Ave. INDIANAPOLIS

### WORK FOR MARCH

Of course you've studied the catalogues over and over, and decided you really must have some of the new and wonderful things displayed, to lure the stray pennies or dollars from your purse, but have you sent in your order? If not, rush it off as quickly as possible, then your seeds will come in time to get a nice early start in green house, hot-bed or even in boxes in the house if you can do no better. There are so many perennials which might bloom the first year if started early, and many late bloomers like cosmos, asters, marguerite carnations, salvia, etc., which would bloom a month earlier, if started in the hot bed.

A miniature green house may be constructed by taking a medium sized box, filling it with fine mellow soil (about one-fourth sand) and for the glass sides and ends press ordinary window glass in between the sides of box and the soil, letting them extend three or four inches above the soil. Inside this enclosure such seeds as asparagus, begonia, cineraria, cyclamen, fuschia, geranium, gloxinia, smilax and primula, may be lightly scattered over the surface of the soil; water them by dipping a brush in water and shaking it gently above them; then sift on a very thin covering

of finest sand; cover this with a sheet of manilla paper. Now put on the roof, a light of glass large enough to lay on top of glass sides and project an inch or two all around. This box can be placed on a register or shelf over the kitchen range, anywhere, so they will get bottom heat. As soon as the little plants appear, remove the paper and set box where it will get plenty of sunlight. Air may be admitted to the little plants by raising one edge of glass roof. As soon as they are large enough, carefully transplant them (in same box) and when they are two inches high transfer them to thumb pots. Any one possessed of a little time, money and patience, can grow any of the varieties mentioned and have plants just the right size for blooming another winter. Many a young girl could sell enough of these plants to buy her winter outfit or provide herself with money for Christmas shopping. Or she might use the plants for Christmas gifts to her friends.

### FLORAL NOTES

March is a good time to start the chrysanthemum slips. Bring up the old plants from the cellar, give warm water, sunshine and fresh air. When the slips start from the roots and branches, remove them and start in the cutting box. When rooted, pot them in good garden soil in three-inch pots. Keep them grow-vigorously all summer, repotting when necessary.

Plants, like people need air; open the doors several times during the day and let in pure air from outside. When sweeping, hang a curtain from the ceiling to the floor of your window garden to keep out the dust. Give each plant a plunge bath once a week, if possible.

Two of the best tools in the flower garden are a medium sized trowel and a longhandled steel rake with head about five inches long. With this rake, one can "tickle the earth" between the close set plants much better than with a hoe. A good sized, child's express wagon is also very useful about the garden for hauling flower pots, soil, fertilizers, mulching materials, etc.

Don't hurry the mulch off the bulb and pansy beds too early; there are frosty nights still ahead of us.

Try the mammoth fringed Allegheny hollyhocks, either in clumps or long rows, in the hardy border. They are vastly superior to the old-fashioned varieties, and worthy of a conspicuous position.

Masterpiece, is the appropriate name of a fine new pansy. The border of each petal is curled and fluted, giving a soft airy effect most delightful. The flowers are large and color range all that need be desired.

The Shasta daisy is indeed a "daisy," but alas! in our state it is against the law to grow any kind of daisy; so we have to content ourselves by plucking the wild ones, which grow anyway, whether recognized as a lawful citizen, or outlaw.

To shade the ends of the porch try golden-leaved honeysuckle, the light green leaves are beautifully netted with pink, gold and cream; flowers are white and fragrant. A sunny location brings out the variegated character most strongly.

Crimson rambler roses should be planted where they get direct sunlight; an east or south porch suits them best. If planned in shady spots they incline to mildew.

An old corn-popper is just the thing to sift soil for delicate seeds; fill shallow boxes nearly full, then scatter seed thinly over surface, give the popper a shake or two and the seed will be sufficiently covered.

Start dahlia seed early in March, transplant two or three times to get good stocky plants by the time danger of frost is past. The tubers do better planted out rather late. Experts say June is plenty early.

**MONTGOMERY WARD & CO.**  
Michigan Ave. and Madison St., Chicago. 49

### FROZEN HOUSE PLANTS

Yes, we got caught, or rather, our plants did, one cold night last week; all the begonias were ruined beyond repair, unless they send up shoots from the roots. The other plants came out of the hospital showing little, if any, damage from being too familiar with Mr. J. Frost. As soon as discovered, the frozen plants were removed to a cool dark cellar, sprinkled with cold water and left to thaw out gradually. We shall take pains to move all plants back from the windows hereafter, when the mercury takes a tumble. Seems as if it has been so near the bottom all winter, it had not far to fall. What a winter we've had! And how good it will look when we see the verdure of spring again.

### BROWALLIA GIGANTAE

One of the charming blue flowers useful as a bedding plant or for cut flowers is the Browallia. In habit, it is much like the Lobelia, bushy and compact; it is always in bloom and produces hundreds of indigo-blue florets, from one to one-half inches across. It is easily started from seed sown in boxes in the window, or in open ground after the weather becomes settled, or one can obtain small plants from the florist who raises bedding plants for sale. For cemetery planting nothing could be neater.

ONTARIO VETERINARY CORRESPONDENCE SCHOOL, Dept. 30, London, Canada.

### COILED SPRING FENCE CO.

Very few fence manufacturers have enjoyed such a marvelous increase of business as that experienced by the Coiled Spring Fence Co., Box 88, Winchester, Indiana. They inaugurated the system of selling direct to the farmer at wholesale prices, and have furnished a fence so completely meeting the needs of the farmers that the Company as well as their product has leaped into popular favor. It is certainly gratifying to enjoy the confidence of the farmer to such an enviable extent, and it is just as certain that nothing short of their excellent fence, and square dealing could have won such a liberal patronage.

### AUTUMN FAVORITES

Among the annuals, one should never fail to plant seedling chrysanthemums, salvia splendens, cosmos and asters, these will stand by until killed by frost. With the exception of the aster, seeds of all these varieties should be started very early in spring either in window boxes or hot bed if one has no green house. The chrysanthemums are usually hardy enough to be classed as perennials and one is sure of delightful surprises both as to form and color; many are as handsome as their more aristocratic cousins petted by the florist. A bed or hedge of scarlet salvia is simply grand for display, while the asters and cosmos are equally attractive in the garden or house, any of these flowers will last for weeks when cut and all have fine long stems for vases. Be sure to add these to your list when sending in your order for seeds and bulbs.

### IF

If we notice little pleasures  
As we notice little pains,  
If we quite forgot our losses  
And remembered all our gains;  
If we looked for people's virtues  
And their faults refused to see,  
What a comfortable, happy,  
Cheerful place this world would be.  
[Selected]

### Names of Farmers Wanted

The Valley Farmer wants names and addresses of farmers anywhere in the U. S. They want to get them interested in their big farm magazine which now has a circulation of over 100,000 copies and is acknowledged to be the best farm paper in the West. The subscription price is 50c per year, but if any of our readers will send them five farmers' names and addresses and ten cents in stamps or silver they will enter you as a subscriber fully paid for a whole year. Address Valley Farmer, 521 Jackson street, Topeka, Kan.

BIRMINGHAM, ALABAMA

When writing mention UP-TO-DATE FARMING.

### PRUNING ROSES

Everblooming roses, the trees, are benefited by a good pruning. If cut back to about six inches of the old wood, strong new shoots start out and furnish abundance of bloom. In the more northern states the plants are usually winter pruned, i. e., they freeze down quite closely to the ground; in that case all that is necessary is to cut away the injured portion. Farther south, where the wood is not frozen, the bushes should be cut back about one-half. Hardy roses bloom better for more moderate cutting. Yellow roses scarcely ever need any pruning. The whole matter must be regulated by habit of growth. Trim to neat shapely appearance, taking out all dead or diseased wood just before growth starts in spring.

## For a Short Time Only

Constipation and Indigestion may give rise to nothing more serious than a distressed feeling or discomfort due to an over-worked or impoverished condition of the Digestive Organs. A dose or two of

## Beecham's Pills

will easily put this right, but if neglected—if the early symptoms are disregarded—what a burden of illness may be the consequence.

### BILIOUSNESS, SICK-HEADACHE, NERVOUS DEBILITY, LIVER AND KIDNEY TROUBLES,

are all caused by some important organ or organs failing to do their duty properly. No one who values life can further neglect the warning symptoms. The best and wisest, as well as the simplest plan, is to always rely on

THE "LITTLE DOCTOR" IN THE HOME—

## Beecham's Pills

By following the instructions with each box of pills thousands of women all over the world have saved their lives.

BEECHAM'S PILLS purify the blood, give strength and vigor to the digestive organs, give vim and tone to the nerves and put the whole body in a healthy condition. A box of BEECHAM'S PILLS should always be kept in the house as, like a "stitch in time," they will invariably have the most beneficial effect and save much future worry and anxiety, as well as many a fit of sickness and much expense.

Sold by Druggists at 10c. and 25c. Or mailed by B. F. ALLEN CO., 365 Canal St., New York City, if your druggist does not keep them.

# Up to Date

## HOME ON THE FARM

We invite correspondence for this department. Address all communications to Mrs. Eva Alice Morse, Ed. "Home on the Farm," care of Up-to-Date Farming, Indianapolis, Ind.

### CHEERFULNESS

Of all graces, the greatest is Cheerfulness. One may be honest, patient, self-sacrificing and pious, and still be dreadful to live with, because of a doleful countenance and voice. But the cheerful man or woman who bravely puts personal troubles in the background, facing the world with a laugh, is a blessing, not only to those about them but to themselves as well. If we could learn not to meet trouble halfway or run after it when it is gone by, the problem of happy living would be half solved.

"Thankful for the sunshine  
An' thankful for the rain;  
Thankful if the troubles  
Of the past won't come again;  
Thankful for the bitter  
That makes us prize the sweet;  
Ain't no use o' hangin' back  
From thankfulness complete."

Honestly, now, have we any right to go moping through the world, throwing a wet blanket on the spirits of everybody? If we must whine and complain, we'd better fit up a Howlery-Growlery room, where we can go and enjoy our misery to the full and give those who'd to be cheerful and pleasant a chance for their lives. Being pleasant is more than a virtue, it's a duty.

**AMATEUR PHOTOGRAPHERS!** Develop your plates in daylight. No Dark-room needed. Write for circular.

### FOR WEE THIMBLES

What small maiden is not possessed of a desire to run the sewing machine, and do all sorts of intricate work by hand? How many are interested in running seams hemming or gathering a piece of cloth simply for practice? Every child likes to construct something, a definite, special something, and this natural liking should be encouraged, not repressed. Don't drive Mary from the sewing machine, but kindly show her how to thread needle and shuttle, how to wind the bobbin smoothly, in fact, all the detail of plain work, you will be surprised to see how readily she takes to the work, for children always learn things in half the time it takes an adult. A grown man or woman cannot learn to row, swim, skate or ride a wheel half as easily as the boy or girl. My little girl was always "bothering" about the sewing machine, seizing every opportunity to run it when mamma was busy elsewhere. At last in sheer desperation, I determined to utilize her ambition. I bought some checked gingham for aprons and told her I would hire her to make them for me and she could have the money to buy cloth for some fancy white aprons for school. With my little showing she cut out the plain work apron; taking pains to cut by a thread and match the checks in sewing the seams. The hem was easily kept even by folding on a line of checks, and basting it in place; after stitching it was ornamented with a simple design in cross-stitch, done with san-silk. Next the ruffler was adjusted to the machine and her first lesson in gathering was taken, the band was sewn on, then the strings were hemmed and soon my little seamstress had her first real garment ready for inspection and approval. The coveted white aprons are assured, and both parties satisfied.

### MARCH METHODS IN THE HOUSEHOLD

What a long dreary blustering month of storm, wind, mud and slush, is old March! Yes, if we will it so, but we can shorten it a good deal by doing agreeable work beside the cheerful sitting room fire, getting ready for the more strenuous work of cleaning house, making garden, setting hens and spading flower beds, which will be crowding April and May days so full. We aim to get bedding and table linen made up during January. Every day dresses, aprons, shirts for the men folks and carpet rags (if we have them), are gotten out of the way during February. We sew the rags on the machine mostly, either hit or miss, or if for rages all the blue ones by themselves, red ones the same, and the rest hit-or-miss. These woven with three colors of warp in "honeycomb" style, make pretty and durable rugs for living rooms and chambers. We aim to have rags and warp in the hands of the weaver early in March so rugs or carpet will be ready to put on the floors as soon as cleaning is done. Then comes the real enjoyment of the month, making up the best dresses, shirt waists, etc., for the summer's wearer. This is a real pleasure and easy to accomplish as the stores display their finest wash goods early in the year, and summer fashions are foretold in late winter.

The roads in the country are usually so bad, we are not apt to have much company, and there are no holidays, so we can give our undivided attention to the sewing, and what a lot of it we can turn off. The evenings are given over to the catalogues of seeds and nursery stock, and planning the garden and field work. As a co-operative family, mother and the girls are interested in every rod of ground in the farm and father and the boys discuss the merits of vegetables and flowers with equal interest. Work in the poultry yard is planned also, and supplies, stock, or eggs for hatching are ordered, if we decide to purchase. So our dreary days roll round almost before we realize it.

Please write for Catalogue; it's worth its weight in gold to anyone interested in Diamonds.

**BOYLSTON DIAMOND CO., 308 Boylston Building, CHICAGO, ILL.**

### MORE LIGHT

A business man said if there was a sure way of telling whether or not a farmer was prosperous, it was simply to observe the way his home was lighted up at night. This man often had occasion to take long trips into the country, and, coming in after night, he always commented on the people about as follows, if he happened to have a friend with him: "Now there's John Brown's house on the left. I wouldn't trust that man any farther than I could see him for he's too stingy to live. Look at that light! I'll bet his bill for oil isn't ten cents a month. His children left the farm long ago, and I don't blame them. I've been in his house and you could barely find your way around in the dim light and yet he expects his wife to patch and darn all evening."

Then perhaps a brightly lighted home would loom up and the business man was delighted. Often the strains of music or merry voices helped out his argument, as he dwelt upon the character of the farmer who lived there. Long residence in the county made him familiar with most of the people and his judgment was almost sure to be correct. Many other travelers grew to watch the lights at night and bore him out in the belief that bright lights and happy families go together invariably.

I have in mind one home where a No. 2 burner lamp sits in the middle of the big table and nine persons try to see by its feeble rays. Surely poor eyesight must result from such unwise saving. Good lamps may be bought as low as fifty cents apiece and there is no excuse for dirty chimneys or charred wicks. It is much better to buy expensive oil than spectacles for your children and many a case of nearsightedness can be traced directly to dim lights.

Many mothers hesitate about using large lamps for fear the children will upset them, but a heavy lamp is less apt to be overturned than a little one. For the kitchen it is well to have bracket lamps but in the other rooms put your substantial ones on good tables and there is hardly a bit of danger. Of course no one would think for a minute of leaving small children alone with an insecure light, but even babies may be taught to let stoves and dangerous things alone, if they are not spoiled by indulgence.

Another idea that prevails in many homes is that of having only one or two lamps besides the parlor one. Some one is continually jumping up with the only light to search for articles in another room, leaving a circle of disgusted people to wait for her return. It costs very little to have a row of well kept lamps in the kitchen ready for use at any moment, and certainly it is more enjoyable to be able to read or work without being interrupted.

A few country homes have large gasoline lamps that shed a brilliant white light and some are illuminated with natural gas in the gas regions, but for the most part, farmers must depend upon coal oil for light. It is never economical to buy a poor quality or oil for poor lights are the result. Always have a certain time to fill and clean the lamps and never, never let that time be after night. The chimneys may be washed with the breakfast dishes, the bowls filled and paper sacks slipped over them to protect from dust. By this means they are out of the way for the day and in perfect trim for the evening. If your children like to visit certain homes at night instead of asking their playmates to sometimes spend the evening with them, try to find out the cause. Ten to one they are in love with some brilliantly lighted sitting room where fun and frolic reign, for who could be cheerful in a dim room? The mercury of one's spirits goes down with a rush upon entering a gloomy, ill-lighted place; but rises when light breaks forth.

HILDA RICHMOND.

### IF YOU HAVE RHEUMATISM

and will write to the Magic Foot Draft Co., G. A. Oliver Bldg., Jackson, Mich., mentioning UP-TO-DATE FARMING, they will send you a pair of their foot drafts, free on approval, to try. If you are satisfied with the benefit received from the drafts, you are expected to send one dollar to pay for them. If not, send nothing. You decide. This Company claims to have cured many prominent people in every country on earth with their simple, cheap remedy. They all get the drafts without paying a cent in advance, and you can now do the same.

### WHAT IS YOUR EXCUSE

If you are offered happiness and refuse it, What is your excuse? If some one offers to supplant misery and distress with peace, enjoyment of life and comfort of body, and you allow it not, What is your excuse? Mr. Theo. Noel and the Theo. Noel Company of Chicago, whose announcement appears in these columns, wants to know what is your excuse, if you are sick and ailing and refuse to accept the offer of thirty days' trial of Vita-Ore at the Company's risk which they are making to the readers of this paper.

The offer "PERSONAL TO SUBSCRIBERS" has appeared in these columns a number of times during the past two years and hundreds are to-day blessing the day they read and accepted it, else the Company could not continue its announcements from time to time. If you fear its genuineness, ask any of your fellow subscribers who have accepted it, and then, if YOU don't accept, What is your excuse? You need the medicine; you can have it for the asking, you take no risk; What is your excuse?

The editors of the best periodicals in the country endorse the Company and the offer—let their endorsement be YOUR EXCUSE for writing today for a package on trial. See large announcement on last page of this issue.

**50 CENTS.** Eskridge's Elegant Mineral Cabinet of glittering gold-bearing ores, in all their native purity, from highest gold mines (12,000 feet altitude) of the great Rocky Mts. Rare curiosity. By registered mail 50 cents.  
J. W. ESKRIDGE, Newmire, Colorado.

**MONEY** C. S. A. \$5 bill sent to any address for 25c. Will give \$50 to any one who can detect it. FRANK K. SHILLING, NAVARRE, OHIO.

### WE WILL PAY HALF YOUR EXPENSES TO INVESTIGATE

WE WANT RESPONSIBLE MEN, with cash, to act as bona fide agents for a fuel saving apparatus to put on any stove or furnace. We want to correspond with men who mean business; who will take the agency for this money saver after they see with their own eyes how it does it. # Up-to-Date Farm Buildings

EDITED BY E. A. PAYNE

What has been kept in mind in designing this cottage is the attainment of a maximum of room compatible with safety, health and comfort and a proper regard for beauty in features of construction. The cellar has been omitted because its cost would take off one room from the house if the total cost is to be restricted to the sum named. The entrance hall not being large enough for a reception hall, is placed on the side where its front door and staircase are nearest to the workroom and to the sitting room as well. The kitchen is isolated as much as possible from the other rooms of the house, thus making a pleasanter house than would otherwise be the case.

with covered siding, and the roof shingled. The outside is painted three coats and the inside trimmed with natural finished pine. The first story is 9 feet and the second 8½ feet, and the house could be built in most localities as shown for \$700.

The door in the dining room leading to the closet under the stairs is the means of saving many steps to the housewife. This may be used as a serving closet from the kitchen. The food prepared or the dishes to be washed may be passed through it to and from the kitchen.

The foundation is of brick. The chimney, which starts in two parts at the bottom, ends in a single stack at the top. The outside walls are weather boarded.

## A MARVELOUS NEW IMPLEMENT

Some few years ago, shearing machines were invented and were adopted eagerly by large flock owners in all parts of the world, but they were expensive and were run by power and were only suitable for large stations. It was very evident that a machine for the owner of a few sheep was wanted and wanted badly. To meet this demand the Stewart machine was brought out.

There is an enormous demand for a thoroughly reliable machine to be sold at a small price, which is simple, strong and durable and at a price well within the reach of every sheep owner. The new machine is made equally as well as the previous models and so simple that any farm hand will find it easy to operate.

The price is but \$12.75 for a complete outfit, which the company claim is saved on the first fifty sheep shorn. A very interesting little book has just been published by this company entitled "Some Shearing Suggestions" by R. M. Marquis, Champion Shearer of the world, which will be sent to all parties applying for same who mention this paper. It is worth reading and can be had free by addressing the Chicago Flexible Shaft Co., 224 Ontario St., Chicago, Ill.

## ROLLMAN FOOD CHOPPER

Will chop a given quantity of meat or other food with less labor than any other household machine made.

Will cut a given quantity of meat or other food as quickly as any household machine if you reckon on the time required for cleaning the machine.

Cuts all meats and foods with less waste than any other machine.

Is small and of light weight, is convenient to handle and infinitely better adapted to household use than the old style cumbersome machines.

Has Steel Cutters—fine, coarse and nut butter cutter. Chops three-fourths pound raw or cooked meat per minute, fish, vegetables, fruits, nuts, spices, coffee, etc. A handy and efficient household tool, adapted to all household requirements. This chopper will cut one pound of meat quicker and with less waste than any household machine made if you reckon time for cleaning machine. Easiest cleaned.

**OUR OFFER.** For 75 cents we will send on UP-TO-DATE FARMING one year, "Kitchen Krinkles" a book of recipes by Mrs. S. T. Rorer, and full directions. For \$1.00 (25c extra) we will deliver it to you any where in the U. S. Give Express office as well as P. O.

**UP-TO-DATE FARMING**  
INDIANAPOLIS, IND.

## Implement Prices

Guaranteed tools—the kind you like to use.

Don't pay double prices, when a postal will bring you our free Implement Catalogue No. 145, just off the press, completely illustrating and describing all the new and approved tools for 1904. We sell only re-

Hay Tools All Kinds.

The leading manufacturers of the United States make our goods: some we make ourselves. Our implements are in use everywhere, satisfying others, and we know they will satisfy you.

Write at once for our free catalogue No. 145, it illustrates, describes and prices almost every kind of a farm tool or implement known, from the Midget 60c. corn sheller to the well-known Banner Disc Harrow. We have steel beam plows as low as \$8.30, cultivators for \$9.25, corn sheller for \$4.10, harrows at \$8.75, gas en-

gines \$74.50, all honestly made, correct in design and guaranteed to please. Let us send you a catalogue and you can see for yourself. You can look over the entire lines, compare our prices and see for yourself that we can save you anywhere from 15 to 40 per cent.; catalogue also gives freight rates, explains our ship on approval plan, contains order blanks and gives much desirable information. The spring edition is now ready. Ask for Implement catalogue No. 145. Address

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

### CHAPTER XIV (continued).

"That is your affair," the woman replied, without a shade of concern.

I thought I could perceive a growing embarrassment in her manner as de Valence came closer to her, remembering, for so she must, that we could hear very word through the portiere. She collected herself bravely; de Valence must not suspect.

"Come, I'll pay you," and she put her lips upward so coolly I wondered he should care to touch them. Jerome raged silently, for I confess we were both guilty of looking as well as listening. De Valence leaned over her, but lifted his head again.

"Celeste—Madame, so cold. I'd as lief kiss the marble lips of Diana in the park."

"Oh, as you please; you may kiss them, too, if you like," she shrugged her shoulders, and was not pretty for the instant. "I pay as I promise; it is a mere barter of commodities. You may take or leave it as you choose."

The man's attitude of dejection touched even me, but the woman gave no sign of feeling or compassion, only intense impatience.

"Well, Monsieur, am I to sit waiting an hour? Are you come to be a sordid huckster to wrangle over your price?"

De Valence bent over her again, touched the lips lightly, and strode away, gathering up his papers from the table as he went. Two only were left, and those Madame held listlessly in her hand.

We felt thoroughly conscious of our guilt, Jerome and I, when we put aside the screen and re-entered the room. There was a certain air of resentment in his manner, as if he would call her to account, and I heartily wished myself elsewhere. Perhaps it was all for the best; my presence prevented, for the time, explanations, and I fancy the woman was grateful for the respite. Her lassitude, and effort to overcome it, smote me to the quick, and right willingly I would have aided her had I but the power. To Jerome she spoke:

"You heard—all?"

He nodded.

"And saw?" Less resolutely this question came. The words conveyed the wish, unexpressed, that he had not heard. To me she gave no thought. Again Jerome nodded, and looked away.

"It is the penalty and the price of power. Oh, Jerome, how fervently I have prayed that this all had not been," she went on oblivious of my presence.

Jerome's resentment faded away at her mute appeal for sympathy, and I am very sure he would not have me chronicle all that then occurred. Suffice it, that I employed myself at the window, some minutes perhaps, until a hasty rap on the door, and the maid bore a message which she delivered to her mistress in secret.

"Bid him come in at once if it please him."

"He is already here, madame," the girl replied.

We had barely time to gain our former hiding place before a man richly dressed, and limping, entered; the same I had seen in the gardens of Versailles. I was now intensely interested in this little drama, which, as it were, was being played for my own benefit, and gave closer study to the Duke of Maine who hurried in.

The weak, irresolute face bore no trace of the dignity and power which made his royal father at times truly great; it showed, too, but little inheritance from the proud beauty of the de Montespan. Vastly inferior to both, and to his ambitious wife whose schemes he adopted when they succeeded and disowned when they failed, the Duke trembled now upon the verge of a mighty intrigue which perchance would make him master of an empire, perchance consign him to the Bastille or to the block. Well he knew that the abandoned Philip of Orleans, though he sometimes forgot his friends, never spared an enemy. With these thoughts haunting him, his timid mind shrank from putting his fortunes to a decisive test, and he looked forward, dreading to see the increasing feebleness of the King hasten that day when a quick

stroke must win or lose.

He approached Madame at the table with a semblance of that swagger affected by the weakling in presence of women, yet permitting the wandering eye and uncertain gestures to betray his uneasiness. Something had evidently gone wrong with my lord.

"Have you heard, Celeste, of Yvard?" he inquired, dropping into a seat.

My ears quickened at the familiar name. "Well, what of him?"

"He has lost the Louisiana dispatches, and I know not what they contained."

"What!" exclaimed the woman, as if genuinely alarmed, and learning the bad news at first hand.

"Yes, the cursed fool lost them in some drunken brawl in the city. We have had the place thoroughly searched, but—" he finished the sentence with a shrug to express his failure.

"What if they should reach Orleans?" he continued evenly. "My men fear he has gone to him anyway, hoping to play in with both for pardon. I'd feel much safer could we only lay our hands upon him. He is the one man beside ourselves here who knows—who knows, anything," the Duke went on with growing trepidation.

"Well, make yourself comfort, my lord. I took the responsibility to detain Yvard in Paris."

"You?" he sprang from his chair in astonishment. "You? Why? How?"

"I thought your safety demanded it. My lord is too generous, too confiding," she threw toward him a glance of concern poor de Valence would have periled his soul to win. You see, when we entrusted him with this business, it was so delicate a mission, I set a watch upon him—some of my own people of Anjou—and when he acted negligently they reported to me. He began drinking, too, and freely, so I fixed his discretion. I now have the man safe in Paris. What would my lord with him?"

Du Maine fixed his cold eyes upon her, for a short space, then,

"It would be prudent to put him quietly out of the way," he suggested, the thin lips closing cruelly. "No, hold him, we may have further need for his sword. But have a care that he talks to no one."

Madame had raised no objection to the Duke's cool command that an end be made to Yvard, yet I did her the credit to suppose it was because she well knew she might do as she liked, and he be none the wiser.

He now settled himself upon a divan near Madame, with all the complacency of a man whose own foresight had saved him a serious trouble, and said after mature deliberation, gazing thoughtfully at the sportive cherubs on the ceiling:

"Well, it could not have been so bad after all, for I observed the caution to prepare a warning for our friends across the frontier, and had arranged for a friend of ours to be entrapped by Orleans, betraying misleading dispatches to him. A fine plan, think you? Menezes you know is devoted to me, and I have promised him a patent."

"Who did your grace say was to be this friend?"

"Menezes."

"Why Menezes?"

"I have done much for the fellow, and he is not over clever; clever enough for the purpose, you know, but—"

"Does my lord not remember Menezes is a brother of the Perrault whom you had hanged some years ago? I fear you have been badly advised."

"No! I do not recall him."

"The rogue who cast a stone at your horse?"

"Ah, I bring him to mind. Short, thick-set fellow, who whined something about hunger, children and the cold. Ugh! What concern have I with the rable? But how do you know this, Celeste?"

"I have long mis doubted him, and had the rascal overlooked. He is of Picardy, and his father was attached to St. Andre, who like not His Grace, the Duke of Maine."

"No, by my faith, he hates me. Ah, I see it all. Celeste, you should have been a man, a man's wit almost you have. Really, so much brain is wasted in that pretty head of yours. Madame will come to comprehend she does not know it all—yet she

torments me till I give in. I think I shall take firmer hold, and manage my own affairs to better advantage than she. Ugh! What a scrape she was like to get me in."

He gradually regained the expression of complete satisfaction with himself, and prepared now to show the masterpiece of his work, the contract with Antonio of Modena, the money lender.

"Here are our financial plans; the usury is high, but there is great risk, so thinks Antonio; egad! perhaps he is right, though it is possible we may pay him. Altogether a most excellent plan, my own work—"

Madame interrupted him, thinking perhaps it was wise that he could not throw the blame on other shoulders. She took advantage of a pause to examine the document with apparent care.

"Yes, excellent, but let us see. Three, seven, twelve, fourteen, twenty-three—here is some mistake. Let us go over it again. Yes, here it is. This is not your accounting. This miserly Lombard would cozen you of your honor if he could but sell it again. Here is an error of near ten thousand livres; let me correct it for you."

And while he stared at her she deftly copied the correct amounts from the slip she held concealed in her hand. She knew the figures were his own, but gave no

**For Kidneys, Bladder and Rheumatism**

**New Discovery by Which All Can Now Easily Cure Themselves at Home—Does Away With Surgical Operations—Positively Cures Bright's Disease and Worst Cases of Rheumatism—Thousands Already Cured.**

**SENT FREE TO ANY NEEDY PERSON**

At last there is a scientific way to cure yourself of any kidney, bladder or rheumatic disease in a very short time in your own home and without the expense of doctors, drugs or surgeons. The credit belongs to Dr. Edwin Turnock, a noted French-American physician and scientist who has made a life-long study of these diseases and is now in sole possession of certain ingredients which all authorities say will positively cure Bright's disease, diabetes, dropsy, gravel, weak back, stone in the bladder, bloated bladder, frequent desire to urinate, albumenuria, sugar in the urine, pains in the back, legs, sides and over the kidneys, swelling of the feet and ankles, retention of urine, scalding, getting up nights, pain in the bladder, wetting the bed and such rheumatic affections as chronic, muscular or inflammatory rheumatism, sciatica, rheumatic neuralgia, lumbago, gout, etc., which are now known to be due entirely to uric acid poison in the kidneys—in short, every form of kidney, bladder or urinary trouble in man, woman or child. All this and more is explained in a 64-page illustrated book which the doctor wants you to have as well as a trial treatment of his discovery, and you can get them both entirely free, without stamps or money by addressing the Turnock Medical Co. 561 Turnock Building, Chicago, Ill., and as thousands have already been cured there is every reason to believe it will cure you. If only you will be thoughtful enough to send for it.

**"THE BLACK WOLF'S BREED" by Harris Dickson** in the September first issue of **UP-TO-DATE FARMING**. The twelve back numbers containing the first installments will be sent for **30c.** **UP-TO-DATE FARMING, Indianapolis**

taken.

"I doubt not you would have looked over it more carefully before you signed it, and these matters would have been detected by your own eyes."

"Yes, yes," he replied nervously, reaching out his hand for the paper lest she observe—what her quick eyes had at first seen—that the contract already bore his signature and seal. She gave it him and he replaced it carefully in his breast.

"I will give these careless secretaries a lesson they sorely need," and in this disturbed condition of mind he blustered out of the apartment, forgetting his usual gallantries, which Madame so diplomatically put aside without giving too serious offense.

Jerome leaned against the window-facing, his unseeing eyes resting on the park beyond the little garden at our feet. His brow lowered, not as of a storm, but with the murkiness of a settled and dismal day. Perchance his thoughts wandered with his childhood's sweetheart amid the fertile vales of far away Anjou. Nothing was more distant from him than the gilded furnishings, the frescoes, the marble Venus at his elbow. Beside her table, alone, and abstracted as Jerome, the woman toyed with a dainty fan; her impassive beauty, born of rigid training, betrayed not the inner desolation. Her face was calm and serious enough, the skin lay smooth and glowed with all those delicate tints that women love.

Her quietude reminded me of the slumbering ocean, glassy and tranquil, whose unmarred surface conveyed no hint of sunken ships beneath, of cold dumb faces tossing in the brine, of death-abysms where wrecks abandoned lie.

I slipped away without rousing a protest from Jerome, and closing the door softly left them to their meditations and to each other.

#### CHAPTER XV.

##### New Hopes.

Now, that I was well out of their way, it came to me to wonder what I should do with myself until Jerome might please to seek me again, but accident favored me with occupation. Passing through the hall I heard a woman's shrill voice, lifted in anger, berating some unfortunate attendant.

"You wretched hussy, to speak rudely to

## RHEUMATISM

### Cured Through the Feet

Thousands are cured at home every month by **MAGIC FOOT DRAFTS** Why not YOU?

#### Try Them—FREE

The Drafts cured Mrs. W. D. Harriman, wife of Judge Harriman of Ann Arbor, Mich.

They cured H. C. Van Valkenburg, Providence, R. I., of an intensely painful case of muscular rheumatism.

They cured severe rheumatism of the arms, neck and back for T. C. Pendleton, Jackson, Mich.

Mrs. Caspar Yahrdsdorfer, Jackson, Michigan, 70 years old, was cured in a few weeks, after suffering 80 years.

The Drafts cured James Gilbert, Locomotive Dept., Mich. Cent. R. R., Jackson, Mich., after 27 years of pain.

Dr. Van Vleck, Jackson, Mich., writes that they cured him and he is now using them in his practice.

They have cured hundreds of cases probably just like yours. Isn't the chance worth taking? You try them free. Send us your name. We will send you by return mail a pair of Magic Foot Drafts—prepaid. If you are satisfied with the comfort they give you, send us One Dollar. If not, you send us nothing. **You Decide.** Magic Foot Drafts are worn without the least inconvenience, and cure rheumatism in every part of the body by stimulating expulsion of acid poisons through the great foot pores. Splendid booklet, illustrated in colors, free with the trial Drafts. Don't suffer, but write today to the Magic Foot Draft Co., G. A. 5 Oliver Bldg., Jackson, Mich.

a guest of mine, who did but make to you a pretty speech. I'd have you be most charming to Monsieur Viard. Remember, you are only a hireling, and need give yourself no such fine and unseemly airs."

The door just ahead of me was thrown violently open, and out strutted a tiny lady in a most disproportionate rage. She was beautiful neither in face nor figure; she was diminutive, and petulant of manner, but bore herself with an air of almost regal pride. It was she whom I came to know as Madame du Maine, a daughter of the proud and princely Condes. Following her, weeping bitterly, came the sweet maid who had spilled the tray of flowers on me at the door. I stepped back into an alcove, lest, perchance, she look behind, and aimlessly I straggled out into the gardens as best I might.

The Villa being a strange ground, it fretted me to be alone therein, with nothing to think of but this trouble of my friends. And Madame de Chartrain, did I blame her? Blame Jerome? Yes—no. I hardly knew. Viewed at a distance, and impartially, such things strike us with aversion, and we are quick to condemn. But the more I thought the nearer I came to concluding it took something more than a mere mummery to make a wife. All the ceremonials and benedictions and lighted candles and high-sounding phrases could not bind a woman's heart, where that heart was free, or called some other man its lord. Yet the bare fact remained, this woman was a wife, and to me, at least, that name had always been a sacred and holy one.

To what vain or wise conclusions my cogitations may have led me, I conceive not, for another small matter now quite absorbed my whole attention. It was the beginning of that one dear hope which speedily banished all others. It is said the tripping tread of Fate doth leave no print upon the sand to mark its passage, nor doth she sound a note of warning that the waiting hand may grasp her garments as she flies.

A gleam of white in one of the summer houses caught my roving eye, and quite aimlessly I passed the door. A chit of a child crouched upon the floor, and leaned forward on the benches, weeping as though each sob were like to burst her little heart. I grant it was no affair of mine, yet my tears were ever wont to start, and eyes play traitor to mine arm at sight of woman's trouble. Without thinking one whit, I stepped in beside her, and laying my hand gently upon the lassie's shoulder, implored that she weep no more.

Up she sprang to face me, flushed and indignant. Verily was I abashed. Yet there was that of sympathy and sincerity in my voice and mien—or so she told me after—which turned her wrath aside.

"You, Monsieur; I thought it was old Monsieur Viard, he pursues me so."

It was the same little maid I had seen in the hall, and that was why I trembled. She wept now for the scolding she had got. I caught my breath to inquire why she wept.

"Oh, Madame, Madame—it is the humor of Madame to humiliate me of late; she reminds me ever of my dependent position. And Monsieur," the child straightened up proudly till she was quite a woman. "Monsieur, I come of a race as old as her own—and as honored." "Charles is poor—the Chevalier de la Mora, you know. But now he goes to the colonies, and will take me with him."

It was a silly enough thing to do, but about here I stalked most unceremoniously off, leaving her to her sorrow and her tears. Since that day I have often smiled to think how foolishly do the wisest men deport themselves when they first begin to love. Their little starts of passion, their petty angers and their sweet repentances—all were unexplored by me, for Love to me was yet an unread book.

At the door of the house M. Leroux hailed me graciously:

"Well met, my dear Captain; we go to the park, and would have you bear us company. Where is M. de Greville?"

I explained as best I might his absence, and followed them in lieu of better employment, forgetting for the time the threatened fete. Before I could extricate myself, these new friends had led me into a brilliant circle, and duly presented me to Madame, who sat on a sort of raised platform in the center.

She showed no traces of her recent anger and spite, vented upon that patient girl who now claimed all my thought. Her ladies, some languishing literary notables of the day, and officers, stood about discussing the news, and talked of naught but some fetching style or popular play, through all of which I struggled as bravely as my dazed condition would permit. It seemed I would never grow accustomed to the like, though it is said many men find great delight in such gatherings. But one thing I searched for most eagerly.

Behind Madame's chair, after a little,

## PILES

Instant relief, final cure in a few days and never returns. No purge, no salve, no suppository. REMEDY MAILED FREE Address, C. J. MASON, Box 519, New York, N. Y.

## A WIFE'S MESSAGE

### Cured Her Husband of Drinking.

#### Write Her Today and She Will Gladly Tell You How She Did It.

My husband was a hard drinker for over 20 years and had tried in every way to stop but could not do so. I at last cured him by a simple home remedy which any one can give secretly. I want every one who has drunkenness in their homes to know of this and if they are sincere in their desire to cure this disease and will write to me, I will tell them just what the remedy is. My address is Mrs. Margaret Anderson, Box 487 Hillburn, N. Y. I am sincere in this offer. I have sent this valuable information to thousands

and will gladly send it to you if you will but write me to-day. As I have nothing whatever to sell, I want no money.

## RHEUMATISM

Wonderful New External Remedy Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

#### Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address **THIS VERY DAY.** PROF. S. M. WATSON, Dept. 19, Battle Creek, Mich.

appeared the sweet shy face of my weeping Niobe of the park. I felt she saw and recognized me, and my face grew warmer at the thought. I made bold to ask one of the gentlemen standing near me who the lady might be, and not desiring to point at her, simply described her as well as possible, and as being in attendance upon Madame.

"That, Monsieur, is Madame Agnes, wife of the Chevalier de la Mora; the wittiest and most beautiful woman at Sceaux, and the chilliest."

Noting the change of countenance which I sought in vain to control, he went on banteringly:

"Beware, M. le Capitaine, half the men at Sceaux are in love with her, but she has the execrable taste to prefer her own husband. Such women destroy half the zest of living. Beside, the Chevalier has a marvelous sword and a most unpleasant temper. Bah! how ludicrous it is for men to anger at trifles."

"But," I faltered, "she seems a mere child."

"Yes, but none the less charming," and he turned away to continue his interrupted conversation with the daring young Arouet, the same who was to acquire universal fame under the name Voltaire.

Thus rudely were my new-awakened hopes of love cast down. A wife, and the wife of a friend! She had spoken to me of "Charles," and of going with him to the colonies. A wife, yet for all that, I knew I loved her.

They say the road to hell is paved with good intentions. My intentions were the best that ever made excellent cobblestones toward the infernal gate. Only a few days and I would be gone; surely those could be passed through in peace. She was a wife—I would never let her know that all my heart was hers. This I determined. But man is weak, and the very atmosphere of France dried up the springs of every honest impulse. Everywhere was scoffing, raillery and disbelief. Honor, friendship and virtue were regarded as the vain chimeras of a fool. Why should not I enjoy life while I might?

Directly Madame Chartrain entered without intruding, and composedly took her place among the ladies who made room for her near Madame. Nothing in her manner bore evidence of her recent conflict. It was really marvelous how the life these women led schooled them to a stoicism any Choctaw brave daring the stake might envy. She nodded to me gaily, and I stopped to touch her hand.

"Where is M. de Greville? Is he not to be with us this afternoon?"

I looked her in the face, wondering, for could she not answer her own question far better than I? She read my meaning, but her glance never wavered.

"Ah! There he is, among the gentlemen. I feared he found Sceaux too dull after Paris, and he had promised us a bit of his work. You know he composes famous verses to some fair and distant innamorata."

"Indeed, Madame, I suspected not his talents," I replied. Our conversation lagged, for the programms had already commenced, and we gave our attention to the reading of some curious letters, said to have been written by two Persians of distinction then traveling in Europe, which were being published anonymously in Paris. At first, I could not bring myself to listen to such twaddle, dubiously moral, which, under the guise of light, religious beliefs, and all which I had before held sacred. Listening only to contradict, I grew interested in spite of myself, and only at some allusion more than usually out of place, as it seemed to me, among so many ladies, did I take my eyes from the reader's countenance, and suffer them to roam about the company.

Feeling again the subtle influence of Agnes' gaze fixed full upon me, it caused my cheeks to flush, my knees to quake, and verily, my legs were as like to carry me away as to sustain me where I leaned against a tree. The girl was looking straight at me; I dared not return her stare which had something more than mere curiosity in it, and disturbed me greatly.

The reading was finished without my

## To Women Who Dread Motherhood!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, post-paid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

knowledge, a piece of buffoonery, or play acting gone through with, which I did not see, when my own name, called by Madame, brought me to my proper good sense again.

I found myself, before I was quite aware, bending before Madame and receiving her command that I should do something for the amusement of the company.

"M. Jerome has favored us, you know—we have no drones here," she went on pleasantly, "and it is the rule at Sceaux that all must join our merriment."

"Jerome?" I answered in a bewildered fashion, for I had no recollection of seeing aught he did; then I remembered hearing him recite some languishing verses about a white rose, a kiss, a lady's lips—some sighs, and such other stuff that now escapes me—but I had paid no attention to it all.

Jerome, the villain, seconded Madame's request so vigorously I could not decline, though he well knew I was no carpet knight capable of entertaining ladies fair on the tourney field of wit.

"The Captain sings divinely, Madame, but is becomingly modest, as you see." The wretch laughed in his sleeve; I could have strangled him.

"Ah, so rare," she retorted, "you men are vainer than my ladies."

# MYSTERIOUS POWER OVER DISEASE

## Wonderful and Miraculous Cures Performed by a Mighty Healer

At Last There Seems to Have Been Discovered the Secret of Long Life and Perfect Health

(From Hearst's Chicago American)

FORT WAYNE, IND., (Special Correspondent).

In response to numerous requests your correspondent called on the now famous Dr. James W. Kidd, to learn, if possible, the secret of the mysterious power by which he was effecting so many wonderful cures. Dr. Kidd was found at his office busily engaged in answering the hundreds of letters of inquiry which he is daily receiving from all over the world regarding his remarkable discovery.

"It is hardly necessary to say that I am busy," said the doctor. "In those files are thirty-five thousand letters that we received and answered last month, but I am always willing to explain, as far as possible, my discovery, especially to newspaper men, because I know that they will publish the information and I want the whole world to know that there has at last been discovered a remedy which will cure every ailment."

Will it cure every case?

"It will cure every disease that I have been called upon to treat in my experience in thousands of cases, and has positively cured thousands of afflicted people who thought that they were beyond all earthly help."

What do you call your discovery?

"The Elixir of Life." Dr. Kidd here showed the correspondent a number of small egg shaped capsules containing various colored liquids in which floated small tablets, and said: "Doctors have known and used nearly all the remedies which constitute my discovery for years, but the proportions and the method of compounding are my secret."

Do the doctors accept or use your discovery? was next asked.

"Not as a rule, because I do not care to explain or give my secret to them. It is the result of a lifetime of study and experiment and naturally I am jealous of the honor which it brings me."

Do your patients seem to appreciate what you do for them?

"Yes, indeed. In this set of letter files are thousands of letters from grateful cured patients, and I am receiving more every day. They are the greatest source of pleasure and satisfaction to me, and the only pay that I ask for the years of study that this discovery cost me. Here are a few which are particularly interesting to me, because they are patients whom I cured two years ago, when I first made my discovery, and before I was as sure of the results as I am now. They are all enjoying perfect

health now. You may publish as many of them as on like, as I have their permission."

Your correspondent copied the following extracts word for word, from a few. The following from Miss Sarah Penington, Milton, Iowa, tells a thrilling story of her cure: "It does not seem possible that a person paralyzed as I was could be cured in 18 days. When you got the statement of my case, I was perfectly helpless, had to have a friend write to you in my name. Now I feel that I am cured. I will always praise and thank Dr. Kidd for what he has done for me. You cured me when others had given me up to the grave."

A. C. Blair, a prominent attorney of the firm of Blair & Green, Charleston, W. Va., writes as follows: "I received your treatment for nervousness, indigestion, stomach, kidney and bladder trouble, twenty days ago. It is truly 'The Elixir of Life.' I am agreeably surprised at the wonderful result. I have suffered for more than five years and was getting worse all the time. I have improved daily since beginning your treatment. I now feel ten years younger. Instead of having to pull myself up the court house steps by the railing I now run up as I did ten years ago." Ten days later Mr. Blair reports as follows: "I am restored to perfect health, sleep well, eat hearty, digestion good, kidneys and back cured, nerves in fine shape."

Your correspondent was shown hundreds of other testimonials telling of miraculous cures of apparently every disease with which man or woman was ever afflicted, and was firmly convinced that Dr. Kidd truly too modest in his claims for his marvelous discovery.

Can your "Elixir of Life" be used by patients at home?

"Yes, with my instructions and with equally as good results."

Is it true that you are giving away treatments to all applicants?

"Yes, and I expect to continue until its virtue is known all over the world. You can tell your readers that I will send every sick or afflicted person a course of treatment prepaid especially for their case by mail postage paid and absolutely free. To be sure of personal attention ask them to describe their case and address my private office as follows: Dr. Jas. W. Kidd, 83 Baltes Block, Fort Wayne, Ind."

As the doctor asks for no money, it would seem that every reader afflicted in any way, no matter the disease, should take advantage of this liberal offer.

# Personal to Subscribers

We will send to every subscriber or reader of

## UP-TO-DATE FARMING

a full-sized **ONE DOLLAR** package of **VITÆ ORE**, by mail, **POST PAID**, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors, or patent medicines he or she has ever used. Read this over again carefully and understand that we ask our pay only when it has done you good, and not before. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. **VITÆ ORE** is a natural, hard, adamant, rock-like substance—mineral—**ORE**—mined from the ground like gold and silver, and requires about twenty years for oxidation. It contains **FREE IRON, FREE SULPHUR AND MAGNESIUM**, and one package will equal in medical strength and curative value 800 gallons of the most powerful, efficacious mineral water drunk fresh from the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as Rheumatism, Bright's Disease, Dropsy, Blood Poisoning, Heart Trouble, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, LaGrippe and Malarial Fever, Nervous Prostration and General Debility, as thousands testify, and as no one, answering this, writing for a package, will deny after using. **VITÆ ORE** will do the same for you as it has done for hundreds of other readers of this paper who have accepted this offer, and **MADE NATURE THEIR DOCTOR**, if you will give it a trial, which none should hesitate to do on this liberal offer, **SEND FOR A \$1.00 PACKAGE AT OUR RISK**. You have nothing to lose if the medicine does not benefit you. **WE WANT NO ONE'S MONEY WHOM VITÆ ORE DOES NOT BENEFIT**. Can anything be more fair? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. Investigation will bear out our statement that we **MEAN JUST WHAT WE SAY** in this announcement, and will do just as we agree. Write **TO-DAY** for a package at our risk and expense, giving your age and ailments, so that we may give you special directions for treatment, if same be necessary, and mention this paper, so that we may know that you are entitled to this fiber offer.

## "OUT OF THE JAWS OF DEATH"

CURED IN ONE MONTH'S TIME A SERIOUS KIDNEY AND RHEUMATIC TROUBLE.

Was Broken Down, Disheartened and Almost Helpless.

**READ** what Mr. M. V. Estes, of No. 8 Trinity Street, Atlanta, Ga., who answered our advertisement, and received a package of **VITÆ ORE** on on trial says of the medicine:

ATLANTA, GA.—When I look back at my condition and suffering during recent years, and think of the herbs, roots, barks, tinctures, powders and liniments I have taken and rubbed with, all to no purpose, and that I was cured at last in one month with **VITÆ ORE**, I stand dazed and amazed at the result. Indeed, I feel like exclaiming with Mr. Richardson (a correspondent of the New York Herald) on closing an account of his escape from a Confederate prison during the late war between the States, "**Out of the Jaws of Death, Out of the Mouth of Hell!**"

Thirty years ago I contracted a disease of the Kidneys, and commenced passing gravel from them, the pain often throwing me into spasms. Those only who have passed through this ordeal can give an idea of the suffering connected with it. These spells continued at irregular but frequent intervals, down to a month ago. During all this time my urine was highly colored, sometimes profuse and sometimes scant, but all times charged with a yellowish, albuminous brick-dust deposit.

About three years ago I was attacked with Rheumatism in my right hip-joint, knees and the muscles all over my body. Physicians told me I had Diabetes and marked symptoms of Bright's Disease, and commenced to dope me with mercury, soda, lithia, salicylic acid, potash, etc., all of which were constantly constipating me, and nearly everything I ate disagreed with me. You can well imagine my condition and state of mind. I was broken down, disheartened and helpless.

By chance I had placed in my hand a Chicago paper containing an advertisement of **VITÆ ORE**, and, like a drowning man, I caught at it, sent for it, and it has proved to be the "Oar" that enabled me to paddle my frail barque into the heaven of Health. I used the ore in hot water, and it commenced to benefit me from the first dose. In four days I saw a marked change for the better, and so wrote you. My urine became cleared up and natural in color. In six days the brick-dust deposit was gone. My bowels became regular. I could eat what I wanted, and what I did eat, did not hurt me, and was perfectly digested. I slept soundly at night without those terrible hallucinations that had haunted my slumbers so long, but, best of all, the pain was leaving my suffering limbs, I could walk without crutch or stick.

Now, after taking a dollar package of **VITÆ ORE**, I say I am in better health than I have been in thirty years. All this wonderful change in my condition is due to the virtue of one ounce of Ore taken from Mother Earth. Would that I could impress upon every one suffering with Kidneys, Stomach, Liver, Rheumatism, etc., what I know of the virtues of **VITÆ ORE**. Take it according to directions, but always in hot water, and you will not be long, in joining with me in singing the praise of **VITÆ ORE**, and praising Theo. Noel for his efforts in introducing this grand boon to suffering humanity. Theo. Noel's name should go down to posterity side by side with that of Harvey, one for discovering the circulation of the blood, the other for unearthing Nature's means of purifying it.

*M. V. Estes*

### REAFFIRMED ONE YEAR LATER

ATLANTA, GA.—My faith in **VITÆ ORE** grows stronger every day. I suffered with Kidney trouble for years, and never got any relief until I used **VITÆ ORE**, that did the work, and I am still well. Can get insurance on my life in any company that accepts men of my age.

This offer will challenge the attention and consideration, and afterward the gratitude, of every living person who desires better health, or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skeptic'sm, but ask only your investigation, and at our expense, regardless of what ills you may have, by sending to us for a package.

## FREE SEEDS AND PROFITABLE PRICES

Farmers, Do You Want Them?

UP-TO-DATE FARMING Tells You How

It is published twice a month, and the price is 50 Cents a year. It tells you how to set your own price on every crop you grow. UP-TO-DATE FARMING has unaided fought for DOLLAR WHEAT, and raised the price from Under 70 Cents to \$1.00 a Bushel at Chicago. If you want \$1.00 Wheat, 60c. Corn, 12c. Cotton (never less), 5c. Hogs, 5c. Cattle, 35c. Butter and 25c. Eggs the year around, and a profitable price for every other crop, you can get them through UP-TO-DATE FARMING.

UP-TO-DATE FARMING is elevating agriculture until it will be as profitable as banking, merchandising or manufacturing. READ SOME LETTERS:

"Up-to-Date Farming was a great surprise to me. Did not know there was such a publication so full of excellent thought and ideas." E. F. CURRIER, Amesbury, Mass. "You seem to have some far-reaching and good ideas about the interests of farmers, as expressed in Up-to-Date Farming." P. B. NEAL, Madison, N. C. "Up-to-Date has been a great help to me. The ideas it advocates for farmers are grand. It is an educator that pays large dividends." O. K. TATE, Springfield, Ia. "I am an old reader of Up-to-Date Farming, and will continue to take it because it shows us how to better our condition. No farmer should try to get along without this advice it gives." E. R. EAVES, son, Chetopa, Kan. "I have read your Up-to-Date for two years, and am delighted with it. I read several farm papers, but Up-to-Date is above all others." D. RILEY, Mackville, Ky. "I hardly know what I would do if I missed one copy of Up-to-Date. It has been a great help to me." M. C. MASON, Clay Centre, Kan.

**A GREAT OFFER** We want every reader of this paper to read UP-TO-DATE FARMING. WE DON'T WANT TO MISS A SINGLE ONE. Therefore we will give you absolutely free, the following rare and valuable seeds if you send a subscription promptly.

**1-4 lb. Year-Long Corn**—Yellow, some ears 25 inches long. Read: "My Year-Long Corn yielded at the rate of 165 5-7 bushels per acre. I have one ear 25 inches long. The corn is immense. Farmers will now try to raise 200 bushels per acre." J. L. PERKINS, Harrison County, Mo.

**1-2 lb. Early Success Potatoes**—Earlier than Six Weeks or Triumph. Ready for market in 33 to 40 days. Color white, round, yields twice as much as red Triumphs. We will tell you how to grow 8 to 8 bu. from the 1 lb. A valuable secret.

**1 pkt. White Wonder Watermelon**—Shell 1 inch thick, as white and hard as egg-shell. Flesh red, lusciously sweet, weight 25 lbs. Succeeds everywhere. Don't cross with any other melon. Ripe melons keep 90 days after taking off of the vines without losing their quality.

**1 pkt. King of the Mammoth Pumpkin**—The largest, heaviest and most productive. Have grown to weigh 250 lbs. Read: "Perhaps the greatest exhibit was 21 pumpkins grown on a single vine. Their average weight was over 60 lbs., and total weight over 1,000. This is the report Farmers' Institute. One vine had 21 pumpkins, as above. The heaviest weighed 82 lbs.; next 80 lbs.; 78 lbs.; 75 lbs., etc." Mrs. JAMES A. SEED, Lawrenceville, Ill.

of my pumpkins as shown at our Farmers' Institute. One vine had 21 pumpkins, as above. The heaviest weighed 82 lbs.; next 80 lbs.; 78 lbs.; 75 lbs., etc." Mrs. JAMES A. SEED, Lawrenceville, Ill.

**FARMERS, GARDENERS** We have made you a wonderful offer. ARE YOU GOING TO EMBRACE IT AT ONCE? Some will say, "I will wait awhile." DON'T! WE MUST have your name NOW! Therefore, if you will send your order as soon as you read this offer, and the addresses of five other farmers, written on a separate sheet, we will send you

**A 25c. DUE BILL** Good for 25 cents' worth of seeds selected from the catalogue of a leading seed-house. Your choice. Send us the addresses of five farmers for the due bill. Understand, there is no charge for the seeds; the paper is what you pay for. For only 50 Cents we will send UP-TO-DATE FARMING twice a month for one year, the rare and valuable seeds mentioned above, and a DUE BILL good for 25 cents' worth of seeds for five addresses of farmers. Or we will send

**YOURS FREE** If you will get up a club of 4 at 50 cents each. That is 5 for \$2.00. The free seeds and due bill sent to all. Send promptly.

MENTION THIS PAPER.

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
AT 227 WEST WASHINGTON STREET

Entered at the Indianapolis  
Post-Office as Second Class Matter

VOLUME 7

INDIANAPOLIS, MARCH 15, 1904

NUMBER 6

## UP-TO-DATE FARMING

J. A. EVERITT - Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club, (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2	- for	\$ .75
A Club of 3	- for	1.00
A Club of 10	- for	2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept

Your Own Subscription 2 yrs. for \$ .75  
3 " " 1.00  
For Membership in the A. S. of E. add 50 cents to any offer.

The emblem of the A. S. of E. as shown above, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgement.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. **Don't Neglect This. See Special Subscription Offers elsewhere in this number.**

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of February 15, 1904, Circulation

Indianapolis, Feb. 18, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the February 1, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum, State of Indiana } Before me, Charles E. Brigham, a notary  
Marion County } ss public personally appeared S. E. Cullum and  
swears to the foregoing. Charles E. Brigham.  
[Seal] Notary Public.

*Farmers, the speculators are pricing your new crop of wheat down to 89 cents in July and 84 cents in September. What do you think of it? Are they going to make the price on your 1904 crop or will you make the price? Also they priced your old wheat for May delivery at 93 cents on March 7th, but millers and consumers are quite glad to pay \$1.00 to \$1.03 for cash wheat, at Chicago and \$1.00 or more at all leading markets east of Chicago. This is as it should be. You can hold the price to the dollar mark if you will. Don't let the speculators stampede you.*

*You cannot possibly lose by holding for your price this year. The amount of wheat in the farmers hands now is less than in ten years at this season. There is practically five months before the new crop can move freely, (five twelfth of the year). This is your opportunity. Make the most of it.*

Has the editor of your farm paper congratulated you on dollar wheat? Has he referred to this important event, or does he not consider it an important event? Perhaps after saying it could not be done he doesn't like to eat crow, or perhaps he is sorry that the price has reached a dollar.

"Farmers have no right to price their products?" "All that farmers have a right to do is to work hard, produce the biggest crops possible, then fold their hands and let the smart exploiters skin them out of their just profits." So teach many editors.

We have almost lost patience with some editors of farm papers. They appear to grind out objections to the attempt of farmers to regulate their marketing and thus compel fair prices, like they would pass sweet morsels over their tongue. There is a limit to patience and we believe the limit has been reached in this matter. If they don't want to help in this movement let them shut up. The display of opposition they make not only retards the movement but it also hurts them. Therefore what good excuse can there be for it? Farmers you are the injured people. You can end it if you will.

If farmers have not a moral right to price their products, let us ask if that class of people who have been pricing them for them, have ever earned a morally honest dollar in their life?

As an independent unit you are powerless, as a co-operating unit you are irresistible. Let farmers remember this.

Things are not always what they seem to be. What this world needs is men who see things different from the way the masses have seen them and then lead the masses upward and onward.

Readers of Up-to-Date Farming: You have frequently read in other farm papers of objections to controlling marketing, price making and the plan of the A. S. of E., but have you ever read a single instance where those papers undertook to continue the argument after their criticisms were answered? If you have, make clippings and send to this paper.

Several local unions have passed resolutions favoring the increase of their National representatives salaries when speculation in farm crops is killed and when farmers price their own products. This farmers problem has good prospect of becoming a leading topic in the coming presidential election.

The Acme Mill, at Indianapolis, makes a grade of flour that stands at the top for quality in European markets. In conversation with their representative recently, he said, "We oppose the farmers movement to control their marketing, because we want to buy their wheat and put it in elevators and know that we have the wheat to grind."

We explained that it made no difference whether the wheat was in their elevators or in the farmers graneries, the entire crop would be for consumption. Their elevators might be useless, but under the new order of things there would be a more steady stream of grain flowing to the markets than under the old.

The crops of 1904 are now being planted and the campaign for controlled marketing and profitable prices will be conducted with more vigor than ever before. Farmers have had a taste of victory and we propose that not an inch shall be relinquished. Instead of letting the bulk of the 1904 crops go at the speculators and trusts prices, we propose that farmers shall have their price for the first bushel, pound or ton, that goes on the market of the new crops. The National union has been passing through an exceedingly busy season. Night work was the rule each

day rather than the exception. We know what long hours mean as well as the farmers do, but it was willingly given because we see victory ahead. Soon we will have improved press facilities, when Up-to-Date Farming will carry the news that will bring farmers to the front to every nook and corner of our country with almost lightning speed. Get ready for success in 1904. Insure it by spreading the glad tidings and securing recruits to the army of a million, a million united.

Within the last month, Eastern Indiana millers and grain dealers met at Anderson, Ind. They agreed to quit over-bidding each other for grain. Members in the association will agree on a price, then if the farmer does not sell to the first one he will be quoted exactly the same price by No. 2 or 3 dealer.

This is all very well in theory, but they have left the farmer out of the transaction, which has been customary in the past. The farmer of 1904 is, however, an individual to be calculated on. Dealers may have their fine theories about plans and agreements about prices, but the farmer holds the chips which are necessary for the game.

If those millers and dealers had called the farmers to their conference and they had mutually agreed on prices to be paid and at which the farmers would sell, there would have been some common sense displayed. This plan is bound to be adopted in the future and the sooner middlemen recognize the farmers as factors in economic matters, the sooner will the friction be removed and all business will settle down to a safe satisfactory and reliable basis.

These observations while they are applied particularly to wheat or grain, apply equally to all farm crops. The principles of true co-operation, control of marketing and price-making are the same, and may be applied to grain, meat, fruit, vegetables, cotton, wool, etc.

#### A PREDICTION

We predict that the farmers of this country will never again sell wheat for less than \$1.00 per bushel at the base market.

Speculative prices may go up and may go down, but farmers will watch the cash market and feed the market at their price. The season has now arrived for the market manipulator to get in his work. Good or bad weather conditions as they appear to affect the growing crops will be used to put the futures up or down. Don't be concerned about May, July, or September prices. The price has been fixed on last years crop and the A. S. of E. will take action in due season regarding the value of the growing crop. By putting the speculative price up or down, don't make nor subtract a bushel from the crop that will be produced. Farmers are not interested in these guessing contests. What they want is a fair price for the crop when produced whether large or small. We say now that a crop cannot be produced, so large as to justify less than \$1,

#### FARMERS HOLDING CORN

The following item appeared in the daily papers February 16th:

Grain men say that the present movement of corn is almost entirely from elevators. They say that the farmers are holding on to their supplies with persistent tenacity. The country bids are from 11 to 14 cents under the figures quoted on the May option on the Chicago Board of Trade and the selling proposition evidently does not look attractive. Probably no one knows better than the farmer that his corn will grade better next summer than it would now, and this may be his reason for not accepting the discounts offered.

Farmers have learned by their experience with wheat. Hundreds of thousands of farmers unloaded their wheat at the other fellow's price and are now sorry they did. A greater percent of the corn is in farmers' hands and they will be wise to control the marketing and force the price to 60 cents. When they force the price then let them demand their fair share of it. Farmers will do this thing.

#### SHALL THE COUNTRY BE AFFLICTED WITH ANOTHER GREAT COAL STRIKE?

The conference of miners and mine operators in session at Indianapolis the week ending March 5th, failed in an agreement regarding wages and a great strike is imminent.

Without going into the merits of the case, we want to say that the people who will suffer because these comparatively few people could not agree are the masses representing millions of people and industries representing millions of products.

It is a terrible arraignment of our boasted free country that the quarrel of a comparative handful of people can affect our entire population and jeopardize and injure every business. But this is a fact as was illustrated only two years ago by a strike similar to the one now threatened.

#### COTTON CROP SOLD FIVE TIMES OVER

It is estimated that since the beginning of the year the speculative transactions of the New York and New Orleans cotton exchanges have amounted to at least 50,000,000 bales. This means that in a period of about thirty-five business days the entire cotton crop of the U. S. has been sold five times over. It is probably not too much to say that the history of speculation presents no other record equal to this. Taking 15c as the average price of cotton during that time, the speculative sales on these two exchanges have amounted to about \$750,000,000.

Farmers, you are to blame for this condition. You may plead that you were powerless in the past to prevent it, but you will not be powerless in the future. Make a vow now, that in this presidential year you will vote for that party that will pledge itself to wipe out the whole iniquitous business. Organize and back up your demand by the ten million votes that you represent. Organize in the American Society of Equity to the extent of one million more, and we will guarantee that in one year not a bale of cotton, a bushel of grain or a pound of meat will be sold or bought on any board of trade or bucket shop in the country that has not the actual stuff back of the deal. Don't wait for any other people to do this thing. Do it yourselves. If you wait on others you will wait a hundred years or more.

#### WILL THE PAST BE REPEATED IN THE FUTURE?

How many farmers have worked hard and steady for forty years and have more than a hundred and sixty acres to show for it, worth, we will estimate, \$8,000? Very few, if they stuck to farming. This \$8,000 is the legacy they have to leave to a family of boys and girls, perhaps not more than a thousand to each. We are not claiming that farming is worse in the respect of cumulative profits than some other businesses, but we do claim that conditions in this country should not be such that any legitimate business should have such distressing limitations, while some others have enormous possibilities.

Farmers should not consider the present only but should consider their business for a period of years or for a life time. If the past will not be repeated in the future, it will simply be because farmers will not have it that way. Farmers have done more in the year 1903 to elevate their business and put it on a good business basis for certainty and profits than was ever done before. When the speculators, and crop and market manipulators said a year ago "we will pay you so much for the crops you grow this year;" you, for the first time in your life, said "we will demand so much and we will not let you have our crops until you pay it." The world knows the result.

Take the matter of wheat. The final report by a accredited authorities makes the 1903 world's wheat crop the largest ever grown. Under ordinary conditions the price in this country would have ranged around 65 cents to 70 cents at Chicago. But ordinary conditions did not prevail. In fact, a very extraordinary condition entered into the problem.

We must be excused for referring to this matter frequently. The press and grain dealers are determined to belittle the influence of the farmers in strengthening the markets. We don't propose to leave it that way. We know the farmers were the power. We know many of them have learned that controlled marketing will compel the price and we want to teach all the others.

If farmers were not responsible for the light receipts of wheat during the last crop year and consequent urgent demand, who, pray, were responsible? Were the newspaper men responsible or even the dealers and speculators? You know none of them produced a bushel of wheat, did not have a bushel of wheat unless they bought it of you, and

they could not at any time get as much from you as they wanted. Is it not a fact that cash wheat, the actual grain—was always higher than speculative wheat—the wind grain? Does this not prove conclusively that Armour and all his clique were constantly trying to pull the farmers' price down to a level with theirs? Can you show us a single illustration where the speculative price (made by the speculators) was as high as the cash price (made by farmers and legitimate dealers)—the price that the consumer was willing to pay for the wheat. One old dealer said, "I have not known such a condition to exist before for thirty years," and we can safely say such a condition has not existed before since there were boards of trade run on the present system.

So you see ordinary conditions have not prevailed this year. These extraordinary conditions we want to perpetuate until they become ordinary, because they are right and equitable and should prevail. All prices have been fairly well maintained much better than if some farmers had not learned the lesson of controlled marketing. With a greater number converted to this plan, certainty will prevail, and no person will ever need to hold crops when he doesn't find it entirely convenient to do so. What is needed are more farmers belonging to the farmer's Society.

Remember, the excuse that "farmers can't hold" is an exploded theory. By the plan of the A. S. of E., the trouble will be to prevail on enough to let go to supply the every day demand. Millers and elevator companies have had such an experience this year that they will be standing ready to take all the grain you will let go in the future at your own price. We defy either friend or foe of the A. S. of E., to point out a single point in the plan of the A. S. of E. that has not worked out exactly as was predicted. Build this machine of co-operation and you will have one that will serve you for all time with increasing efficiency as time goes by and you learn to operate it.

Again, let us remind all—to keep the old members faithful and encourage new members—what you must do. It is market a crop that corresponds with a years consumption, over a period of a year. Keep the surplus in your own hands instead of putting it in the hands of the speculators. Market all you can when the dealer will pay your price, but stop the minute he won't take any more. In this way you will get your price and prices will be maintained.

#### WHOM WILL YOU SERVE?

"Several years ago the editor of this journal chose whom he would serve." "We put all combines in one class." "All are alike." "A combination of men to compel rich and poor to pay a certain price for wheat is no better in our opinion than a combine to control the price of meat and coal, or any other commodity." Just so! These sentences are taken from an editorial in the "Farmer's Guide," replying to some strictures on the course of that journal made by Mr. Reo Johnson, of Whitley county, Indiana, and an inquiry why he did not help the American Society of Equity.

The stubborn man, the mentally blind man, always falls back on the declaration that his course is fixed, that he has marked out the line he intends to travel, and will not vary therefrom. He is always one of those who are either too old to learn, or already knows all things. Evidently the editor of the journal, mis-named the "Farmer's Guide," belongs to one of the two classes, too old, or knowing all things. He is a blind leader of the blind, and the good book tells that in all such cases both shall fall into the ditch. The farmer that follows this "Guide" is to be pitied.

He is against all combines. Just so! Yet combines exist, and, in all human probability, will continue to exist for many years to come, and nearly all, if not quite all of those combines are against the farmer, yet this "Guide" is opposed to the farmers combining for their own protection. In many sections of the country there are "Farmer's Protective Associations" to protect the members against horse thieves. It is a combine, yet this blind "Guide" must be opposed to such combinations, for he classes them all in the same category.

The editor of the "Guide" must be opposed to such combi-

nations, for he classes them all in the same category.

The editor of the "Guide" has something to sell to the public—his paper on subscription and his advertising space. He fixes the prices on both paper and advertising space, and would resent any attempt from a proposed subscriber or advertiser to fix such prices. The farmer has wheat, or corn, or oats, or hogs, or cattle, or fruit to sell, just as this blind editor has paper and space, yet he tells the farmer, he has no right to fix the prices at which he will sell his commodities. This editor puts himself upon a higher plane than he will permit the farmer to occupy. The farmer goes to the office of the "Guide" and tells the editor that he wants to subscribe for his paper, and also to advertise his farm for sale. The editor gives him the price of subscription and space, and then says: "I see you have some hogs to sell. I want to buy. What will you take for them?" The farmer names his price, but this editor, who knows it all, and wants to boss it all, replies: "Nay! nay! You are asking more than the market price. I will take your hogs, but you must sell them at the price I shall fix."

That is just the position the editor of the "Guide (?)" takes. He may cut it down crossways, or rip it up lengthwise, and he cannot get away from that position. It is an absurdity on the face of it, yet it is the existing condition of affairs, and the people have suffered too long under such a condition. The aim of the American Society of Equity is to change, so far as it may be possible, this condition, and to permit the farmers to exercise the same rights now accorded every other class that has anything to sell, and fix the price of what they produce. Under the present conditions of farming one dollar per bushel for wheat is only a fair price. If conditions change so as to make seventy-five cents a bushel a remunerative price, then the Society will favor such a price.

The Society has another aim, and that is to encourage better and more productive farming, and will pursue this object through the medium of its official organ, and by the dissemination of other literature, and by lectures and talks at farmers' meetings. In short it will adopt any method that commends itself to advance the material interests of the great class that produces the food and clothing of the world. The Society of Equity demands nothing for the farmers that it does not cheerfully accord to every other class. It holds that the farmer has just as good a right to fix the price at which he will sell the product of his farm as the editor of the "Guide" has to fix the price at which he will sell advertising space, the owner of the coal mine to fix the price at which he will sell his coal, the workingman his labor, the manufacturer his textiles, the lawyer or the doctor his services, and no greater right.

Now, a word as to the "poor" argument. Between the farmer and the consumer is the middle-man. This middle-man fixes the prices he will pay the farmer, and then the prices at which he will sell to the consumer. This is entirely too heavy a burden, and the Society of Equity proposes to relieve him of one-half of that burden, so that he may rest easier of nights. The "poor man" is the victim of the middle-man, in other words of the speculator, and has to pay just what that middle-man demands, no matter what price the middle-man paid for his wheat. Thus: if the middle-man buys his wheat at fifty cents a bushel, and it afterwards goes to one dollar, the middle-man raises the price of his fifty cent wheat, or the flour it produces, to the price of the one dollar wheat. If the price was fixed, and uniform, the poor man would not be called upon to pay more for what he consumes than he does now under the shifting rule of the speculator. The manufacturer does not take the "poor man" into consideration when he fixes the price of the product of his mills. He does not take the farmer into consideration. Why then should the farmer take the manufacturer or the "poor man" into consideration? "Equity" means fairness! That is fairness to the producer and fairness to the consumer. There is no attempt to build up a combine to fix an unfair price. In that lies the difference between the Society of Equity and other combines!

## A Review of the Dollar Wheat Campaign--How to Maintain Dollar Wheat

"It can't be done," this was the cry of the united press of the country. "It can't be done," so said the millers and grain dealers. "It shan't be done," was the slogan of the speculators.

The farmers united (even to a limited extent) are an irresistible power. When they make the demand for a fair price for an article so essential as wheat, they are in a better position to enforce that demand than is the laborer when he demands more money for labor, or the manufacturer when he demands more labor for money, or the capitalist when he demands more interest for money. The demands of the farmers cannot be ignored. Hence, when the president of the farmers' society and editor of this paper, speaking for the farmers of America, proved convincingly that the 1903 crop of wheat would be worth \$1 they believed it.

### ONE DOLLAR PER BUSHEL FOR WHEAT

By facts and figures we showed in an article under the above head, printed June 1st, 1903, that the consumption of wheat has increased enormously and is tremendously on the increase. Our argument in favor of dollar wheat was in part as follows:

"The country is enjoying unequaled prosperity. The demand for all commodities is unprecedented. Prices are maintained in every line, with frequent advances. Labor is receiving more now than ever before, with the tendency still upward. The march is upward and onward. There is only one exception to the rule, and it is a very important exception. So long as this important exception exists the greatest and best class of our people will suffer and our national prosperity will be jeopardized. The exception covers all of our agricultural products.

"While every other important industry is protected for prices and margins, the prices of farm products are at the mercy of speculators, trusts and gamblers, who manipulate them in the most outrageous ways to the enormous loss and disadvantage of the two great classes of our country, the producers and consumers.

"As agriculture is the foundation of our nation's business, everything that operates to secure permanent prosperity on our farms operates to secure permanent national prosperity, and for every legitimate industry. On the other hand, anything that tends to make agriculture unsatisfactory or unprofitable will just as surely be reflected in every other enterprise.

"The lowering of prices of all farm products that is going on at present is a most alarming condition. Unless it can be stopped or controlled at a safe and equitable point it is surely the beginning of the end of the era of prosperity that our country has enjoyed.

"Let everybody consider this prediction and take warning. Let those who have large interests and investments stand appalled at the spectacle of large crops being produced which may not return the producers a fair and profitable reward. \* \* \*

"Who dare say, in the face of these evidences, and considering the present higher range of values for nearly every other commodity produced in the country, that wheat at this time and for the next crop, is not equitably worth \$1.00 per bushel on the basis of the Chicago market, and that other farm crops should be on a corresponding basis?

"Farmers, keep this matter in mind, keep \$1.00 wheat (\$1.00 at Chicago) before you, and you will get it as sure as the sun appears in the east and disappears in the west. Above all, however, we implore you, don't be fools. When you get the equitable price let it go. Sell on the basis of \$1.00 and no less, but don't hold for more or you may run up an unwieldy surplus, which must eventually compel lower prices. Feed the world at equitable prices, and it will consume every bushel that it would at an unfairly low price.

"Every acre of our fair domain which has fed and clothed us, lo, these many years, and now feels the strain of impoverishment, calls for equity. Every farmer who has labored hard, honestly and hopefully, with a comparative

pittance to show for it, cries for equity. Every farm hand who labors from sun to sun for scarcely more than board and decent clothing cries for equity and an income to allow him to live like an American citizen should live. Every faithful wife, every boy and every girl on the farm, who has patiently done his or her share under the worst conditions ever imposed on any free people, cry for less drudgery, more pleasure and an equitable distribution of rewards. They should have it, and they can have it."

\* \* \*

Later in the year, and after threshing returns in, we published the following, September 1, 1903:

### NO WHEAT FOR EXPORT

Crop Estimate from Farmers' Reports. Five Hundred to Five Hundred and Fifty Million Bushels.

"Basing our calculations on reports direct from farmers, it is ridiculous for speculators and others to continue talking about a seven hundred million bushel wheat crop, and it is a crime against the farmers of this country to hold out such preposterous claims and attempt to force on them a price that a bumper crop might in equity be sold for.

"This country never raised but one seven hundred million bushel crop, and that was in 1901, according to the government report. The 1903 crop is away short of the biggest crop we ever raised, as every person is prepared to believe.

"July 23 we gave out an estimate of 550,000,000 as a very liberal calculation of this year's wheat crop based on reports from farmers in all parts of the winter and spring wheat areas. Laying aside figures and taking thousands of letters from farmers, which state, 'A half crop or less,' 'From ten bushels to a failure,' and what must be your conclusion? Other years at least a fair portion of reports from farmers were favorable, but this year almost without exception they show disappointment. Do such things indicate a bumper crop?

"There have been powerful influences at work to keep the market down and every 'bear' argument that can be imagined has been brought forward. Gradually, however, the true conditions are asserting themselves and dealers and speculators are getting on the bull side and admit that the former estimates of the crop must be revised. We predict the truth will be known ere long and it will be like the heavens falling to the schemers who have been attempting to get the farmers' good wheat at an unfairly low price.

"The wheat crop of the United States was 748,000,000 bushels in 1901. Exports, 215,900,000 bushels. The crop of 1902 was 670,000,000 bushels. Exports, 234,700,000 bushels. For home consumption, 435,300,000 bushels. The average home consumption for these two years was 483,700,000 bushels. In fact, the consumption was more than this, as two years ago the visible supply was 47,000,000 bushels, while now it is only 13,000,000 bushels. Adding this difference, 34,000,000 bushels, to the domestic consumption, we have an average home consumption of over five hundred million bushels.

"If our country has consumed five hundred million bushels of wheat in each of the last two years, will it not want as much the next year? As a matter of fact, will not its consuming capacity be greater in view of the enormous increase of consumption of bread grain? If we have a material shortage in this country, as no person now doubts, where will the exportable surplus come from? Since Europe also has a short crop, and as Argentine and India have marketed the bulk of their crops, where will Europe get bread grain that they absolutely must have?

"Here are problems for the astute reasoners to solve. Here is a chance for the law of supply and demand to assert itself, and how much does this supposed law say a bushel of wheat is worth under such conditions?

"This is the farmer's opportunity; they have the commercial world in the hollow of their hand. The speculators have said you shall not put the price on your wheat, and began last May to mark the futures down. Our bulletin of May 26th, showing the true condition of crops and the equity of dollar wheat stopped the downward march and headed it for the dollar mark. The farmers are in this fight to win; equity is on their side, and it is a fundamental right of theirs to price the goods they produce. God rules in the heavens; the farmers own the earth, and all others are suspended somewhere between. They are absolutely dependent on the farmer while on earth. Will farmers realize their position and profit by it?"

\* \* \*

October 1st arrived and still wheat had not reached the dollar mark, although it had made substantial gains. This was the first fight by the farmers to put a value on their labor, skill and investment, as represented in their prod-

net, and it is not to be wondered at that the first battle was a long one. To encourage wheat growers we printed as follows, October 1st, 1903:

#### WHY WHEAT DOES NOT ADVANCE TO A DOLLAR

"All the conditions have been produced to warrant dollar wheat, but it does not come. We warn farmers to not be discouraged. IT WILL COME if you are patient a little while longer, and the conditions are such this year that no bad after effect will follow if you hold your wheat.

"But why don't the price go to a dollar at Chicago? We will tell you. Nearly all the wheat and rye (bread grains) are raised in the northern hemisphere. The harvest time covers about three months. The harvests are just coming to a close. Now, even though the crops in all the countries were short, there will still be much wheat marketed immediately following the harvest. To prevent it would require an organized, concerted action on the part of farmers in all the producing countries, which does not now exist. The first run has been coming into market and is being consumed as fast as it arrives. The great elevators and storehouses are not filling up as is usual at this time of the year. The farmers are storing the grain out on the farm—the best and cheapest warehouses in the world. Also, another factor that enters into the matter of price is the fact that the 1903 crop was sold in advance by millers and speculators, at low prices. They are now loath to let the prices go up, which means serious loss to them. This waiting condition and dealing from hand to mouth may continue a while longer, but every day brings the time of reckoning closer. Will the farmers hold out? The world has not a normal supply, therefore we cannot see how any wheat need be left if held for the dollar basis. It is fair and equitable.

"Farmers, you will win this battle, and the next one will

be easier. We implore you to continue faithful and prevail on your neighbor to help."

Farmers, have not our estimates been verified? Have not our predictions been fulfilled? Has not our advice been followed? Farmers did remain faithful and the dollar mark was reached February 2d, 1904, we hope and believe never to be lost again in this country, until possibly there may be a general readjusting of values at some future time.

\*\*\*

Farmers, now that your price has been made, what will you do? Will you sell or will you hold for more? You are equitably entitled to \$1.05 in March, but you can afford to not be over particular this time. The great questions with you are: Will you maintain the price? How will you maintain the price? We will tell you: **SELL ALL YOUR BUYERS WILL TAKE AT THE ESTABLISHED PRICE AND STOP THE MOMENT THEY WON'T TAKE MORE. IF YOU HAVE THE GRAIN IN TOWN, HAUL IT HOME IF YOU CANNOT GET YOUR PRICE. IN THIS WAY THE PRICE WILL BE MAINTAINED. LET EACH FARMER PRACTICE THIS JUST AS FAR AS HE FINDS IT CONVENIENT AND AGREEABLE AND PRICES WILL BE MAINTAINED. NO GREAT EFFORT WILL NEED TO BE MADE BY ANY ONE, AND NO SACRIFICE WILL BE REQUIRED. THERE WILL ALWAYS BE ENOUGH WHO FIND IT EASY AND CONVENIENT TO HOLD TO REPRESENT THE SURPLUS THAT CAUSED THE TROUBLE UNDER THE OLD SYSTEM. THE CONSTANT DEMAND WILL TAKE ALL THE BALANCE.**

Let us now settle down to raise cash corn to 60 cents and hogs and cattle to 5½ cents at Chicago; also to prevent cotton from going below 12 cents at New York. But, above all, let us organize thoroughly, so we can compel a profitable price on every crop grown in 1904.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

Didn't Mr. Everitt give that Wallace's Farmer man a roast in February first issue? The writer is personally acquainted with Mr. Wallace, and knows him to be an intelligent, progressive man. But like nearly all agricultural writers, he has dropped into a rut, and can't see anything outside of it. It takes considerable of a jolt to bounce them out of the rut. Write to your farm paper.

Speaking of progress, the special guardians of progress seem to be least progressive. This is true in school, and church, and State. The "leaders" are proud of their place and jealous of their influence. When anything is proposed that they do not understand, they begin to pull back. They fear it is something else for them to learn, or that it will offer some one else a position in front. It seems like a contradiction of terms, but every advance that has been made, has been made in spite of those on the advance line.

This accounts for the apathy or opposition of the agricultural press toward the greatest of all movements of the farmers to secure the right to sell his products when he pleases and on his own terms. This proposition is so radically different from time-rotted methods that those on the so-called advance line refuse to think about it. But another line is moving to the front, and history will again repeat itself—the present advance line will find itself in the rear.

"A monopoly always has been an object of detestation in democracies," says President Eliot, of Harvard. Certainly, but Mr. Eliot seems to see monopoly nowhere except in the efforts of labor to secure fair play, and of the farmer to secure equitable prices. The country is full of vast concerns that boast in the fact of their being monopolies, but neither President Eliot nor the government see that they are made so by special privileges that are freely bestowed upon them. Kill special privilege, and monopoly will die of itself.

The very fact that the farm papers are shy of the A. S. of E., ought to be a matter of encouragement to the members, for it proves as nothing else could that there is something in it—that it is outside of the ordinary, and strikes at some entrenched evil.

The enthusiasm so plainly visible all over the country is but the reflection from the local unions. The Local at the Crossing is setting an excellent example for all the others.

That lively conversation between Uncle Alf and his recently returned friend Harry, gives a good idea of how things are going out West. The records at the office of the Nation Union justify the glowing account given by Harry. These chats may be kept up in future issues.

A local in Illinois last week gave first and second premiums on light bread and

Jelly, the exhibits to be served as a lunch at the close of the meeting. It was a jolly occasion—beat an old-fashioned "candy pullin'."

Every member of the A. S. of E., of course, reads Up-to-Date, but do they all read to advantage? Do you benefit by what you read, and tell it to your neighbors? Every member ought to be an active, wide-awake missionary.

"The farmer don't know how much he is going to raise," says Mr. Wallace, and, therefore, he is not in position to control his own business. If Mr. Wallace were to say this to any other productive interest he would be laughed out of countenance. The above fact is all the greater reason why he should have some certainty of price, and that he can have if he will.

We appeal to our friends of the agricultural press to not take too much for granted. Because some thing strikes you as being beyond the common run of things is no reason why you should dismiss it with a sneer or a snub. Where is the fellow that sneered the electric light and the telephone? Be brave enough to look into things, and honest enough to admit the truth.

Has your local union got a good secretary? If not, get one as soon as possible. I want a letter from him, telling about what you are doing.

Mr. President, if you are not meeting regularly, call a meeting and adopt some plan that will attract the people. Future growth and success depends much upon you.

Let each local union investigate freight rates and decide what is the equitable price for their products at their home town. This is very important since wheat has reached their price and corn, oats, hogs, cattle, etc., will soon reach their level. Remember, the price at the base market, less freight and a fair margin to the handler is the farm price. While the railroads will for a time make the freight rate, you can, when united, dictate the price you will allow the middleman for handling your product.

## THE LOCAL AT THE CROSSING.

Third Meeting.

The President—At the close of the last meeting I remarked that I wished to bring up some questions concerning the general markets. We will take that up now, and I hope we may bring out some facts that will be of use to us in the future. For instance, take the cotton situation. The price of cotton kept climbing, with more or less regularity, until it reached figures far beyond the normal. Such a state of the market might have been brought about by an increasing demand, or a decreasing supply, but neither of these conditions prevailed in any marked degree. But when the price suddenly tumbled, and went down more rapidly than it had risen, with no apparent change in demand or supply, manipulation was clearly indicated; in fact, we may say it was proved. The unnatural changes in the market can be accounted for in no other way.

James Burton—I am glad this question is brought up. I think the same thing may be said of the wheat market. Its vacillations during the season can not be accounted for by changes in the supply and demand. Besides making and trading upon prices for future months shows a reckless disregard of supply and demand, and a guess at future conditions. This guessing implies gambling of the worst sort—one man laying a wager that his guess will prove nearer the truth than some other man's guess, or, what is worse still, setting up his power to force a price against some other man's power to do so, the difference in the price being the amount of the wager, often running into many millions. If no one was affected by these methods but the gamblers themselves, it would be no worse, perhaps, than gambling at cards or racing. But the markets of the whole country are controlled by them, and every wheat grower of the country is at their mercy. He knows there are two factions in the market, one betting that he can put the price up and the other that he can hold the price down, but it is impossible for the grower to know which of these is the stronger or shrewder, and most likely to win; hence he can not know whether to sell at the present price or to wait for a future better one. This forces the entire wheat producing interest to take sides, and if they do not become gamblers themselves, they become aides and abettors of gamblers—they become bulls or bears, as the market manipulators are called. The producers naturally belong to the bull side of the market because they are interested in holding prices up, while the consumers as naturally belong to the bear side, because their interest seems to be in low prices.

Joe Riley—In the light of present day transactions, low prices to the producers are no benefit to the consumers; hence it is not so easy to array them on a certain side of the market.

The President—That is true, and I hope we shall have something more definite on that phase of the subject before we close the discussion.

George Bowers—I agree with what has been said of the evil effects of these methods of ruling the markets, and I would go much further and use stronger language. By them the people are not only made to aid the gamblers, but they are made to become gamblers themselves. For instance, if a farmer concludes the market is at its best, and he rushes his products to the market, he plays into the hands of the bears and assists that element to win, but with no hope of getting any of the winnings himself. On the contrary, if he holds his grain in anticipation of higher prices, he helps the bull side of the game to win. So the whole thing becomes a game of chance, and every buyer and seller is forced to be a party to it—a helper of one side or the other.

Silas Jordan—That is getting a little deeper into this matter than I have ever gone before, and he must be dull, indeed, who can not see the pernicious in-

fluence this system must have upon the public morals as well as upon the financial condition of the farmers. I would like for the president, in his plain words, which we all so well understand, to tell us how this bad system may be wiped out without injury to general trade.

The President—Not just now. The discussion has taken a turn somewhat different from what I had in view, but it is all right, and some important facts have been clearly presented. In suggesting the topic I was thinking particularly of the live stock market, but my reference to the cotton markets naturally led into these other channels. I am glad it did, for some far-reaching effects of the gambling system have been shown here, which I had not thought of myself. But let us turn for a moment to the live stock trade. Of course everything said of the cotton and grain trade applies to this also, but as we live in a stock raising country, the live stock market comes nearest to each of our doors. I notice Mr. Burton, our leading stock buyer and shipper, with us. Will he kindly tell us something about the live stock market?

Mr. Burton—I am not a speaker, but I am glad to say a word on this subject, especially so since it gives me a chance to correct a false impression some farmers have regarding local dealers. Low prices are no advantage to us. When prices are low we are compelled to trade on smaller margins; our profits are less and our risks greater. When prices are high producers are better satisfied, and we can take better margins. We must buy, if we buy at all, at prices that give a margin. It may readily be seen, then, that when the central markets are low, the local dealers' prices must be still lower, and in his efforts to please his patrons, who are generally his neighbors, he often trades on dangerously narrow margins. For some time now the live stock market has been badly depressed.

James Manley—Mr. Burton, do you know any reason for the low prices at this time?

Mr. Burton—I do not. There is no condition of the country which would indicate a decrease in the consumption of meats, and there is certainly no evidence of a greatly increased supply either of cattle, sheep or hogs. With a normal supply and a normal demand, prices ought to be steady, but they are not.

Joe Riley—I have heard it said that, though prices to producers are so much lower than they were a short time ago, prices of dressed meats to the consumers are as high as ever. What do you know about that, Mr. Burton?

Mr. Burton—Nothing personally. But, Mr. Menton, of Chicago, a friend of mine, who accompanied me to the meeting, may be able to tell us something about it.

Mr. Menton—All I can say is that there is no reduction in the price of beef, pork or mutton at the meat markets in the city. The prices all the past summer and fall and this winter have been a little higher than usual. Good steak now costs us from 18 to 20 cents per pound.

Mr. Lambert—That agrees with what Secretary of Agriculture Wilson recently said on this very subject. I have it with me, and will read: "Enormous profits are being made by some one between the producer of beef and the consumer. Either the farmer is getting too little for his beef or the consumer is paying too much. The packers are the retailers, and through their hired men or agents, are getting enormous profits. Fat cattle are not so dear as they were a few years ago, yet the retail price of beef is about the same as when cattle on the hoof were selling at fancy figures."

The President—That is the point exactly. Some one between the producers and the consumers is getting all the profits. By combination they force the price to the producer down and to the consumer up—really rob both for the

## To Members of The American Society of Equity and all Farmers in Southern Illinois

Dear Comrades:—The farmers of this part of Illinois are nearly all members of the American Society of Equity. We have great faith in the complete success of this movement by the farmers to control marketing and make our own prices. We are all loyal to our beloved Society and we all feel that we can stand a little more prosperity. To prove our loyalty I will say that this is a great wheat growing section and nearly all our farmers acted on the advice of the head of our society to hold our wheat. Our mills received very little wheat from the farmers of this section before the price went to \$1.00. When our price was reached, our farmers again were true to their principles and have been marketing their wheat freely. We are now preparing for the crops for 1904, and will look for advice again and will assist headquarters by backing up their advice and recommendations. When headquarters sends out blanks for reports we will fill them honestly so farmers, dealers and consumers everywhere may have facts to guide them instead of blind guessing or pure fabrications as in the past. The estimate of the National Union of our Society was the nearest correct of any made, as time has verified. This proves that the plan of crop reporting by our Society is the true one. Most of our farmers have graneries in which to store their wheat, and many new ones will be built this year. These graneries on the farm are much better for us than elevators owned by other people.

The education, farmers all through

[Continued from page 9]

benefit of their own coffers. They don't pay the farmer enough; that discourages production; they charge the consumer too much; that curtails consumption. Thus these combines compel the world to go hungry where there ought to be a superabundance. So it is clear that low general markets are no benefit to consumers. What we must come to is co-operative production and marketing, and an equitable division of profits between producers and consumers. This can be readily secured by the American Society of Equity, the only organization that has made this its rallying cry. I am glad of this meeting, and proud of the thoughts that have been expressed

here have received from the official paper of the A. S. of E. the past year, has been worth more to them than all the education they ever received from other sources. They are continually discussing these new and great questions of controlled markets and equitable prices.

A local union has been planted in easy reach of every farmer in Clinton county. There are also numerous unions in St. Clair, Madison and Bond counties. A grand effort is now being made to complete organization in all these counties and take in the whole state. To this end grand rallies will be held as follows:

Trenton, Ill., April 7, at 2 p. m., in Ginzell's Hall.

Highland, Ill., April 8, at 2 p. m., in Schlaeppe's Hall.

Greenville, Ill., April 9, at 2 p. m., in the Court House.

Railroads are expected to sell excursion tickets and a grand time for farmers will certainly result.

National Organizer, C. O. Drayton, and State Organizer L. N. Staats, will have charge of the meetings. Hon. James Barlow, Asst. National Organizer, will speak at each meeting and it is hoped National President, Mr. Everitt, will attend. Important business will be transacted at these meetings and appointments may be made at this time for meetings in other parts of the state to immediately follow. For further particulars address,

C. O. DRAYTON,  
Trenton, Ill.

here, and of the important facts that have been so clearly brought out. I hope I shall see this room crowded at our next coming together. I do not see how an intelligent farmer can stay away.

### "LET ME SELL YOUR FARM"

Home, Lots, Business, Stock, Store, Patent, locate you. Tell me what you have or what you want and I will get it for you easy, cheaply, quickly and guaranteed confidential. The best service. ### WORMS IN HORSES

IN WORMS (*Oxyuris equi*) infest the large intestine of the horse. They are usually about two inches to two inches and a half in length and pointed at either end.

These parasites flourish in animals that are in low condition, when the mucous membrane of the intestine is in an unhealthy state. The excretions and exfoliations from the intestinal walls furnish them the favorable habitation.

**Cause.**—Horses that are long kept on dry food or furnished a single article of diet are frequently infested with these parasites, as such feeding has a tendency to reduce the power of digestion and create an unhealthy condition of the mucous membrane of the intestinal canal. Animals that dislike common salt are often infested with these parasites, as the absence of salt tends to reduce the power of digestion also.

Dry, rough coat, occasional swelling of the legs, paleness of the mucous membrane, dullness, and becoming easily exhausted are external symptoms of deranged digestion, which favors the propagation and development of these parasites.

**Treatment.**—The ill condition found in animals infested with pin worms is not so much due to the worms themselves as to the conditions which favor development of these parasites, as stated above. That is, they are more frequently the result of the ill condition than the cause of it. Hence, the treatment to permanently rid an animal of pin worms must be directed along the line of improving the digestive organs by carefully selecting the feed, giving salt regularly, and toning up the digestive canal with bitter vegetable tonics, overcoming anemic condition by a liberal supply of salts of iron. Laxatives are also of the utmost importance. Dr. Hess Stock Food contains these ingredients in exactly the proper proportions, and is guaranteed to remove these parasites. It increases the strength and renews the sleek, glossy coat. It is formulated by Dr. Hess (M. D., D. V. S.), and is endorsed by eminent veterinarians and leading colleges. If they know of nothing better, it must be good. No unprofessional manufacturer can equal it. Sold on a written guarantee. 100 lbs. \$5.00 (except in Canada and Pacific Slope); smaller quantities at a slight advance. Fed in small doses.

For every disease and condition for which Dr. Hess Stock Food, is not recommended, the little yellow card in every package entitles you to a letter of advice and special prescription from Dr. Hess.

Dr. Hess Stock Book, the authoritative work on diseases of stock and poultry, will be sent free if you will write and state what stock, and how many head of each, you have; what stock food you have used, and mention this paper. Address Dr. Hess & Clark, Ashland, Ohio.

# HOW NIGGER JO FELT WHEN HE WAS CONVERTED

Mr. Editor Up-to-Date—When I see dat pictah of dat apple tree in yoh papah dat 'em buzzardhs was a-settin' on, an' dem farmahs a-diggin' an' a-toillin', an' a-sweatin' so hard dat dey can't look up and see dem buzzardhs in dat tree a-pluckin' an' a-pickin' de best fruit what de farmah had raised, an' dat 'ciety laddah a-standin' up agin dat tree dat was so high up dat it reached up to 'em buzzardhs, an' eberv roun' so good an' so strong dat eberv farmah can go up an hab a lick at dem buzzadahs, an' yo' said in yo' papah dat dem am de fellahs dat's been a-pricin' de farmah's stuff dat he done raised so long dat he got used to it an' didn't know no bettah, an' when a million farmahs clum up dat laddah an' hab a lick at 'em buzzadahs an' done knocked 'em off, den de farmah gwine to price his own stuff what he done raised, so's he can save dat fruit dat dem fellahs been a-pickin' all de time, so's he can fix up his fahm an' hab a bettah house an' a bettah barn, so he can buy moh bone meal an' raise moh stuff, 'cause den he can put his own price on it an' git moh money an' pay off de mor'gage.

When I read all dis in yoh papah it makes me feel so glorius an' hallelugis dat I forgit dat I's a hayseed niggah, an' feel like dis whole earth was my pastuah fiel'. An' I says I'm gwine to crawl right on dat 'ciety laddah an' go right up onto de top roun' an' hab a lick at dem fellahs myself. I nevah know what a farmah was worth till dat Equity did ring in my soul; den I say, "God bress Mr. Everitt; he tell de trufe an' nuffin but de trufe." I sum up de 'ciety in a few words: Eberything 'pends on one man, an' dat man am me.

Now you see if all de farmahs feel dat way the job am done. I beg yo' pardon, but dis is de way it makes me feel. I want to do my paht in dis good work, so's I won't be ashamed when dis 'Ciety of Equity gwine to rule de country. 'Spouse I do yoh work, en what good dat gwine to do? I tell yoh how much—none; dat's how much. An' who's gwine to do my work while I's doin' yohs? Dat's de 'portant p'int. An' anoder 'portant p'int is to spress on de 'vidual an' to git eberv farmah to feel wid his heart an' know wid his min' an' see wid his eyes dat all 'pends on him. Den dar be no sluggards an' no oberworked farmahs, fo' each one feel like he will lose his birthright if he set down an specks anoder to do his work. Work is 'lotted to man 'cordin' to what he can do. An' if dis is so (an' I can't see how yoh can 'spute it), den if my work am done yoh hab to do it. Den if yoh want yoh work done, Mistah Farmah, yoh bettah git at it, or yoh might find yo'self a-dyin' some day wid a whole lot ob work on yoh

hands. Den what's yoh gyine to do?

What's de need ob a farmah's organization? So's yoh can act in harmony, dat's why. Harmony is de mos' beautiful; harmony is de sweetest melody; harmony is poetry what rhymes de best. All nature am harmony. When a million men act like one man dey act in harmony. When a million men climb up dat 'ciety laddah an' hab a lick at dem fellahs up dah, dey act in harmony. When one act dis way an' one dat way and one anoder way, den yoh all ag'in yo'selves. An' when yoh act in harmony yoh all for yo'elves.

I know dem fellahs up dat tree is as smaht as smaht can be, But when a million farmahs spies 'em, Den Equity say yo got to let dat fruit be; An' when dey all up dat laddah go, It won't be 'sprisin' if dey haf to get out an' hoe.

## THE SHIP OF EQUITY.

By E. D. Gee.

Tune, "We're Going Home at Last."  
Though mammon, with his greedy horde,  
Got on our Ship of State,  
And pushed the farmers overboard,  
We'll leave them in our wake.  
Chorus—  
We're going home, we're going home,  
We're going home at last;  
On board the Ship of Equity,  
We're going home at last.

There is a man in Hoosier land,  
With heart so brave and true,  
His fertile brain worked out a plan  
The farmers to relieve.

He built the ship of Equity,  
And dyed her sails in blue,  
And launched her on the troubled sea  
In Nineteen Hundred Two.

We're now on board the noble ship;  
Our captain's brave and true;  
He says if we'll co-operate  
He'll bring us safely through.

Ye farmers all—on you I call—  
Come listen to my lay;  
There's room and Equity for all  
On board our ship to-day.

When farmers heard the bugle call  
That sounded o'er the sea,  
Near Sixty Thousand came on board,  
In Nineteen Hundred Three.

The farmers that's now up-to-date  
Have learned a thing or two—  
That if they will co-operate  
'Twill bring them safely through.

## THE STRAWBERRY BED.

The sun rose pale, and the sun rose red.  
The snow fell white, and the grass grew green,  
And rain fell on the strawberry bed  
Till never a better one was seen;  
"Never berries like mine," said the man,  
"They show my care, they show my care;"

The robins hopped and the squirrels ran  
To get their share, to get their share.  
FRANK H. SWEET.

Waynesboro, Va.

## GINSENG AN IMPORTANT PRODUCT

Notwithstanding the fact that American Ginseng has become quite prominent in the last few years as a money-making crop, there are many persons who do not know what Ginseng is, nor do they understand how it is cultivated, and to them the following information, contributed by a writer who has made an extensive examination of this peculiar product, may prove of interest.

"American Ginseng belongs to the natural order Araliaceae, a family of plants closely related to the parsley; it originally grew wild between the 35th and 50th parallels of North Latitude, generally appearing in secluded spots in the depths of the forests.

Ginseng disappeared rapidly as the clearings of the settlers encroached upon the forests, (shade being one of the conditions necessary to its growth) until at the present time there is very little wild Ginseng left in this country.

That which remains today appears generally in sparsely settled mountain country, and is eagerly sought after by the sang-diggers, who have come to know that the root is worth its weight in silver, and is in use all over the Chinese Kingdom, where it is esteemed as having great medicinal powers, and is a universal remedy for all forms of disease.

The great monetary value of the comparatively small amount annually exported caused the Government Department of Agriculture to investigate the matter of its scarcity and the possibilities of cultivation, with the result, that today, there are Ginseng gardens, which although not over an acre in area, are worth to their fortunate possessors, anywhere from \$50,000 to \$80,000 each, according to the density of the stand of plants.

The cultivation of Ginseng will not prove a difficult matter to anyone who will give it the proper attention according to the directions furnished by the various gardeners, who have made a success of its growth, and who make a business of furnishing nursery stock to farmers and gardeners desirous of starting a bed of this valuable root.

A start may be made by any man, woman, or child, (who is willing to take the time to prepare a small patch of soil) for from \$5 to \$50, according to the size of patch desired. As to the size of the patch, the amount of nursery stock which can be purchased for \$10.00, will occupy a bed of about 4x12 feet.

With this as a start, there can be purchased a crop which will net at the end of five years upwards of \$1,500. These are but a few facts concerning Ginseng, but they should be enough to cause every intelligent farmer or gardener to thoroughly investigate this subject, as the returns from the outlay and space occupied will warrant his making a trial of this crop.

It can be taken care of in spare moments, without detriment to other pursuits; in fact the work is so light that it is a pleasant pastime for women, who become attached to the little plant on short acquaintance; as evidenced by an extract from the letter of a young lady, visiting friends who had a bed of the plants. She wrote her father amongst other things: "I have fallen in love with Ginseng." Whereupon, the old man, mistaking her meaning, immediately telegraphed the following: "Cut acquaintance of Gin Seng, don't want a Chinaman in this family."

As the United States has never produced Ginseng to the extent of One Million Dollars, there is no danger of Ginseng cultivation being overdone for many years, when we have the Government for authority that China will annually consume \$20,000,000 worth of this product.

## FAMILY RECORDS

Beautiful colors; background solid gold; space for photographs, date of birth, marriages & deaths, etc. Tremendous seller. Agents delighted. We will send an assortment of Family Records and other beautiful pictures postpaid. You sell them at 25c each, send us the money and we will send you a handsome Shawl, Genuine Diamond Ring, Telescope, Watch, Trimmed Hat, Banquet Lamp or other premiums of your own selection from our large premium list. We pay postage and take back unsold goods. We run all the risk. Don't waste time trying to sell rubbish. Our Family Records sell on sight. INFORMATION CO., 23-75 Como Bldg. CHICAGO, ILL.

## THE DIXIE HOME

# UNCLE ALF'S FRIENDLY CHATS

Face to Face and by the Phone

"Hello Central."  
"Hello."  
"Give me Uncle Alf, please."  
"Hello, Uncle Alf; I'm awful glad to hear your voice again."

"Hello, Harry, is this you?"  
"Yes."  
"Why, I thought you was away out West, wrestling with the bronchos and blizzards!"  
"Just arrived on the 3:40 train. How are you all?"  
"Good as wheat. You ought to see us."  
"Will soon. But speaking of wheat; that reminds me. You know I have been all through the West this trip, from Texas to the Dakotas, and I never saw the people so excited over any one thing in my life. The great wheat raisers are wild."  
"What about?"  
"The price of wheat."  
"Yes, that has been soaring a little lately, and has actually touched the dollar mark."  
"Yes, but that's not it. The great wheat raisers have got into their heads that they have a right themselves to make a price on their wheat, just as the makers of the machinery they use put a price on the machines."  
"You don't say!" (And a little laugh went over the wire.)  
"Yes, and they mean it. You don't hear anything else talked about on the big wheat farms. I first noticed it in Texas, but I didn't pay much attention to it there. But when I got to Oklahoma, it was the one absorbing topic. The farmers are solidly organized there, and have regular meetings, and you would be surprised to hear the speeches they make. Their arguments are good, and I believe they can succeed."  
"Succeed in what?"  
"In fixing a reasonable price on their grain, and getting it."  
"Nonsense!" And many a twinkle lit up Uncle Alf's eyes, but Harry couldn't see it.  
"That is what I thought until I heard those Oklahoma farmers talk. I tell you they make a good case, and they say they are going to get their price by marketing their wheat only as the consumers need it, thus keeping the market hungry, and they are going to stand with the corn and cotton raisers to secure the same right for them. What surprised most was to find the same sentiment on the big stock ranges. The ranchers are organizing to secure the same privilege for the live stock men. I tell you, Uncle Alf, this means something. The great Central West is aroused. The same sentiment prevails in Kansas and Nebraska, and in the Dakotas. On my home trip through Iowa and Michigan I found it the same and I believe the great Central States ought to join in."  
"Oh, I guess it is only the dying echoes of the alliance movement."  
"No, it isn't. They are organizing into unions, Equity unions, I believe they call them, and I think the national headquarters are at Indianapolis. They are more in earnest than I ever saw the farmers before, and they are pressing their demands with greater reason and wisdom."  
"But ain't the Western farmers all rich now? Secretary of Agriculture Wilson says they are."  
"Not by a — sight! Excuse me, Uncle Alf. I am just from the West, you know. That interview of Wilson's was published in the Iowa Tribune while I was in that State, and you should have heard the Iowa farmers express themselves on it. The agricultural atmosphere of Iowa sent the mercury up like

There I go again! But I tell you, Uncle Alf, I have become saturated with this idea. There is no reason why farmers should not put a price on what they produce, just as manufacturers and all others do on their products. But how is it about here, Uncle Alf; haven't you had some thoughts or experience on this line?"  
"Now, see here, Harry, somebody has been telling you about something!"  
"No, you are the first person I've talked to since I arrived."  
"Haven't read Up-to-Date for February 1?"  
"No, I've been traveling nearly all the time since then."  
"Well, I've had some 'experience,' and I'm as muct 'saturated' as you are. The West is not by itself in being aroused on this subject. You'll find local unions all through the corn belt and the cotton belt, and the fruit regions, and among the tobacco growers. The American Society of Equity is founded on the principles of right and justice. It teaches the farmers to attend to their own business, and let the other fellows attend to theirs. And its purposes and methods are simple, plain, and practical, and it is going to succeed. It combines the interests of all classes of farm production, and is no sense antagonistic to the consumers. It proposes to suppress gambling in the sweat and toil of agriculture, and bring the producer and consumer together on the great plain of equity, and thus quietly and peacefully revolutionize production and consumption and marketing, and in this one accomplishment do more for civilization and the human race than philosophers have done in all the ages."  
"But, say, Harry; I wish you had been here a few weeks ago. These equity fellows played a joke on me all right, and they opened the eyes of old Uncle Alf, and I think he'll keep them open from now on. But you'll learn all about it. Come over and see us. You'll find me and the old woman O. K. for equity. Be at our next local union meeting and tell us all about the West."  
"All right. Tell Aunt Mary 'howdy' for me. Good by."

## MORE BLOOD IN THE BRAIN

A. R. Carhart.  
Nothing is of real value that is not practical. Men who reduce their ideals and convictions to practice and develop results, render tangible benefits to humanity.  
Our own part is to do what we have in hand better than others have been able to do before us.  
Valuable conclusions are reached by hard and persistent thinking.  
The demand of the utmost thought of our own period is that strenuous competition shall be replaced by strenuous co-operation.  
When under open competition (or supply and demand), 36 per cent. of the shrewd men of business and productive labor have ever been impoverished. Shall thoughtful people refuse to see that stability of remunerative value has always been, and now is, the world's utmost need?  
Greed and self interest as seen today, carried to its limit in the over capitalization of the trusts, should not blind intelligent people as to the benefits of equitable co-operation when there is no capital stock other than land and labor.  
Man's anxiety and distrust of self, disappears as the veil of ignorance is drawn aside, revealing truth and fact.  
With stability of remunerative value once established, no economic cyclone as panic of the money schemes, could get near enough the earth to seriously disturb the wealth producer.  
Wealth gained in equity and expended in love, is the legal tender of the A. S. of E.

# Facts and Figures

## WORTH CONSIDERING BY THE COTTON GROWER

The unprecedented advances in cotton during the latter part of December, 1903, and through the month of January, 1904, seems to have run the farmers of the South wild on the subject of cotton.

Some successful and progressive farmers whose success in the past was due mainly to the fact that they grew their own food crops, making cotton a surplus, are now on the verge of converting their corn, wheat, sorghum and forage-producing lands into cotton lands. This change, no doubt, will mark a period of business successes on one hand and business failure, if not bankruptcy, on the other. To the farmer anticipating this change, let me appeal to your common sense and judgment. Have you made cool and deliberate calculations? Have you considered the change from every viewpoint? If not, then why plunge into this speculative maelstrom to meet with business failure, or perchance, bankruptcy in the end?

With this change and an overwhelming yield of cotton this year, can you expect remunerative prices for your cotton next fall? Do you not know that to produce a record-breaking cotton crop, by the exclusion of food crops, that it would place you at a disadvantage from two standpoints?

First, you would be compelled to sell your cotton to buy food, and the speculator would take advantage, both of the forced sale and the overproduction, to hammer the price down—can we say, to the actual cost of production? No, but probably far below it, and would you be forced to sell at any price offered? Yes, because your wife and children must have bread and your mules and horses must have provender.

Second, the speculator dealing in corn, oats, flour and meat would take advantage of your having these things to buy, also the shortage in food crops, which must result from a decreased acreage, and would buy them up, forming a trust and fixing his own arbitrary price on them, and would you have them to buy at these ruinous prices? Yes, because not having produced them you must buy them.

I want to ask just here, how the farmer producing all cotton, can expect to pay for the extra mules bought at fabulous prices; pay for the extra labor that must necessarily be employed in tilling the same area under the all cotton idea; buy corn, meat, flour, sirup and hay, all at high prices, and "things that he must have," regardless of the price obtained for cotton; and after all this expenditure, can expect to have a surplus to add to his bank account at the end of the year?

If, with a crop of 10,000,000 bales, the farmer can reasonably expect to realize fifteen cents a pound, why go to the extra expense of raising 15,000,000 bales to sell at five or six, or even ten cents a pound?

Should you realize ten cents a pound for the fifteen million bale crop you would not have a cent more in the aggregate than you would receive for a ten-million bale crop at fifteen cents a pound. Would it not be much better for the farmers to spend the time and money required to produce the five-million bales extra in growing corn, wheat, oats, hay, sirup, potatoes, vegetables, and fruits, or to spend the time in repairing the buildings or fences about the farm, and if there happens to be no work of this kind to be done, then would it not be better to spend their spare time in reading and studying the economic questions of the day, better fitting themselves as useful citizens, forever freeing themselves from the frequent appellations, "Rube," "Yap," "Hayseed," etc., thrust at them by the city gentry, rather than to produce a surplus of cotton, thereby causing the entire cotton crop to be sold at or below cost of production?

This is a question to be settled by the farmers individually. If your acreage and force the past year was sufficient to grow only ten bales of cotton, confine it to the same again this year; or it would be better to decrease the acreage by sowing sorghum and peas for a forage crop and then giving a little more attention to the lesser area in order to produce the same ten bales as formerly. Each farmer must act for himself in this matter if he expects to be benefited to the full extent. If your neighbor curtails the yield of his cotton five bales you will share the benefit with him; but if you both curtail your cotton in the same proportion, you will both get double the benefit. This rule does not apply only to the farmers in one neighborhood, or one county, but applies to every farmer in the cotton belt with the same force and effect. Should your neighbor's barn be filled with corn, oats and hay, bins with wheat, smokehouse with meat, lard and sirup, it will do you no good unless you have the means wherewith to buy them.

Some will say, if we produce 10,000,000 bales that we can not get fifteen cents a pound for it. In answer to this proposition, I will say that every bale produced in excess of ten million would lessen the chance of getting fifteen cents a pound in a two-fold ratio. If the cotton growers of the Southern States would confine themselves to a yield of only ten million bales this year and produce their own food crops, they could not only expect to get fifteen cents a pound for their cotton, but would be in a position to demand and hold for it. I would not require every person that grows cotton to hold it in order to insure this price with a ten-million bale yield, but only enough farmers to represent, say one-third or one-half of the entire crop.

Mr. A. will say that the farmer can not get fifteen cents a pound for his cotton were the crop to aggregate only ten million bales. Mr. B. will say the price is too high, that it is out of all proportion to the price of manufactured goods. Mr. C. says the manufacturer will not pay the price; that he will close the doors of his factory or use other materials from which to manufacture his goods.

To Mr. A.'s proposition I will call attention to the price of middling cotton in New York and New Orleans during the latter part of December, 1903, and the month of January, 1904. Mr. A. will say these prices were speculative and can not be used as a safe basis of calculation. To this proposition I beg to say that, whether speculative or stable makes little difference so far as the results go, so long as spot cotton is bought and received by the manufacturer at these prices. Again, if mere speculation, conducted by a class of non-producers, can force the price to these points with no actual cotton on hand, "how much higher" could the producers run the price by concert of action in refusing to sell their cotton? As the writer has previously stated, one-third or one-half of the entire yield being held would insure the highest price the entire crop would demand?

In answer to Mr. B.'s proposition, will ask him if he has ever produced a pound of cotton, and if so, what it cost him to raise it? If he has never produced a pound of cotton, he isn't a competent judge; and if he has and estimates his time as being as valuable as that of others no more competent than himself, employed in other vocations, he is obliged to admit that fifteen cents a pound for cotton is not too high. If it is out of proportion to the price of manufactured goods, then let the manufacturer raise the price of his goods accordingly. To say that the manufacturer has been getting the lion's share of the profits in the past is shown by the twelfth (1900) census of the United States. Of the ten billion dollars invested in factories the investor gets an earning of one dollar and thirty cents on each dollar invested, while the farmers, with twenty billions invested in farming,

get an earning of only twenty-five cents on the dollar invested.

Mr. C. says the manufacturers will not pay the price; that he will close the doors of his factory before he will pay it. Well, the writer will admit that a majority of manufacturers are "great big fellows," with barrels of money, but their factories with the doors closed have the same bearing to their material wealth that the farmer's land has to his material wealth. Can the farmer afford to turn out his land, neither cultivating it himself nor allowing it cultivated by others? No; if he fails to make a living on it himself he either rents it out or sells it. And that is the way the manufacturer will do with his factory if he finds in the end that he can not raise the price of his goods so as to give him a profit on their manufacture. As to using other materials from which to manufacture goods to take the place of cotton goods, the writer would be glad if Mr. C. would name a few of them. Wool, silk and flax might; but would they be cheaper than cotton, even at fifteen cents a pound? Will Mr. C. please name another material regardless of its available quantity? Imagine a person wearing an undergarment made of wool, silk or flax that could be produced cheaper than if made from cotton at fifteen cents a pound; or a mechanic, machinist, engineer or other laborer wearing a pair of overalls made from such materials; or a soldier crouched under a tent made from the same that would be cheaper than if made from cotton at fifteen cents a pound. Absurd! Isn't it? It appears so, at least, to a sane person.

The farmers would swell their bank accounts much faster by devoting more time in studying "how to market their crops in order to realize most for them, or the nearest equitable price," instead of expanding their areas; making extra expenditures, or working extra hours to produce larger ones. It is very evident that overproduction serves but two classes: the speculator and the gentlemen of leisure.

The former it enables to make millions of dollars out of the necessities of the laboring classes and it enables the latter to continue his vocation as a gentleman of leisure, because he can buy cheaper than he can produce.

Returning again to the proposition that fifteen cents a pound is not too high for cotton if based upon a ten-million bale yield, and to further substantiate this assertion, beg to call the attention of the reader to the annual yield for the past seven years, which were approximately, in round numbers, about as follows:

The year 1897, 11,250,000 bales; 1898, 11,250,000 bales; 1899, 9,500,000 bales; 1900, 10,250,000 bales; 1901, 10,750,000 bales; 1902, 11,000,000 bales; 1903, estimated, 10,250,000 bales. This gives an average yield for the seven years of a fraction over 10,500,000 bales. The factories of the world consumed in the year 1899, 13,535,000 bales, or about 3,035,000 bales more than the average yield for the past seven years, which produced the largest crops of cotton ever known.

It is generally conceded by those in position to know that the present visible supply is far below the demand for raw material. Taking these facts as a basis of calculation and considering the increase in the factories being built in different sections of the country; the increase in population; the constant increase of cotton being used in the manufacture of goods, of which other materials were formerly used, does it not seem possible and highly probable that with only a ten-million bale crop this year the farmers could get fifteen cents a pound for it? From the different viewpoints it does not seem unreasonable to say that the farmers can easily get that price for their cotton this fall with only a ten-million bale crop.

Some will say at this price the farmers would soon get rich. Well, granting that, haven't they as much right to get rich as the manufacturer, the merchant, the banker, the doctor or the person engaged in any other kind of business?

But let us make some comparisons just here, and see to what extent and just how rapidly he is going to grow rich. Take, for instance, those in the employ of railroads: engineers, conductors and baggage masters. Engineers get from \$75 to \$150 a month, or an average of about \$1,500 a year; conductors, from \$60 to \$125 a month, or an average of about \$1,100 a year; baggage masters, from \$50 to \$60 a month, or an average of about \$660 a year. It should be borne in mind that these men have a rest, or lay off. Now, we will take the mechanics, machinists, doctors, lawyers and bankers, and if they are not making from \$800 to \$5,000 and \$10,000 a year they do not consider that they are getting their share of the good things in life. These classes, as a rule, if you will notice, have little invested save brain and muscle. Now, we will take the merchant of \$1,200 or \$1,500 capital upon which he operates in a town or city, and if he does not clear eight hundred or a thousand dollars a year over and above house rent, taxes, insurance, clerk hire and a living out of the business in the meantime for self and family, he does not think he is doing much business, and is for moving to some other town where he can get a larger patronage. Now, on the other hand, we will take a white man, strong, vigorous, energetic, cultured and of superior business qualifications, and we will put him on a farm, say of thirty acres, this being as much as one horse can cultivate properly in corn, cotton, etc. He must either own or rent, so we will take the position that he owns the land. The land with dwelling and barn would be worth \$1,000; he must have a horse or mule, so there is \$125 more; he must have a wagon and harness, say \$30; implements, tools, etc., \$25, making in all \$1,180 that he must have invested before he can do anything. Now, in order to succeed, he must be on the place and doing something every day in the year, excepting the days required in marketing his crop, there being no lay-off or rest days. Of the thirty acres he must plant at least fifteen in food crops to keep the place going from year to year. The remaining fifteen acres he plants in cotton and from this source he must rely for money to pay taxes, insurance on buildings, interest on money invested, fertilizers used, blacksmithing, general repairing about the farm, and if there happens to be anything over, that is what he gets for his year's labor. As stated in the outset, that we had selected an ideal and successful farmer with which to make this comparison, and that being the case we shall expect the very best results, which the writer is willing to concede. We will allow a yield of 250 pounds of lint cotton per acre, which is far above the average. Now, fifteen times this amount would be 3,750 pounds, and at fifteen cents a pound would amount to \$562.50; to this amount we will add \$140, the amount received for seed, making a total of \$702.50. From this amount we will deduct interest on the capital invested, \$1,180, for one year at the rate of eight per cent. per annum, \$94.40; one and a half tons of fertilizers at \$20 per ton, \$30; insurance on buildings for one year, \$14; State and county taxes for one year, \$12.50; blacksmithing, \$7.50; general repairing about farm, \$25; making a total of \$183.40; this taken from the gross receipts, \$702.50, leaves a balance of \$519.10, which represents his salary for the year's work, and his good wife gets nothing for having done her own domestic work and, perchance, chopped out a few acres of the cotton during the very busy season.

It should be remembered that in making this comparison, we have counted cotton at fifteen cents a pound. Suppose there is an overproduction and he has to sell at ten cents a pound, and in that event he would have only \$331.60, and should he be forced to sell for seven cents a pound he would have only \$219.10 for his year's work.

Do these amounts appear extravagant for a year's salary of an energetic and successful business man? If not, then, 15 cents a pound isn't inequitable. Any

one at all familiar with farming in the cotton growing States are obliged to admit that the expenses enumerated on the thirty acre farm is not overdrawn, and on the other hand, that the yield allowed is far above the average, even in very fertile sections.

Then admitting these facts, and a strict adherence to the golden rule, "for the laborer is worthy of his hire," who can say that the farmer should not receive 15 cents a pound for his cotton?

I wish to call the attention of the reader to the yield of cotton, and the price received for the same, for the two years, 1889 and 1899. The crop of 1889 was 3,564,387,747 pounds, which sold for an average price of 11 cents a pound, amounting to \$392,082,652.17.

The crop of 1899 was 4,717,172,446 pounds, which sold for an average of 7 cents a pound, amounting to \$330,202,071.22, or \$61,880,580.94 less than the crop of 1889. We see by the increase of 1,200,000,000 pounds, or 2,400,000 bales in 1899 over the crop of 1889. The entire crop of 1899 was sold for 4 cents a pound less than the one of 1889, amounting in round numbers to \$61,880,580.94.

The reader should remember that this \$61,880,580.94 represents only a part of the actual loss to the producer. He has sold his entire crop below the cost of production, besides the expense of producing the 2,400,000 bales of surplus. Now, what benefit did the farmers get for producing the four-fifth billion pound crop? None whatever. The surplus caused him to sell the whole crop for less than the cost of production.

Now isn't it reasonable to suppose that if a difference in yield of 2,400,000 bales in the years 1889 and 1899 should cause a decline of 4 cents a pound in price, that with an increase this year of three or four million bales that the price would decline even more per pound?

Do the farmers of the cotton producing States want to see the price down to 4 and 5 cents a pound again? If so, all they will have to do to get it is to produce a crop of fourteen or fifteen million bales this year.

What was the experience of the cotton producer from 1872 to 1894? It was a continued lowering of price, with the exception of spasmodic rises, on one hand, and renewed and persistent effort each year by the cotton growers, to increase their crops enough to offset the decline in price on the other hand, and with the final result of a mortgaged home, with a burdensome rental.

Last year (1903) the South had about 28,000,000 acres in cotton. Had the weather been propitious and the yield per acre equal to the average of the two preceding years, the crop would have been about 11,000,000 bales. Had the yield per acre been equal to the average for the three years, 1898, 1899 and 1900, the crop would have been 12,500,000 bales, and had it been equal to the average yield for the three years, 1895, 1896 and 1897, it would have been 13,000,000 bales.

Now, supposing the year 1903 had been an ideal cotton year from every standpoint, and the farmers had produced a 13,000,000 bale crop, in all probability the average price the farmers would have received would have been about 6 cents a pound. Thirteen million bales at 6 cents a pound would amount to \$390,000,000. Since Providence has stepped in and forced the yield to near ten million bales for 1903, the average price received by the producers will be about 10 cents a pound, or an aggregate for the South's cotton crop of about \$500,000,000, or in all probability \$110,000,000 "more" than the farmers would have gotten had they produced a crop of 13,000,000 bales.

Now, my farmer friends, do you want to contribute to the raising of a three-million bale surplus, just to enable you to buy your cotton goods  $\frac{1}{2}$  to 1 cent a yard cheaper, and at the same time forcing the price of the entire crop down from 7 to 8 cents on the pound?

Why, what you would lose on 2 bales of cotton in price would buy all the cotton goods your family would need during the year. I am sure you do not want to

## WHY TAKE CHANCES IN BUYING A Cream Separator?

**WHY** buy a second or third-class Cream Separator merely because it is well advertised or some agent talks well for it to earn a fat commission for himself?

Every well informed buyer knows that the De Laval machines are in a first class by themselves. The original machines, improvements have always kept them well in the lead. Other machines are merely cheaper made imitations and partial copies to the extent expired patents made possible.

But other machines lack the patent protected features necessary to perfect separation, slow speed, easiest running, and are so poorly made as to surely not last half as long, while moreover the De Laval machines are cheapest in proportion to actual capacity.

So why take any chances? Send for a De Laval catalogue and the name of the nearest local agent.

## Superior Cream Separator

### GET ALL THE CREAM

Complete separation is made in 60 to 90 minutes by cold water circulating through the specially constructed center water columns and outer water Jacket. Simple and practical. Does not mix water and milk. Surer results with less trouble and expense.

**We Give a Binding Guarantee** and refund your money if not satisfied. Write today for full particulars.

**Superior Fence Machine Company**  
313 Grand River Ave., Detroit, Mich.

### THE 4-LEAF CLOVER CREAM EXTRACTOR

Has utmost cooling capacity. Don't mix milk and water. Inner can instantly removable. Air chamber over entire can. Patent improved milk and water faucets. No water required in winter, and many other superior advantages all described in catalog mailed free.

The Plymouth Mfg. Co., Plymouth, O.

### CREAM EXTRACTOR FREE

This is a genuine offer made to introduce the Peopoles Cream Extractor in every neighborhood. It is the best and simplest in the world. We ask that you show it to your neighbors who have cows. Send your name and the name of the nearest freight office. Address

**PEOPLES SUPPLY CO.**  
Dept. 183 Kansas City, Mo.

### CORRUGATED CREAM EXTRACTOR. IMPROVED

Inner can detachable, double the cream gathering power of any other. No water in the milk, more cream, more and better butter, pure milk for table and stock, easily cleaned, greatest labor saver ever used on a farm. Free catalogue. Price the lowest. Agents wanted.

ED. S. CUSHMAN, Sole Mfg.  
Box 322, Centerville, Iowa.

bring about this state of affairs, and to avoid it each farmer must be sure that he plants enough of food crops to supply his farm and then plant as much cotton as he can cultivate well, and at the end of the year he will have a surplus in cash, whereas on the other hand he would be in debt, with no food or clothing for self and family.

There is one thing that every producer of cotton should consider, and that is that every acre of increase in "cotton" works against him in a two-fold way.

First, the average having been increased, an increased yield must follow under ordinary circumstances, and the larger the crop produced the lower the price it would command when put upon the market.

Second, a decrease in the acreage of corn, wheat, oats, sorghum and forage crops would, under ordinary circumstances, mean a decrease in the yield of these crops, and when they are put upon the markets, there being a general shortage in the yield, the prices would necessarily be higher. To sum the whole matter up in a nutshell, "the larger your cotton crop" the lower your price, and "the shorter the food crops" the higher the price you would have to pay to obtain them. The writer would be glad to make some comment on the recent decline in the price of cotton, and the effect of the war between Russia and Japan will have on the price of cotton in the future, but must desist for the time being, with the promise of having something to say on this line later on. I want to say, however, that I indorse the plans and purposes of the American Society of Equity, and think it offers a solution to every agricultural question, whether the producer of cotton, corn, wheat, oats, tobacco, vegetables, and, in fact, everything to eat or wear, and I shall hail with delight the day when this organization will be in perfect working order in every agricultural section of the civilized world.

Farmers of every class and section should join this society and subscribe for the official organ (Up-to-Date), and see that local unions of the American Society of Equity is established in their neighborhoods, and devote their spare time for a while in studying "how to market their crops to the best advantage," rather than how to grow larger ones, which rarely bring the cost of their production, let alone a remunerative price to the producer.

### THE FUTURE OF COTTON

The cotton crop in the future, for some time at least, will not reach a great figure. The laborers have been largely attracted from the fields to the mines and railroad work where better wages are paid, and to a smaller extent the colored laborers have gone north to better themselves financially, so that there is less labor available to produce a big crop. Then the ravages of the boll weevil in Texas is steadily decreasing the yield there in the largest cotton producing state. The chances are against a great crop in the immediate future, unless hard times in mining and railroad building drive back the labor to the farms. Cotton is likely to bring a good price for some time to come, and here is the danger to the southern farmer. Instead of continuing the work of soil improvement and diversifying his crops, he will likely be tempted once more to go in for all cotton and neglect everything else. The probabilities are that the spring will see a sale of commercial fertilizers never before equalled, and there will be a rush to plant cotton where other crops should go, and when the reaction comes the planters will find their eggs all in one basket, and the work that low prices compelled in past years will be all to do over again. Stick to rotation farming and improve your land, endeavoring to grow more and more cotton per acre instead of more acres. Good farming pays better in the long run than the single cropping.—Cotton Exchange.

### WHOLESONE LITTLE STORIES WITH A MORAL

HENRY BURNS GEER

#### THE PREACHER AND THE BEES

It happened down in Tennessee, and Shelby was his name—old "Parson Shelby," a noted colored divine. It was a hard crowd, and a hot day, and few there were who would be baptized. The parson had done his best, and several good sisters had waded in shouting. But the great crowd of brethren held back. They were not ready for confession and immersion. The meeting was down at the creek at the rear of the old garden, where the banks of the stream sloped down easy-like, to the water and the shallows reached far out into the stream. Down there, also, were Mr. Robertson's bees, several stands of them resting on a low platform. The bees were hot, and bee-like, they were hanging down from the platform in great clusters at the front of each hive. But, this fact had naught to do with the parson and the sinners, until the coming of Jerry Paxton—the dandy "yaller nigger" from the barber shop—leading by a red tapeline his pet dog, "Skerrit." When Jerry hove in sight, it was plain that he was "It." The dusky damsels, gathered around him like bees take to white clover. Even "Skerrit" shared in his master's honor, until a large gray cat started across the garden; and then, with a bound "Skerrit" shot after it—the red tape streaming along behind. The cat, cat-like, took refuge under the bee-hive platform, but the dog dove under there, too, and then there was a rumpus. The fur soon begun to fly; but the struggle was short lived, for the two combatants, in their rounds, suddenly brought up against a stack of underhanging bees, and then something happened—the bees came in on the last round, and by their energetic intervention soon parted the combatants. The cat disappeared, but "Skerrit," yelping with pain, sought refuge at the heels of his master—the bees accompanying him. This part of the exercise was not down on the afternoon's program:

"Flee from the wrath to come,—flee to the Lord," shouted the parson. And they fled.

Old and young, rich and poor—great and small, in that gathering of citizens of African descent took to the water like fish. They went in—clear in—nothing but nose and one hand each being held above the surface. The bees flew about as if surprised at the situation. The parson still held his own, his tail "Bee-gum" hat loming up like a stump above the water, the hole in it looking like the real thing. So thought the bees, anyway, for shortly their leader made a turn and set sail for the hole, followed by the whole push, and soon they were all hived in the head covering of the servant of the Lord. And then it was that he showed his superior wisdom. He just settled down easily and quickly into the flood, till the waters rose above him, and floated the old hat away—bees and all. And then there was a genuine revival, and a baptism worth talking about. They were all in then and so they made the best of it. When they pulled out on dry land again they had all taken the vow, and been baptized.

It was another illustration of the influence of little things, and the power of association. One bee could not alone have created a panic. But, a few hundreds of his kind, all of the same mind and inclination, drove the whole crowd right into the gospel tent.

#### THE RAILROADER'S GARDEN

There's not a better railroad man in our town than Ed Thompson, and what he don't know about trains and the like, ain't worth knowing. In fact, he is something of a knowing fellow all around,

with one failing—a sort of a contempt for farmers.

"They don't know how," he used to say, "or, if they do, they won't take hold, and farm like that they ought to. You can't get them out of the old ruts." And then, after a spurt of this kind, Ed would sit on the brake and tell the boys how to farm. The thought grew on him, till it finally took root, and nothing would do him but to rent a suburban place, and try his hand in the agricultural line to a small extent. He got settled in his new surroundings about the first of February, and by the first of May he had things "flourishin'"—as he expressed it to the boys.

One day Tom Norton—who, by the way, was raised on a farm, and was something of a farmer himself—went over to Ed's new place to take dinner with him. Of course, the new railroad-farmer had fixed things so as to put the best foot front. He was proud of his place; and as Tom afterwards said, it looked like he must have been getting up at 5 o'clock of a morning, and working till dark, to get it in such a neat trim.

"We went down in the truck patches," said Tom, "and Ed was showing me about, when we came to a patch of wilted, wormy-looking stuff, that I couldn't for the life of me name. 'What's this you have here, Ed, I asked."

"Why, that's my bean patch; don't you know beans when you see them? The blamed things all came up up-side down, but I've got 'em all straight now."

There are some people, who, in their ignorance, think they are wiser than nature; but they usually make themselves ridiculous in their efforts to prove it.

#### THE CLEANING UP AT BIGBY'S

Captain Bill Bigby had been the head pusher at Quinby ever since the war. He made a fortune in cotton in the latter '60s, because of the popularity of his pretty young wife, a favoritism which extended both north and south between the combatants; thus enabling her husband to get provender for both horse and man through the lines, when others in his line of business were shut out. In this way Captain Bill built up a fortune rapidly. He had formerly been a farmer, and the good sense that was born with him, and the early physical and mental training that he got when he lived out close to nature's heart, stood him well in later years, when he found it necessary to devote the greater portion of his time to looking after the fortune which the tide of war had floated in for him. He had proven his business capacity by strengthening and trimming his feed business at the close of the war, so as to carry it on as a provision and commission house—a line which he lengthened so as to extend all up and down the great valley country in which he lived. He had a sense of cleanliness,

**HANCOCK DISC PLOWS**

THE PLOW EVERYBODY IS TALKING ABOUT

Genuine **Hancock** Disc Sulky and Gang

Lightest Draft Plow in the World

Changes the Old Method of Plowing as the Twine Binder Did the Old Method of Harvesting.

We dare not tell you half the facts. We want you to see it in the field. Sent on trial. Not one cent in advance. We guarantee to do fifty per cent more work with the same team and do it better than any other Disc or Mould-Board Plow on earth. Will plow hard, dry ground where no other plow will work. We furnish hundreds of letters from farmers that it will plow almost anything either wet or dry. We want you to see it in the field, and will pay you to hold an exhibition where we have no agents. We are exclusive manufacturers for two-thirds of the United States of the Genuine Hancock Disc Plow, the only plow branded or advertised as "Hancock." Beware of cheap imitations that look like our plow but which lack the essential features (covered by our patents) that make the Hancock Disc Plow the wonder of the age and the ONLY SUCCESSFUL DISC PLOW ON EARTH. Imitation is the sincerest flattery, but do not be deceived by imitations. See that the name "HANCOCK" is on the plow. Write now and get ready for Spring work. Circulars and hundreds of testimonials from prominent farmers furnished on application. We do not ask you to take our word for it.

**HANCOCK DISC PLOW CO., Exclusive Manufacturers, 115 Langdon St., ALTON, ILL.**

Captain Bill did, which was peculiarly his own.

"A man cannot conduct a clean and honorable business, unless he is clean and honest himself, and has none but cleanly employes in his business," he used to say; and that's the way he held it while he was in active control. But, in the latter days, as he grew wealthier, he took a trip abroad, and was gone a year or two. The first thing he did when he returned was to call for a sample of the individual work of each employe. The next thing was to make a personal inspection of the offices and the office force. The hour chosen for this purpose was peculiarly like old Bill Bigby. He got down ahead of the janitor, and was there waiting for the fire to be built when that functionary entered the office. He noted—watch in hand—the minute each man and woman reported for duty. Two bright looking young fellows were the first to come in. They were on time to the minute. Following them at different intervals several other clerks came straggling in—gossiping, and looking like they had spent the night at a "wake."

The next two hours were busy ones with Captain Bill. When he finally left the office, he left a wide swath of surprise and consternation in his wake. The latter was sealed up in several small packages, and more than one clerk received a portion. The seal broken, and contents revealed, something like this was seen:

"We sell clean groceries and food stuffs. You do not measure up to the standard of our goods and methods, and therefore your services will be dispensed with from this date. The cashier awaits your presence."

The two young men first named worked, overtime, and at an increased rate of pay, 'till more like them were brought in from the rural districts, and initiated in the business operations of the firm.

In this way we have a striking illustration of the purifying, ennobling and strengthening influence of the new blood, and stronger brains and nerves of the men from the country who are ever drifting into the larger towns and cities. If this tide should cease entirely to flow, the strength and vigor of our American commercial life would be sapped at the root. The sons of the city are not equal to the burden.

\*\*\*

THE GOLD IN CONDITIONS were un-  
THE HEART Equal, 'tis true; but  
Cupid is no respecter  
of persons, for his shafts, like the wind, come, no man knoweth whence, nor whither they goeth. Still, it would not have happened had not Frank Leighton broken his arm in the mill shaft, and been taken to the hospital, where his friend, Ed Ralston, went every other evening to minister to his wants. There it was that he met pretty Annie Guild, daughter of Mr. Burton Guild, the banker. Annie, so it chanced, belonged to a club which made a "fad" of carrying flowers, daintily prepared dishes of edibles, etc., to the sick and wounded at the hospital—a club with a most laudable ambition, too. Now, Ed. was decidedly on his muscle, which he had cultivated in the cornfield and the meadows. He was tall and sufficiently broad across, and his strong gray eyes reflected back the happy light of the sunshine, the stars, and the glad green fields. Verily, Ed. was a man, great and strong, and healthy with joy in his face—truly, a man in the image of his Maker. Annie—dear, sweet little feminine creature, with loving brown eyes and a trustful heart—she admired him from the first. To her he was the oak that the vine of her womanly heart could twine about in happiness never ending.

Papa couldn't see it that way, however, and so he gave Ed. the icehouse straight out; and Ed., for a time, let it go at that. Time passed on—as it usually does—until it moved up to the evening when, just as old man Ralston, Ed's father, who was something of an athlete himself, came out of his meadow gate down by the creek, where the banks are high and steep and the current swift and deep. Just as the old man closed

the gate a team of foam-flecked frightened bays came tearing down the road, with a man hatless and pale and a girl screaming with fright, holding on desperately in the swaying and bounding carriage behind the maddened team. It was but a quarter to the creek, and there was nothing in sight to stop them. It was a desperate chance, but the old man took it the moment he recognized the fair but terror-stricken face of the girl.

"My boy's not good enough for her," he muttered, with a bitter thought; adding, as the resolution moved him: "It's not her fault, God bless her." Then, with a spring and a plunge, he seized the bridle of the near horse and held on with a strength that was the fruit of honest toil. The hoofs struck him and tore his coat and vest, the iron shoes bringing the blood in a stream; but still he held on. The bays plunged madly, but the telling strength of the old man soon begun to count, and they swerved to the left, and were finally brought up, trembling and snorting, within fifty yards of the creek.

The man in the carriage sprang out, and reached for his purse. The young woman did better. She rushed straight to their rescuer and, throwing her arms about him, cried:

"Oh, Mr. Ralston, you have saved us, thank God! Oh, how grateful I am!" She would have fallen then, for she had fainted, but the old man laid her tenderly down on the grass, and turning he faced her father:

"No, Mr. Guild, I don't want your gold. I did it for her sake, God bless her true and honest heart."

Guild advanced, holding out his hand: "Ralston," he said, "I have acted the fool. I see it now. There are more jewels and greater wealth in the heart than in the purse. Ask Ed. to forgive me, and tell him to come to us."

THE HELPING HAND It was shortly after the great civil war closed that Paul Underwood took it in his head to leave the rocky hills of New Hampshire and seek his fortune in the great Mississippi valley. Up that way, when a man wanted anything, or any work done, he paid for it in good hard cash; but out in the valley land it was different. Paul carried the New England ways and the

Yankee ideas westward with him. And so, when he decided to put up a grain barn—the old western “stable” not suiting his ideas—he cast about for ways and means to get it in place. Of course it must be built of logs, lumber being too scarce and high. So Paul went to the woods and got out the timbers for the purpose, and later hauled them to the barn site. Some of his neighbors watched his movements curiously—those native to the soil—but said nothing.

When all was ready Paul, late in the evening, stopped a young fellow whom he knew, that was passing, and said to him:

“Say, George, I’d like to get you and your brother Frank, if you’ve nothing else ahead for to-morrow, to come over and help me on this work.”

“Goin’ to raise yer barn, eh? All right, we’ll be over shoah; and tell the other fellers, too.” Then he stretched it off down the road, leaving Paul rather puzzled over the last clause in his remark.

The next morning by 8 o’clock there were over a dozen of the neighbors on hand, all joking and making light of things in general.

“Where’s she to sot, neighbor Underwood,” said old man Weaver, the “bell-wether” of the neighborhood on such occasions. “Just you give us a p’inter, and we’ll have her up fer ye, afore noon.”

Paul was confuddled. He hadn’t calculated on so many hands, but, thought he, the more there are of them, the sooner they’ll get it up, and the cost won’t be any more than if two men had worked at it much longer. So he showed them where to lay the foundation logs, and took hold with the rest.

“Fust raisin’ you ever see, hain’t it?” queried the old man.

“No, I’ve helped on barns a good deal, East,” replied Paul.

“Humph!” grunted the former as he shouldered one end of a floor sill.

The men joked and laughed and worked like beavers, till all was done but putting on the clapboards. Then they gathered in a bunch, putting on their coats, and looking kinder sidling and curiously towards the house. Paul wasn’t a fool, for he took the hint, and was soon serving it in a high-necked glass from a jug wearing a jacket. When it had passed around twice, there was a little talk.

“Well, friends,” said Paul, “I’m mighty glad you came out so strong on this job and finished it so soon. Quick work, and good work, too; and now I’d like to settle with you. How much do I owe you, all ’round?”

“Owe us fer what?” asked Weaver in surprise, while the others looked their

astonishment with wide-open mouths.

“For putting up the barn, of course.”

“Well, I’ll be darn! Hain’t you done set up the drinks? You don’t owe us nuthin’ but er helpin’ hand when any of us fellers has a stable or a shack that’s got to be riz. Come on boys;” and the “bellwether” led the way down the path through he woods towards the spring.

It takes some persons a long time to understand the neighborliness and the advantages of co-operation.

### A COMBINATION IN BUTTER

A small boy once had the task of delivering butter to his mother’s customers. He seemed to like the job all right, and all the people who received it, excepting one woman, who seemed to go out of her way to let him know that she was conferring a great favor on him and his mother by taking the butter at all; and on more than one occasion she had said to him:

“No butter to-day, Bennie. Hope you can sell it elsewhere.”

This didn’t suit Bennie at all, as she had engaged to take it regularly; but he said nothing about it, till one day when he chanced to see another boy go in her house with a package, and come out without it. This excited Ben’s curiosity, and so he laid in wait for the boy, and when he came up asked him what he had carried in to Mrs. Mason’s.

“Butter,” was the reply.

“Butter!” exclaimed Ben. “Gee! She just told me she didn’t want any.”

“She don’t take it regularly,” said the other boy; “it’s only when I get stuck on a pound or two in my rounds and have to sell it cheap.”

“That’s funny,” said Bennie; “she’s ’greed to take our butter, but she don’t do it sometimes. How you sell yours? Mine is twenty-five cents a pound.”

“Same as mine, ’cept when I gets turned down; then I sells it at twenty. Don’t you, too?”

“Yes; but say, I’ll tell you what we can do: Let’s not let any one have it for less’n a quarter, then we won’t get turned down and won’t have to run around to sell what’s left.”

“Good!” exclaimed No. 2; “I’ll go you.” And from that time on there was no more “cut rates” in butter in that neighborhood.

These boys were wiser than some men.

# The Advance Plan OF SELLING FENCE

Direct from our Factory to Farmer

is the result of fifteen years' experience in the fence business. We have not only learned how to construct a fence so as to obtain the greatest possible amount of strength from the wire used, but how to market fence by the most economical method. This is why we advertise and sell our fence **direct from the factory to the farmer**. The profit which the dealer makes is a dead loss to the farmer, as it makes the fence no better. In order to relieve the purchaser of all risk, and to convince him of our confidence in our goods and in him, we offer to sell Advance Fence

## ON 30 DAYS FREE TRIAL

We are the originators of this unique and unquestionably fair method of selling fence. It enables you to see and test the fence for thirty days in actual use and be sure you are perfectly satisfied. If not perfectly satisfactory you can return it at our expense and your money will be refunded. The reason we have such confidence in **Advance Fence** is because we know that it is constructed on the right principle. No light wires used. The stay wire is endless, being twisted into the cable from one stay to the next. This leaves no loose ends at the top and bottom to become unfastened. We obtain twice as much strength from the wire used as fences with cut stay wires.

**ADVANCE**

By selling direct to the user we are enabled to quote you  
**Wholesale Prices**  
The dealer can't buy it any cheaper than you. We can't give the middleman a profit or we would not have any ourselves.  
**We Pay Freight**  
on 40 rods or more. F. O. B. factory prices are misleading. They don't tell how much it will cost delivered at your station. Drop us a card and we will obtain the lowest freight rate to your railroad station and make you a delivered price on our complete line of Fencing, Gates, Etc. We will also send you our **FREE FENCE BOOK** which describes and illustrates 23 styles—a fence for every requirement of the farmer. Also 24 sizes and styles of steel frame gates. It describes our Giant Stretcher and tells how to use it. This book should be in the hands of every farmer. You will be a better judge of fences after reading it. If you want to be a careful fence buyer you should study fence construction. Your name and address on a postal will bring book and wholesale prices.

**ADVANCE FENCE CO., 7636 Old St., PEORIA, ILL.**

# Farming From an Up-to-Date Standpoint

BY AN UP-TO-DATE FARMER

No. 23.

In nothing is the drift of farming better shown than in the preparation of seed beds for the reception of crops and the subsequent cultivation given the soil. Think of harrowing the earth every week for months before sowing to grass seed! And yet, that is what the greatest haymaker of this country says he does. I refer to Mr. George M. Clark, who produces seven or eight tons of grass to the acre every year. He attributes his success almost altogether to this thorough culture. When we think that the average tonnage per acre of the common run of farmers is not more than a single two thousand pounds, it does seem as if it would pay us to do better work, doesn't it?

The writer has been having a tussle with a piece of ground that became seeded to narrow leaf, or rat-tail plantain. The seed must have come originally from grass seed purchased for my farm. I have always been very particular about the grass seed I buy, examining it all as carefully as possible and doing my best to get a warrant for its purity. And it is a little discouraging to think that I, after all, brought home in a bag of seed, for which I paid the highest market price, the foul stuff that I found soon afterward scattered far and wide over my farm.

It cost me a good many days of hard work and considerable money to get rid of that plantain, and I am by no means certain that I have succeeded even now. This is the way I went at it: In the first place I plowed the land deeply. One year I planted it to potatoes and kept it cultivated and hoed out so that it did not seem as if a single weed could survive; but there did. The plantain came up thickly as soon as it could get a chance. Then I went at it still more radically.

In the spring of the year, two years ago, I plowed the field again. Many of the roots of the weed I was trying to exterminate were thus turned up. As soon as practicable I followed the plow with a spring tooth harrow. And if there is any one tool more fitted for tearing things up by the roots than another, it is a spring tooth harrow. By this time it seemed as if the plantain must be thoroughly rooted up. Then I took a two-horse stoneboot and went on to the piece to haul off every root I could find. We fairly scraped the ground over with our fingers. There were sore hands and lame backs before we had the last load on. These roots we drew into the barnyard and piled them up to rot. Then we harrowed the land again, picking up every root we could find that had escaped our former search. Then we sowed the piece to alfalfa.

Our effort was only partially successful, however. The season was a very wet one and the alfalfa did not get a good hold. It came up beautifully and looked nice until after the first cutting, and then it succumbed to the wet weather. But the plantain seemed to be hardy enough, for in spite of our desperate effort, it came in again last season quite numerously. This last spring, 1903, we plowed the piece again and sowed it to oats and peas, seeding it down with clover and timothy. This time, when we had cut off the oats and peas, very few stalks of the plantain made there appearance. What the future will reveal only time can tell.

Now, this shows how we must work and try and experiment for ourselves. The man who wins a place as an up-to-date farmer, must do this. He cannot let the experiment station do everything of this kind for him. That would be an impossibility. It would weaken the farmer and not help anybody else.

Take the matter of the gasoline engine. A good many men think it is the power par excellence for the farmer. Others who have tried it pronounce it a failure. There is all the difference in the world in men about mastering machinery, and this is just as true of gasoline engines as anything else. Some men cannot even keep a mowing machine in order. They will ruin the best machine made in a few years, while another man would take the same machine and by his careful management, make it last a great many years. There is no doubt that the gasoline engine is a complicated machine. Some of them are so than others. And the constant effort of the manufacturers is to bring out a machine which will be so simple and easy to run that any farmer with ordinary ingenuity can handle it. Until this has been accomplished, we will continue to hear differing opinions about the practicability of the gasoline engine. Not many farmers, be they ever so modern in their methods, have ventured to purchase these engines yet. They prefer to depend on horse power or the reliable windmill, and wait for the inventors to perfect this new power.

It is interesting to follow the current discussions of the advisability of using commercial fertilizers. In fact, the best of us can be said to be only experimenters in this field, and we cannot afford quite yet, to take the word of any man on the subject. We must make ventures for ourselves. The most of the men who put standard fertilizers on the markets, are undoubtedly honest in all their assertions, they could not afford to be otherwise. The results they advertise have been accomplished. But in order to know whether or not you and I, the common, every day farmers, could get the same results, we must know how our land compares in its constituent parts with that where the crops were grown that have made such records. We should be informed as to what our particular farms need in the way of fertilizers. There can be no doubt that we can waste a tremendous amount in a short time, if we do not understand our farms, and the fertilizers we are dealing with. Some states require every man who sends out a fertilizer, to stamp on the sack the component parts of the contents. This is all right; but suppose that our farms do not need these particular elements? What then? Why then we are throwing good money away. To be more specific, the land which is all worn out needs a different kind of fertilizer from that called for on soil which is naturally in good heart, but has not been properly tilled. Stony land does not call for the same manuring that a deep loose soil does. And so we must study our farms first of all, then buy fertilizers with especial regard to the wants of our land.

Many times the same farm shows a variety of soils. This makes the problem more complex than ever. What will do for one field will not be the thing at all for another. I have used fertilizers which I knew did not bring me a single cent's worth of good. The seasonal conditions made this so. The fertilizer was all right and properly applied; the trouble was in the weather conditions. This must always be true. If there be not moisture enough in the soil to release the elements of the fertilizer so that they may be taken up into the soil and finally gathered up by the plant, it will lie in the earth all through the season and do no good whatever. But farming is really becoming more and more an exact science, and some day we may master even this uncertainty.

**WIRE & NAILS** Direct from factory to consumers. Write for prices.

## Names of Farmers Wanted

The valley Farmer wants names and addresses of farmers anywhere in the U. S. They want to get them interested in their big farm magazine which now has a circulation of over 100,000 copies and is acknowledged to be the best farm paper in the West. The subscription price is 50c per year, but if any of our readers will send them five farmers' names and addresses and ten cents in stamps or silver they will enter you as a subscriber fully paid for a whole year. Address Valley Farmer, 521 Jackson street, Topeka, Kan.

## The Coming Farmer

C. Hayes Taylor.

It is not an encouraging thought to hold that the farmer of the future must face exactly the same conditions that confront us to-day. There is little ground in them for encouragement. I am living in a tobacco-growing country. We can raise good crops of good quality, but there is little incentive for us to do so. For the past few years our tobacco crops have barely made expenses. The tobacco farmer is not improving his condition by its production. And there is something wrong—there exists some abnormal condition when the production of a staple crop does not pay the expense of its production.

In order that the coming farmer may not have this deplorable state of affairs to meet, something must be done by the farmer of to-day. This is a plain fact, not to be denied. In order to make tobacco sell high a change must be made in the system of its production and marketing. If any but the farmers made this change, what assurance is there that the farmer would benefit by the change? The larger portion of the tobacco of this section is still hanging in the barns. And prices maintain an unusually low level. It is very evident that one year, nor two, will suffice to establish a profitable price for this crop. Then isn't it also very evident that the sooner we do something towards a better condition the better for us, and the better for the coming farmer.

There isn't a farmer who is not planning for the future. He is by necessity compelled to do so. He plans for his crops, for improvements in his farming and his buildings, and there his planning ceases. He works hard to carry out those plans. How often is the result spelled f-a-i-l-u-r-e? And why is it so? Does he fail to raise his crops? Not often. We must look in some other direction to discover the cause of his disappointment. Let us go to the average farmer and ask him this question: Will you make any improvements this year? Almost invariably his reply comes back, "If I get a good price for my produce I will." But is he planning to get a good price for it? Is he studying the ways and means—is he planning for good prices? Is he putting forth any effort to establish a fair price? He is not; and therein lies the cause of his failure—the secret of his non-success. A man may be ever so good an engineer, yet without a knowledge of signals, time-tables and the track he would be a dangerous man to place in charge of a train. A man may be ever so successful a farmer, yet if he has not the ability to market profitably, his prosperity rests wholly upon chance. It is not enough for a doctor to have a thorough knowledge of medicine—he must study and understand human anatomy and disease. It is not enough that the farmer should have a thorough knowledge of crops and stock—he must study and understand the ways of commerce and the principles of business. Must know just what forces and conditions control the sale of the produce from his farm, for not until he does know this can he regulate or control his interest therein. And this he must do or be forever only a machine in the field of production, con-

trolled by selfish and grasping corporations.

The farmer of the present is generally well informed on matters pertaining to practical agriculture. And there are teachers and sources of information innumerable along these lines. Information concerning the proper and profitable plan of disposition of farm crops is unfortunately very meagre. Such an important and essential part of the farmer's education must not be neglected or ignored, for neglect and ignorance is dangerous to the welfare of the farmer, both present and future.

There must be a beginning to all things. The education of the farmer in business has already begun, and it is well that it has. The greatest need at present is instruction. The foremost work of the American Society of Equity is to expound the principles of rational marketing, and to interest the farmers in planning for future sales as well as future production. Let the farmer's planning for his future be complete.

The coming farmer—where will he stand? Shall he master his condition, or will the condition master him? Shall he be free or fettered? The sons and daughters of the present farmer—shall they be handed down a condition under which their parents toiled, suffered and bore needless disappointment? Do we not owe it to posterity, as well as ourselves, to begin planning for a new condition among farmers that will enable them to plan successfully for improvements? The surest way to better the condition of the present farmer is to lay the foundation of a permanent and sure prosperity for the farmer of the future.

Brothers, we have been too long negligent of the most important part of our business. If this negligence continues, the coming farmer will find the shackles more tightly bound. Now that the work of their removal has begun, let us work with a will, study and plan with a fire, zeal and enthusiasm that will brook no defeat. We shall prove apt students in the school of progress and business freedom. Hail to the success of the coming farmer.

### WE WILL PAY HALF YOUR EXPENSES TO INVESTIGATE

WE WANT RESPONSIBLE MEN, with cash, to act as bona fide agents for a fuel saving apparatus to put on any stove or furnace. We want to correspond with men who mean business; who will take the agency for this money saver after they see with their own eyes how it does it. To such men we will pay half of their expenses to our office. Now don't write and use our time unless you're a hustler and mean to do business. You needn't worry about our being able to convince you—your own eyes and common sense will do that. Look us up in Bradstreet's—then write us.

"36 YEARS A STANDARD PIANO"

# The WING PIANO

A Wing style—45 other styles to select from

**This Piano** is a representative Wing style, being our concert grand, with longest strings, largest size sound-board and most powerful action, giving the greatest volume and power of tone. It has  $7\frac{1}{2}$  octaves, with overstrung scale, copper-wound bass strings; three strings in the middle and treble registers; "built-up" wrest plank, "dove-tailed" top and bottom frame, "built-up" end case construction; extra heavy metal plate; solid maple frame; Canadian spruce sound-board; noiseless pedal action; ivory and ebony keys, highly polished; hammers treated by our special tone-regulating device, making them elastic and very durable; grand revolving fall-board; full duet music desk.

Case is made in Circassian walnut, figured mahogany, genuine quartered oak, and ebonized; ornamented with handsome carved top mouldings and hand-carving on the music desk, trusses, pilasters, and bottom frame.

## In 35 Years 36,000 Pianos

We refer to over 36,000 satisfied purchasers in every part of the United States. WING PIANOS are guaranteed for 12 years against any defect in tone, action, workmanship or material.

**Wing Organs** are just as carefully made as Wing Pianos. They have a sweet, powerful, lasting tone, easy action, very handsome appearance, need no tuning. Wing organs are sold direct from the factory, sent on trial; are sold on easy monthly payments.

For catalogue and prices write to us.

**You need this book** IF YOU INTEND TO BUY A PIANO, A Book—not a catalogue—that gives you all the information possessed by experts. It makes the selection of a piano easy. If read carefully it will make you a judge of tone, action, workmanship and finish; will tell you how to know good from bad. It describes the materials used; gives pictures of all the different parts, and tells how they should be made and put together. It is the only book of its kind ever published. It contains 116 large pages, and is named "THE BOOK OF COMPLETE INFORMATION ABOUT PIANOS." We send it free to any one wishing to buy a piano. Write for it.

**Save from \$100 to \$200** We make the WING PIANO and sell it ourselves. It goes direct from our factory to your home. We do not employ any agents or salesmen. When you buy the WING PIANO you pay the actual cost of construction and our wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

## SENT ON TRIAL

**We Pay Freight      No Money in Advance**

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask any advance payment or deposit. If the piano is not satisfactory *after twenty days' trial in your home, we take it back entirely at our expense.* You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

Old instruments taken in exchange.

## EASY MONTHLY PAYMENTS

## Instrumental Attachments

A special feature of the Wing Piano: it imitates perfectly the tone of the mandolin, guitar, harp, zither and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachment has been patented by us, and cannot be had in any other piano, although there are several imitations of it.

## Up-to-Date Farm Buildings

EDITED BY E. A. PAYNE

Further information concerning this house, or complete working plans for the same may be obtained at reasonable rates by addressing the architect, E. A. Payne Carthage, Ill.

Reasonable people do not expect that a small and cheaply built house will appear as handsome and pretentious as an expensive dwelling. Yet there is no reason why a cheap house, no matter how small it may be, should not look neat and cosy and be comfortable also. In country districts a low house is less exposed to the heat of the sun in summer and is more easily kept warm in winter. A pretty one-story cottage well built is more desirable than a more pretentious design poorly constructed.

The accompanying perspective and floor plan represents a cottage costing about \$700 to \$800, which will meet the requirements of many who wish a convenient house of low cost. Cellar is provided under the kitchen, and the foundation is built of brick. The size of the building is 28½ x 43 feet; the cellar is 7 feet deep, and the first story is 10 feet. The materials and workmanship are of good quality throughout. The outside is painted three coats and the inside finished with hard plaster. The interior is trimmed with natural finished white pine. For a compact, convenient cottage, with every facility for doing the work of the household with the least number of steps; for an attractive and picturesque cottage, with moderate prices attached, we do not know of any plan more appropriate than this.

**RUPTURE** Positively Cured. I have cured thousands and can cure you. It never fails. **H. M. ALLEN, M. D., Rooms 17 to 31, Telephone Building, Reading, Pa.**

**MONEY, \$ \$:** Shrewd, reliable men write **E. T. BEHR, La Crosse, Wis.**

## RHEUMATISM

Cured Through the Feet

Don't Take Medicine. External Remedy Brings Quick Relief. **FREE** on Approval. **TRY IT.**

We want everyone who has rheumatism to send us his or her name. We will send by return mail a pair of Magic Foot Drafts, the wonderful external cure which has brought more comfort into the United States than any internal remedy ever made. If they give relief, send us One Dollar; if not don't send us a cent.

TRADE MARK

Magic Foot Drafts are worn on the soles of the feet and cure by absorbing the poisonous acids in the blood through the large pores. They cure rheumatism in every part of the body. It must be evident to you that we couldn't afford to send the drafts on approval if they didn't cure. Write today to the Magic Foot Draft Co., H. A. 6, Oliver Bldg., Jackson, Mich., for a trial pair of drafts on approval. We send also a valuable booklet on Rheumatism.

## ROLLMAN FOOD CHOPPER

Will chop a given quantity of meat or other food with less labor than any other household machine made.

Will cut a given quantity of meat or other food as quickly as any household machine if you reckon on the time required for cleaning the machine.

Cuts all meats and foods with less waste than any other machine.

Is small and of light weight, is convenient to handle and infinitely better adapted to household use than the old style cumbersome machines.

IT OPENS

EASY TO CLEAN

TWO PARTS

75c

Has Steel Cutters—fine, coarse and nut butter cutter. Chops three-fourths pound raw or cooked meat per minute, fish, vegetables, fruits, nuts, spices, coffee, etc. A handy and efficient household tool, adapted to all household requirements. This chopper will cut one pound of meat quicker and with less waste than any household machine made if you reckon time for cleaning machine. Easiest cleaned.

**OUR OFFER.** For 75 cents we will send you of these invaluable machines **UP-TO-DATE FARMING** one year, "Kitchen Krinkles" a book of recipes by Mrs. S. T. Rorer, and full directions. For \$1.00 (25c extra) we will deliver it to you anywhere in the U. S. Give Express office as well as P. O.

**UP-TO-DATE FARMING**  
INDIANAPOLIS, IND.

# The Value of Manure in a Natural State Value of Same when Properly Balanced

A Bulletin, No. 21, recently issued by the Department of Agriculture, gives the fertilizing value of the manure from the several domestic animals for a year as follows: For each horse, \$27; for each head of cattle, \$19; for each hog, \$12; for each sheep, \$3. Counting the total value of said manures, based on the number of animals shown by the census of 1900, we have in round numbers the sum of two billion, seventy-one million, four hundred thousand (2,071,400,000) dollars.

It is well known that each of said manures contains an excess of nitrogen. Hence, if they be applied in their natural state there will be much unnecessary waste of nitrogen. Therefore said excess should be corrected by the addition of proper quantities of potash and phosphoric acid.

In order to make this matter as plain as possible, some one of said manures should be selected and then balanced for some particular crop. We will select for this purpose stable manure and balance it for corn.

A properly balanced fertilizer for corn should contain nitrogen 2 per cent., potash 7 per cent., and phosphoric acid 6 per cent.

A ton of stable manure usually contains nitrogen 10 pounds, potash 10 pounds, and phosphoric acid 5 pounds, making a total of 25 pounds of plant food. The nitrogen, as here shown, is largely in excess.

In order to make the plant food in a ton of stable manure conform with the above formula it will be necessary to add 25 pounds each of potash and phosphoric acid. Fifty pounds of muriate of potash or 200 pounds of kainit in lieu of the muriate will supply the necessary potash, and 180 pounds (say a sack) of 14 per cent. acid phosphate will supply the phosphoric acid.

Well, what will be the effect of adding a sack each of kainit and acid phosphate to a ton of manure? The weight will be increased from 2,000 pounds to 2,400 pounds, and the plant food in the manure will be increased to 75 pounds (raised from 25 pounds). Hence, in practice, a ton of stable manure balanced for corn (2,400 pounds)

is equivalent to three tons (6,000 pounds) of unbalanced manure.

A handful each of kainit and acid phosphate may be added daily to the droppings of a horse or a cow making in the aggregate 200 pounds of each per ton. Said materials, in addition to largely increasing the fertilizer value of the manure, will also, if properly applied, prevent the escape of ammonia from the manure, thus furnishing another important reason in favor of their application. If the manure be removed and bulked necessary measures should be adopted to prevent excessive heat.

The excess of nitrogen in hog and sheep manure is greater than in horse manure. In cow manure the excess is a little less than it is in horse manure. In the four manures, horse, cow, hog and sheep, the average excess of nitrogen is about the same that it is in horse manure. That is, the average quantity of nitrogen in the four manures is about three times as much as it should be for corn. Hence we deduce the following:

The manure from the above animals, in a natural state, according to official statement, is worth two billion seventy-one million, four hundred thousand (2,071,400,000) dollars. The efficiency (agricultural value) of same after it has been properly balanced for corn, will be increased threefold, a ton of manure balanced being equivalent to three tons of unbalanced manure, as above stated. This trebling in agricultural value of the manure is accomplished at a small outlay for potash and phosphoric acid.

It should be noted that the above balance applies to corn only. Other crops require a special balance to suit the requirements of each.

Hen manure contains an excess of nitrogen to a greater extent than any of the above manures.

In the above article I have omitted the details showing how the balancing dose was procured. In an article headed "Directions for Balancing Stable Manure," published in February last, the details were fully set forth, and are therefore unnecessary now. What the farmers desire to know is what materials and the quantity of each are necessary to be added to their several manures in order to make them work to the best possible advantage. This information I have endeavored to give in plain and simple language that can readily be made available by all farmers.

Carthage, N. C. BRYAN TYSON.

## SEED CORN

It is not advisable to use immature corn for seed. As a great portion of last year's crop was husked in the fall in a soft condition, the procuring of good seed is quite a problem.

While high priced seed sometimes proves disappointing it always justifies the increased price more than that sold at prices little in excess of those paid for feeding corn.

From the bulk of seed selected whether home grown or purchasing take 100 grains and plant them in sand or soil, setting the box containing it in the kitchen or sitting room. If 95 grains sprout it will be very high grade seed. If 85 or 90 grains show strong sprouts it should be planted thicker. Or at the end of fourteen days should a number of grains be perfectly sound, count one-third of them as germinated, otherwise disregard the whole and procure new seed.

The soil loses fertility by the oxidation of the vegetable matter within during the summer. Keep all the land growing some crop and thus hinder escape into the atmosphere of much valuable plant food.

## A FINE \$17,000 FARM SOLD

A prosperous farmer, Mr. C. W. Cecil Hamilton, Ohio, has just sold his fine 212 acre stock and grain farm for \$17,000 to I. T. Leas. He recommends all who want to sell either land, home, lots, stock, store, patent or any other property, to put it in the hands of the agent who has sold his farm and many others to such good advantage. He will give you his confidential advice free by return mail. This is the best season and you had better list at once. Address J. A. Stephens, Up-to-Date Real Estate Agent, 267 Willard Bldg. Muncie, Ind.

## A Marvel in Horticulture

## Corn

### EFFECT OF A DEEP SEED BED

Some years ago the late Rev. W. R. Brown related to the undersigned substantially the following:

That upon a certain occasion a tenant laid off a crooked corn row, when he remarked to him that he would straighten the row if he had to run a half dozen times. A number of straightening furrows were run. According to the statement of Mr. Brown this row yielded twice as much corn as the row on either side.

Corn is an exhaustive crop. Therefore, some crop should be grown in connection therewith that will maintain the fertility of the soil. Cow peas will not only do this, but will also materially increase the fertility of the soil while yielding remunerative crops. Hence, in climates that are adapted to growing the cow pea, when corn is planted provision should at the same time be made for cow peas. To do this, soon after the land is broken, if not liable to wash, drills may be constructed about seven feet apart and proper measures employed for making seed beds thereon from one to two feet broad, and from twelve to fifteen inches deep. Other seed beds of proper width and depth may be constructed midway between, the latter beds are for cow peas.

When the time for planting corn arrives loosen the beds intended for corn and apply thereon horse, cow or other manure at the rate of one to two tons per acre. Proper measures should be employed to pulverize said manures, especially if largely composed of straw or other litter, before application. If compacted lumps of manure be deposited where they will not be subjected to frequent stirring they will remain substantially in the same condition twelve months, and consequently will render but little service, comparatively speaking, to the present crop.

Farmers frequently bulk coarse manures as a means of reducing them, making them fine. This method often causes a loss from heat of more than three-fourths of the value of the manure. Even if measures be adopted to

prevent heating, the loss, by reason of causes that I can not here explain, is apt to be considerable. Therefore, in digging up the manure it should be rendered as fine as possible, thence conveyed direct to the field and distributed where wanted without permitting it to heat.

Having in a previous article balanced horse manure for drill purposes, we will here use cow manure. This manure contains an excess of nitrogen, and when applied should be properly balanced; otherwise there will be a great waste of this costly element of fertility.

According to data in a small work, "Principles of Profitable Farming," a ton of 2,000 pounds contains, nitrogen 6.8 pounds, potash 8 pounds, and phosphoric acid 3.2 pounds. A properly balanced fertilizer for corn should contain nitrogen 2 per cent, potash 7 per cent, and phosphoric acid 6 per cent. In order to bring a ton of cow manure to the above formula it will be necessary to add potash 15.8 pounds, and phosphoric acid 17.2 pounds. Thirty-two pounds of muriate of potash or 128 pounds of kainit will supply the necessary potash, and 122 pounds of 14 per cent. acid phosphate will supply the necessary phosphoric acid. A ton of unbalanced cow manure contains 18 pounds of plant food, balanced 51 pounds. Thus, at small cost, the manure is nearly trebled in agricultural value.

For the convenience of farmers the manure may be applied at the rate of 2,100 pounds per acre, increasing or decreasing the quantity as may be desired. A square acre will contain 30 rows, each 70 yards long. Hence 2,100 pounds of cow manure distributed will give 70 pounds to each row.

The balancing dose should be proportionately increased, which will raise the muriate to 34 pounds, the kainit to 175 pounds, and the acid phosphate to 128 pounds. If the two latter be mixed and used the total balancing dose will be 263 pounds, nearly 9 pounds per row. With the instructions given any desired quantity per acre can be used without measuring the land.

The cow manure may be first applied to the loose beds, then the balancing dose. Mix lightly with the soil and plant to corn as early in the season as a good stand can be procured; thin to one stalk

ten to fifteen inches apart, according to fertility and cultivation.

Fertilizer for Peas.—Mix 400 pounds muriate of potash with 1,600 pounds of acid phosphate and apply 600 pounds per acre on the loose beds, midway between the corn rows. From May 20 to June 15, according to the kind of pea, drill therein eight to twelve pounds of cow peas—a plenty for forage or improvement purposes. The corn and cow peas should be properly cultivated soon after each rain until the pea vines become too large.

BRYAN TYSON.

# FARMER'S INTEREST CORN

*Absolutely without a peer as a profitable variety to grow*

*Unequaled in productiveness and all fine qualities*

Photograph of one bushel of Farmer's Interest Corn. This was the highest scoring bushel of corn on record

THE FARMER'S INTEREST CORN has an enviable reputation of winning the leading prizes at all corn shows and expositions where exhibited, including Indiana State Fair for the past nine years. Nine prizes at Illinois State Fair 1902, one of which was for the best bushel of corn open to the world AND GOLD AND SILVER MEDAL AT PARIS IN 1900. Also has won hundreds of prizes at county fairs where exhibited by our customers. It has proven THE LARGEST YIELDING CORN KNOWN IN THE CORN BELT, on all kinds of soil.

It shells heavy and weighs heavy, is high in protein and has high feeding properties. It is a corn that would increase the corn yield many million of bushels if generally grown solely on account of its superior yielding propensities. A thorough bred corn like FARMER'S INTEREST would be cheap at \$10.00 a bushel for seed to any farmer who has been planting mongrel kinds in the past. The best seed is none too good on such an important crop as corn, and the FARMER'S INTEREST is the best variety for all sections south of Michigan that can be found if you would travel the country over. We challenge comparisons and tests.

160 Page Catalog FREE, if you have not received it, where this remarkable corn is fully described.

**Price** By mail, pkt. 10c, large sample ear 30c, 1 qt. 40c, 3 qts. \$1. By freight or express, 1-4 bu. 75c, 1 bu. \$2, 2 1-2 bu. in 1 bag, \$4, 5 bu. or more \$1.50 per bu. A certificate of genuineness is given to each purchaser

**J. A. EVERITT, Seedsman, Inc., Indianapolis, Indiana**

Cost of Production

To the Editor of Up-to-Date Farming:  
As a great many farmers never consider the cost of producing a bushel of grain, I would like to give them some figures showing the actual cost of raising per acre of five of the principal crops of the State of Michigan, viz., wheat, corn, oats, hay and potatoes. I will take the amount of land one man can farm successfully with a team of two horses, and will show the cost of raising these crops on sixty acres of good land worth \$2,400, and the value of the crops delivered to market within six miles of the farm, at the average price that has prevailed for the past ten years; also the cost and value of the same crops when the farmers organize and control the prices, in order that every one may see the great benefit they will receive thereby.

Cost.	
It costs to raise and market an acre of wheat.....	\$7.50
It costs to raise and market an acre of corn.....	10.75
It costs to raise and market an acre of oats.....	7.00
It costs to raise and market an acre of hay.....	2.50
It costs to raise and market an acre of potatoes.....	18.00
Now suppose he raises the above crops as follows:	
15 acres wheat, 225 bu., cost to market .....	\$112.50
15 acres corn, 600 bu., cost to market .....	161.25
15 acres oats, 600 bu., cost to market .....	105.00
10 acres hay, 10 tons, cost to market .....	25.00
5 acres potatoes, 500 bu.....	90.00
Interest on land and stock one year at 6 per cent.....	180.00
Taxes on same .....	20.00
Wear and tear on tools and team, at 5 per cent.....	30.00
Feed for team for six months.....	50.00

Total expense .....	\$773.75
Value.	
15 acres wheat, 225 bu., at 77c per bushel .....	\$173.25
15 acres corn, 600 bu., at 40c per bushel .....	240.00
15 acres oats, 600 bu., at 35c per bushel .....	210.00
10 acres hay, 10 tons, at \$7 per ton .....	70.00
5 acres potatoes, 500 bu., 35c per bushel .....	175.00

Total receipts .....	\$868.25
Taking the total expense from total receipts, leave \$94.50.	
When organized the cost of raising same crops will be a little more, or \$785.50.	
225 bu. what, worth \$1 per bu....	\$225.00
600 bu. corn, wor 60c per bu.....	460.00
600 bu. oats, worth 45c per bu....	270.00
10 tons hay, worth \$10 per ton....	100.00
500 bu. potatoes, worth 50c per bu	250.00

Total receipts when organized .....\$1,205.00  
Taking expense from receipts, leaves \$419.50, or \$320 in favor of organization. These figures represent the labor of the farmer and his team. Every one can readily see the value of organization, and no one should hesitate to put in his dollar and help build up the American Society of Equity, in order to improve their homes and make them more attractive and valuable, and to be able to enjoy some of the luxuries as well as the necessities of life. Their children will grow to manhood and womanhood, and bless them for aiding in the good cause. Under present conditions, if a young man has no help from home, and has no capital but his labor, by the time he is fifty years of age (if he enjoys good health) he may possibly own a home of forty acres, valued at \$1,600, and perhaps be broken in health and unable to enjoy the home so dearly won.  
I am acquainted with a German fam-

ily who came to this country when young, and now in their old age, after working hard all the best of their lives and raising a family of five, have just got forty acres paid for, and have, perhaps, \$500 worth of stock and tools. Let us all join hands and say we will make the pathway for our children more pleasant and profitable.  
Climax, Mich. S. W. CLARK.

ALFALFA

If you want a permanent meadow, yielding protein in such quantities as you cannot harvest from any other crop, and hay in such weight as no other plant yields, plant alfalfa. The objection to it as a rotation crop is the great difficulty of plowing it up. With a sharp plow and four good horses it is a big day's work to plow one acre.

Be generous with your soil, but alfalfa will thrive on a variety—sandy, sandy loam, black, rich, yellow clay or gumbo, but never on wet or swampy land. On such the conditions are not right for the growth and development of the nitrogen-gathering bacteria which are contained in tubercles (knots) found on the roots. A level surface with a porous subsoil, where there is no hardpan within eight or ten feet of the surface, is excellent.

HAULING MANURE

The principal objection to winter manuring is the danger of excessive waste of fertility. The frozen, ice-crustured ground that makes the moving and spreading so expeditious, in like manner promotes its leaching and waste to the lowlands and streams.

Early in March, often late in February, the soil becomes thawed to a considerable extent, so as to be able to absorb the drainage should rains come. If snow is on the ground it is apt to be solid and supporting, but yet porous. The teams and men are in need of such exercise to harden them for the spring campaign.

TEA CULTURE

Work in tea culture investigation continues at Summerville, S. C., and a new station has been established at Pierce, Tex. At Summerville, though the season has been somewhat unsatisfactory, the yield of tea will probably approximate 9,000 pounds.

MANAGEMENT OF BREEDING STOCK

It may be safely stated that a large number of our readers count on incubating a large per cent. of their eggs in March and April. This means that they desire and require that eggs shall not only be fertile but strongly fertilized by March 1.

The pullets that have been forced to lay when prices were high cannot hatch so large a per cent. of strong chicks. Breeding females should go on making bone and muscle, building up the frame work. They are undeveloped and must be fed accordingly. We prefer not to have them lay before the middle of December, or better still, January 1. The day they enter the breeding pen, they must be fully matured in size, strength of bone and body and plumage. A pullet fed so strongly as to begin laying before she is full grown, is not likely to make a vigorous breeder.

In regard to the male, we are of the opinion that best results are obtained from eggs for WINTER HATCHING where early hatched, well matured, vigorous and active cockerels are used, if kept to themselves until wanted. It is well known to all observers that females receive the greatest attentions from males immediately after laying their eggs, and hence where males intended for the breeding pens have been allowed to run with the laying stock during October, November and December, they are in no condition to impregnate with certainty the eggs of hens or pullets after these three months of exhaustive service. They also develop as to form at the expense of size and vigor.

It is a custom among fanciers to place the cockerel intended for breeding in a roomy pen by himself, out of sight of the females. Supply him with all necessary

food, and in addition feed him about two ounces of raw lean beef each day. So treated, by January he enters the breeding pen in full possession of all his faculties.

When a well-matured cock is desired to head the pen after molting, he is given a necessary and judicious rest, during which time he reinvigorates from the previous season's work, as is evidenced by feather and strut. It is needless to say from hens and cocks two years of age, will come the largest and most vigorous chicks, if only they have the rest from the time of molting until late in winter or early spring.

For strong fertility alternate the males, using one male in the breeding pen with twelve to sixteen hens for two days; then take him out and place another in the pen for the same length of time. The secret of this plan is this: Hens with one male for the season are mated according to the idea and likes of the owner, and not according to the likes and dislikes of the females themselves. Only in cases where the invitation to copulation is extended by the hen, is fertility assured. Again, on the part of the male, he is apt to have his favorites, shunning the rest.

Feed a mash in the morning composed of six parts oats, three cornmeal, two wheat and one oil meal. This mixture is carefully cooked and fed rather dry. The oilmeal keeps the birds' bowels in perfect order, and is a great aid to feather production.

Delay a week after mating before selecting the eggs for hatching, as fertilization effects about six of the undeveloped eggs.

## The Brood Mare

In the care and management of our brood mares the feed need not be different in quality from that fed at other times, only that it should usually be somewhat greater in quantity. As to feeds, oats are perhaps the best single feed, yet bran and clover hay more than repay the breeder. Linseed meal and carrots are also beneficial. These foods keep the mare in excellent condition so there will be no occasion for bolting; gastric disturbance is easily set up, and in such matters prevention is better than cure.

The mare should get plenty of exercise at all times. It is the nature of the horse to be out in the air and in motion a great deal of the time. Perhaps there is no better way of exercising than to keep her at light, steady work, or if we have no work, as is often the case during the winter months, she should have the range of a field.

As foaling time approaches let the feed be loosening in character, and do not change the condition of the mare to any considerable extent. Where corn has been a part of the ration it should be dispensed with six or eight weeks previous to foaling. If she has been in the habit of working, it is safe to keep her working right up to foaling. A few days previous to foaling she should be turned loose in a box stall filled with cut straw and containing no projections except a movable grain box in one corner. In such a stall a mare can be turned loose. If the weather is warm a good-sized lot is better, as at that time she desires to be free.

Eleven to fourteen months are the time which a mare goes with foal, but forty-four weeks may be taken as a mean time. When once her time is known the breeder can regulate her going to the horse so as to have the colt appear at whatever season he considers most desirable. Our experience shows close watching is the best plan. At the approach of parturition the udder frequently becomes distended, and a day or two before the teats fill out full and plump.

Foaling is a prompt act, and if the mare is in good condition she needs no assistance. Never try to hurry nature, and no one but an experienced horseman should attempt to relieve a terrified mare. After foaling, give her warm gruel and a little hay. She attends to the colt by instinct, allowing it to suck and licking it dry. If she refuses to own it rub some of her milk on the foal's nose, then let her smell it and she will own it at once.

After dropping the foal the mare ought to have at least a week or ten days' rest. Feed a diet of crushed oats and bran with succulent feed to produce a good flow of milk. The grain ration should be fed wet, mixed with cut hay. A small quantity of the latter at first is best, as it has a tendency to destroy her shape.

If she is intended to raise a colt next year lead her—never ride her—to the stud nine or eleven days after foaling. If this is considered too soon delay another week, and if she refuses another trial should be made five days later.

## Vicious Sows

The number of pigs lost because of insufficient care of sows at the time of farrowing has been a source of regret to many swine breeders. There are on record many cases in which every pig was lost, either because the mother ate up her offspring after birth or on account of her lying the pigs to death.

The cause of viciousness in sows at the time of farrowing is often the pain occasioned by normal narrowness in the lower part of the genital organs. The mucus membrane will sometimes be pushed up into folds—"curtains"—which obstruct parturition. A great deal of relief may be effected by introducing a clean hand in the vagina and pulling forth the young pig.

Biting the pigs is prevented in the following manner: A leather strap (Fig. 1) is placed about the sow's neck, due care being taken that the animal can breathe free. Then the snout and the lower jaw is tied together by means of a strong, flexible, soft (cotton) cord, the ends of which are carried up to the leather strap, above and between the ears of the animal. To prevent this cord from slipping off two more fastenings are made, one on each side of the lower jaw. As a rule, this muzzle can be removed in a few days' time.

Examine the pig's teeth and see whether or not they have sharp tusks which are lacerating the teats, and which they are using in the scraps with their brothers and sisters to see which will get the best teat. If you find that they are doing this get your pinchers, take the little fellows up and simply snap off these teeth. If you do not, you may have a case of canker sore mouth, which will spread through the herd.

FIG. 2.

"Lying to death" is frequently obviated by the insertion of a small shelf under which the young pigs may rest safely, in the wall of the pen, a short distance from the floor.

## DOING UP TRACES.

Many farmers when unhitching, fasten the traces in short and abrupt knots. You will notice that traces generally become unstitched just where this abrupt turn is made. To remedy this go to your harness shop and procure four snaps, which are especially made for holding up traces. These snaps are fastened into the ring in the back part of the strap which holds the breeching. It gives the traces a long, gentle curve, and they are securely held up out of the way.

## HOGS AND CATTLE

The live stock men in their national convention at Portland, Ore., January 12, adopted a resolution unanimously in favor of the establishment in stock centers of farmers' packing plants and pledging the support of the live stock association to these plants. The proposed capital stock is \$5,000,000. In this way the farmers can control the market on hogs and cattle.

The stock men in Kansas show that beef cattle in that State alone have depreciated in value \$11,000,000 as compared with last year. They declare that this has been caused by the great packing combines of Chicago, Kansas City, St. Louis, Omaha and St. Joseph.

If the stockmen all over the United States will join the American Society of Equity we will control the hogs and cattle and get a fair living price for all we can raise. C. O. D.

## WIRE FENCE

Before any of our readers buy fence they should investigate Page Woven Wire Fence. Page fence is good fence. The Page people publish a little paper called Page Fence Age. Send for a copy to Page Fence Co., Box 81, Adrian, Mich.

No Smoke House. Smoke meat with **KRAUSERS' LIQUID EXTRACT OF SMOKE.** Made from hickory wood. Gives delicious flavor. Cheaper, cleaner than old way. Send for circular. E. Krauser & Bro., Milton, Pa.

**SPAVINS** Absolutely removed and permanently cured in 24 hours without pain with Dr. McKee's **MAGIC SPAVIN CURE** Splints, Ringbones, Curbs, Chapped Hocks, Sweeney, Sprains, Swelled Legs, Enlarged Glands, Rheumatism, Shoe Bolls, Nodular Disease, Wind Puffs, Joint Lameness, Fistula, Quittor, Lumpy Jaws, Soft Bunches, Bony Growth, Guaranteed. No cure. No pay. For particulars write at once to **DR. O. W. MCKEE - Benson, Minn.**

**SPRAYING** brings fruits and flowers. We make the right appliances. Special adaptation to every need. **HAND, BUCKET, BARREL KNAPSACK and POWER SPRAYERS.** 20 styles. Nozzles, hose, attachments, formulas, every spraying accessory. Write for free catalog. **The Dering Co., Salem, O.** Western Agents, Benson & Hubbell, Chicago.

**NO MORE BLIND HORSES.** For Special Ophthalmia, Moon Blindness and other Sore Eyes, **BARRY CO., Iowa City, Iowa,** have a sure cure.

**DEATH TO HEAVES** Guaranteed **NEWTON'S Heave, Cough, Diarrhoea and Indigestion Cure.** A veterinary specific for wind, throat and stomach troubles. Strong recommendations. \$1.00 per can. Dealers. Mailer Ex. paid. **The Newton Remedy Co., Toledo, Ohio.**

## Veterinary Department

[Conducted by C. C. McCue, Akron, O., to whom all communications should be addressed before the 1st of the month to insure insertion in the following month's issue. All subscribers are invited to submit questions. All communications must be signed in full, not for publication, as only initials will be used but to show good faith.]

**WEAKNESS-RHEUMATISM:**—Can you give me any advice on the following? Have hogs that lose power in hind legs. They seem to give way in their back and drag their hind parts. Little pigs, five and six weeks old, nice and fat, will run along, and all at once their hind parts will give away. My hogs were in a great deal of mud and water in the spring and in a few weeks they seemed to get stiff in their joints, and some got so they could not walk nor stand. Some of them died. Is there any help for them? J. C. H., Chapman, Kan. From the description, am led to believe that you are giving your hogs and little pigs too strong a feed. Cut their feed down one half. If you can, give them ground feed mixed with bran. Add oat hulls or some such filler, so as to create bulk. Feed in form of warm slop. Get a good condition powder and feed for thirty days. Reduce the flesh on your hogs. The mud and water probably brought on rheumatism, and it may be troubling their joints yet. Keep them in a dry warm place. Use plenty of straw, so they can make nice warm nests to suit themselves. Report after a fair trial.

**SCOURS:**—What would you recommend using for scours in colts? Have had the misfortune to lose a fine colt from this trouble last summer. W. J. A., Joliet, Ill. Give small dose raw linseed oil, and in a couple of hours afterwards, give five drops of laudanum. This should be repeated every four hours, until you obtain desired results.

**KICKED:**—A short time ago one of my horses had the wart knicked off hind leg. Will it injure the horse? What can I do for it? P. I. L., Huntington, Ind. Bathe the injured parts of leg with warm water and soap once. After that rub in a good ointment once a day until it is well.

**UNTHRIFTY:**—Have a ten year old mare that does not thrive, although she is well fed. Occasionally she passes water, evidently involuntarily, but not often. She was troubled this way once before, but apparently recovered. A. S. R., Sioux City, Ia. If you are feeding your mare whole grain, take it away from her and give her ground feed mixed with cut hay, nicely dampened. Use from one to two quarts of corn feed meal, four quarts of bran, and a peck of cut hay, add a pinch of salt. In freezing weather mix with hot water. Use a condition powder until your mare shows signs of improvement.

**WARTS:**—I have a yearling horse colt, which has in his ear, pin warts, which have come since the last of August. Will you tell me how to treat them, to take them off? The ear is full and it dropped. I am a subscriber to UP-TO-DATE. W. V. G., Dot, Va. Take a piece of stick caustic, dampen it and rub each wart once a day. Scrape off the dead parts daily. Rub in a good ointment twice a day. If the colts blood is out of order, or his hair is harsh and dry, feed him a condition powder for two or three weeks.

**EXTRA TEAT:**—Young heifer has a double teat,

one smaller than the other. Milk comes from both of them. H. Y. M., St. Joseph, Mo. If you have not weaned the calf, let it run with her as long as possible. After you dry her up, destroy the small teat. During the time you are milking her, see that all five teats are milked out.

**WORMS:**—Have a yearling filly that is not doing well. She passes some worms! and has a poor appetite. J. C. S., Hope, Ind. You should feed a condition powder. If you do not know of any, write me a personal letter and I will prescribe. Feed your filly dampened ground feed mixed with cut hay. Take all whole grain from her. Occasionally give her a warm bran mash.

**WEAK EYES-COUGH:**—We have a mare whose eyes are very small and a foggy appearance; sees but very little. She also has a dry cough. Has been this way all summer. What can I do for her? Had a veterinary look at her in May. He gave me some eye water, that seemed to have a great deal of strength. The mare got mean about handling, so we quit using it. Could not say that it did any good. J. Z. & S., Metamora, Ill. In the first place if there is any dampness where your mare is kept, move her to a dry warm place. Bathe the eyes twice a day with warm water. Occasionally add a little salt to water before bathing. Do not let her stand where there is a draft. Dampen all her feed. In cold weather dampen her chop feed with hot water. Shake all dirt and dust out of hay and sprinkle with lime water. If you do not know how to make it, write me. Feed her a condition powder and twice a week give her a hot bran mash. In a week write to me.

## The Field in General

Brother Farmers, I want to give you a few common sense ideas. My grammar and spelling may not be right, but it is better to have your head full of the right ideas than of grammar and punctuation marks. We want to solve the problem of getting one hundred cents on the dollar for farm products. We have been going ahead studying the production end, but forgot to fix a place to light when we got a knock out blow. While we were toiling last summer to produce big crops, the packers and trust managers were off to a cool resort fixing a place for us to light, and we have lit there—in a hole. On Sept. 1, I began to feed a bunch of fine shoats. I kept an account of the corn fed, and upon selling them, I found they brought \$17 less than the corn was worth. A car of fine bacon hogs sold here the other day at \$3.55 per cwt., yet one merchant paid the packers 21½ cents the same day for fancy breakfast bacon. But I don't need to tell what the trouble is. Every feeder in the United States knows what is the matter with us. What we want to be told is the remedy. The remedy will come by making our own prices. Prices can be made by organizing in every township. Let the or-

ganization in each county select a delegate to national convention, and put capable men in charge that understand every market and every farm crop.

The farmer is the man who usually starts the dollar to rolling, but if he fails to get the dollar it don't roll from him to his country merchant and then to the city merchant or manufacturer. When the bands of high-waymen who make prices for the farmers, are ousted and the farmers do this job themselves, then will the dollars roll plentifully. It has come to the point right now when the farmers and business men in the county must co-operate with each other to build up the country first and always keep the county prosperous. A. W. DAVIS, Pleasanton, Iowa.

\*\*\*

**EDITOR UP-TO-DATE FARMING:**—We have endeavored to give an impetus to the movement of the American Society of Equity by the dissemination of literature sent us from headquarters at Indianapolis. We also wrote many articles for the "DIXIE STAR," and had them published the famous "Dollar Wheat Bulletin," and some other matter in our possession. Since then wheat has been gradually climbing up to the dollar mark, as predicted; corn likewise moving in sympathy. That this has been a direct result of a combined effort on the part of farmers who had enrolled themselves under the banner of the American Society of Equity, no one can doubt, from the fact that the department of agriculture reports larger crops of wheat and corn this year than last. Any of our farmer friends can figure from this as to whether the A. S. of E. has not returned its members a very large percentage on the small amount invested in membership. We are now in communication with the Hon. J. M. Barlow, of Plainfield, Ind., who will doubtless be with us some time this month—February—and from his efforts, combined with what has already been done, we expect results. The movement demands strenuous efforts now. The A. S. of E. is delivering the goods, and the farmers are the only ones who can retard the many benefits that are promised by it. The organization is past the experimental stage. It is now up to you Mr. Farmer. What are you going to do about it?

JOHN A. McCURE,  
Hickman, Ky.

\*\*\*

M. WES. TUBES, Acting Secretary, A. S. of E.  
DRAE SIR:—There is good sleighing, and lots of us rubes are in town. I did not have any trouble to distribute the papers you sent. There were some farmers in, to

## THIS 50-EGG INCUBATOR ONLY \$6.00

The P. S. is a hot air Incubator, built of first-class material, neatly finished and thoroughly tested before leaving the factory. The improvements in this machine have so simplified hatching that a child can operate it without difficulty. The regulator is highly sensitive metal, extending above and beneath the egg tray. It can be set to any desired degree of temperature, and when so set will hold the temperature within the egg chamber without any variation, regardless of any variation of temperature outside the Incubator.

### This is the Incubator For You

#### OUR OFFER

We will send a P. S. 50-egg Incubator for \$6.00. This machine will hatch eggs just as well as the larger sized ones. It is the best Incubator on the market and every person owning one speaks of them in high terms. The 50-egg P. S. Incubator is 14½ x 24 inches. It has one blank tray, one thermometer, etc. Weight 32 pounds; crated for shipping 45 pounds. Each machine is supplied with complete directions for operating. Cut off the coupon and mail it today.

Look at this record. Do you want anything better? Catalog of all sizes of Incubators Free

NO MOISTURE NO CRIPPLES

whom I gave booklets and papers last Saturday, and they want to know if I am going to organize local unions, and to be sure to let them know when I do. The time is now ripe for the work in this section of Iowa, and I will begin work at once. I have sent the book "The Third Power," to C. F. Curtis, dean and director of the Iowa State college, and I want some society stationery to correspond with editors of farm papers and professors of colleges.

I see Secretary Wilson has been telling our friends down on Wall street that we farmers are getting good prices for our cattle and hogs, but I have been raising hogs to long too be deceived by such statements. We Western farmers may as well prepare for another advance in farm implements for I believe the manufacturer will take the hint and lay their heads together to relieve us farmers of some of our hard-earned dust. Secretary Wilson says the Iowa farmers are prosperous and happy. He may be right to a limited extent but then, farmers are not use to much, and they are thankful and happy for very little.

DON M. LEACH,  
Ackley, Iowa

\*\*\*  
I never let up on Equity whenever I have a chance to drop a thought or speak a word in that direction. I wear the emblem, explain what it signifies and have painted Equity's banner, "Profitable Prices for All Farm Products," in many public places. Business men are very favorable toward the A. S. of E. in this locality as they realize that it is beneficial to them to have the farmers prosperous, and they see in the plan of the A. S. of E., the flower of perfect prosperity.

J. O. THOMAS,  
Salesville, Texas.

\*\*\*  
I am a farmer and by the aid of the A. S. of E., I hope to be a more successful one in the future. I have been devoting as much of my time as is possible to this grand and glorious cause, by calling meetings and organizing unions to the best of my ability. I hold meetings at various places within twenty-five miles of my home.

My appointments now call me from home four nights out of every week, and I will earnestly say I wish it were in my power to devote all of my time to this grand cause which is both just and right.

This plan of Equity is for the up-lifting of the down trodden farmers. It will be but a comparatively short time till Equity will burst forth in all its glory like the blush of a new born day. I consider the plan of the A. S. of E. a God-send and well worthy the support of every farm and other paper as well as every individual. All we farmers want is an honest reward for honest labor. We are asking for nothing that is not rightly ours. We are all lovers of justice and fair play, and when the victory is won, as won it will be, it will be found that all will be benefitted. The end may be delayed for a time, for a short time only, but it will surely come.

I am yours very truly,  
JAMES A. BAKER, Deputy Pres.  
Mutual, Oklahoma.

\*\*\*  
Mr. J. A. EVERITT, Pub.:—May I add a few lines and thoughts for your paper on the conditions of farmers? Now every body is agreed on one thing, that the farmers are the worst abused persons living—from a commercial standpoint in the way of prices on their products. We admit it, but who is to blame? The majority of farmers blame the speculators. Not so Mr. Farmer, you are to blame for all. Why? Because you let the trader and speculator make prices for you, and you have not the courage of your manhood, that is from a business standpoint, to say nay. I write from experience, I am a farmer myself and have been all my life, and hence my knowledge of these facts.

I live in the dark tobacco belt and that is our leading crop for this part of the state. This year the buyers boasted they are going to buy it for \$2.50 per hundred around here, and they are doing it too. We ask farmers what they propose to do about the matter? I don't know. Can you live and pay expenses? No. Well, the fact of it is we are going to quit raising it until prices get better. Do you think prices will get higher if you quit raising it? Yes. Well can you maintain them afterward? I doubt it. Why don't you farmers organize yourselves into the A. S. of E.? The farmers won't stick together. Well, why? I don't know, but it

"can't be done." So now we have the gist of what farmers say about organizing and putting farming on a paying basis.

Such ideas are beneath the dignity of a ten year old school boy who has never been taught or knows anything about making equitable prices for farm products. Brother Farmers, I am glad to tell you it is in your hands to make the prices and put farming on a paying basis. You and you alone are responsible. It is your product and the world will have it, there is no make shift for your products. They being yours, need you let speculators make the prices at their own figures? It shows cowardice on our part for the speculators to invade the private sanctuary of our homes and say what we must do in the matter, and take from our hard earnings that which should go to make our families comfortable and happy. We may be putting it too strong for some of the farmers, but it is true, too true to be denied by any one. We want to say now is the time. Don't delay. Organize upon business principle and stand PAT for your rights. You owe it to yourselves and families, not only to them but for your country's good.

Some say we read other farm Journals but they don't give very much encouragement to organize in the A. S. of E. Farmers' crops are too diversified and they can't control prices. Just as I thought. Let me give you what I think about the facts in the case. First, I read a great many different farm journals, and they give good and wholesome advice as far as they go, but they don't go far enough. They tell you how to increase the yield of your farm, which is all right, but there they stop and do no more. That part of the work is from a scientific standpoint, which is called intensive farming. After all of that comes the other part of the business which is making prices, and that they fail to do, except one farm journal which takes up both propositions and makes them so plain though a child he need not err therein. I will whisper its name in big capital letters. THE UP-TO-DATE FARMING. In conclusion let me say: Educate yourselves from a business point of view in the school of the A. S. of E., and do your own thinking in the premises and you will, I am sure, not contend as you do. Let us be up and doing and push the work of organizing to a finish; then control marketing and prices will be made and maintained. We haven't any time to lose. Brother Everitt, I am in the fight to a finish.

R. H. NABBETT,  
Providence, Ky.

\*\*\*  
MR. J. A. EVERITT, Pres.—We know that when we attempt to organize the farmers we are met with denunciation. Along down the line from New York to the county papers comes denunciation of the plan for organization of the farmers. The reason of it is that the organized class want to still fleece the farming class, the unorganized. Farmers let us come to the front and organize so that we can get equity and justice. Let us stand for the principles that are set by the A. S. of E., and let us have the profits on our produce that the gamblers get by their unjust methods. All that we need is organization to become the First Power instead of the "Third Power." In union there is strength." United we stand; divided we fall." So let us unite and come up in a solid band and demand right and justice. Stop the lobbying and compel legislators to give us equitable laws. "Live and let live." Let us be an independent people instead of a dependent people.

J. P. ODOM,  
Freeland, Texas.

\*\*\*  
J. A. EVERITT, Pres.—I believe you are on the right track to help the tiller of the soil if you only can get enough to see it. I always maintained this idea. Our local markets are fairly good but we can do nothing but a trading business. Go to the store and the merchant sets a price on what we produce; says he will give us so much in trade, no cash. Then he makes his price on what we buy. Just a little illustration that happened a few days ago. I had eggs to market. They were 25c on Monday; Tuesday I took them in. They have dropped to 25c, so the merchant says. Well, I wanted some groceries. Coffee that I had just bought a few days ago at 15c had advanced to 17c. Now in less than 24 hours my eggs were worth 3c less and coffee 2c more. This is only one out of a hundred other cases similar. Yes sir, I say the farmer must and can help himself if he goes at it in the right way, and the only way will be to organize.

## Burr Incubator

Perfect in construction and action. Hatches every fertile egg. Write for catalogue to-day.

GEO. H. STAHL, Quincy, Ill.

I intend to do all I can to forward the movement by paying what I can and talking. I want to be a member of the association. Hoping this will not weary you and that we may see more prosperous times in the future, and strength to push the cause along, I remain yours respectfully,

LAWRENCE CLARK,  
Hooversville, Pa.

\*\*\*

It does look strange to me that farmers will hesitate to join this society and give it a trial when the membership fee is so small compared with what they lose on their farm products one year with another. If they could all see as I do, you would receive members faster than you could issue certificates. Then the price of farm produce will come.

Well, they are getting to see more and more here every day. I think there are several here now that will join and help this society along. Any way, if our master is willing I will give them two chances this week. Hoping this A. S. of E. an everlasting success, I am yours for equity,

WILL PURNELL,  
Stone Fort, Ill.

\*\*\*

MR. J. A. EVERITT, Pres.

DEAR SIR:—I have read the last two copies of Up-to-Date with much interest. I was raised on a farm and have been more or less identified with farmers all my life. Am still interested in farming and expect to be the balance of my life. I fully believe farmers are the most important body in the community, both as to numbers and as to occupation in which they are engaged. Farmers can live without any other class, but none can live without the farmer, unless they become farmers themselves, at least to a certain extent. Farmers as a class are quite capable of managing their own affairs. And I think the time is ripe for farmers to arouse from their drowsiness and manage their own personal affairs, which they are far from doing now. The first thing is for them to place themselves in a position to do so. I believe your plan is right and just, and you seem to be the right man in the right place. If so, I see no reason why your plan should not succeed. I trust you realize fully your responsibility. Much lies with the leaders who are in position to know the limitations of the workings and the obstacles in the way, better than the rank and file. While believing your object a worthy one, as well as stupendous, and will take time, also money, but in the end if persevered in justice will prevail. I believed the farmers are bound to fall in line. It is their only salvation. Never-the-less, they are so slow going it will take time. You may send me some copies of Up-to-Date and other literature you think advisable. Wishing you greatest success, I remain yours Very respectfully,

W. A. SNYDER,  
Claremont, Va.

\*\*\*

J. A. EVERITT, Publisher,

DEAR SIR:—I read in the issue of Jan. 15, Up-to-Date Farming, the proposition to take the publishers of leading farm papers in to associate themselves with Up-to-Date Farming in order to push the movement and give it more influence. As a member of the order, I would say, don't do it. Three-fourths of those editors are partisans and would do all in their power to maintain present conditions. Some of the most intellectual of men who are in the farmers' institutes as speakers would do all in their power to defend the combinations of capital and monopolies, and for money endeavor to disrupt the organization. You are undoubtedly on the right track; keep clear of entangling alliances. The official organ as it is will push the order as fast as the farmers can read, and thoroughly digest the principles taught. It is possible to organize too fast so that members will not have sufficient time to study. What have all these farm papers been doing for the last twenty years that they never advocate any thing like the A. S. of E. Possibly you may think I am cranky on this but I have been in two or three reform movements that have been wrecked by admitting doubtful allies. Napoleon's maxim was a good one when he said: "Better have a known enemy than a doubtful ally." Doubtless many of the farm papers will be loud in the praise

of the A. S. of E. when they see it will be a success. We have 800 Grangers in Lewis county, and have a state organization. I am at present lecturer of the state Grange and I know from experience that they all realize that the Grange is not going to reach the case. I can get a Granger's attention in two minutes as soon as I begin to talk A. S. of E. Name omitted by request.

\*\*\*

I take the liberty of writing you for the benefit of my brother organizers and State organizers of how I manage my organizations in my territories. I am now devoting my time to holding revivals. I hold these revivals from two to three days at each county seat, with good entertaining programs for the morning, afternoon and evening sessions. I have special invitations to local unions in the county, and have some member from each union take part in the exercises; have each union attend in full if possible. So we get a general feeling of interest throughout the county. I visit in person as many as I can, and press upon them in the most urgent manner the invitation to attend and to take a part with us, and in this way we reach those who otherwise could not be aroused into the feeling of enthusiasm and interest in the American Society of Equity.

I am holding a convention in Blaine county, where there will be represented fourteen unions. We hold our meeting at the county seat, Watonga, O. T., on March 11 and 12. The work is being perfected in this county by Brother J. B. Winn, deputy president.

Our meeting at Geary, O. T., on February 18, 19 and 20 was conducted by Brothers Goss, Pennebaker, Tomkinson and Franklin. We had a crowd each day, and great interest was manifested, and many new members will be received.

I have succeeded in getting the co-operation of our farmers' institutes. The Secretary of the Board of Agriculture is co-operating with me throughout the territory, as is the experimental college of the Territory. Now, brother organizers, we have the best and most highly appreciated society ever organized by the farmers, and you should not lose sight of this thought; you should never fail to view the facts as they are. Do not antagonize any agricultural school, institute or other organization, but rather court them, coax them, associate with them and aid them. They will return to your folds and be one with you. I believe our society would accomplish more and better results by having out in the field a good evangelist, who would hold revivals all over the country and associate with members of the boards of agriculture and the deans of agricultural schools. I want to say right here that I have been for one week with Dr. John Hamilton, the lecturer of the agricultural station at Washington, D. C., and he has given me many valuable suggestions and recommends the ideas of the society. In the near future I will be able to give your readers a very interesting letter from him.

I also have met Prof. Cornell, of Dallas, Texas, also president of the Farmer Congress, who has promised to give me a letter upon farmers' organization. Prof. Cornell is one of the ablest men on this subject in the West.

Now, brother organizer, get out into the field; it is my intention to bring Oklahoma and Indian Territories up to the top round. I don't intend that my deputies shall take a back seat for any. Our society has in the past four months become very popular. We should reach the million mark before harvest of 1904. In order to do this every one must be up and doing. Our local union of Mitchell, Noble county, Oklahoma, has bought one entire block, and will build a big cotton gin and warehouse. They also will build and operate a store of general merchandise. They have a fine working union, and are doing much good. The wealth of Noble county is

represented in our union, and the best business brains of the Territory, and in these new enterprises will be found one which will tend to build up the town of Mitchell. It is now one of the liveliest towns in the Territory of Oklahoma. We invite you, brother organizer, to visit our country and see what is being done. It is our aim to co-operate and work for equity first, last and all the time. We can now boast of sixty unions in Oklahoma, all of which are in working order. I would like to hear from some, and prefer to hear from State organizers and deputy presidents, also from the secretaries of all the local unions. Yours for equity,

WILLARD J. CONOVER,  
Okla. City, Oklahoma.

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

### CHAPTER XV—Continued.

I knew myself the target for dozens of curious eyes, under the heat of which I near melted away.

"Sing, comrade, sing some sweet love ditty of a lonely forest maiden and her lover, robed in the innocence of Eden."

Had the fool no sense? I caught the imploring expression of interest on the girl's sweet face behind Madame, and determined at all hazards they should not have the laugh at me. I saw it all then; they were in league with Jerome to play a game of "bait the bear," with me for bear.

So I pitched in and sang, such a song I warrant as my lords and ladies had never bent their ears to hear before, a crooning death incantation of the Choctaws, which fell as naturally from my lips as my own mother tongue.

Their laughter hushed, for even in the court of France, sated as it was with novelties, laying a world under tribute for amusements, that wild, weird melody never rose before nor since. One stanza I sang translated into French that they might understand:

"Yuh! Listen. Quickly you have drawn near to hearken;  
Listen! Now I have come to stop over your soul;

You are of the Wolf Clan;

Your name is Ayuni;

Toward the Black Coffin of the upland, in the upland of the Darkening Land your path shall stretch out.

With the Black Coffin and the Black Slabs I have come to cover you.

When darkness come your spirit shall grow less and dwindle away never to reappear. Listen."

And they did listen; yea, attentively did they hearken, for a great pail of silence lowered upon them, so new, so strange to them was the song.

When I had quite finished, the soft, Indian words dropping as the splash of unknown, unseen waters, Madame besought me with earnestness to tell her more, and the others crowded round to hear. I do not know what evil genius of folly prompted the childish deed, but feeling safe in having found what we wanted, and moved more than I would admit by the now admiring eyes of the girl, I gathered up half a dozen daggers from the gentlemen who stood about. Selecting those whose weight and balance commended themselves most to my purpose, I cleared a small space, and having sent a serving man for a pack of cards, chose a five spot and pinned it to a tree. Standing back some ten to fifteen paces, I cast the four knives at the corner pips in quick succession, piercing them truly, then paused a minute and cast the fifth knife at the center, striking accurately between the other four. It was an act of idle vanity, yet I hated for Jerome to taunt me on the way home.

By these petty means I gained a cheap applause from the belles and gallants at Sceaux, and Jerome opened not his lips to jibe me, as I feared, but like the rest, applauded.

I had now quite regained my courage, but for the girl. I loved to think of her as but a girl; that she was also a wife I barred out of our castle in Spain. Why should I be afraid of such a timid child? Verily, I knew not.

My folly had one result I could not then

**"THE BLACK WOLF'S BREED"** began in the September first issue of **UP-TO-DATE FARMING**. The thirteen back numbers containing the first installments will be sent for 35c. **UP-TO-DATE FARMING**, Indianapolis

### To Women Who Dread Motherhood!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

foresee; it told some of those present, whose hand it was had cast the hunting knife which struck Yvard. I did not learn this for days after.

The approving and pleased look on the little lady's face fired me with an insane desire to further win her notice, whereat I chided myself for a vain coxcomb, and drew imperceptibly away from the company, until I gained a shady and secluded walk which led to a retired nook overlooking the valley.

The quietude of the evening's close jarred on my turbulence of spirit. For the first time a woman's voice lingered in my ears after her speech was done, a woman's smile played as the fitful summer's lightning before my eyes. Oh, fool, fool! What place had women in a soldier's life. What a discordant harmony would one angel create amid the rough denizens of Biloxi. So I reasoned, forgetful that reasons never yet convinced the heart.

### CHAPTER XVI.

#### The Unexpected.

As one who pauses at the threshold of some fabled palace of the houri, so did I stop, bewildered by the beauty of this virgin field of love, by fancy decked with blossoms, now spreading all the allurements of fetterless imaginings before me. A sudden whiff brought me the perfume of her presence, and, turning, she appeared before me, whether in the spirit or the flesh, I could hardly tell, so transported was I by the swift changes of my thought, merging beauties ever new, ever sparkling with those scarce tasted ones but just discarded. Yet there she was, a dainty thing in white. White of dress, white of face, white of spirit.

In frightened tones of far-away sweetness, her voice mingled with the air, so low, so melodious one could scarce determine when she commenced to speak.

"Monsieur, quick, listen. You are in danger. I was in Madame de Chartrain's chamber and overheard. You have letters. M. de Greville will take them from you—for her sake—they compromise her. There is other danger," she spoke breathlessly on, "other more deadly danger lurking for you here; I beseech you to leave—at once. M. de Greville will take those letters from you by force or guile. Oh, tarry not, there has been so much of blood, and this place so seeming fair; the assassin, the poison and prison houses."

The eloquence of fear trembled in her words. Half starting forward I drank in every syllable, not for the warning she would fain convey; but for their sweetness. All I could realize for the moment was that she had sought me, sought me freely. Then she was gone. Swiftly, noiselessly as she came, she disappeared. The distant flutter of her skirts among the sombre trees marked the path she went. Through it all I spoke no word, returning, as one who has received an angel's visit, to my reverie.

I was not suffered long to spend my time alone. The old beau, de Virelle, in his bluff and hearty way directed the attention of a party of ladies who were with him to where I hung over a marble balustrade enraptured at the broad expanse of valley, rosy tinted with the hues of ebbing light, boundless as the dim horizon of my own sweet dreams.

"By my faith, Captain, you should have heard the clamor over your departure. Already famous, and so soon weary of your laurels. Ah! a tryst," he exclaimed. "Verily you do better than I thought," for he had picked up a muslin handkerchief, edged with lace, which sought in vain to hide itself among the leaves. So busied had I been it escaped my notice. Instinctively I reclaimed the prize and with no gentle hand I doubt, for his touch and jeering manner desecrated the sacred relic of my vanished saint.

De Virelle scowled somewhat at my precipitation, but, meeting a no less determined air, passed the matter. His ladies affected not to see. They in their turn plied me with inquiries about the savages in America, asked all manner of silly questions, and completed with their foolish simperings the disgust I already felt at such an interruption to my thought. Yet so

**FITS** Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE** \$2.00 trial bottle and treatise Dr. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

great is the force of novelty to women, they clung about me as if I were some strange tame animal brought to Paris for their diversion.

"Zounds, Margot dear," de Virelle blurted out aside, for even his dull senses saw I was not pleased, "our good Moliere must have had this hermit captain in his mind when he made Alceste to rail so at the hypocrisies of the world, and urge the telling of truth and looking of truth at all times."

"How brutally frank! What bad breeding," assented that young woman.

"This captain seems so full of weariness at our coming, and lacks the grace to veil it decently; let us go."

Finding no hand of mine raised to hinder them, these fair dames and demoiselles, with many pretty pouts and flutters and frounces, betook themselves away, followed by their faithful squire.

I began then to feel sorry at having dis-

## RHEUMATISM

**Wonderful New External Remedy**  
**Curing Thousands. Any Rheumatic Sufferer May Try It**  
**Without Cost.**

**Send Your Address and Get A Dollar's Worth FREE.**

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address **THIS VERY DAY**. **PROF. S. M. WATSON**, Dept. 19, Battle Creek, Mich.

**CRAMPS CURED** No drugs, no medicine; easy permanent, sure. Medicated pad carried in the pocket will cure cramps. Guaranteed, or money refunded after three months trial. **ONLY 25c. postpaid.** **H. J. ROBBINS**, North Wilbraham, Mass.

graced Jerome's gentle teachings. The light dying away across the distant fields and streams, I resigned my solitary communion and set out slowly toward the villa. The meaning of all the girl had said now forced itself upon my attention. If this were true, and it seemed plausible enough in view of all that had transpired here, I was indeed confronted by a new and serious danger. Happily danger was not a new fellow-traveler; I merely turned over in my mind the best means to meet it.

Going rather out of my way, I found the grooms without much difficulty, and telling them we were to leave Sceaux at once, ordered the horses saddled, and made ready at a side door where I directed them to wait. My own mind was to tell Jerome nothing of it, but simply to mount the best horse and ride away alone—if that course became necessary.

I will break in a bit just here to speak of an incident which occurred that very night in the modest boudoir of Madame de la Mora. Had I but known of it at the time, it would have saved me many weary months of suffering.

Madame Agnes de la Mora sat placidly, her work basket by her side, busied about some lace she was mending. The Chevalier studied a number of military maps of Louisiana at his table. It was a pretty picture of domestic harmony, then quite unfashionable at Sceaux. A timid rap at the door, and a voice:

"Sister, may I come in?"  
"Yes, child," and her sister Charlotte slipped silently in and sat herself upon the floor at Madame's feet. There was a striking similarity between the two. Madame, for all her dignified title, being but a year the elder, and she scant of twenty. Charlotte, somewhat slighter and more delicately colored, was even of greater beauty than her sister, with much promise for the years to come. To the casual observer, though, especially when viewed apart, they seemed almost reflections one of the other, ship in the attitude of the elder, of confidence and trust in that of the younger, as she leaned her head upon her sister's knee in pensive meditation.

"Sister, I must tell you of something; I know not that I did well or ill," and she lifted her face with a surety of sympathy.

"What is it, dear, what weighty matter troubles you now?"

The Chevalier looked up long enough to say:

"Have you torn your frock or only quarreled again with the good Abbe over your task?" The girl very evidently had nothing to fear from his harshness.

"No! No! Don't tease; it's really important. This day at noon Madame Chartrain was in her chamber—you know the young man who came with M. Jerome?" de la Mora nodded.

"The same I ran into at the door?" and she flushed again at the memory of our discomfiture.

"Well, to-day noon at Madam Chartrain's I heard that danger threatened him concerning some papers or something which he has—and Madame du Maine, too, they mean him harm; and—and—well, I told him. Did I do ill, sister?"

"What is that, Charlotte? Come here."

She crossed the room obediently and stood before him.

The Chevalier asked: "How did it happen, child? Tell me all about it, where you saw him, who was there, and all."

So she went on to tell of her seeking me in the park, and her hurried warning.

"Well, what did he say to all that?"  
"He didn't say anything; I gave him no chance; I just ran up near him and told him as quick as ever I could that he had better go off somewhere, and then—and then—well, I just ran away again. He looked so startled and surprised he could not say anything. When I turned again to peep through the hedge he was still standing there with his hands stretched out as if he would have liked to stop me, but I was already gone."

The girl laughed a short little laugh and tucked her hand closer into his.

"Did I do wrong, Charles? Tell me, was it so very, very—bold?"

The Chevalier could not quite suppress the smile already twitching at his lips, though he soon looked grave enough.

"Yes, child, it was not well; beside, the affair is not yours, and it is always dangerous to meddle. There, now, don't worry, it does not matter much after all. Soon we leave here and you will never see any of them again, I hope. This is no place for lassies fair and young as you. I hope to take both you and Agnes to a new and purer land."

"Soon we leave?" she repeated, "oh, I forgot; but I don't want to, I like it here."

"Like it? I thought you hated Sceaux?"  
"Yes, I did—but—"  
"But, what?"  
"But, nothing, I just like it—now," she insisted illogically.  
"Who is this young man, Charles?" asked Agnes when her sister had gone. And he told her.

(To be Continued.)

30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address **Drs. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.**

**A WIFE'S MESSAGE**

**Cured Her Husband of Drinking.**

**Write Her Today and She Will Gladly Tell You How She Did It.**

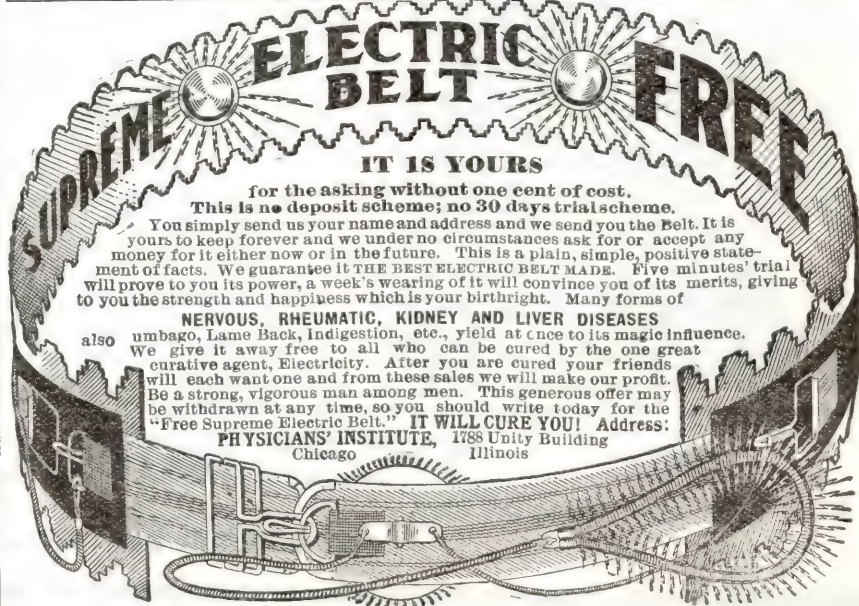

My husband was a hard drinker for over 20 years and had tried in every way to stop but could not do so. I at last cured him by a simple home remedy which any one can give secretly. I want every one who has drunkenness in their homes to know of this and if they are sincere in their desire to cure this disease and will write to me, I will tell them just what the remedy is. My address is Mrs. Margaret Anderson, Box 487 Hillburn, N. Y. I am sincere in this offer. I have sent this valuable information to thousands and will gladly send it to you if you will but write me to-day. As I have nothing whatever to sell, I want no money.

**This \$9.50 Peerless Electric Belt FREE**

Fort two weeks Test it. We want to prove to you it positively cures all Nervous Disorders, Rheumatism and Kidney troubles. Also fifty other affections traceable to disorganized nerve system. Duplex electric current—acts on the NERVES—strengthens them and stimulates blood circulation. Saves doctor bills. Don't destroy the stomach with drugs. The Peerless Belt cures. Send today. It costs nothing to find out the truth of all we say.

**EUREKA APPLIANCE CO., 28 Delaware Place, Chicago.**

**SUPREME ELECTRIC BELT FREE**

**IT IS YOURS**

for the asking without one cent of cost.

This is no deposit scheme; no 30 days trial scheme. You simply send us your name and address and we send you the Belt. It is yours to keep forever and we under no circumstances ask for or accept any money for it either now or in the future. This is a plain, simple, positive statement of facts. We guarantee it the BEST ELECTRIC BELT MADE. Five minutes' trial will prove to you its power, a week's wearing of it will convince you of its merits, giving to you the strength and happiness which is your birthright. Many forms of NERVOUS, RHEUMATIC, KIDNEY AND LIVER DISEASES also umbago, Lame Back, indigestion, etc., yield at once to its magic influence. We give it away free to all who can be cured by the one great curative agent, Electricity. After you are cured your friends will each want one and from these sales we will make our profit. Be a strong, vigorous man among men. This generous offer may be withdrawn at any time, so you should write today for the "Free Supreme Electric Belt." **IT WILL CURE YOU!** Address: **PHYSICIANS' INSTITUTE, 1788 Unity Building Chicago Illinois**

# You are to be the Judge!

## AS A BEACON LIGHT

**VITAE-ORE** points the way for storm-tossed sufferers to a haven of Health and Comfort. If you have been drifting in a sea of sickness and disease, towards the rocks and shoals of **Chronic Invalidism**, Port your Helm ere it be too late, take heed of the message of **Hope and Safety** which it flashes to you; **stop drifting** about in a helpless, undecided manner first on one course and then on another, but begin the proper treatment immediately, and reach the goal you are seeking by the route so many have traveled with success. Every person who has used **Vitae-Ore** is willing to act as pilot for you, each know the way from having followed it; attend their advice, follow the light and be cured as they have. Can you afford to disregard it? Hundreds of readers of **UP-TO-DATE FARMING** have accepted our offer since it first appeared and are now either enjoying **perfect health** or rapidly traveling the road to it. Every reader who is ailing should send for a package and allow the Company to demonstrate at its own risk and expense, that **Vitae-Ore** is the best medicine on earth for the afflicted. Every reader of this paper who has some friend or relative ailing should inform him or her of this offer and give them a chance to accept it.

## MAKE NATURE YOUR DOCTOR

**MEDICAL SCIENCE** has failed to improve upon or even equal the remedies found in a free state in **healing mineral springs**. Physicians, the oldest and the best, the newest and learned, acknowledge this to be a fact, and when they encounter a disease which is not amenable to the action of drugs, they pack the patient off to **Carlsbad, Saratoga, Baden**, there to drink the waters which contain the essential properties for the restoration of health, and the patient returns—**fresh healthy in mind and body**. If the patients cannot afford the trip, and few but the wealthy can, they must continue to suffer, as the waters deteriorate rapidly, and when transported fail to produce the desired results.

**A LETTER TO THE THEO. NOEL COMPANY, CHICAGO**, will bring a healing spring to your door, to your own house, your chamber—will bring to you **Vitae-Ore** a mineral spring condensed and concentrated, a natural God-made remedy for the relief and cure of the ills with which man is afflicted. Why continue to suffer when this **natural curing and healing Ore**, nature's remedy, can be had for the asking, when you can have

## A HEALING MINERAL SPRING AT YOUR DOOR

**WHAT VITAE-ORE IS.** **Vitae-Ore** is a natural, hard, adamantite rock like substance—**mineral-ORE**—mined from the ground like gold and silver, in the neighborhood of a once powerful but now extinct **mineral spring**. It requires about twenty years for oxidation by exposure to the air, when it slacks down like lime, and is then of medicinal value. It contains **free iron, free sulphur and free magnesium**, three properties which are most essential for the retention of health in the human system and in one package—one ounce—of the **ORE**, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drunk fresh at the springs. It is a geological discovery to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as **Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Catarrh and Throat Affections, Liver, Kidney & Bladder Ailments, Dropsy, Stomach and Female Disorders, Malarial Fever, La Grippe, Nervous Prostration and General Debility**, as thousands testify, and as no one accepting this offer and writing for a package, will deny after using. **READ OUR SPECIAL OFFER: YOU ARE TO BE THE JUDGE.**

## PERSONAL TO EVERY READER OF UP-TO-DATE FARMING

We will send to every subscriber or reader of **UP-TO-DATE FARMING** or worthy person recommended by a subscriber or reader, a full-sized **One Dollar** package of **Vitae-Ore**, by mail **post-paid**, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the reader can truthfully say that its use has done him or her more good than all the drugs and dopes of quacks or good doctors or patent medicines he or she has ever used. **Read this over again carefully, and understand that we ask our pay only when it has done you good and not before.** We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. We do not offer to send you a free sample to last three or four days, nor to send you a medicine which will cure you with four or five drops; but we do offer to send you a regular **\$1 package of the most successful, natural medicine known to the civilized world**, without one cent of risk to you. We offer to give you thirty days to try the medicine, thirty days to see results before you need pay us one cent, and you do not pay the one cent unless you do see the results. We know that when this month's treatment of **Vitae-Ore** has put you on a road to a cure, you will be more than willing to pay. **Vitae-Ore** has cured more chronic, obstinate, pronounced-incurable cases than any other known medicine, and will reach every case with a more rapid and powerful curative action than any medicine, treatment or combination of medicines which it is possible to procure.

**VITAE-ORE WILL DO THE SAME FOR YOU** as it has for hundreds of readers of **UP-TO-DATE**, if you will give it a trial. Send for a **\$1 package at our risk**. You have nothing to lose. If the medicine does not benefit you, **write us so, and there is no harm done. We want no one's money whom Vitae-Ore can not benefit.** Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try **Vitae-Ore** on this offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. **We mean just what we say** in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense giving your age and ailments and mention this paper, so we may know that you are entitled to this liberal offer. This offer will challenge the attention and consideration, and afterwards the gratitude, of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package.

### ITS CURES ARE PERMANENT

It Isn't the Medicine which Does You SOME Good, Which Counts, But the Medicine THAT CURES! **Vitae-Ore** Is That Kind! It Cures and Its Cures are Permanent

### THIS PROVES IT

**BAKHITO, IND. TER.**—About six years ago I commenced take medicine from quack doctors. I had Liver Trouble, Constipation and also Kidney Trouble in the worst stage. I had Chills and had Heart Trouble so bad that when the spells would come on me I would smother and fall. I was treated by three doctors, but they did me no good. My doctor bill was \$100. About four years ago I learned of **Vitae-Ore** and began its use, I had not taken three dollars' worth when I was well and doing all my work. I have taken no other medicine but **Vitae-Ore** in four years. I cannot praise it enough, for it saved my life four years ago, **MARY E. WALL.**

# Free Trip to the St. Louis World's Fair

## WE WILL SEND FOUR SUBSCRIBERS TO THE GREAT FAIR AT OUR EXPENSE

No doubt every reader of UP-TO-DATE FARMING wants to attend what will be the greatest fair the world has ever seen. We offer an excellent opportunity to attend at our expense. Our only regret is that we cannot send every subscriber for a couple of weeks. To decide what four subscribers to send we have made following little contest.

### OUR PLAN

Every person sending five yearly subscriptions to UP-TO-DATE FARMING on any offer we make will be entitled to enter the World's Fair Contest. Each person entering shall write a letter to us of not more than one hundred (100) words, giving reasons why UP-TO-DATE FARMING is the best paper for farmers published. The writer of the best letter will be given first prize, the next second, etc.

**FIRST PRIZE—TWO WEEKS' TRIP** to the St. Louis World's Fair. Railroad, hotel and admission expenses paid by us.

**SECOND PRIZE—10 DAYS' TRIP** to the St. Louis World's Fair. Railroad, hotel and admission expenses paid by us.

**THIRD PRIZE—ONE WEEKS' TRIP** to the St. Louis World's Fair. Railroad expenses and admission paid by us.

**FOURTH PRIZE—5 DAYS' TRIP** to the St. Louis World's Fair. Railroad fare paid by us.

Any one reading one or two numbers of UP-TO-DATE will find no difficulty in writing a short letter about its good points. Remember it is not the writing that counts, nor the spelling, but the ideas expressed.

You don't need to be a scholar to enter this contest, and have a good chance of winning. The poorest written and worst spelled letter may win first prize. The ideas and nothing else counts.

### YOU MAY ENTER THE CONTEST FREE

and receive beside the paper a year, a collection of seeds and due bill.

We send five (5) subscriptions one year to Up-to-Date Farming, five (5) collections of new seeds and potatoes and five (5) Due Bills for 25 cents worth of seeds all for \$2.00. Or five (5) subscriptions without any premium to any of the subscribers for \$1.50.

## UP-TO-DATE FARMING

J. A. EVERITT - Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club. (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2 - for \$ .75  
A Club of 3 - for 1.00  
A Club of 10 - for 2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept

Your Own Subscription 2 yrs. for \$ .75  
" " " 3 " " 1.00

For Membership in the A. S. of E. add 50 cents to any offer, for each member.

The emblem of the A. S. of E. as shown above, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgement.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. **Don't Neglect This.** See Special Subscription Offers elsewhere in this number.

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### Proof of March 1, 1904, Circulation

Indianapolis, March. 10, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the March 1, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum, State of Indiana } Before me, Charles E. Brigham, a notary  
Marion County } \*\* public personally appeared S. E. Cullum and swears to the foregoing.  
[Seal] Charles E. Brigham.  
Notary Public.

### NOTICE TO SUBSCRIBERS

Winter season with its long evenings will soon be past, and active work will begin in the fields. This reminds us to urge on those subscribers who have not sent their renewal to attend to it at once. You surely don't want this paper to stop, as it will if you don't appreciate it enough to pay for it. On your label is printed a month and year. This is the date to which your subscription is paid. You will find the subscription terms in first column on this page. Notice the price if one year, two years or three years are paid for. Also notice the terms for membership in the A. S. of E.

Now brother farmers and subscribers, send in your renewals. Every farmer and farmers' family in the United States has been benefited by what this paper has done. This paper has elevated agriculture many points above what it has ever been before. It has started farmers to thinking along lines and working along lines as never before. More than this, it has positively benefitted farmers many millions of dollars in increased prices of their products, and being instrumental in keeping prices up. 1904 will be a great year for farmers, and UP-TO-DATE FARMING will largely be responsible for the great things that will occur this year. Don't doubt and hesitate. We speak from convictions. Trust us to bring them about.

When sending your own subscription, do a little hustling to get others to send with you. Numbers are what count. Numbers are wanted on the list of UP-TO-DATE to bring farmers to the front and send the speculators to the rear.

Keep your eye on UP-TO-DATE for 1904.

### NOTICE TO FARMERS IN ILLINOIS

Organization work is being pushed in Illinois by National Organizer C. O. Drayton and Stat Organizer L. N. Staats.

Mass meetings will be held as follows:

Trenton, Ill., April 7, 2 o'clock p. m.

Highland, Ill., April 8, 2 o'clock p. m.

Greenville, Ill., April 9, 2 o'clock p. m.

Excursion rates will be made by railroads.

Farmers in Southern, Central and Western Illinois should embrace this opportunity to learn about the movement of the A. S. of E. Also to make arrangements with the State Organizer to visit their section and start the work.

Deputy National Organizer, Hon. James Barlow will address each of these meetings.

For further particulars address C. O. Drayton, Trenton, Ill.

The farm price is the basis market price, less freight and a reasonable margin allowed to the handler.

Crop planting and organization to price the crops must go hand in hand. Now is the time for both.

Farmers, to the front! Take the place that is yours by right of numbers, by the greatness of your interests, and by divine right.

Have you renewed your subscription to this paper? If not, attend to it at once. The expiration date is printed on your wrapper. Look at it.

The stock raisers of Iowa are organizing to prevent heavy shipments of stock at one time, and thereby prevent "flooding" the market and forcing down prices. This movement is right. It is the exact plan of the American Society of Equity. When stock raisers in other States join forces the thing will as surely be accomplished as that day follows night. "Controlled marketing" compels the price.

From all parts of the country come encouraging reports of a grand forward movement among the farmers for a better organization in their own interests. The official organ of the Society of Equity will do all it can to help on this great movement, but it can not do all. Each member has a special work to do in this line. He has a work that none other can do. If he neglects it, it will not be done. His work is to induce his neighbor to join the Society, attend all meetings of the local union, and help to make them as interesting as possible, and then to talk Equity, practice Equity, and teach Equity by word of mouth and by example.

We intend to make Up-to-Date Farming the greatest and best paper for the farmer published in this or any other country. It is to be a paper for all the interests of the farmer, and not merely an agricultural paper. It will encourage better farming and better marketing. Most farmers know when to plow, and how to plow, but they have permitted others to tell them when to sell and how to sell, and that telling has all been in the interest of those who buy, and not in those who sell. Our aim is to give practical suggestions as to how to raise bigger crops, and then

to sell them at a price that will remunerate the producer. It will also give hints about how to make the home more pleasant and thus encourage the boys and the girls to remain on the farms. There is a very great difference between an agricultural paper and a paper for farmers. This paper will be for the farmers and the families of farmers.

Speaking of greater yields: We will again refer to the fact that consumption has passed production on some of our important crops. This calls for increased yields, which means more intensive farming, which means increased fertility in the soil, all of which means better prices for farm crops. Give farmers the encouragement of good prices and certainty of good prices always, and they will replace the lost fertility in their soil, hire help to farm better, use the best seeds, and will quickly raise the ridiculously low averages of crops that have prevailed in the past. This is a problem that faces the world at this time. It must be met, and will only be met and solved through a higher range of prices for farm products. Mark our prediction.

In the circular letter addressed to the coal miners by the committee of officers it is pointed out that the country has reached the apex of industrial and commercial prosperity, and that the country is on the eve of a period of business depression. This is a thought that farmers should also bear in mind. The country has never known such a period of business activity and prosperity as it has witnessed since 1897. This great prosperity affected every class to some extent, but the farmers received less benefit from it than any other, although they are chiefly responsible for the condition. If business depression is to come, the only protection for the farmer is organization. He has always been the last to feel the wave of prosperity and the first to be struck by depression. But how can the country have industrial depression if the farmers will keep themselves prosperous, which they can do if they will organize and get good prices always.

Contrary to the prediction made by the "committee of officers" referred to above, this country may enter upon and enjoy a period of commercial prosperity such as will make the past long period appear as one of depression in comparison. If the greatest class of our people, the farmers, will now embrace the opportunity offered them to organize, co-operate and control their marketing, to make profitable prices, it means a transformation of rural America and a revolution in industrial America. Give to the farmers of this country certainty of value and profitable prices and they will be buyers of manufactured goods for the farm, the farm home, and for personal comfort and luxuries as will cause the wheels of industry to revolve as they never did before. The present facilities of our manufacturing would be inadequate to cope with the demand which would be permanent. Clearly every other class of people should help to educate the farmers to the necessity of organization and how to organize.

### SHALL SALARIES BE RAISED

A bill is now pending in the United States Senate to raise government salaries all along the line. It is proposed to give the President \$75,000, Cabinet officers \$15,000, and members of Congress \$8,000. The salaries of members of the Supreme Court are also to be materially increased. What do the farmers think of this proposed large increase? It is argued in favor of the measure that many presidents of railroads get a larger salary than is given to the President of the United States. That may be true, but, on the other hand, the president of the railroad gets nothing from his company but his salary. Out of that he meets all his own expenses. If he wants a house he either rents or buys one for himself. If he has servants he pays them. He pays for his own electric lights, for his own horse feed, for the supplies for his own table. If he wants new furniture he pays for it himself. If he or his family desire to take a sea voyage he pays the cost.

This is not the case with the President of the United States. The people furnish him a house; the people buy his furniture; the people pay his gas bills, and nearly all his servant hire, and a liberal allowance is made him for table expenses, and if he or his family take a sea voyage he uses a government vessel, the people paying the sailors,

the fuel bill, and all the supplies, and the cost of repairs. Under the present administration the cost of maintaining the President and his family has increased enormously, and he is now asking an appropriation of \$90,000 to build a new stable for the eight horses he keeps.

Good men, able men, all over the country are eagerly seeking a seat in the Congress at the present salary. There is not a Governor of any State in the Union that would not willingly resign his place as Governor if he could become a Senator in exchange. Chauncey Depew resigned a salary of \$50,000 as president of a railroad company to accept one of \$5,000 as United States Senator.

Franklin Murphy, of New Jersey, B. B. Odell, of New York, and S. W. Pennypacker, of Pennsylvania, are Governors of their respective States, and each draws a salary of \$10,000 a year, and each of them would gladly trade for the \$5,000 salary and a seat in the Senate. The very woods are full of men who would like to become Representatives in Congress for the \$5,000. In fact, in nearly every district in the country they are actually falling over each other in the mad race for the places. In England members of Parliament serve for nothing, and are glad to do it. This is a republic, and while public servants should be paid liberally, there is no demand, as there is no necessity, for aping royalty in the profuseness of display on the part of the officials.

When Congress shows a disposition to enact some remedial legislation in the interest of the farmers, such as breaking down injurious trusts, putting an end to gambling in futures, which makes the food and clothing supply of the country the plaything of reckless speculators, enlarging their markets, it will be time enough to ask farmers to sanction an increase in official salaries. Fully three hundred members of the House of Representatives depend upon the votes of farmers for their position, and there is not a member of the Senate that could be elected without the support of the farmers, yet what Representative in Congress, or what Senator ever thinks of the farmer after taking his seat, at any other time than the season of free seed distribution? A few packages of free seeds are expected to placate the farmer. He may be oppressed by trusts, may be victimized by the speculator, but a package or two of free seeds, and a volume or two of public documents are sufficient to reimburse him.

The labor unions may demand an eight-hour law, a weekly pay day, and it is a brave member of Congress who refuses to vote for such laws. The manufacturers demand a tariff rate that is almost prohibitive, and it is given them, but nobody listens to any cry from the farmers. Labor unions are a power, manufacturers are a power, because they are united. Farmers are powerless because they are not united. Give the farmers remedial legislation, and then come and ask them to sanction the proposed increase of salaries—and they will think about it.

### A RESOLUTION

In transmitting the following resolution Mr. Crane, the secretary, wrote as follows:

"Mr. J. A. Everitt, Publisher:

"Dear Sir—The inclosed resolution, as passed by the Rob Roy Union, may seem a little strong to you at first reading. We trust you will take no offense, but receive it in the spirit of kindness and for the good of our order as it is sent. Our action may prove of mutual benefit to you and us alike."

The Rob Roy (Ind.) Local Union of the American Society of Equity, in regular session, Saturday evening, Feb. 13, 1904, passed the following resolution unanimously:

"Inasmuch as we realize that the cheapest, most economical, and in fact the only practical way of the National Union communicating with members and local unions is through the medium of a newspaper; also, as the plan of crop and market reporting, as contemplated in the plan of the A. S. of E., can only be carried out through the medium of a newspaper; therefore, be it resolved as follows:

"We believe the official paper of the society—Up-to-Date Farming—in its present form and make-up is far below the standard of a paper representing an organization that can and will control the business of the world. Therefore, we respectfully urge the publisher to bring the paper to a higher standard by: First printing it on good book paper; second, occupy the first page with a lithograph of a farm scene, stock or farm products; third, cut out all patent medicine advertisements, ditto counting and guessing contests and all questionable advertisements; fourth, in their stead open up a page to "Farmers' Wants, For Sale and For Trade." Fifth, make the official paper a weekly and the price \$1 a year or more if necessary to make a high class paper as recommended.

"We believe these recommendations will be approved by

ninety per cent. of the members of the A. S. of E. We request that this resolution be published in the next issue of the official paper.

F. A. NAVE, President.  
WM. HASHAW, Vice President.  
BENJ. F. CRANE, Secretary.

[The publisher of Up-to-Date wants to hear from members and local unions with recommendations and resolutions. This is working toward co-operation. The publisher of the official paper wants to know what members want, then he will come nearer meeting the wishes of his readers. We assure one and all that no apology is necessary for making the recommendations.]

The publisher must apologize for some of the paper used in February and March issues. It was, however, that or none, as our regular paper was delayed in Michigan by storms. We will try to not have it occur again. Considering the recommendations in order as given, we comment as follows: First, we expect to always in the future use good book paper. Second, to print an illustration in colors on the first page will be very expensive. We fear the revenue from subscriptions will not allow us to do this for some time yet. Third, we will discriminate closer on advertisements in the future. There are, however, some medical advertisements that should be quite unobjectionable in our official paper. If farmers will come to the support of this paper as they should, considering what it is doing for them, we would cut out every advertisement that any one could object to. Fourth, our columns are open to the business mentioned. It will be considered the most desirable and entitled to special consideration. Send it along or correspond. Fifth, the official paper will be a weekly in the natural development of this farmers' movement. It would, however, be impossible, to publish it weekly now on account of lack of press facilities. At present it requires fifteen days to get off each issue; thirty days for the two. Our greatest need is more rapid press work, and we are trying to work this problem out now. When we are able to mail our semi-monthly issues in about three days we will seriously consider the weekly.

In conclusion: Very material changes and improvements will be made in the official paper in the very near future. We have been passing through a season of unprecedented activity, and have been too busy to consider improvements, but every energy has been directed to taking care of the daily work as it presented.—Pub.]

### CROP SCARES

This is the season of the year when the market manipulator gets in his perfect work. Honest and false crop reports vie with each other for supremacy, without any person knowing which is which. Pure fabrications are more numerous than reports with actual conditions to back them. For the speculator's purpose one is as serviceable as the other but for the farmer none of them do him any good.

It is a remarkable fact that in this great agricultural country no reliable system of crop reporting has yet been devised and put into practice. That the fake reports manufactured by the crop liar and blind guessing on such an important matter as the condition and yields of our crops has been allowed to exist this long is another evidence that our government does not intend to do anything for the farmers. "It would injure the speculative business if certainty should prevail." The speculators must not be interfered with in their business (?), even though the farmers are robbed of nearly all their just profits.

Consider, if you please, what would have been the result for farmers if the Government had put the moderate estimate on the wheat crop in July that it did later, or had known and reported the short yield of cotton a couple of months before it did. What the farmers want to know is the yield of a crop promptly when it is produced, not after the bulk of it has passed from their hands.

Speculation should stop. It must stop. What moral or legal right have a few slick individuals to put the price of the crops up or down without creating or destroying a bushel or pound of the product? Absolutely no right. If our government desired to be just, and was as strong as it should be, this gambling in the chief articles of our nation's products and consumption could be stopped in a month or week or day. We charge that our Congress does not want to be just. It knows the evil, but will not rem-

edy it until the farmers rise up in their might and demand honesty, justice. It all rests with the farmers, and if they want the barnacles on the body agriculture removed they must see to it themselves. If the vampires are to be routed from the tree of agriculture you must climb into the branches and with the club of equity for all clear the tree of all the leeches that have always sucked the very life blood from all the products produced on the farm.

Notice these figures: The wheat market fell 18¼ cents from the high price for May wheat, corn 8 cents, oats 7 cents, pork over \$3 a barrel, lard and ribs a cent a pound. The fluctuations in the cash market were, however, only a few cents. That is, the farmers have maintained a fairly steady market, but the speculators have been pawing, bellying and squeezing each other in the wildest frenzy, fighting over what none of them possessed. Wheat is about 20 cents a bushel higher than a year ago, corn about 15 cents lower. Receipts of wheat are about one-third larger than a year ago, which shows conclusively that farmers have learned the lesson of controlled marketing and are letting the supply come on the market gradually to correspond with the demand and consumption. Wheat sells for \$1 per bushel in all leading markets from Chicago east, and farmers will curtail their marketing as soon as they can not sell on this basis. We caution farmers to not be alarmed if cash wheat should drop below \$1 at Chicago, as dealers may buy so much from you that they may speculate on it. If you know your price and hold for it you will get it.

Speculators are repeating their tactics of 1903 in selling the farmers' 1904 crop out at a reduced price. While No. 2 cash wheat is worth \$1 per bushel at Chicago and old crop May wheat is quoted at 96½ cents, July new wheat is quoted at 91½ cents and September new at 86¼ cents, a discount of almost 14 cents a bushel for the new crop in September.

Farmers are informed that we don't expect any wheat crop will be produced in this country that should in equity sell for less than \$1 a bushel. Therefore, prepare your granaries, control your marketing, and under no circumstances let your crop go into public elevators for other people to hold and use as a club to beat down prices. This is true of every other crop and is a vital matter for EVERY INDIVIDUAL FARMER. Organize! Organize! Get into unions. If you wish, call them dollar wheat clubs in wheat districts, 60-cent corn clubs in corn-growing sections, 12-cent cotton clubs in the cotton country, tobacco clubs in the tobacco district, stockmen's clubs in the cattle country, etc.

### CONCERT OF ACTION

The great object of the American Society of Equity is to secure concert of action among the producers of America. The Society is not organized to fight anybody or any other society, but to secure such a concert of action among the farmers as to bring about a better condition of affairs, so far as the conditions relate to the producing class. It certainly needs no argument to convince any farmer that business conditions with that class are not of the best. It ought not to need an argument to convince him that the present condition can not be improved unless there is a concert of action on the part of at least a very large number of farmers. It is not expected—it would be folly to expect—that all the farmers of America would unite in this concert of action. Nor is it necessary that they should. Therefore, the point that is sometimes made against the Society—that all farmers will not join it—has no weight.

In Connecticut, at one time, there were about thirty cotton mills. They found a demand for all they could produce, and even more, but competition and an insane desire to secure more than their individual share of the business reduced the price so low that it was unremunerative. Several efforts were made to get a concert of action among the various operators, but there was always a hitch somewhere. At last about one-fourth of the mills entered into an agreement not to sell until better prices prevailed. They kept their looms busy, but piled up the product in warehouses. The other three-fourths laughed heartily at this folly, as they called it, and went on manufacturing and selling at the old prices. At last they could not fill their orders, and buyers had to look elsewhere. The elsewhere was the mills that were holding out for a better price. The buyers had to have the goods, and finally paid the price demanded. Three-fourths of the mills had been operating at a loss; one-fourth sold at a profit. Some of their unfortunate competitors were forced into bankruptcy. It was not folly on the part of the one-fourth to hold out for better prices, but the height of wisdom.

There is a demand for everything the farmer produces. He would be foolish, indeed, to expend time and labor in

## Capital Stock vs. Individual Control

Recently there has been much publicity given to various farmers' (?) organizations incorporated with capital stocks ranging from \$50,000 to \$50,000,000. The theory of the individuals incorporating is that a large sum of money is needed to handle the farmers' crops to secure good prices. Of course the farmers are expected to put up the cash at the rate of \$10 per share, and the glittering inducement is held out that by belonging to the association he will save handling charges on his grain and get carload rates. They also figure that by taking the farmers' grain and putting it in company elevators they can control the marketing and compel a good price.

What some people don't know about true co-operation by farmers would fill several volumes, and what they do know could be put in a little book. Let us analyze this form of co-operation. In the first place, the scope of operation will be limited and they can not hope to make it anything like universal with the farmers. **FARMERS WILL NOT BUY THEIR CAPITAL STOCK.** Farmers are a little bit too wise in this day and generation to put millions of dollars in the hands of other people, no difference how safe the plan looks. There is not a law on the statutes of our nation or of our States that slick lawyers can not manipulate to the disadvantage of the multitude of stockholders in a corporation of this kind, even though it was possible to get the multitude, of which there is no reasonable prospect.

But suppose they do sell enough stock to make a show of business, the speculators on boards of trade still make the prices, and all the stockholders can expect to gain will be a little saving in freight and commissions. It is expected to build numerous elevators to contain the farmers' grain. While this is one of the objects of co-operation by the plan of the A. S. of E., it is quite secondary and it is not expected that elevators will cut much of a figure in securing profitable prices for farm crops. We recommend granaries on the farm as far superior to elevators, because it costs nothing for storage, and the grain does not become **VISIBLE**, besides money can be borrowed at most places on grain in a good granary as well as on grain in an elevator. We recommend a good granary on every farm

where the farmer is absolutely master of his goods and the world can not use them as a club (as visible supply) to beat down prices. Being master of his goods he can market any day when the price is right and withhold the moment the market will take no more at his price. He can hold over even from one year to the next if he desires, without storage charges eating up his principle (the grain). Should farmers store their grain in elevators there will absolutely be no certainty about controlling marketing. It will begin to draw storage charges as soon as put in, and this accumulating month after month will frighten many farmers to sell at just the time when the market needs their support. If granaries had been common with wheat growers in 1903 we would have seen dollar wheat months before it came.

In conclusion: We warn farmers to keep out of all capital stock companies. They can not make profitable prices for you and maintain them if they had fifty times fifty million dollars capital. Profitable prices can not be maintained by money, because taking your produce at a profitable price is only half of the transaction. Your company must then find a purchaser **AT A HIGHER PRICE**, and there will come failure in time. The secret of profitable prices for farm products is to decide on the price a crop is worth in the first place, then market your crops only when you can get the price, and let an annual crop go on the market to meet an annual demand over a period of twelve months. In this way elevators will soon be a relic of an old, vicious system, and the farm or union warehouse will be as common and numerous as our farms or the unions. Control marketing, keep the produce in the hands of the people who produce it until the consumers want it, and the problem of certain, uniform and profitable prices for farmers is solved. On the other hand, if you continue to dump the bulk of your crops as soon as produced, let them go into warehouses and elevators, where they are "visible supply," you will perpetuate the gambling boards of trade forever, and the farmers will always play the old, uncertain, hit-or-miss, guessing game as in the past.

The plan of the American Society of Equity is the only safe and absolutely sure one for farmers. Up-to-Date Farming is the only paper in the world that is teaching farmers this plan to control marketing and compel the price.

## FARM FENCE

Don't hesitate. Rely on our statements. Years of experience with an ardent ambition to excel has made us master of fence construction. We use only the

best, High Carbon, heavily galvanized Coiled Spring Steel Wire. To get this good enough, we make it ourselves. The weave is so perfect that full strength of every wire is preserved. The strain is equally distributed. Every twist is an expression of strength. Every line a suggestion of symmetry. The whole fabric so flexible that it staples to the posts as you would nail a board. Confidence in our product rests on a foundation of practical experience, guided by practical sense. Don't worry. **We'll Pay the Freight,** yet sell to you direct at **WHOLESALE PRICES.**

## HORSE HIGH, BULL STRONG, PIG TIGHT.

Horse High is high enough, Bull Strong is strong enough, Pig and Chicken Tight is tight enough. **SENT ON TRIAL**, with privilege of returning same at our expense, any time within thirty days if not found entirely satisfactory, you to be the judge. Write us. This will get you in communication with us. We have something more to say to you. Our catalogue is full of fence sense, and shows the various styles we make. It's free.

## DIRECT TO

**KITSELMAN BROS.,**

Box 289 Muncie, Indiana.

## THE FARMER

ON THIRTY DAYS TRIAL.

Going to Paint This Spring?

**STAR BRAND BARN & FENCE PAINT**

In ½-barrel lots Per gallon. .... **48 cts.**

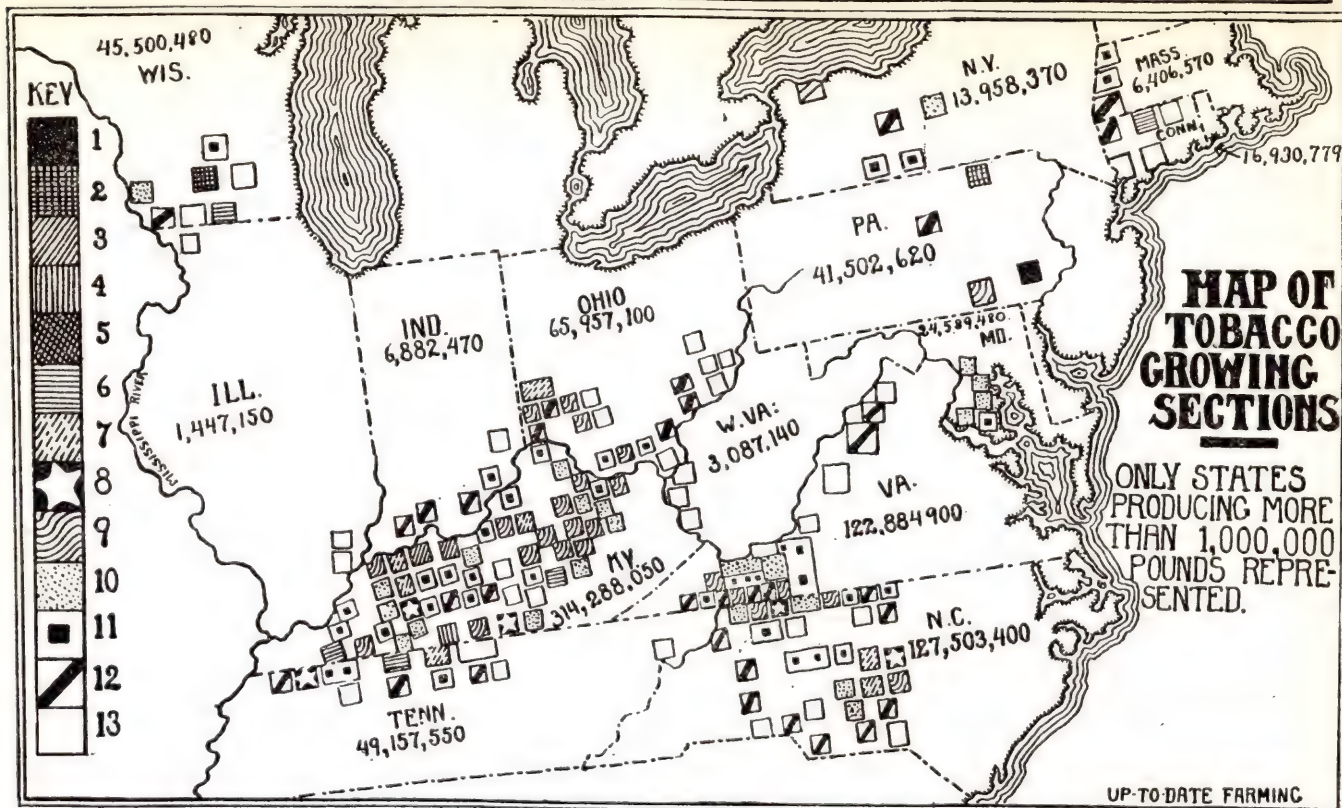

**Don't Pay Two Prices**

and then get an inferior paint in the bargain. Our Star Brand Ready-Mixed Barn, Fence and Roof Paint will wear longer, look nicer and cover more surface to the gallon than any medium-priced paint on the market. You could not buy as good a paint at home for less than 75 cents to \$1.00 per gallon in single gallon lots.

**SEND FOR FREE PAINT COLOR CARD** showing all the other paints we carry, at lowest prices for reliable paints. Be your own dealer. Buy direct from us and put your dealer's profits in your own pocket.

**Montgomery Ward & Co.,** Michigan Ave., Madison and Washington Sts., CHICAGO.

MAP OF THE TOBACCO PRODUCING SECTIONS

No. 1 represents a county producing over 22 million lbs.; No. 2, 20 to 22 million lbs.; No. 3, 18 to 20 million lbs.; No. 4, 16 to 18 million lbs.; No. 5, 14 to 16 million lbs.; No. 6, 12 to 14 million lbs.; No. 7, 10 to 12 million lbs.; No. 8, 8 to 10 million lbs.; No. 9, 6 to 8 million lbs.; No. 10, 4 to 6 million lbs.; No. 11, 2 to 4 million lbs.; No. 12, 1 to 2 million lbs.; No. 13, 300,000 to 1 million lbs.

We want to correspond with people in every one of the tobacco producing sections at once. Any grower, farmer, merchant or officer of town is requested to write to The National Union of the American Society of Equity, Indianapolis, Ind.

## Tobacco

Tobacco has always been one of the prominent products of the United States, and for a century it was the only crop raised for export. The Puritans of New England and the Dutch of New Amsterdam gathered and exported peltries and furs, but tobacco remained for more than a century the only product of the soil raised for export, except a limited amount of rice in South Carolina. The history of tobacco is one of interest. It was discovered growing wild in some parts of North America, when the English first came, and they found it cultivated to some extent by a few of the Indian tribes. The origin of the name is uncertain. By some authorities the name was derived from Tobacco, a province, a province of Yucatan; others that it came from Tobago, one of the Caribbee islands, while still others give the honor to Tobasco in the Gulf of Florida. It matters little how, when or where the name was given it: it is of the plant itself we are interested in. The weight of authority is that it was first observed at St. Domingo, Cuba, in 1492. The Spaniards found the natives using it freely, and they at once fell into the habit, and by 1520 all Spaniards who came to America in search of adventure were smoking the plant and singing its praises.

There is some dispute as to when it was first taken to England. On one hand it is claimed that Sir John Hawkins was the first to introduce it in 1565. It has generally been credited, however, that Sir Walter Raleigh and Francis Drake in 1586 introduced it to London society. In their expedition to the Virginia coast they found that with the Indians it was the emblem both of peace and of war. If the chief passed the pipe it was to be peace; if he let it fall war resulted. The plan soon became very popular with the people of London, and so great was the demand for it that the government undertook to suppress the traffic. In 1664 King James, the pedant King, issued a proclamation against it, to which he gave the sounding title, "A Counterblaste Against Tobacco." At first it was not used as at present, every person smoking at his own home, or on the street, or wherever he pleased, but there were "tobacco houses," where the users would assemble and smoke until satisfied. Pipes were kept for the use of the patrons, and the tobacco sold by the pipeful.

In 1684 a tax of 6s 10d a pound was laid on tobacco in

England. During the reign of Charles II an attempt was made to introduce its cultivation in England, but this was forbidden by law. In this country it was the staple article of commerce, and in Virginia it was made the measure of values. The pay of all the ministers of the established church in Virginia was fixed in tobacco, and several times came near causing a revolution. One of the great complaints of the Virginians against the parent government was the shipping law, which forbade the shipment of tobacco in any other than British vessels, and to any other than British ports. This was for the purpose of cutting off the trade with Holland, which was growing to large dimensions.

Almost from its first discovery the plant has been a favorite theme for poets and painters. Byron, in "The Island," thus pays a tribute to the soothing effects of tobacco:

"Sublime tobacco! which from east to west,  
Cheers the tar's labor or the Turkman's rest;  
Which on the Moslem's ottoman divides  
His hours, and rivals opium and his brides;  
Magnificent in Stamboul, but less grand,  
Though not less loved, in Wapping or the Strand;  
Divine in hookas, glorious in a pipe,  
When tipp'd with amber, mellow, rich, and ripe."

Tobacco has found its way to every part of the world and its consumption increases with every year. In France and in Austria it is a government monopoly, and a decree recently issued has made it the same in Japan. It pays enormous revenues to our government, to England, to Spain and to Italy. During the late war between the States, and for many years afterward, it was one of the chief sources of internal revenue to the government, and without the tax levied upon this great product of American farms the United States would not have been able to reduce its tremendous war debt with a rapidity that aroused the wonder of all nations. Tobacco to a limited extent is cultivated in a number of the States of the Union, but by far the greatest part of the output comes from Kentucky. In 1900 the product of Kentucky amounted to 314,268,050 pounds. The total output for all the country, the same year, was 868,163,275 pounds.

A few years ago a tobacco trust was formed, and since that time the cultivation of tobacco has been an unprofitable employment. The total number of tobacco growers

in the country in 1900 was 308,317. This vast army of workers, with a capital invested in land, and the necessary machinery for the successful cultivation of the soil, mounting up to many hundreds of millions of dollars, for years has been at the mercy of a few firms of tobacco buyers, who have united together to rob the producers. They arbitrarily fix the prices they will pay, and because of a lack of organization among the producers they are able to force the producer to sell at the price fixed. Nor is this all. They work the jobbers. Being determined to make all the profit, and not being ready to raise the price to the consumer, they compel the jobber to handle their tobacco on a margin of two per cent. If the jobber is lucky enough to sell seventy-five thousand pounds in one year, then the trust magnanimously gives them five per cent. on all sales over the seventy-five thousand pounds.

The low prices that have prevailed have led many tobacco growers to abandon its cultivation, while others have materially reduced their acreage. It must be evident, by this time, that the growers have but one remedy against this gigantic evil. They must combine, or go out of the business. The trust does not desire to drive them out of business, for that would put an end to its enormous profits, but it will continue its oppressions so long as the growers yield. The growers can, if they will unite in an organization so strong that they, and not the trust, can fix prices. The law offers no remedy against this giant cor-

poration, that sucks the life blood from so many thousands of farmers, so the farmers must seek another way out of the difficulty. Organize! organize! and say to the buyers that hereafter you can not get a pound of tobacco unless you pay our price! Producing the great bulk of the tobacco raised in this country, Kentucky alone is able to establish an equitable price on tobacco if the growers in that State will combine.

The map will give a good idea of where the tobacco is grown in the various States. No State is marked where the total crop was less than 1,000,000 pounds, and sections producing less than 300,000 pounds are not marked. The work of organization has already begun in all the tobacco-growing sections, and the agitation is rapidly spreading. The A. S. of E. is now growing more rapidly in Kentucky than in any other State. Leading tobacco growers are taking hold of the movement, and the merchants in the towns and cities are lending their aid and encouragement. They realize that their prosperity is closely linked with that of the tobacco producers. If the grower gets a remunerative price for his product, the merchant gets an increased trade. This fact the merchants through the tobacco sections fully realize, and therefore they are in full sympathy with this movement to better prices.

Organizers will be sent into every tobacco growing section, and every effort will be put forth to unite the producers in a concert of action.

## Notice to Subscribers and Readers

This paper is fighting the farmer's battles for freedom from speculators and his right to price the product of his investment and toil as no other paper has ever done.

It has been instrumental in raising prices on some crops and maintaining prices on others, so farmers secured for the 1903 crops, hundreds of millions of dollars more than they would have received if Up-to-Date Farming had not taken the stand it did.

This paper has taught you that by controlled marketing you can compel your price. It will continue along this line until every crop the farmers produce is controlled for marketing, and profitable prices are compelled.

The publisher now makes an earnest, urgent appeal to every subscriber who has not renewed to do so at once. We want to keep your name on our list and we need your help. To readers who are not subscribers, we ask you to join the army of farmers who are striving for better conditions and guaranteed prosperity on the farm for all future time. Farmers it is up to you. There is only one paper fighting for you these important battles. It is this paper, Up-to-Date Farming. The subscription price is only 50 cents; published semi-monthly. With membership in the A. S. of E., \$1.00 (or 50 cents extra.) See 1st. column, page 2, for terms in detail.

## THE GAMBLER IN THE GRAIN PITS AND THE FARMER IN THE DARK

(A. HUNTER)

It is said the good old farmers  
Are a-rooping in the dark,  
While the gambler in his grain pit  
Is a watching like a shark.

Let him take the Hoosier war club  
Of farming—Up-to-Date;  
Aim to hit him, do not spare him,  
Just swat him o'er the pate.

Let your bugle notes be sounded  
Along the old Wabash,  
Till it hits the Mississippi  
With a deep resounding swash.

And is carried on his waters  
Till it reaches to the sea,  
And proclaims the joyful tidings,  
That the farmers are set free.

## SOMETHING TO REMEMBER

(PEARL ULILLA DAVIS)

One just man, a man alone,  
Awakened his dreamy brothers;  
And farmers near and farmers far  
Joined with the thousand others!  
Where men have failed, he persevered,—  
Success has crowned his dealings;  
And million soon will join the boon  
Of Equity's great sealing!

And yet some sit apart and sigh,—  
They say their crops are poor;  
They know that prices are so low,  
Yet dare not ask for more.  
Friends, friends, can you doubt Equity,  
Now based by righteous light;  
Where thousands see that Equity  
Has raised the prices right?

The great need you've been wishing for  
Is now within your reach;  
Yet blind you are to see the power  
The Union has for each.  
Still as they believed in olden times,  
And sought Jesus in peace,  
So now they grasp great Equity  
And justice links increase!

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

What did you do at the last meeting of the local union?

\*\*\*

How long has it been since you organized a new union?

\*\*\*

How many new subscribers to Up-to-Date were reported at last meeting?

\*\*\*

Is there any material remaining in your neighborhood for the committee on new members to work upon?

\*\*\*

Cannot the committee on new organizations find some near-by locality where a new local union could be formed?

\*\*\*

Who is your best speaker? Get ready for the picnic season. There is no time for dull meetings now. Get a great big move on you and hustle.

\*\*\*

The meeting is a failure which does not awaken a new interest in somebody or give somebody a new idea.

\*\*\*

Don't think because we have dollar wheat we are going to have two-dollar wheat. The burden of all discussions in the local unions is Equity. When an equitable price is offered, sell.

\*\*\*

The only trouble with the wheat market is that the dollar was a little slow in coming—the most of the wheat is out of the farmers' hands. More general organization and a little more general withholding from the market would have brought the dollar sooner, and it would have found much more of the wheat on the farms where it grew. How shall it be with the harvest of 1904?

\*\*\*

What has been done shows what can be done and points to the necessity of the "million united farmers." Let us have them before the next wheat crop is ready for the market.

\*\*\*

Present indications point to the fact that the equitable price for next harvest's wheat may be more than a dollar. Let every effort be directed to securing the equitable price, whatever it is.

\*\*\*

Peter Laring, of Sumner county, Kan., writes that the farmers in that section are slow to take hold, but he thinks they will become active friends of the organization when they fully understand its purposes.

\*\*\*

From Howell, Mich., J. P. Lockwood writes: "We all have a part to take. While some may not be able to take up the work of organization, yet you are certainly able to add at least one name to the roll of honor during the next week. If we all do this we would have the million members in a short time. Think how strong we would be in a few days if each member would just get one more, in the next week, and some of us can do even better than that. Do not

stop at one member, but get all you can. Our success will largely depend on the number of members we enroll, and the sooner we get the members the quicker the machine of co-operation will be set in motion." This is a good suggestion. Let every member report a recruit at the next meeting of his local.

\*\*\*

James W. Barnett, of Salem, Ind., writes: "I have read the book, 'The Third Power.' I consider it a revolution to the farmers. If all of them had access to it I am sure they would join the army of Equity. . . . If we will all put our shoulder to the wheel, and push with all our might, the American Society of Equity will make us free, and we can then demand a fair price for all our products—and get it."

\*\*\*

"The American Society of Equity is a cause that must eventually triumph. The cry of the husbandman must be heard in the land, and when it is heard by the Lord of Sabboath it will certainly humble the oppressors of the people and righteousness shall be exalted in the earth. You are fighting a winning fight, and you certainly have the sympathy of all good people who understand the noble work you have engaged in."—J. Lewis Lee, Conway, S. C.

\*\*\*

J. A. Everitt, Pub.: The members of the A. S. of E. all value the official paper very highly and eagerly look for every issue. You are giving the farmers just the kind of education they need

## GEMMER Gas and Gasoline Engines

Built to fulfill your particular requirements for power. Economical, safe and satisfactory. GUARANTEED in every respect. If you are interested in securing a High Grade Engine for a low price, write our Consulting Engineer for Gas Engine Information of value, FREE. GEMMER ENGINE & MFG. CO., 1620 Park Street, MARION, IND.

## SAW MILLS

The DeLoach Patent Variable Friction Feed Saw Mill with 4 h. p. cuts 2000 feet per day. All sizes. Shingle Mills, Planers, Trimmers, Corn and Buhr Mills, Water Wheels, Lath Mills etc. Fine catalog free.

DE LOACH MILL MFG. CO., Box 850, ATLANTA, GA. Meet us at St. Louis.

## Farmers' Handy Wagon

With 4-Inch Tire Steel Wheels

Low and handy. Saves labor. Wide tires, avoid cutting farm into ruts. Will hold up any two-horse load. We also furnish Steel Wheels to fit any axle. Any size wheel, any width of tire. Catalogue free. EMPIRE MANUFACTURING CO., Box 68, Quincy, Ill.

## 20th CENTURY Wagon Box and Rack

One of the most convenient, useful, and labor-saving articles ever offered to the farmer. Substantially made and finished from best materials. Malleable castings and very strong. When closed it is available for hauling corn, potatoes, wood, live stock, etc. By suspending canvas or muslin from top, inside, will hold 100 bushels of bulk grain.

SIDES CAN BE LOWERED INSTANTLY And it becomes a solid rack for hauling hay, straw, fodder, sheaf wheat, etc., with ample strength and capacity for three tons. Very convenient for husking corn with side lowered as shown in cut. Made 14 feet long and regular widths. Sold direct to farmers at manufacturers' prices, freight prepaid. Write for Catalogue and prices. MODEL MFG. CO. Box 18 Muncie, Ind.

above everything else. It is strange to all of us here why other farm papers do not see the farmer's business in the same way and help to push it to a successful issue.—C. O. Drayton, National Organized.

\*\*\*

A. J. Doss writes from Scottsburg, Ky., that the A. S. of E. is taking hold of the minds of the farmers in that section. He says that the producers of tobacco need the Society, as they are forced to sell their tobacco at cost of production, or even below. Some of the producers are holding on to their crop, but others are forced to sell because of the need of the money. "The dark tobacco belt," he says, "needs an organizer in every county during the summer months." Around Scottsburg the producers have agreed to limit the tobacco acreage to two acres to the hand. He reports that on February 20 they held a district union at Dripping Spring, at which three locals were represented and great interest shown.

\*\*\*

A. E. Lawson writes from Montezuma, Ind., that in his judgment the only source for redemption for the farmers is through the Society of Equity. He endorses the plan and purpose of the Society, and adds: "All we have to do is to be patient and make our issue a general topic of our daily conversation. An Equity Society is a good place for everybody." He also has a kind word for the official organ of the Society, and speaks of it after the following fashion: "The little Up-to-Date paper is a welcome visitor to our family. Its ideas are bright and encouraging. It makes me want to be more up-to-date in my farming."

\*\*\*

An Ackley, Iowa, dispatch to the Dubuque Telegraph says: "Organization and co-operation seem to be the watchword of the present century. The farmers are now planning and organizing farmers' unions all over the United States and Canada. The American Society of Equity seems to be the most popular with the farmers, owing to its practical plans, and it is to be hoped that the agriculturists of America will soon become thoroughly organized into one grand national organization. The farmers in the vicinity of Abbott, Hardin county, held a farmers' meeting in the Hazel Green schoolhouse Feb. 6th, which was well attended, notwithstanding the inclemency of the weather and at this meeting the farmers organized a local union of the American Society of Equity. This union will be known as Abbott Union No. 1, of A. S. of E."

\*\*\*

Rob Roy, Ind., Local Union reports a growing interest in the Society in that neighborhood. The union has adopted a system of gathering useful statistics, to be tabulated twice a month. In tabulating reports from a dozen farmers the local finds that on the 15th of February that those twelve farmers had on hand 42,119 bushels of corn, of which only one-fourth would be marketed, the other three-fourths to be fed. Out of 9,415 bushels of wheat raised, only 1,000 bushels are now in the hands of producers. Of 13,405 bushels of oats only 900 remain.

\*\*\*

Don't misunderstand the position of the A. S. of E. It is that the farmer shall have an equitable price for all his products; and an equitable price is a price that compares in fairness, everything considered, with the price of all other industrial products, and that the farmer is the proper person to determine this price, especially so since the producer of all other products determines their price.

But the A. S. of E. does not say that farmers must sell at the equitable price. Sometimes the market may run above that, and in such case it is entirely legitimate for farmers to have the benefit of it. The equitable price fixed is the minimum price, and members of the Society will not sell below that price; they may sell as much above it as the

market may offer. But when farmers are offered the equitable price they are advised not to hold for a higher one, as that would bring them within the field of speculation. On the other hand, they are not to rush the whole crop in on the minimum market, as that would lead to congestion and stagnation. Just enough to supply the demand and keep the market steady is the purpose of the A. S. of E. And such a thing is entirely within the power and province of co-operation.

Bounce them out of the ruts. It may jolt them considerably, but let them jolt. I refer to the agricultural press. They persist in cultivating only one side of the field, and they are working one old ox under a yoke made for two. They are urging the farmer to raise more stuff, but they absolutely refuse to aid him to get a fair price for it. If they will put the fair price ox under the other end of the yoke to which is attached the increased yield ox, they will find they can plow a much straighter furrow, and that it will be of much greater benefit to the farmer. But they have got into an awful deep rut. Bounce them out of it.

\*\*\*

Can't any local union have a boys' contest this year? Send for one or two bushels of the very best of seed corn. Divide this among the boys of the neighborhood, giving each, say a quart of the seed, on condition that they will plant it separate and apart from all other corn, and exhibit five or ten ears of the product at a special meeting held for that purpose next fall. Offer several premiums on these exhibits—say, first, \$3; second, \$2; then five of \$1 each. This makes \$10 in premiums, a sum which could certainly be raised for that purpose in any local union. You will be amazed at the corn exhibit you will have and at the interest you will awaken, and the good you will do. Have your exhibition in advance of the county farmers' institutes, so that the same exhibits can be displayed at the county institute. Not one of you will ever regret this course.

[To help along the suggestion of the editor of this department I will donate a bushel of the very valuable new white corn, Pride of Indiana, to any local union that will organize a new union and ask for the corn when reporting it, and use it as suggested above. The selling value of this bushel of corn is \$2.—J. A. Everitt.]

## \$1.90 BEAUTIFUL BLACK SILK TRIMMED HAT

A REGULAR \$5.00 STUNNING SPRING AND SUMMER PATTERN HAT FOR \$1.90.

**OUR OFFER:** Cut out and return this ad, enclose \$1.90, and we will send you this newest style dress hat by express. Examine it, note the fine materials, try it on and see how becoming it is, compare it with the most expensive hats at your home milliners' and if you do not say it is a value that is simply astonishing, the prettiest, most stylish and becoming hat you ever saw, if you don't believe it is worth every cent of \$5.00, return it to us and we will immediately return your money. This is a richly designed dress hat for spring and summer. The latest style. Very fashionable and becoming to young and old alike. Made of black shirred Louisiana silk.

**A BEAUTIFUL PATTERN HAT** and fine quality, shirred silk chiffon.

Hand made on a silk wire frame. The shape has a graceful, rolling brim with a pointed dent in back. The facing is made of shirred and stitched, best quality black Louisiana silk, while the trimming is overlaid with hand shirred, black silk chiffon, same extending in gathered folds to the bell crown, which is made of black silk hair braid. Black satin and silk flowers and black satin foliage are beautifully arranged in front of the crown and side of brim. The trimming of part of the crown and part of the brim is overlaid with black silk Chantilly lace, which extends in folds to the back of crown. A prettily designed, new shaped gilt ornament is artistically arranged below the shirred silk chiffon, while a loop of gold cord is arranged on the left facing extending to the bandeau. Bandeau is trimmed with black silk and satin foliage and black silk lace. The hat as described, in all black with gold cord, makes a very rich and beautiful appearance, but can also be ordered in WHITE, PINK or LIGHT BLUE, with trimmings to match.

**\$1.90** barely covers the cost of material. We make this extremely low price merely as an advertisement for our millinery department. If you order this new, stylish, richly designed dress hat you will be saving more than one-half in price; you will be getting one of the handsomest styles that will be shown, a hat that carries city style and distinctiveness in every feature. Our free Millinery Catalogue, sent on request, shows astonishingly low prices on our complete line of spring and summer hats, shapes, trimmings, laces, veils, ornaments, feathers, ribbons, etc. Very interesting to every lady, including those in the millinery business or thinking of starting in the profitable retail millinery business.

**WRITE FOR OUR FREE MILLINERY CATALOGUE**, for the lowest prices and prettiest hats ever shown.

\$1.90

**Order Today. Address: SEARS, ROEBUCK & CO., CHICAGO, ILL.**

livered. It was the time for an exhibition of butter, jellies, pies, cakes and bread, the exhibits to be served as a lunch after the awards were made.

And there were exhibits! Nicer cakes, purer jellies, finer butter, better pies, and lighter bread could not have been found anywhere, and they were displayed in such a way as to tempt the most lagging appetite. The awards were made by a committee from a neighboring union and everything went off highly satisfactory, and with the best of feeling.

Mrs. Bowers won first on cake, Mrs. Lambert on butter, Mrs. Riley on pies, Mrs. Williams on jelly, and Mrs. Barton on bread. The prize winners were promptly appointed a committee to serve the exhibits.

And now is when the fun commenced. With malice prepense, as the lawyers would say, the serving ladies conspired to get everything out of joint, and prove the existence of a world of chance. Everything was served out of proportion. Either there was too much bread for the jelly, or too much jelly for the bread. The pies were as apt to be cut in slices as in triangles, while the cakes were cut in minute squares, or in flakes. The bread turned up all crust or all crumbs. They had started out for a good time, and they had it, yet everything was entirely orderly—proceedings could not be otherwise at the crossing, yet it must be confessed that many faces reminded one of the old time "candy pullin'." Jokes, jollity, good cheer and good will were the prevailing elements of the entertainment, and everybody went home happy.

What the next "outbreak" at the Crossing will be, it is difficult to say; somebody is ever ready to spring a surprise, and it always turns out to be an enjoyable and profitable one.

#### A PERTINENT ANSWER TO A PERTINENT QUESTION

"How shall the farmer get good help? I will divide \$5.00 among those who send in the best answer before February 25th."

The above is quoted from the "Farm and Home" of February 15th. I will answer by asking: How does Farm and Home get good help? How do trusts get good help? Farm and Home gets good help because, I take it, their com-

positors, pressmen, etc., have a schedule of prices which Farm and Home is governed by, and advertising and other work is rated accordingly. Farm and Home fixes its own price on its product. Corporations get good help, because skilled labor has its scale of wages, brought about by much suffering and loss in the matter of strikes, which corporations are bound to pay. Their products are advanced to meet this scale. So also trusts, of whatsoever name or nature, whatever they pay in good wages, is charged up to the consumer. The country is prosperous and no serious complaints are heard, except where some necessary article is selected by a trust and prices that are extortionate are demanded.

The classes specially alluded to have prerogatives, where good wages are demanded for good help; in this, that they set their own price on their product or article of commerce. "How shall the farmer get good help?" Just as soon as he advances to that position in the business world that is held by all other producers. By organization. Call that organization what you please, but it must be an organization formulated along business lines, and with one specific point in view, viz: To control the price of their products; to do this, its ramifications must extend all over the States and Territories, and must be conducted intelligently and with marked executive ability. Instead of dumping their products onto the market blindly, as is now the case, allowing speculators and gamblers to fix the price, they themselves must be posted as to supply and demand and ship intelligently, with a standard price fixed; by this means they can plan intelligently, as do other business men. When this is brought about, intensive farming—which must come—will be the

rule. And shall farmers get good help? will solve itself. He will be able to pay for it.

## FARMER'S INTEREST CORN

Absolutely without a peer as a profitable variety to grow  
Unequaled in productiveness  
and all fine qualities

THE FARMER'S INTEREST CORN has an enviable reputation of winning the leading prizes at all corn shows and expositions where exhibited, including Indiana State Fair for the past nine years. Nine prizes at Illinois State Fair 1902, one of which was for the best bushel of corn open to the world AND GOLD AND SILVER MEDAL AT PARIS IN 1900. Also has won hundreds of prizes at county fairs where exhibited by our customers. It has proven THE LARGEST YIELDING CORN KNOWN IN THE CORN BELT, on all kinds of soil.

It shells heavy and weighs heavy, is high in protein and has high feeding properties. It is a corn that would increase the corn yield many million of bushels if generally grown solely on account of its superior yielding propensities. A thorough bred corn like FARMER'S INTEREST would be cheap at \$10.00 a bushel for seed to any farmer who has been planting mongrel kinds in the past. The best seed is none too good on such an important crop as corn, and the FARMER'S INTEREST is the best variety for all sections south of Michigan that can be found if you would travel the country over. We challenge comparisons and tests.

160 Page Catalog FREE, if you have not received it, where this remarkable corn is fully described.

Price By mail, pkt. 10c, large sample ear 30c, 1 qt. 40c, 3 qts. \$1. By freight or express, 1-4 bu. 75c, 1 bu. \$2. 2 1/2 bu. in 1 bag, \$4, 5 bu. or more \$1.50 per bu. A certificate of genuineness is given to each purchaser.

Photograph of one bushel of Farmer's Interest Corn. This was the highest scoring bushel of corn on record

J. A. EVERITT, Seedsman, Inc., Indianapolis, Indiana

LETTER FROM DAVID DOBETTER

NO. 40.

NEAR WILLIAMSPORT, Ind., March 15, '04

Dear Mr. Everitt:

Things are swinging into line again for the spring's work. We are planning for a vigorous campaign here on the farm. Everybody is busy and happy. Happy folks are always busy. I used to think that it was happiness to scrap along most anyway. If we had enough to eat, nothing much to do and plenty of time to sit in the shade of the back porch and dream, that was about all there was of life. Now I know that we were not living at all those days. We were just killing time; and of all the unprofitable things any man ever did that is the most so. Eating, drinking and sleeping is not living. Living, as I look at it now, is doing something to make the world better. It was the best day of our lives when we began to look toward the sunshine. At first it dazzled our eyes a little, but now it is all right. We are at last seeing things in their right light.

The seed potatoes went with a whew. One man took them all. That inch advertisement we had in your paper did the business. The man who bought them was a seedman. He asked me to send down a few fair samples of the different kinds, which I did. The next week we shipped him every bushel we could spare, at fine prices, too. The buyer said they were the best of anything he had seen this spring. Our land seems to be especially adapted to the growing of potatoes. And then, I think a great deal of the credit for this crop is due to Tom, our splendid German hand. He certainly was faithful in caring for the crop all the way along. I let him know how I felt about it when the check came for the pay; and when I slipped a five-dollar bill into his hand, as a kind of appreciation of his good service he was the happiest man in town. I never shall be any the poorer for it. Of course I paid Tom a fair price for his work, but I think it no more than fair that we should go a little farther sometimes by our help and let them know in substantial way that we think they have had something to do with our success in life. We mean to keep Tom as long as we can. He has done a fine winter's work getting out timber for the barn, hauling away potatoes and other stuff from the garden and farm and caring for the stock. He has put almost lumber enough on the ground to build the new barn, too.

I have about made up my mind that the Carmen No. 3, the Sir Walter Raleigh and White Mountain are as good potatoes as we can grow here, for late varieties, I mean. Those sold the other day for seed were all of those kinds. They seem to do well for us, do not rot as badly as some other varieties and yield first rate. Some of the neighbors complained of the rot last fall, but we did not have much of it.

Tom has somehow found time to get out a good share of the manure in addition to all his other work. We have

been studying this problem of drawing out manure in the winter and have come to the conclusion that if we have a field where the ground is quite level and not subject to overflow or washing from some other field, it is all right to get the manure out there while the snow is on the ground. On other pieces I certainly would not think of doing so. A year ago I took a trip across the State and in many places I saw hundreds of dollars' worth of the best barnyard fertilizer floating down stream on the spring floods. I am not able to stand such losses myself, and I do not know of anybody that is in this part of the country. Folks that have such farms ought to wait till the floods go down before drawing out the manure from their barns.

Right along this line let me say that we have been getting one of the low-down wagons advertised in your paper. I believe they will save the farmers' strength as much as any one thing ever invented. When you think of the tons and tons of stuff we must lift every year, do the best we can, it makes me glad some one thought about lowering the wheels. They do not cost much and think of the backache they save!

Seems kind of tough, but I must tell you that the poor, sick neighbor we wrote you about last month has gone away to stay forever. He was too far gone when Chipper found him. The doctor went there faithfully, and we all turned in and did all we could to nurse and coax him back to health, and it did seem for a while as if he would pick up and get around again; but all of a sudden he took a bad turn and almost before we knew it he was gone.

His folks are left in bad shaps. You know how it is. He had not been strong all his life. Some folks called him lazy, but there wasn't a lazy hair on his head. He was not able to do as the rest of us did and that is all there is about it. So he never had laid up anything for a rainy day. When it came he was right out in the wet and cold; and now his wife and everybody are dreadfully bad off. Somebody, a great many years ago, built a little shack of a house down on our woodlot, close by the road, and wife and I thought if they were a little nearer to our house we could look after them a little better. So we moved them up one day last week. Everybody has been good to them, and so they are as comfortable as you could expect. We go down often and see if they have things to make them comfortable. The poor widow is almost broken-hearted, but she is beginning to look up once more. She comes up once in awhile and helps mother and it is quite a bit of relief, for we have the carpenters here now working on the new barn. We mean to have it ready for the hay crop this season. You remember there is a slight rise in the ground just back of the old barn? Well, there is where we are going to locate the new one. Tom and I spent the fore part of the week plowing and scraping for the basement. We thought if we could make it a basement barn it would be warmer for the stock and add to the room considerably. When the boys were home last week we stuck

the stakes and turned the first shovel full of earth. The young chaps keep up their interest in the old farm. It seems as if the more we do to make it handy and more beautiful the better we all like it. I believe if every farmer would take pains to fix up the farm and make it just as comfortable and convenient as possible, the young folks would be more contented and willing to stay in the country.

Well, Chipper has been curled up in a big chair reading while I have been writing. Now he stretches himself and says, "Uncle, the clock's struck eleven. Everybody's gone to bed but you and me. Let's see which of us can get there first." So I lay down my pen and hustle to beat my little man. Time does fly when I get to talking with you and I always leave a lot that I want to say. But I guess it will keep till next time. So good night.

Yours truly,  
DAVID DOBETTER.

### A GOOD WORD FROM FLORIDA

To the Editor of Up-to-Date Farming: Your late issue of Up-to-Date brings renewed inspiration for the cause of causes—stability of remunerative value for all products of labor, beginning with those of the soil. It includes and embodies all that has been taught or preached of specialties, and it can not be but that all leaders of thought who are looking for the direct route to higher and better things and to relieve the stress of life will, when their minds are opened to this proposition, grasp its expanding possibilities, be inspired by its direct and ready helpfulness and advocate and proclaim it everywhere.

Two things the commercial and social sense of this generation is bound to get rid of, which have been the chief causes of anxiety and bankruptcy from the beginning:

1st. Open competition (or commercial suicide), under which history says 96 per cent. of all men in business have failed.

2nd. Supply and demand, where value falls off as quantity is increased.

These two contribute directly either to desperate and reckless measures or to listless indifference, both of which are inconsistent with twentieth century life and must go. Any leadership that fails to recognize these facts is holding back and blocking the wheels of progressive development. In this progressive effort and education the A. S. of E. is in the lead, and it is with the greatest satisfaction that I see these ideals, which I have for many years been standing for, taking firm hold of the best minds of our period and being so ably advocated and elaborated by your earnest, forceful and vigorous paper.

The book, "The Third Power," I have read, studied and re-read, and although many of its propositions were not new to me, many were new, and all were carried to their logical conclusions, and as an educator in its most vital and far-reaching undertaking for the uplifting of productive labor is without a rival, and should quickly find its way into the hands of every one aspiring to help his fellow.

Between the trust which multiplies its stock a thousand fold and then raises prices and cuts down wages to pay interest thereon, and helpful co-operation, which would maintain remunerative values for all products of soil and labor and let the productive value of lands and plants follow, there is all the difference that has ever been described between the saint and the sinner.

A. R. CARHASS.

Boston, Fla., Feb. 27, 1904.

### SPECULATIVE PRICES AND PROFITS

A recent discussion in Congress brought out the evils of speculative price fixing them in a stronger light than ever before. Mr. Martin, of South Dakota, said the so-called beef trust comprised seven firms who fixed prices of beef cattle and beef products without any reference to cost of production or supply and demand, and that the price to the consumer was not at all influenced by the price to the producer.

He recited the case of a constituent of his, a prominent stockraiser, who shipped a train load of fancy steers to Chicago. In search of the best market he applied to all the buyers, but could get but one bid—none of the other buyers had any offer to make.

He had to sell to the firm that made the bid, and at the price offered. But his curiosity had been aroused, and he determined to see what disposition was made of his steers. So he kept a watch upon them. At night they were divided equally among the seven companies comprising the trust.

Mr. Martin then took up the Chicago market and showed the following results: On February 1, 1903, the price of good to extra steers was \$6.50 per hundred weight, and the price of that grade of beef to retailers was \$8.37½. August 1, 1903, the price of that grade of beef was the same, but the price of good to ex-

tra steers had dropped to \$5.17. During the month of August, declared Mr. Martin, 293,000 steers were sold in the Chicago market, which, at the prices quoted, made a net profit of \$3,882,263, of \$144,317 for each of the 26 business days of the month. This is the sum paid by the stockraisers of the community to these seven combined companies for fixing prices upon beef cattle.

Mr. Stanley, of Kentucky, then spoke on the tobacco question. He declared, with emphasis, "the tobacco trust has killed competition, and therefore tobacco growers are completely at its mercy. There are 120,000 growers, he said, who, since the advent of the trust, only earn 35 cents a day."

It is encouraging that these things are being made subjects of discussion in Congress, and that the evils of speculative control of prices are being so emphatically stated; but the remedy for the trouble will never come from Congress. There is but one power that can overthrow these monopolies, and that is the power that creates the products. Speculation can not touch them, and monopoly can not control them, so long as they are in the hands of the producers, the original and first owners. Prices must be fixed while they are still in these first hands, and they must be fixed by the producers themselves through efficient co-operative agencies, as proposed by the American Society of Equity.

He who does not believe this can be done makes a complete surrender to speculative monopoly, and abandons the hope of liberty, justice and civilization.

If the producers would contribute to their own cause one-tenth of one per cent. of what they contribute in the shape of profits to monopolies, a single season would not elapse until they would be masters of the situation, and the stream of millions flowing into monopoly's coffers would be turned into their own pockets.

## Sharples Tubular SEPARATORS

WILL you buy a separator because the agent is a "good fellow?" Some people do. We hope such will read this. The Tubular talks for itself and is bought for itself.

If You Have a Brand New Separator not a Tubular, put it in the garret.

We will sell you a Sharples Tubular, guaranteed to make enough more butter than the other from the same milk to pay 25 per cent yearly dividend on the whole cost of the machine. You test them side by side.

Pierpont Morgan is hunting a place to put money at 6 per cent; here is a guaranteed 25 per cent to you. While this dividend pays your bills the Tubular makes your life more pleasant by pleasing your wife. A waist low milk vat saves your back. Simple bowl—easy to wash—the only one that is so. Automatic oiling; the only one that has. Easier to turn than others and safer. Catalog A-138 explains better.

A WORD FROM OKLAHOMA

Oklahoma City, Okla., March, 1904.  
J. A. Everitt Pres. of A. S. of E.:  
Dear Sir—As some of our people would like to hear from this great and wonderful territory of Oklahoma I will try to tell you and them what we are doing and how we like to read Up-to-Date Farming. Well, as you know, our society of A. S. of E. is rapidly increasing its membership, and also the deputy presidents are beginning to be scattered over the territory, and every person who once becomes a member pledges himself to get another. We think, in fact we know, it is the best organization that ever presented itself to the farmers of the United States. It is the means by which we can elevate our minds and educate our sons and daughters. We can at the same time build up our bank accounts on the right side of the ledger, as well as improve our homes and farms and make them beautiful and attractive. We can build and beautify our public highways, and those of us who have been members know and realize the great benefits already derived from it.

As to Up to Date Farming, we can not find words strong enough to express how we appreciate it. To say it is heartily welcomed in every home is too mild.

Now, let me say right here that none of us want to see it pass from the hands of J. A. Everitt. It is he who has brought about this movement—this grand and noble American Society of Equity.

We are being flooded with many other farm, or would-be farm societies, but they all have that old plan of stock company and building features. There is but one plan the Oklahoma farmers will pursue, and that is the plan of the American Society of Equity. We want a more rapid growth in every state and territory, in Oklahoma as well. We want our territorial organizer, Willard J. Conover, to go as our representative to the St. Louis convention, and every local union should see to it that proper steps are taken to send him. He is an earnest and devoted worker for the cause and amply able to handle any and all problems that confront him. It is through his efforts that we farmers are beginning to see our way to successful organization in Oklahoma and Indian

Territories, and we are happy to say that we thank you for your wise and good judgment in selecting him as territorial organizer.

Now, in conclusion, let me again say that we farmers of Oklahoma are loyal to our official paper and society. Every farmer should read "The Third Power," and every friend of a farmer.

Yours in Equity,  
OKLAHOMA FARMER.

AN EARNEST PLEA

Editor of Up-to-Date Farming:  
On looking over the Wallace Farmer, which I take (and it is a good paper), I saw an article written by a subscriber, asking him why farmers should not organize and price their goods, and also Wallace's reply.

When I got your paper of February, I saw the Farmer's reply, and your remarks on them. I do wish every farmer would read it and study it; it would do them good. My observations have been that farmers, as a rule, do not read enough; they simply scan or run over their paper; don't study as they ought and get the gist of the writer. If they did, I believe every thinking farmer who reads the Up-to-Date Farming would be a member of the A. S. of E.

Farmers, there is no other way but to organize and price our own goods as other people do. Why do we lurk along in the deep rut and let gamblers and other corporations kick dirt in our faces? Farmers, don't be so slow, but come out and into the union and help us. The crop reports will be worth that to us and many times more.

Just think, if we increase our members a little faster than we are now we can trouble the price makers next fall, and if you will make a rush, which you surely ought, we can price our goods next fall.

A SUBSCRIBER.

Riverside, Iowa, February 17th.  
Teacher: "Johnny, can you tell me what classical music is?" Johnny: "Yes, ma'am. It's any kind a fellow can't whistle."—Credit Lost.

# THIS 50-EGG INCUBATOR ONLY \$6.00

The P. S. is a hot air Incubator, built of first-class material, neatly finished and thoroughly tested before leaving the factory. The improvements in this machine have so simplified hatching that a child can operate it without difficulty. The regulator is highly sensitive metal, extending above and beneath the egg tray. It can be set to any desired degree of temperature, and when so set will hold the temperature within the egg chamber without any variation, regardless of any variation of temperature outside the Incubator.

## This is the Incubator For You

### OUR OFFER

We will send a P. S. 50-egg Incubator for \$6.00. This machine will hatch eggs just as well as the larger sized ones. It is the best Incubator on the market and every person owning one speaks of them in high terms. The 50-egg P. S. Incubator is 14 1/2 x 24 inches. It has one blank tray, one thermometer, etc. Weight 32 pounds; crated for shipping 45 pounds. Each machine is supplied with complete directions for operating. Cut off the coupon and mail it today.

### WHOLESONE LITTLE STORIES WITH A MORAL

HENRY BURNS GEER

#### THE OLD WAY THE BEST

A funny thing happened the other day in a southern town. A man charged with murder had been on trial for several days, and the jury had been out about forty hours, and it seemed that no verdict could be reached. The Jurors room was down on the basement floor of the court house, whereas, the court room was in the upper part—two floors above; a passenger elevator being the connecting link serving as a means of easy communication between them. There was much interest taken in the trial, and the court-room was crowded daily with spectators who hourly expected a verdict. And, right here let it be added that a broad flight of stairs also connected the several floors of the building.

Late in the evening of the second day, a boy rushed into the court-room, and up to the judges bench, and without awaiting an introduction, or permission to speak, exclaimed:

"If you please, Mr. Judge, the jury in the Nolen case is hung."

"Hung?" interrogated the judge; "then go back and tell them to come in and announce the fact in regular order."

"But, sir," replied the boy, "they're hung up, and can't come in." This vexed the judge, and his brow darkened:

"What do you mean, you little rascal; this is no place, and no time, for levity."

"Taint nuthin' like that air; them fellers started up in the elevator in a bunch awhile ago, an' I reckon the current went off. Least wise, they're all about half way 'tween this floor an' 'tother, an' can't get no higher." This caused a buzz of excitement about the room, and the judge ordered a deputy sheriff out to investigate the matter.

Sure enough, he found the elevator, loaded with the jurymen, stuck about ten feet down from the court-room floor. In reply to the enquiry if a verdict had been reached, the foreman replied in the affirmative, adding:

"We find Jerry Nolen guilty of murder in the third degree, and recommend him to the mercy of the court—here it is"—handing a written verdict attached to the end of a cane, up through the front opening in the elevator car door. Then he added:

"This is the first one of these dang things I ever rid in, an' I wanted the boys to go up the old fashioned way; but they lowed as they wanted to ride."

It is not always wise to take chances. Some times the old way is the best, even if it does require a little exertion to pursue it.

#### THE VOICE OF THE MUTE

"Simon Skinner,—Provision Broker;" was the way the sign over his door read. He didn't have much of an office, for he dealt over the curb, chiefly; and somehow, his trades always wound up with a balance in Simon's favor. It was fool's money he was gathering in, and the fools were fast making a rascal rich. He had a way of protecting Simon, that was beautiful to behold, and the call for "more margin," was habitual with him, for his fool patronage was chiefly from the country towns, and he knew how to pull the strings so as to wind up the ball in Simon's favor everytime.

It had been a busy day, and the market had fluctuated like a shuttle-cock. You see, the big "bears" and the big "bulls" were having a great fight o' it, and it pleased Simon immensely, as it gave him a chance to strike both going and coming, and before the day was over he had called on his patronage—both long and short to re-margin, and he had closed but a large per cent, to the joy and profit of Simon.

He was sitting at the table at home toying with his scissors; when, to his

great surprise, as he opened them, they gave a short cry of protest. He started. Again as he opened them, the cry was repeated. He gave a nervous, silly, laugh, and taking the tongs, threw a piece of coal on the fire. With a cry of agony it burst with a loud report—scattering fragments of slate and pyrites over the room. Simon rose up, pale and trembling, and reached for a glass, took a drink of water, but the glass fell from his nerveless hand and with a wailing cry of protest burst into a hundred fragments on the hard oaken floor at his feet. The clock on the mantle ticked out a protest against the endless circuit of eternity it was set to record. The wind rose, and wailed a stinging protest against the race of the elements. Then, the door, with a protesting creak opened, and a bank clerk moved silently forward. With a look of reproach he handed Simon a bank book with a false entry. Simon knew where the money was. Again, the door opened with the same protesting creak, and a man with a pistol in his hand, the blood flowing from a hole in his temple fell forward to the floor—expiring with a groan of despair. His pockets were turned inside out. An empty purse lay beside him. A demon riding on the wind as it whistled around the corner—leered at Simon, with a diabolical leer. A woman, poorly clad—leading a little child, with pale, thin cheeks, entered next, and gazed silently at Simon, with sad, mournful eyes. He bent over and covered his face with his hands; but, not for long, for he heard afar the steady tramp, tramp, tramp, of strong men, and voices that were not afraid. He peered through the door, and he saw them coming. With a shriek of terror he cowered in the corner. It was the advance guard of the American Society of Equity, bearing aloft a banner inscribed: "Down with the Provision Gamblers."

They found Simon Skinner the next morning—not dead, but a poor simple idiot, sitting at his own fireside—a victim of a guilty conscience.

#### THE CARD UP THE SLEEVE

We saw a real live "dollar-a-bushel-wheat" man today. A genuine farmer, and a reader of Up-to-Date, of course. He called on us at our office, and he wore a happy expression. We have known this man for thirty odd years, but never knew him to be in a more happy and hopeful mood than he was to-day.

"I got it!" he exclaimed.

"Got what?"

"Got a dollar for my wheat." And then he told us how it happened.

"I take Up-to-Date, as you know, and I've been reading after you fellows for a long time—so long, in fact, that I imbibed the idea that we would get dollar wheat in time for my 1903 crop; and so, I just held on to it. They offered me seventy-five cents, eighty, and on up to about eighty-seven cents last fall; but I just said to them: 'Gentlemen, if you want my wheat, you can have it for one good big dollar a bushel, and not a cent less.'"

"And so you held on to it—'a la Up-to-Date?' we put in, interrogatively.

"That's just what I did, and I got a dollar a bushel for every bushel I had, last week right in my own town."

"That's pretty good; and now what do you think of the A. S. of E.?"

"I think it's all right, and a good thing to stick to. But, say," he added, confidentially, "you fellers didn't say anything about the big far east war; nor what figure it has cut, before or since, in advancing wheat. How about it?"

"How about it!" we exclaimed—"how about it! Why, that is simply the first card we had up our sleeve."

#### THE GIRL WHO KNEW

Box 88 WINCHESTER, INDIANA.

somewhat after the Chinese custom—as a sort of a nuisance to be tolerated and pitied, simply because they exist. But, let it be said for old Prentiss Taylor, that he wasn't built that way, for every one of his seven girls had been given a good common school education, and old Prentiss would raise his cane in a minute, on the boy who didn't treat his girl with becoming courtesy. There was one among them—Miss Zelda—who had from the very first manifested such superior intelligence generally, that her father decided to send her off to a first-class seminary, and give her a general course in the higher branches of education. The old man could not very well afford it, for fully one-fourth of his farm consisted of rocky glades and ledges. In fact, his place was known as "The Glades;" but, once his mind was made up to do it, he never hesitated; nor did he let himself regret it; although the bills for Zelda's college learning did cut a big hole in his rather meagre income.

He held out for three years—getting poorer and poorer each year, and he heaved a great big sigh of relief when the last bill was paid—Zelda had her diploma, and was enroute home.

"Now, mother," he would say to the good wife; "when Zel. gets home, and gets a chance to show what she knows, I'm sure she'll get a job some where that will pay back a heap more'n it's all cost us."

"I hope so, Prent, indeed I do; but somehow I feel like it's just money wasted. Think of the other girls, they aint done no good yet on their school learnin'."

"Just you wait, just you wait, mother, I'll bet Zel. makes her mark, and makes money, too."

Finally the day came that brought Zelda—a sweet faced, graceful, intelligent looking girl of nineteen summers; who by her very actions and speech made her father proud of her as soon as he met her at the station. Everybody who knew her, and who didn't, was there—crowded up to say how glad they were to see her again, and to shake hands with her.

"Father," she said, as they neared the old home; "let's drive across the glades to the stable-yard. Do you know, I've been thinking a good deal about the old soapy, yellowish looking rocks down there, lately."

"Why, Zel, what in the world put them old worthless rocks into your head. I wish they would all sink out of sight," replied the father.

By this time they were in the glade, and Zelda surprised her father by springing out, and breaking two small boulders, by striking them together.

"O, papa, papa," she exclaimed, "it is just as I thought. O, I am so happy."

"Goodness, me, child, have you gone crazy?" cried old Prent, jumping out and running up to his daughter with a scared, pitiful look in his eyes.

"Crazy! Not a bit, but I've found a fine bed of high grade phosphate rock. It's worth more than all the rest of the farm and all the growing crops. I studied geology, at college, you know," the "knowing" young woman added, by way of explanation.

This time the old man just stood still with his mouth open staring at his daughter—a stare that was finally broken by a glad, hopeful look—a hope that was later fully realized.

There are others—many of them, who do not know a good thing when they see it.

\* \* \*

**A Common Enemy**

Things down at Rodney had waxed pretty warm. The boys were divided. There was the "Rodney Gang," and the Rodney "Junction Gang," and the rivalry between them was keen unto cutting. Rodney, you see, was the old town; but the Junction was on the main line of the new railway, and it was fast catching up in size and population with it's elder rival. And so, it came to pass, that there was much jealousy and bad feeling between the boys from the two respective towns; and it finally got so bad that it was not safe for a single boy from either place to venture down

to the creek to take a swim, or to go elsewhere out of shouting distance of his comrades. Nor, was this all. Small squads were often chased by larger ones, and many a black eye, and bloody nose was the result of a stoutly put up fistic encounter between the rival factions. Things had gone on in this way for about a month, when one day something happened:

A squad of the Junction boys were just leaving the creek, where they had been in swimming—about five of them—when, just as they were starting out across the prairie for town, they were espied by a big gang of the Rodney fellers—some ten of fifteen in number. Here was fun for the latter. With a good big "Injun" yell, they lit out after the smaller gang. The latter, although armed with good stout sticks, thought it the better part of valor, to make a home run of it; and so they made for town, pursued by the others. They had been on the swift pass only about fifteen minutes, when a new factor appeared on the scene. It was nothing more or less than "Woolley"—farmer Pierson's old Merino ram. With head down, and fire in his eyes, he was making straight and rapid headway for the big Rodney squad. The smaller gang wheeled about and looked their surprise and concern.

"Say, boys," said Fred Wharton, "Them fellers aint' armed—not a stick in the crowd. That old buck will butt them all over the prairie. What'd ye say, let's go back and help 'em."

"What, go back there and get licked by 'em?" said little Pete Reynolds.

"No. I'm not afraid of that. Let's go back, and help them whip old 'Woolley.' Come on!" With this, Fred wheeled about and started straight for the "Rodney Gang,"—big and threatening as it looked. All the other fellers wheeled and took out after him.

The Rodney boys gave a shout. Old "Woolley" was still making straight at them. The Junction boys veered out to head him off. This brought a ringing cheer from the larger crowd, as the boys took up the race again—swinging off towards old "Woolley" too. The two gangs bunched up about thirty yards ahead of the ram. He was still charging forward. Fred grabbed a stout stick from one of the smaller boys in his crowd, and handed it to Tom Norton, the leader of the Rodney gang. Then they swung about and faced the ram. Not a word had

been spoken; but, as the enraged animal charged up, Fred and Tom cracked down on his fore-shins with their clubs with a force that brought him to his knees.

"Now, boys," shouted Fred, and with a bound he lit on old "Woolley," with Tom a good second. In less than three minutes, the old terror of the prairie went down under the united force of some fifteen boys, who but a short time before were bent on pounding each other; but, in the presence of their common enemy all that was forgotten, and each one shared in the glory of a common victory. Old "Woolley" was tied securely with old suspenders and pieces of coat lining, and carried in triumph to and through Rodney, and on out to the Junction; where the boys held a great "pow-wow," swearing eternal friendship for all time to come.

Wouldn't it be in keeping with the noble example set by those boys, for the various farmer organizations throughout the country to do likewise, and unite against a common enemy—the stock gambler?

\*\*\*

### The Orchard That Was

Pike, is a great lover of fruit, and there is nothing else raised or gathered on his place that he takes more pride in; and his favorite way of entertaining his guests of a Sunday and on holidays, is to take them out to look at some of his newly planted trees; for Bud says he can set a tree out so that it will grow every time. This is his common boast, and it became so common, that it is thought—but the fact has never been established—that some one of his friends got tired of hearing it so often, and so set about to turn the tables on Bud. But, be that as it may, there is a fact to be mentioned, that has never ceased to be a source of wonder and chagrin to Bud, as well as one of amusement to his friends.

It happened in this wise: Bud had but recently set out a fine lot of June budded peach sprouts—about three hundred of them, over on an hill field back from his house about a half mile; and, as usual, he took much pride in the way the job was done. And so, when a couple of his friends called the other Sunday, a trip back to the new peach orchard was one of the first things suggested by Bud. They strolled back through the woodland down the slope in good "Injun" fashion, and as they reached the region of the orchard, their host said:

"Now, gentlemen, right up this hill-side, and over this fence you will see the finest young orchard in this State—if not in this whole country. This orchard cost me—why blame it all—where is that orchard!"

Yes, indeed, where had the orchard gone to? There was the northwestern slope—a good site for a peach orchard, and there were a number of holes with the dirt broken about the edges like as if the tree had been lifted after planting, but nary a tree was there in the whole field. Bud was thunder-struck, and was soon cussin' like a Turk. Some one had stolen his orchard. His friends gave him the laugh. He never said a word, but simply turned about and went home.

"He ought to plant some of the principles of the American Society of Equity in his heart, and think more of his neighbors, and less of himself and his work," remarked one of his visitors, as they strolled homeward.

It is reported that some ten days later Bud found his new peach orchard all nicely "heeled in" in a bunch on the southwestern slope of the hill; but he hasn't said "tree" since it's original disappearance.

\*\*\*

### Why They Didn't

It was in August—hot and dry. The meadows were barren and serene, and in the surface of the surrounding earth there was no moisture. Bee-pasturage was exceedingly scarce, with good indications that it would become much scarcer. Certainly a very unfavorable

time for bees to swarm—a time indeed when all good, wise and well behaved bees were exerting themselves to gather what little nectar the occasional dewdrops drew from the drying and dying roots of the flowers; or hid themselves away and about to gather pollen and to construct comb. There was one stand in the apiary, however, which had all along been noted for its erratic and notorious inhabitants—a colony that seemed to have inherited the spirit of an evil genius, and which appeared to do the unexpected and the undesirable act whenever possible. This particular colony seemed to be peopled with drones and idlers, and such as loved an excursion better than good honest work; and so, when a few of the very worst spirits in the bunch came out on one of the hottest and driest of afternoons and said: "Come fellers, let's to the woods—let's swarm"—there was a great stir and buzzing in approving fashion; and soon the cry was raised at the kitchen door: "the bees are swarming, the bees are swarming!" Then there was a great rattling of pans, and blowing of horns, until Ned Pearce, an experienced apiarist chanced along, as the bees were streaming out of the hive:

"Stop your fuss," he exclaimed, "I'll bring 'em back all right." He went to the front of the hive and knelt down, looking eagerly at the outward flow of bees. "Ah!" he exclaimed presently, as he reached right down among the bees and picked something up. What ever it was he slipped it into a little perforated box; and then he deliberately sat down on the hive and waited.

## Factory Prices, 30 Days' Trial

"Eli" Road Wagon.

**\$16.40**

Imitation leather trimmed: Carpet, wrench and shafts—just as illustrated. Our Vehicle Catalogue 250 gives complete particulars. Send for it before you order. Other Road Wagons \$21.50 and \$23.90.

"Defiance" Buggy.

**\$23.00**

Cloth trimmed: 3-bow top, back and side curtains; carpet and shafts just as shown in cut. Before you order write for Catalogue 250 with complete details. We have Buggies in better grades at \$30.00, \$35.95, \$39.50, \$43.50, \$45.00 and up to \$85.00.

"Ulimax" Surrey.

**\$39.50**

With canopy top; imitation leather trimmed; good, strong springs, carpet and shafts. Before ordering send for our Vehicle Catalogue, which explains fully. We have better Surreys at \$46.50, \$59.95, \$72.50, \$87.50, \$110.00, \$125.00, etc.

Do not place your order for any kind of a vehicle until you have heard from us. Let us show you how to get a high grade, nobby and attractive rig at a price anywhere from \$10 to \$25 lower than you can get a good rig for elsewhere. We have just the kind of a vehicle you are looking for. Buggies, surreys and spring wagons in a thousand styles. Stan hopes, breaks and runabouts—even farm wagons—all at prices you can see at a glance are decidedly low.

No trouble for us to have low prices, because we build the rigs in our own factory and let you have them at the wholesale price. No dealers, no jobbers, no middlemen—just a direct transaction between the maker and user by which the profit of the middle fellow goes to you.

What's better, we give you quality; real second-growth hickory, put together with Norway iron, and finished off like a Fullamcar. No "dipping" in our factory, no new-fangled painting process, but just the old-fashioned painting process and pure oil rubbed down by hand.

Everybody likes our rigs. They are popular for their fine lines and superior finish—points that make a "Ward" buggy look like a thoroughbred when compared with the common kind.

Our free Vehicle Catalogue No. 250 explains all. It gives the details of our 30 days free trial offer; it explains our Guaranty of Satisfaction, and our SHIP ON APPROVAL plan. It also tells how we can make shipments from factories in Chicago, St. Louis and Cincinnati. We are saving our customers \$5 to \$10 on each buggy, and giving more style, durability and finish than can be obtained anywhere else. Write to-day—a postal will do. Ask for Vehicle Catalogue No. 250. The Spring edition is now ready. Address

Shipments Chicago, **Montgomery Ward & Co.**  
Cincinnati or St. Louis. 32 years World's Headquarters for Everything. 66 Michigan Ave., Madison & Washington Sts., Chicago.

Well, sirs, you ought to have seen those bees. After all had gotten out of the hive, they circled around like a flock of pigeons. They seemed to be lost. They started off several times, only to swing about again; when presently, they just turned tail, and all went straight back into the old home again.

"I thought so," said Ned, triumphantly, as he took the queen bee out of the little box, cut off one of her wings with his pocket knife, and turned her loose at the entrance from whence she promptly disappeared within. "There, now," Ned added, "you fool bees won't try swarming any more this year, for your queen can't fly, and you know better than to leave her, for the simple reason that she is the mother of the next generation, and without her, your race would be extinct when you pass away." And it is even so.

How like some people those bees were. Great hands to raise a fuss, and to pretend to be anxious to do something, and yet utterly helpless without a well-equipped leader. It takes organization, co-operation, and able leadership to make things work out right in this day and generation.

### LOOKING THE WRONG WAY

It was common talk, and common belief, that there was buried treasure on the old Burn's place. It was said to be Spanish coin, and tradition had it that it had rested in the earth thereabouts for nigh onto three centuries, but still the belief was strong that it was there somewhere, for it had come down as a tradition from generation unto generation. But, just where? That was the rub. Tom Burns had done just like his father and his grandfather before him; he had dug the old place pretty much all over, but not a single piece of the chink had he unearthed.

There came a night one September, however, while the wind blew strong, and the rain swept down in great gusty dashes—a night when all was dark without, and the evil spirits seemed to stalk abroad, and good people kept closely indoors. It was midnight by one hour past, when the sound of horses hoofs were heard beating and sloughing in the rain riven road that led through the lane. The sound of horses and their riders, who said not a word as the dogs sprang from their kennels, and barked fiercely as the calvacade swept by. The wind hastened its wild pace, and fairly bent the maples and the cherry trees that lined the lane, to the ground; and shook the old house to its foundations. And then it suddenly—with a wild, dying shriek—sobbed and lulled down, as the rain ceased, and then all was still as the grave. The moon shot trembling beams between the rifts in the clouds; as again the thunder of horses' hoofs were heard sweeping down the lane—this time from the westward by the creek; and as they swept recklessly past the house, strange forms and faces—faces hooded after the manner of the seventeenth century were seen, and this time there were words, but in a language unknown to those who, awestricken, peered at the riders through the half-turned slats in the upstairs blinds.

The next morning, just as the sun was rising, an investigation was made. There was a revelation, for down by the creek, under a giant oak tree, the ground had been dug up for several feet; and this, too, in the most unlikely spot on all the farm for buried treasure—and from the openings made, old iron pots had been taken, for they still lay about empty and broken, with here and there a small Spanish coin—but the great treasure had flown with the wild riders of the still wilder night; and the tradition of the Burns homestead became a fact—but a fact that now was barren.

The old grandmother came down to the scene of the pillage; and as she stood there beneath the grand old tree, she cast her eyes upward; and then, pointing to the trunk up where the first fork began, she said:

"Thomas, had thee looked up more for guidance, and down less thee would have found the treasure."

Their eyes followed her gaze, and behold: Up there in the bark was a great cross engraven, and another, and the spear of the anchor pointed with true accuracy to the spot where the wealth had been found!

Some people would rather dig in the dirt, than to look up; or to follow the methods that the condition of things makes necessary to success.

### A Chance to Make Money

I have berries, grapes and peaches a year old fresh as when picked. I used the California Cold Process. Do not heat or seal the fruit, just put it up cold, keeps perfectly fresh and costs almost nothing; can put up a bushel in ten minutes. Last year I sold directions to over 120 families in one week; any one will pay a dollar for directions when they see the beautiful samples of fruit. As there are many people poor like myself, I consider it my duty to give my experience to such, and feel confident anyone can make one or two hundred dollars around home in a few days. I will mail sample of fruit and full directions to any of your readers for nineteen (19) 2-cent stamps, which is only the actual cost of the samples, postage, etc.

## HOW TO BUILD A RURAL TELEPHONE LINE

BY  
GEO. G. WINANS

The farmers of this country should have a telephone system joining them together. Time is money, and the telephone is a time saver, and therefore a money maker for the farmer. It is cheaper to talk than it is to walk or ride. The time has arrived when the farmer must realize the importance of being in touch with his neighbor and with the world.

The greatest hindrance to the general use of the telephone, is the lack of knowledge on the part of the farmers who desire telephone service, of how cheap it can be had, and just how to go at it to organize their own company, and build and operate their own lines. The object of this article is to urge the farmers to build and own their own telephone lines and to show them how easily it can be accomplished by acting together co-operatively.

The first thing to do is to organize a telephone company. Talk the question, and make the farmers understand the value of the telephone; that it is a good business investment and not a luxury; that a telephone in the house saves hundreds of miles of driving during a year; a time saver and a positive personal convenience.

A telephone in the house enables one to call a doctor, and in case of an accident may be the means of saving a life, by saving the time it would take to get the doctor. You can give a general alarm in case of fire or burglars. It will save many a trip to town. It will put you into quick touch with the telegraph, railroad station, bank and grain elevators; also keep you posted as to markets. In fact, the telephone makes it possible for the farmer to transact business at the farm, that otherwise would take him away from home and cause him to lose valuable time. It will also save him from the discomforts of travel, which in a winter like the past one, would be a great item. The telephone eliminates the loneliness of farm life. It makes the community all one family. It enables the farmer's wife to visit with her neighbors, and helps to pass pleasantly many a lonely hour.

People who have a telephone have de-

cided advantage over those who do not. In fact, you cannot be up-to-date without telephone connection. You may save the entire cost of your telephone in one business transaction by keeping posted on the market. I have never known of an instance when a farmer has taken out his "phone" when once installed in his home. This speaks volumes in its favor.

After the neighborhood has been canvassed and it is found that ten or more will take instruments it will be safe to organize a company. I think a simple co-operative company is best. In this case each subscriber pays his share of the cost of installing the system, and the future running expenses and repairs. The writer of this article was one of sixteen subscribers who organized this kind of a company, and built eight miles of line costing each member \$20. We have yearly dues of \$4, which pays all running expenses and also creates a sinking fund that will keep the line in perfect repair. We have the best long distant instruments and direct connection with the Bell Telephone system, which enables us to reach all points. Any of the large telephone lines of the country will be glad to get your business, by you paying the regular toll rates when you desire to use their lines, and will put in a switch board free; that will give you direct connection.

Farmers can furnish their own telen phone poles by making a bee. They can cut the poles and distribute them along their line, at no cost to themselves but their labor. They can also stretch the wire and do all the line work. I think it advisable to hire some experienced lineman from the company which they desire to connect with, to superintend the work. It will cost for material outside of the poles, about \$12 per mile; instruments from \$10 to \$14.

The telephone is in easy reach of all farmers. Every farmer should have one. Every farmer should also belong to Am. Society of Equity, and obtain profitable prices for farm products, and he then can have those things that will make him a happy and prosperous business man.

### BEES.

The spring is the best time to begin with bees. It is generally conceded that bees play a very important part in the cross-fertilization of our fruit trees and where they abound fruit is more plentiful.

In buying sheep notice the fibre of the wool. If it is smaller than normal size you may conclude an insufficient ration has been fed, or if there is a decrease in its diameter at any point sickness is more than likely the cause.

## FARM TELEPHONES

save millions of dollars for farmers every year. Every up-to-date farmer should have one. It keeps you in touch with the markets—connects you with the city—the doctor—the depot—and your neighbors, and the best of all. Write to us and we will send you FREE our booklet, How to Construct a Farmer's TELEPHONE LINE. Address Julius Andrae & Sons Co., 520 West Water St. Milwaukee Wis.

**STARK TREES** best by Test—75 Years

**ELECTRIC STEEL**  
and the  
**ELECTRIC** Handy Wagon

More than a million and a quarter of them are in use and several hundred thousand farmers say that they are the best investment they ever made. They'll save you more money, more work, give better service and greater satisfaction than any other metal wheel made—because **They're Made Better**. By every test they are the best. Spokes united to the hub. If they work loose, your money back. Don't buy wheels nor wagon until you read our book. It may save you many dollars and it's free.

**ELECTRIC WHEEL CO.,**  
Box 170 Quincy, Ills.

## Can You Tell What This Means?

**A N THE S W O R H 2 N T H**  
**\$200.00 IN CASH FOR THE BEST ANSWERS.**

This rebus can be solved by anyone who will give it a little time and study. It represents an old saying, and \$200 in cash will be given to those who can tell what it means and also suggest another old saying that we can use in another contest of this kind. This contest is a test of your ingenuity and if you succeed in sending in the best and nearest answer and sentence we will award you the first prize of \$100. For the next best, we will give \$50; for the next best, \$25; next best, \$15, and next best \$10. All prizes will be paid in cash and be awarded by a committee of three disinterested persons. The only condition is that you comply with our easy conditions, which are that you will agree to get at least four subscribers among your friends for the Household Guest, our interesting monthly magazine, at our club price of 25 cents each. To make it easy for you to comply with the conditions and get the subscribers we will send you 4 handsome pictures, size, 16x20, printed in beautiful colors, suitable for framing, so that you can give one to each subscriber. Do not send any money, simply send your answer. We will

enter it and send you subscription blanks and pictures so you can get the four subscribers, and if your answer is the best there will be no trouble about your getting the prize. We also give you choice of articles from our premium list for obtaining these subscribers, such as Rings, Watches, Sewing Machines, Dinner Sets, Dolls, Lamps, Silverware, etc., full particulars of which we will send you. In addition to this contest you will be entitled to compete without further condition in another contest in which we give

### \$325.00 IN CASH PRIZES

particulars of which we send you with the pictures. If you want your share in these cash prizes, your choice of premium from the Mammoth Premium List, write us today. Do not send any money now, simply write your solution of this puzzle and send in a sentence and we will enter your answer and send the pictures, sample copy and full particulars of our \$325 contest at once. No one living in Chicago or suburbs can compete in this contest. Write today. Address

**HOUSEHOLD GUEST CO., Dept. 64 358 DEARBORN ST., CHICAGO, ILL.**

**12 BOYS GET TOGETHER** and form a club. Each get a Zobo and have lots of fun. Boys have a band of your own—more fun than a "Brass Band." It only costs a dollar to do it.

This musical instrument can be played without instruction or practice by young and old. It furnishes good dance music; can be used in street parades, or any place where music is desired. It is made of highly polished wood, and is not liable to injury. Full printed instructions with each **ZOBO**. Get a dozen and sell them to your friends. We will send one for 10c postpaid.

A dozen postpaid for **\$1.00.**  
**Don't Delay—Send Today.**

# Farming From an Up-to-Date Standpoint

BY AN UP-TO-DATE FARMER

No. 24.

It is announced that one of the Middle West States last year expended in round numbers \$2,000,000 worth of commercial fertilizers. This is an immense sum, and it is to be hoped that the farmers who paid it received good returns for their money. It may be seriously questioned, however, whether they realized for their crops a sum anything like the two millions, over and above what they would have taken in had they not been thus lavish in their expenditure for this form of fertilizer.

It is rather to be presumed that the farmers of this great State felt compelled to invest their money in fertilizers or see their crops dwindle down to discouraging proportions. For it is a fact that all over the country, especially in the West, conditions have changed so that the old-time bumper crops can not be grown without resorting to other forms of fertilizers than those found in the virgin soil. The day has gone by when we can stick down the spade, turn up a bit of the earth, drop in the seed and expect great returns.

Right here is one of the most absorbing problems of the Western farmer to-day. How can we keep up our soil fertility? Has it come to be a fact that we must spend millions of dollars every year to bring the crops we once grew simply by the turn of the hand? If so, what is going to be the outcome of that kind of farming? Will the liberal use of commercial fertilizer permanently increase the quality and the value of our farms?

Some of the most thoughtful farmers of this country fear that we are courting disaster in neglecting to bring our farms up by the use of natural fertilizers. They believe that to rely so implicitly upon this form of fertilizer is to admit that we have at our command no other means of keeping our soils from deterioration. But that is not a fact. There are hosts of farmers all over the country who do not resort to the use of commercial fertilizers. They do not need to, for the reason that they can produce better results through more natural methods. The fact is, very few of us, comparatively speaking, realize what treasures of soil fertility we may gather up from earth, sky and sunshine by the use of proper and up-to-date methods.

We need not stop here to argue that it will help us immensely to use some commercial fertilizer. Every man who has investigated at all on his own account knows that by combining a reasonable amount of well-mixed commercial fertilizers with those made on the farm we may greatly increase our soil productivity.

But after all, our salvation lies in saying the cheaper and more natural elements of fertility which lie right under our noses, almost without money and without price. Commercial fertilizers may be simply the lazy man's resort for escaping work. It may be only one way of robbing nature and throwing over upon the men who come after us more severe problems than any we have had to grapple with. That is not right. Everyone of us knows it. In fairness, then, let us meet all the questions that belong to our day and generation bravely and like men.

The new and enterprising "up-to-date" farmer is looking now with longing eyes for the promised automobile plow. He also has dreams of the time when he may do other kinds of farm work with gasoline or some similar power in the place of the patient and steady-going horse. It is a pleasant fancy and it is by no means impossible that the time may come when the farmer who is fortunate enough to own a level tract of land may mount his automobile and speed away across his wheat and corn-fields, making the dust fly in clouds as he stirs the soil with his harrow or seeder; but for the downcast man whose land stands up on edge, with countless "cradle-knolls," the dream is one which is not likely ever to be realized. Still, no one can safely predict what may not happen in this intense age. Stranger things than any we have mentioned have come true.

If there is any one thing which troubles the up-to-date farmer more than another it is how to get pure grass seed. For years I have been working hard to find some seedsman who will guarantee his seeds to be pure and free from adulteration. Sometimes I have thought I was in sight of such a man. My heart has bounded at the prospect. I am sure

there must be such men somewhere. I have great faith in the integrity of men. When I lose that I shall be ready to leave this world; and so I am still on the hunt. In the meantime, it appears that Congress is going to try to make men honest by law in this important particular, at least. Can it do it? The bill now before that body forbids the adulteration of blue grass, orchard grass and clover, under heavy penalties. There is hope in this measure for the farmers of the country; and yet, what a fight we have before us even if the bill should become a law to rid our farms of the foul stuff with which they are already infested!

\* \* \*

Go where you will, you will find weeds without number. It is stated to be a fact that in some parts of the West farmers are compelled to shear the long hair from the legs of their horses and tie their tails up in burlap, to keep them from becoming loaded with cockles. I have quoted this from an article recently published in the Twentieth Century Farmer. It seems almost incredible and still many of us who live in the East and Middle West know that we now have a thousand weeds where once we had one, and the evil is constantly growing.

\* \* \*

A good many farmers are wondering whether it is best for them to set out apple trees this spring. Once in a while we hear a man say: "I never shall live to get any benefit from them if I do set them out, so what is the use of spending time and money that way?" No good man will ever talk that way. It is the very height of selfishness. If we never do anything except for self we might about as well not live. The men who have made this old world better are those who have forgotten self most completely and worked for the boys and girls coming after them. So set out trees. Be careful to choose a good place, not some out of the way corner, under the impression that that will be "good enough." Only the very best place is good enough for the orchard. Then select trees that will grow well in your locality and will bear fruit suited to your climate and market.

Here's to the Up-to-Date Farmer: He is carrying the world on his broad shoulders. May they grow broader and stouter as the burden becomes heavier, and the smile on his face reach clear round the world!

#### SHALL FERTILIZERS BE APPLIED BROADCAST OR IN THE HILL OR DRILL

Plants obtain their food through the roots and the most active roots are the young and fibrous ones. A study of the root systems of all our common plants will be a great surprise to any one who makes the study or examination for the

first time. The area and depth covered by the roots of all our plants will astonish most farmers who have never considered the matter. When corn is but six or eight inches high the roots of the plants will be found to be extended out two or three feet in all directions, or to be running from row to row and going much deeper than is ordinarily plowed. The roots of a tobacco plant will almost always cover two or three times as great a surface as the leaves of the plant can shade. Even the roots of potato plants before maturity will extend from row to row under the common system of planting.

Now, taking these facts as to the root system into consideration, it would seem to present a strong argument in favor of broadcasting the fertilizer. Wide distribution brings phosphates and potash salts in contact with a greater amount of soil waters and thus increases their availability. In case of raw bone and other organic substances broadcasting would favor decomposition and the natural agencies for rendering it available. Putting bone, acid and other organic fertilizers in the hill will often produce fermentation that will kill germinating seed.

There are times and circumstances, however, when it would probably be advantageous to apply fertilizers in the hill or drill. Such cases would probably be caused by the following considerations:

1. When small quantities are used to give the crop a rapid start, while the natural fertility is sufficient for growing a good crop after it is well started. As a general rule, it is best to apply nitrate of soda when the young plant has about exhausted the supply of food derived from the parent seed. (The dressing should be renewed once or twice at intervals of a few weeks during the period of active growth.)

2. The application of small quantities of phosphates, kainit, etc., will sometimes protect plants from cut worms and root lice in the early stages of their growth.

3. Under some circumstances the application in the hill or drill will have a tendency to retard the reversion of soluble constituents and thus keep them for a longer time in a form more available to certain crops. This consideration may obtain in some cases with such crops as potatoes.

The seeds of melons, squashes and cucumbers, when two to four years old, produce more fruit with thicker flesh and less vine.

Plow under the green crops early before they take out the moisture, which the succeeding crop can use. A week counts a good deal.

THE KIND OF HUMUS

Prof. Ladd, of the North Dakota Experiment Station, is authority for the important statement that humus derived from wheat straw, wheat stubble or grains of any kind does not have the water-holding and absorbing constituents as does the humus derived from red clover, vetches, brome grass, etc. It follows, therefore, that the growing of green crops affords a better type of humus in the soil.

Farm Wastes

Wasteful feeding, care and disposal of stock, wastefulness in saving and applying manure, improper care of implements, losing methods of marketing, lack of promptness, poor culture and poor seed.

Wood Ashes as a Fertilizer

Dry, unleached wood ashes are a most excellent fertilizer, containing as much as seven or eight per cent. potash, which is in the best possible form, that of a carbonate and readily available for use by plants. They are one-sided, having no nitrogen and only one and one-half to two per cent. phosphoric acid. This deficiency in the latter constituent is easily cured by the addition of superphosphate. Ashes neutralize the acidity of soils and have a solvent action, as well as improving the texture. The market value is ordinarily \$5 per ton.

NOTES

In plowing a field that washes badly it is a good plan to run the furrows crosswise.

Weigh as well as measure the oats selected for seed—the heavier the better.

Sorrel flourishes on sour land. Wherever it is abundant you may conclude an application of lime will be beneficial.

One ton of apples worth \$20 removes 60 cents worth of fertility, while one ton of wheat valued at \$25 removes \$6 worth.

Tobacco stems are valued mainly for the potash they contain, but from 2 to 3 per cent. of nitrogen is present. On the basis of 4 cents for potash and 10 cents for nitrogen they are worth \$8 to \$9 per ton.

USE PLENTY OF HORSES

A gang plow turning two furrows, to which is attached a harrow, requires, on ordinary soils, about six horses to pull it, but one man is sufficient. Horses are cheaper than men. From five to seven acres per day may be turned over and left in good condition. But it requires more brains to use six horses than two.

Twenty years ago two horses to one man was considered about the proper proportion. With our improved machinery, one man can use three horses for cultivating and more for gang plowing. He can use as many as six horses on a train of implements that will prepare the ground and leave it smooth and fine on top to retain moisture.

It pays to use sufficient horse power to move an implement easily, that it may go along at a rapid gait and not require so much resting to cool off.

PASTURE FOR HOGS

At the Kansas Station \$11.90 was realized from an acre of rape and \$24.10 from alfalfa pasture in ninety-eight days, July 25 to October 31.

Feed.	Grain consumed in lbs.	Total gain in lbs. of grain.	Grain consumed per lb.
1. No pasture ....	3,801	1,023	3.71
2. Rape pasture ..	3,244	1,076	3.01
3. Alfalfa pasture..	3,244	1,078	3.00

Assigning the same value to the grain fed the hogs on rape pasture, we have 877 pounds of pork credited to the grain and 199 pounds credited to the rape. At six cents per pound, the selling price of hogs at the time, this would be a credit of \$11.90 per acre for rape. In a similar manner the alfalfa is credited with 201

pounds of pork, equal to \$12.05, and as there was only half an acre of alfalfa, this makes a rate of \$24.10 per acre.

The shoats on pasture enjoyed their diet and seemed satisfied. Those in the dry lot seemed hankering after something green.

PLANT THE MULBERRY

The mulberry furnishes fruit and shade and when planted near the strawberry bed or orchard it lures the birds away from the market fruit.

\$50,000.00  
Cash Given Away  
TO USERS OF  
Lion Coffee

We are going to be more liberal than ever in 1904 to users of *Lion Coffee*. Not only will the Lion Heads, cut from the packages, be good, as heretofore, for the valuable premiums we have always given our customers, but

In Addition to the Regular FREE Premiums

the same Lion Heads will entitle you to estimates in our **\$50,000.00 Grand Prize Contest**, which will make some of our patrons rich men and women. You can send as many estimates as desired. There will be

Two Great Contests

The first contest will be on the July 4th attendance at the *St. Louis World's Fair*; the second relates to *Total Vote for President* to be cast Nov. 8, 1904. **\$20,000.00** will be distributed in each of these contests, making **\$40,000.00** on the two, and in order to make it more interesting, in addition to this amount we will give a

Grand First Premium of \$5,000.00

to the one who is *nearest correct on both contests*, and thus your estimates have two opportunities of winning a big cash prize.

Five Lion Heads cut from Lion Coffee Packages and a 2c stamp entitle you (in addition to the regular free premiums) to one vote in either contest:

Printed blanks to vote on found in every Lion Coffee Package. The 2c Stamp covers the expense of our acknowledgment to you that your estimate is recorded.

WORLD'S FAIR CONTEST

What will be the total attendance at the St. Louis World's Fair on July 4, 1904? At Chicago, July 4, 1893, the attendance was 283,273. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before June 30, 1904, we will give first prize for the nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize .....	\$2,500
1 Second Prize .....	1,000
2 Prizes—\$500.00 each .....	1,000
5 " — 200.00 each .....	1,000
10 " — 100.00 each .....	1,000
20 " — 50.00 " .....	1,000
50 " — 20.00 " .....	1,000
250 " — 10.00 " .....	2,500
1800 " — 5.00 " .....	9,000
2139 PRIZES	TOTAL, \$20,000

PRESIDENTIAL VOTE CONTEST

What will be the total Popular Vote cast for President (votes for all candidates combined) at the election November 8, 1904? In the 1900 election 13,959,653 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before November 5, 1904, we will give first prize for nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize .....	\$2,500
1 Second Prize .....	1,000
2 Prizes—\$500.00 each .....	1,000
5 " — 200.00 " .....	1,000

Complete Detailed Particulars in Every Package of

LION COFFEE

WOOLSON SPICE CO. (CONTEST DEP'T), TOLEDO, OHIO.

## NAVY BEANS

For growing this crop a good loam soil is best. It should be well prepared, but not be made overrich, as this has a tendency to cause the crop to run to vine rather than seed. A phosphite or potassic fertilizer is the proper one to use, with a small percentage of nitrogen. The crop does best on land heavily manured for the previous crop, as after a potato crop. Cultivation should be frequent during the early growth of the plant, but should never be done when the plants are wet with dew or rain, or they will rust.

The most critical period in the handling of the crop is the curing of it. If the weather should be wet after the vines are cut and during curing the beans are almost certain to be stained or mouldy. After threshing the beans should be hand picked if the best price is to be got for them. On suitable land in a good season the yield should average 20 to 30 bushels.

## NUTRITIOUS AND PALATABLE FODDERS

Cut rye for hay or feeding in the green state as soon as the heads appear, otherwise it passes very rapidly from the soft to the woody state.

Cut the clover early as well. Early cut hay is more palatable for the stock and what is lost in weight is gained in the increased amount of protein secured. After flowering the older the plant is permitted to grow the less nutritious it becomes. Not infrequently over-ripe clover results in inflammation of the stomach and often in death.

## ARTICHOKES

These tubers are fully equal to potatoes as a feed for stock and some feeders consider them superior to beets, turnips or carrots. Hogs are fond of artichokes when they once acquire the taste for them, and as supplementary food they are a valuable adjunct to corn and other grains. The yield is large and artichokes are less liable to fail in a bad season than other root crops. Planted in hills three feet apart on well drained land they yield from 200 to 600 bushels per acre.

## BARLEY

Barley is one of the earliest grains to mature, but should not be sown until the ground is well warmed up. The crop does best when sown immediately after the land has been plowed. Then if the weather is warm it will come up quickly and push forward rapidly, so that the weeds will have but little chance to grow.

Probably no grain can be grown farther north than barley. Reports show good yields as far up as Alaska. The yield is best in a cool climate.

## BARNYARD MANURE

The horse produces about 55 to 60 pounds of manure daily, the cow 65 to 70 pounds, sheep 3 to 4 pounds, and pigs 7 to 8 pounds. The amount varies according to the feed used and the age and condition of the animal.

Rating nitrogen at 15 cents, phosphoric acid at 7 cents, and potash at 5 cents, horse manure is worth \$2.25 per ton, cow manure \$2.50, sheep \$4.00, and pig \$3.00. The droppings (liquid and solid) for one year from a horse would amount to \$25, from a cow \$30, sheep \$2.25, pig \$3.00. Figure a little and see how many dollars you are wasting each year.

For every 25 sheep to be fed with roots at the rate of 5 pounds a day, during the feeding season of 5 months, devote about one acre to this crop, which will yield ordinarily 300 bushels per acre.

When an animal shows by its coat, by its appetite, by its alert, active manner that it does not lack in vigor, then reserve it for breeding.

## "THOMPSONS' COLT WAS A FOOL"

Because he crossed the river to get a drink. When you have a farm, home, patent or other property to sell, or want to buy, do not waste time but go to an active Real Estate Agent who knows his business, and he will do better by you than you can do yourself. Below is the address of a man who has been very successful in making good sales lately. Write and tell him what you have and he will give you his honest conscientious opinion about it free. J. Allen Stephens, Real Estate, 267 Willard Bldg., Muncie, Ind.

## NEW CATALOG OF VEHICLES

The Royal Carriage Co. has kindly sent us a copy of their new 1904 catalog. They show a large variety of Buggies, Surreys, and Carriages, and the low prices are printed in large plain figures. They also show a large line of horse goods needed on every farm. Any one intending to buy a vehicle of any kind this year can have a catalog sent to his address by writing the Royal Carriage Co., 423 E. Court St., Cincinnati, O.

## PLANT SEED IN WELL PULVERIZED SOIL

A first element in the production of a good crop is proper preparation of the seed bed. Among implements intended to secure this desirable end, none, so far as we know, is more perfectly adapted to the purpose than the Acme Pulverizing Harrow and Clod Crusher, manufactured by Duane H. Nash, Millington, N. J. It pulverizes and makes fine the clods, so that the seed may have quick starting, and the soil be in condition to nourish and make a vigorous growth from the first. Many good things are said about this harrow in agricultural papers. We do not believe it possible to speak too strongly of its worth. It is advertised elsewhere. Writing direct to the manufacturer will bring all information.

## GRAPE VINES

STARK GRAPE NURSERIES are in the heart of the famous Chautauque Grape Belt, which produces the finest vines grown in the U. S. We have an immense stock of all leading sorts; quality perfect; prices low as those of any reputable grower. Send us your orders—one vine or a ear load. A complete line of fruit trees, small fruits, etc. Price List free.

**WE BUY COINS** Look out for the White Cent It is valuable. Send 10c for folder. Box 1, Danville, Ohio.

**GAIN ACRES** by clearing that stumpy piece of land. **THE HERCULES** Stump Puller pulls any stump. Saves time, labor and money. Catalog FREE. Hercules Mfg. Co., Dept. 11, Centerville, Ia.

## AGENTS WANTED

Our scales make a good line with specialties, implements, machinery, mill supplies, nursery stock, separators, foods, etc. Fine catalogue, liberal contract, no expense, no experience. Write for full particulars. Act Quick.

**OSGOOD SCALE CO.,** Binghamton, N. Y.  
231 Central Street.

Address, **NANZ & NEUNER,** Louisville, Ky.

## Boys and Girls Get This Free

**This is an Honest Business Proposition to Boys & Girls** who want to earn money by giving us one hour of their time. It is not a "fake," for we do just what we say, and will give \$100.00 to any person who can prove to the contrary. It is not a toy instrument run by a crank, but a genuine clock work Graphophone that plays all the latest songs and music equal in tone to any \$50.00 machine made. Send us your name and we will forward you a Complete Canvassing Outfit that will enable you to secure 16 subscribers to "Cheerful Moments," our large, handsomely illustrated Home Journal, filled with bright, original stories and other interesting matter for young and old. The subscription price is only 25 cents a year, and you can secure 16 subscribers quicker than you think. When you have sold the 16 subscription cards which we send you, return them to us with the \$1.00 collected and we will ship you the Graphophone with music at once. There will be no delay, and you will be more than delighted with your present. Address  
**Cheerful Moments, Desk 89 154 East 23d Street, N.Y. City**

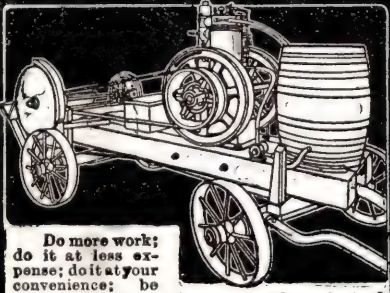

## Up to Date GARDENING AND TRUCKING

Enclosed find 50 cents for copy of "The Third Power" which I have just finished reading, and loaned it to Prof. J. A. McDowell. I would not part with what I learned in this book for a considerable sum.

J. H. HARPSTER,  
Millersburg,

R. B., Coneaut, O.: "I write you regarding my last year's celery crop. I had 30,000 plants set out in doubt rows on ground heavily manured. The varieties were White Plume, Pink Plume, Giant Pascal, Giant Golden Heart, Golden Self Blanching, Grand Surprise, Eureka and Winter Queen. It had the best of care and attained full growth. Earlier varieties started to blanch September 15, by using straw and boards eighteen inches to two feet high. This worked all right and celery blanched nicely and found good market, but Giant Pascal, Golden Heart and other late varieties which I blanched in this way were worthless, every stalk being hollow; also that which I had not started to blanch—24,000 plants—were a total loss. Can you account for this in any way? I would like to remedy the matter and avoid a repetition in future."

Your varieties were all good and it is hard to account for the behavior of your

**Do more work; do it at less expense; do it at your convenience; be master of your own farm; be independent of hired help; do the work when you like and do it quickly and cheaply; take the power to the work, and save lugging work to the power. Our Portable Gasoline Engine can be quickly moved to any part of the farm, doing any kind of work that any power can do and doing it more cheaply. When all portable work is over, put in barn or workshop to do stationary work. No previous experience necessary. Catalogue free on request. Portable Engines, 3 1/2 H. P. up. Stationary Engines, 1 to 60 H. P. Special price to the first buyer in each county.**

**American Gasoline Engine Co.,**  
33 Kennebec Street, Portland, Maine.

celery, except the almost unprecedented weather of the fall. Upon my own grounds the late crop was very poor in quality, and to properly blanch it was nearly impossible. There was also much trouble in the great celery growing district, and I failed to see any that was prime, wherever grown. The hollow stalks, however, indicate that something besides unfavorable weather was partially responsible. Lack of vitality in the seed may have had much to do with it, and I would advise a change of seed. A more probable cause I think may have been a deficiency of potash in the soil. Good height and size of stalk would indicate no lack of nitrogen; but I think hollowness would indicate lack of potash. Were it my case, and intending to use the same soil again, I would apply a heavy dressing of unbleached wood ashes. Sulphate or muriate of potash would either of them answer the same purpose, and I would try either the ashes or 300 to 500 pounds per acre of one or the other forms of the potash.

### Club Root and Cabbage

Mrs. D. A. Lockhard, Punxsutawney, Pa.: "Last spring I received some O. K. seeds and had lovely cabbages both of Everitt E. and Houser; but lost nearly half of the crop by big root and lice. I think the Soyam's seedling tomato blighted, as they took the dry rot and did not look well. Can you tell me what to do for these troubles, and especially big root, which is my worst enemy at present."

The trouble with your cabbage is club root; and in England is known as "five finger." It is a very troublesome disease and will live in the ground several years. It will attack everything of the crucifera family, or those vegetables bearing seed in the pod.

The best known remedy is to apply air-slaked lime at the rate of 3,000 pounds to the acre. Find how many square rods of ground you have. Divide the amount of lime given by 160, the number of rods in the acre, and the result will be the number of pounds for one square rod. Apply the lime after plowing and work it thoroughly into the ground. Do not plant anything of the cabbage family on that ground again for two or three years. But sow the lime, also, wherever you plant the cabbage. If anything is affected with it, pull it up and burn or boil it, roots and all, and do not leave them lying around, as the spores will spread. In this way I think you will get rid of it in time, but it will require much care. The cabbage louse is occasioned mostly by bad weather and perhaps may not appear this year. Whale oil soap, one pound to six gallons of water, is a good remedy. Apply it with a sprayer and be sure to get it onto the under side of the leaves.

### Tomato Blight

Doubtless the difficulty with the tomatoes was rust rather than blight. In this case, the leaves, and perhaps stems also, would turn red or brown; but with blight they would turn black and die. In either case spraying with Bordeaux mixture is the best remedy known. It is safest to begin with the spring when the plants are quite young and continue it at intervals of ten days or two weeks until the fruits are nearly grown.

The dry rot would probably be a dis-

ease of its own regardless of the rust, and the spraying would also prevent that.

### Early Rhubarb

Mrs. John B. Wood, Gladstone, Mich.: "We like the paper and the cause it espouses, and so shall send in our subscription. In your January number was a question and article on rhubarb. May I give my grandmother's way of growing it? Her plan was to manure thoroughly in the fall and turn barrels upside down over each hill. Early in the spring, as soon as danger of frost was over, the heads were knocked out to let in the sunshine and air, and it was surprising how fast it would grow to get up out of the barrel. This is a good way in the north with the cold, late spring; and I think it would also be good in the south to shelter it from the hot sun."

The article referred to was relative to forcing it in winter time in dark cellars. The plan above outlined is a very good

## BALTIMORE FIRE!

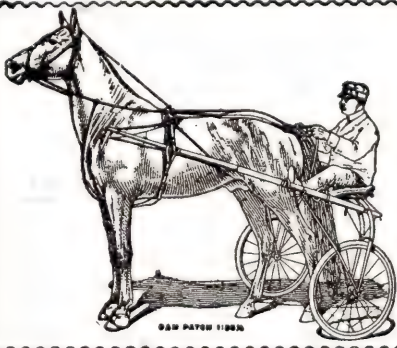

Memorial Picture of the great disaster in history. \$200,000,000 in property destroyed! Tremendous seller for Agents. We will send an assortment of these pictures post paid. **INTERNATIONAL STOCK FOOD CO., Minneapolis, Minn., U. S. A.**

one for getting it early in spring out of doors; and it can even be done with good effect in the spring. If done just as soon as the frost is out it will very much hasten the growth.

#### Insect Pest

Our Pennsylvania subscriber is only one of many thousands that are having to do battle with the garden insects and pests. As soon as spring opens and vegetation starts, they are on deck and ready to begin their work; and the only way to deal with them is to be there first. Just here I wish to speak a good word for Perto-Insect-To-No. Up-to-Date has it with full directions for use, and it is easily applied and also effective for many, if not all, of the garden pests. The O. K. seed catalogue tells all about it, and it is well to have it on hand and ready in time.

#### Garden Implements

We should have plenty of them, and make sure that they are in first-class

working order right now at the beginning of the season. A Man-Weight wheel hoe intelligently operated will destroy more weeds than four or five men with hand hoes. And there are many other implements equally effective in their way. All of them are obtainable through Up-to-Date, and it is the very best of economy to expend some money in their purchase. Labor is scarce and high, and a tool that will do the work of one or even more men will very soon pay for itself.

#### Side Lines

The lines of demarcation between farming and trucking are rapidly vanishing, and to-day it is difficult to say where the former leave off and the latter begins. On a trip last fall through a country formerly entirely devoted to the raising of cereal crops and stock growing, the changes were amazing and crops for the canning factories were largely taking the places of the old enterprises. What is implied in these changes? Simply that the old line farmers will more and more take up these side lines and thus the changes will come.

The canning industries have come to stay and are calling loudly for these changes. Not only this, but the ever-increasing city demands for the raw vegetable crops must in some way be met; and it is up to the tillers of the soil to be alert and active, and so be able to successfully meet these new conditions.

#### Timely Things

The long continued and intensely cold weather of the past winter has shortened the visible supply of vegetables to an extent hitherto unknown. It follows that prices will rule high, at least during the fore part of the season. The money is nearly always in the early vegetables; but this year it will be doubly true. So the admonition is to get an early start and plant liberally.

## GRAINS OF GOLD

### FREE TO FARMERS.

Last spring, we introduced the new **Golden West Corn**, and it was at once recognized as so superior to all other varieties that we could not supply one-fourth the demand. The only variety of corn bred on true scientific principles: **first the plant, then the ear, and it has astonished every one who tried it by its vigorous growth and wonderful productiveness. Ears large, grain long, cob small color bright golden yellow.**

**FREE**—We want you to see it and will send a small sample with a copy of our large 136 page illustrated catalog free if you mention this paper. Our catalog is the most valuable book published for practical farmers. It will pay you to see it.  
**IOWA SEED COMPANY, DES MOINES, IA.**

## DR. HESS Stock Book Free

A treatise on the diseases of stock and poultry, written by Dr. Hess (M. D., D. V. S.), sent free to any address on receipt of answers to the following questions: How much stock have you (number of head of each kind)? What stock food have you used? Mention this paper.

Prof. W. S. Goss, Dean of Talladega (Ala.) College says of it: "I think Dr. Hess Book a little gem. I shall keep it near me for reference."

# DR. HESS STOCK FOOD

possesses wonderful tonic properties that revive all the vital organs, increasing the appetite, strengthening the digestive power, so that wonderful and lasting systemic strength is established. Gives rapid growth to horses, cattle, hogs and sheep; makes them immune from disease.

**Information Bureau.**—For any disease or condition for which Dr. Hess Stock Food is not recommended, a little yellow card enclosed in every package entitles you to a letter of advice and a special prescription from Dr. Hess (M. D., D. V. S.). In this manner you are provided with a universal treatment for all stock diseases, either in the Stock Food itself or in the special prescription to which the little yellow card entitles you. Indorsements from physicians, scientists and stock feeders furnished on application.

**DR. HESS & CLARK, Ashland, Ohio.**

Also manufacturers of Dr. Hess Poultry Pan-a-ce-a and Dr. Hess Healing Powder.

**Instant Louse Killer Kills Lice.**

It is horse sense to keep your horse's condition at the best by feeding Dr. Hess Stock Food, the great horse tonic. Given in tablespoon doses, it fits a horse for hard service; purifies the blood; improves the coat; removes dropsical swellings and stocking of the leg; prevents cracked or greased heel; expels worms, cures distemper, indigestion, constipation, scratches and is a tonic to the organs of reproduction. Dr. Hess Stock Food is especially good for mares in foal and for growing colts—as well as for fattening horses for market. It is called a food for want of a better name; but in reality it is a doctor's prescription for producing the results desired. It is the only stock food made by a graduate of both veterinary and medical colleges; the only stock food endorsed by them and used by successful practitioners. No unprofessional manufacturer can equal it.

Dr. Hess Stock Food is sold on a written guarantee, 100 lbs. for \$5.00 (except in Canada and Pacific Slope) smaller quantities at slight advance. Fed in small doses.

Names of Farmers Wanted

The Valley Farmer wants names and addresses of farmers anywhere in the U. S. They want to get them interested in their big farm magazine which now has a circulation of over 100,000 copies and is acknowledged to be the best farm paper in the West. The subscription price is 50c per year, but if any of our readers will send them five farmers' names and addresses and ten cents in stamps or silver they will enter you as a subscriber fully paid for a whole year. Address Valley Farmer, 521 Jackson street, Topeka, Kan.

Up to Date ORCHARD AND SMALL FRUIT

Readers are invited to ask questions. Address Orchard Department, Up-to-Date Farming, Indianapolis.

Mrs. D. A. Lockhard, Punxsutawney, Pa.: "Please tell me through Up-to-Date how to prevent the larger black ants from destroying my fruit trees."

Mrs. D. A. L. does not state where or how the ants work, and thus it is hard to give a remedy. It would be a very uncommon thing for them to work at the bodies of small healthy trees. However, they do often congregate in decayed parts of trees and especially where the bark has loosened from the body, leaving a fissure where they can make their nest. In this case thoroughly dusting with cayenne pepper for a few times would rid the trees of them. They might also form their hill too close to the tree roots and thus work injury to the trees, although it by no means would be a common occurrence. If this is the trouble, procure from your druggist a can of carbon bisulphide. It is sold in one pound cans and should cost only 20 to 25 cents. Bank up around the tree with soil four or five inches high and far enough out to cover the entire hill. Firm the soil well, and with an iron rod half an inch or more in diameter make two slanting holes, one each on opposite sides of the tree. Start the holes six inches or more from the tree and go deep enough to enter the hill. Pour a tablespoonful of the liquid into each hole and cover quickly with soil and press it solidly down with the feet. Do not inhale the liquid or let it come in contact with fire. Make sure of these precautions. When through using, cork tightly, tying the skin back over the neck of the can, and it will keep for a long time.

Now the most probable thing is that the green lice do the real damage and the ants are after them. Ants are dairymen and the green lice are the cows which they milk. When you see the ants skurrying up and down a tree, it is a pretty sure sign that the green lice are working upon the tender shoots and leaves, and the former are simply caring for and milking them. When troubled again, see if this is not the case. If so, the remedies are simple. Steep tobacco stems or leaves in water and spray the trees, or dust them thoroughly with air-slaked lime when damp with dew.

Orchard Work

Spray the fruit trees before the buds start. Use four pounds of sulphate of copper to fifty gallons of water.

If the plums rotted last year they will rot worse this year without extra precautions are taken. Remove every vestige of the mummy fruit from the trees, and clean up every trace of it under them. Burn it up and spray the trees thoroughly with Bordeaux mixture instead of the copper sulphate solution. This also should be done before growth starts. The pits as well as the mummy fruit will swarm with the germs of rot and the disease will increase rather than diminish unless great care is taken to

Will be packed free with orders if requested or mailed on receipt of three 2-cent stamps. 5c Address Adv. Mgr. Montgomery Ward & Co., Michigan Ave., Madison and Washington Sts., Chicago.

DEMING SPRAYING

brings fruits and flowers. We make the right appliances. Special adaptation to every need. HAND, BUCKET, BARREL KNAP-SACK and POWER SPRAYERS. 20 styles. Nozzles, hose, attachments, formulas, every spraying accessory. Write for free catalog. The Deming Co., Salem, O., Western Agents, Hanson & Hubbell, Chicago.

MAKE YOUR ORCHARD PAY

There will be no trouble about the profits if you spray your trees and vines with a Hardie Spray Pump Each of the working parts of this machine is made of heavy brass so accurately fitted that there is no friction, that's why they work so easy. Our catalogue tells you all about it. It's free The Hook-Hardie Co., 64 Main St. Hudson, Mich.

SPRAY PUMPS

The Pump That Pumps SPRAY PUMPS Double-acting, Lift. Tank and Spray PUMPS Store Ladders, Etc. HAY TOOLS of all kinds. Write for Circulars and Prices. Myers Stayon Flexible Door Hangers with steel roller bearings, easy to push and to pull, cannot be thrown off the track—hence its name—"Stayon." Write for descriptive circular and prices. Exclusive agency given to right party who will buy in quantity. F. E. MYERS & BRO. Ashland, Ohio.

destroy the spores. If old trees are to be grafted, do only a portion of it this spring. Two to three years, owing to age and size, should by all means be allowed for completing the work.

In pruning remove just as few of the large limbs as possible; better to save them all if it can be done. Where this must be done, saw three or four inches from the body and cover thoroughly with good paint. White lead and yellow ochre with raw linseed oil is a good paint.

### DE LOACH SAW MILLS

Readers of this paper must have noticed from time to time the advertisement of the De Loach Saw Mill Co., Box 850, Atlanta, Ga. We wish to suggest that to any one engaged in the saw mill business, in fact in most any kind of wood working machinery, this De Loach advertising is deserving of careful consideration. They are right in the center of a region where the highest grade of materials, lumber, iron and steel, as well as fuel, can be had for less money than anywhere else in the United States. What is said of materials can be emphasized with regard to labor. The consequence is that the De Loach people have every facility for turning out saw mill and wood working machinery of a superior character at a lower price than can be produced elsewhere. It must be borne in mind, too, that Georgia is a great timber region. It is but natural that their machinery for cutting and working should have reached a high degree of perfection. The De Loach Variable Friction Feed, is employed both in saw mills and other machinery. They manufacture all kinds of saw mills from the little four horse power pony mill, cutting some 2,000 feet a day, up to the largest capacity mills made. Other items than saw mills are edgers, trimmers, planing mills, shingle and lath mills, stave machines, rip saws, cord wood saws and other saw mills, stave machines, rip saws, cord wood saws and other saw mill adjuncts. They also manufacture buhr mills, mill stones for wheat and corn grinding, turbine water wheels, etc. They publish a large descriptive catalog, well illustrated, which is mailed free. Anyone interested in saw mill or kindred machinery would do well to write for copy.

### HER WEDDING RING

I heard a lady say last night  
She'd put away her wedding ring  
To keep it safe—away from sight—  
Her wedding ring! Her wedding ring!

And there was one her proud head tossed—  
Proud in the youth of comely spring—  
Who coolly said that she had lost  
Her wedding ring! Her wedding ring!

I heard another lady say—  
And 'twas a most inhuman thing—  
That she had sold for food that day  
Her wedding ring! Her wedding ring!

A woman pale—a woman lost—  
Whose children may not round her cling,  
But yesterday to shame had tossed  
Her wedding ring! Her wedding ring!

And there was one who madly stung,  
Whose every word was mortal sting,  
Whose eye was fire, whose wrong returned  
Her wedding ring! Her wedding ring!

But there was yet one undismayed,  
Who never knew what love could bring,  
Who by her own shy glance betrayed  
Her wedding ring! Her wedding ring!

—EDBERT R. MORRISON.

## TRIAL PACKAGE FREE!

Have you dyspepsia, indigestion or any form of stomach trouble? I want to cure you. I am talking straight at you and mean just what I say. I will send a package of my stomach tablets FREE to any person who will write me in good faith. My Stomach Tablets cured me of dyspepsia when every thing else had failed and I want you to try them. # MYSTERIOUS POWER OVER DISEASE

## Wonderful and Miraculous Cures Performed by a Mighty Healer

### At Last There Seems to Have Been Discovered the Secret of Long Life and Perfect Health

(From Hearst's Chicago American)

FORT WAYNE, IND., (Special Correspondent) In response to numerous requests your correspondent called on the now famous Dr. James W. Kidd to learn, if possible, the secret of the mysterious power by which he was effecting so many wonderful cures. Dr. Kidd was found at his office busily engaged in answering the hundreds of letters of inquiry which he is daily receiving from all over the world regarding his remarkable discovery.

"It is hardly necessary to say that I am busy" said the doctor. "In those files are thirty-five thousand letters that we received and answered last month, but I am always willing to explain, as far as possible, my discovery, especially to newspaper men, because I know that they will publish the information, and I want the whole world to know that there has at last been discovered a remedy which will cure every ailment."

Will it cure every case?  
"It will cure every disease that I have been called upon to treat in my experience in thousands of cases, and has positively cured thousands of afflicted people who thought that they were beyond all earthly help."

What do you call your discovery?  
"The Elixir of Life." Dr. Kidd here showed the correspondent a number of small egg shaped capsules containing various colored liquids in which floated small tablets, and said: "Doctors have known and used nearly all the remedies which constitute my discovery for years, but the proportions and the method of compounding are my secret."

Do the doctors accept or use your discovery? was next asked.

"Not as a rule, because I do not care to explain or give my secret to them. It is the result of a lifetime of study and experiment and naturally I am jealous of the honor which it brings me."

Do your patients seem to appreciate what you do for them?

"Yes, indeed. In this set of letter files are thousands of letters from grateful cured patients, and I am receiving more every day. They are the greatest source of pleasure and satisfaction to me, and the only pay that I ask for the years of study that this discovery cost me. Here are a few which are particularly interesting to me, because they are patients whom I cured two years ago, when I first made my discovery, and before I was as sure of the results as I am now. They are all enjoying perfect

health now. You may publish as many of them as you like, as I have their permission."

Your correspondent copied the following extracts word for word, from a few. The following from Miss Sarah Penington, Milton, Iowa, tells a thrilling story of her cure: "It does not seem possible that a person paralyzed as I was could be cured in 18 days. When you got the statement of my case, I was perfectly helpless, had to have a friend write to you in my name. Now I feel that I am cured. I will always praise and thank Dr. Kidd for what he has done for me. You cured me when others had given me up to the grave."

A. C. Blair, a prominent attorney of the firm of Blair & Green, Charleston, W. Va., writes as follows: "I received your treatment for nervousness, indigestion, stomach, kidney and bladder trouble, twenty days ago. It is truly 'The Elixir of Life.' I am agreeably surprised at the wonderful result. I have suffered for more than five years and was getting worse all the time. I have improved daily since beginning your treatment. I now feel ten years younger. Instead of having to pull myself up the court house steps by the railing I now run up as I did ten years ago." Ten days later Mr. Blair reports as follows: "I am restored to perfect health, sleep well, eat hearty, digestion good, kidneys and back cured, nerves in fine shape."

Your correspondent was shown hundreds of other testimonials telling of miraculous cures of apparently every disease with which man or woman was ever afflicted, and was firmly convinced that Dr. Kidd only too modest in his claims for his marvelous discovery.

Can your "Elixir of Life" be used by patients at home?

"Yes, with my instructions and with equally as good results."

Is it true that you are giving away treatments to all applicants?

"Yes, and I expect to continue until its virtue is known all over the world. You can tell your readers that I will send every sick or afflicted person a course of treatment prepaid especially for their case by mail postage paid and absolutely free. To be sure of personal attention ask them to describe their case and address my private office as follows: Dr. Jas. W. Kidd, 83 Baltes Block, Fort Wayne, Ind."

As the doctor asks for no money, it would seem that every reader afflicted in any way, no matter the disease, should take advantage of this liberal offer.

## THE RADIUM NEW LIFE PILL ANTI-COMPLAINE

The great Blood and Stomach Remedy. Imparts new Life, Tone and Activity to the whole system.

## RHEUMATISM

**Cured  
Through the Feet**

External remedy so successful that  
the makers send it **FREE ON  
APPROVAL to anybody**  
**TRY IT**

If 100,000 men and women, suffering with every kind of rheumatism, acute or chronic, have been cured by a harmless draft on the foot, isn't it worth a trial?

Send your name to the Magic Foot Draft Co. They have so much confidence in the merit of the drafts that they send them to every sufferer in the world they can hear of—without a cent in advance. You pay **One Dollar** when satisfied with the benefit you receive—otherwise you pay nothing—you decide.

The Drafts are worn on the soles of the feet because the entire circulatory and nervous systems are most easily reached through the extremely sensitive skin at this point; but they cure rheumatism in every part of the body, to stay cured, by drawing the acid poisons out of the blood through the foot pores. Write today to the Magic Foot Draft Co., H A 7 Oliver Bldg., Jackson, Mich., for a pair of Drafts free on approval and valuable free booklet on Rheumatism.

## Find a Cheap Home

FORM 145

### LOCATING THE BROODER

A day before the chicks are hatched the brooders should be arranged in position and the floors covered with one-half inch of fine gravel or river sand. The lamps should be lit and the brooders warmed to a temperature of 95 degrees under the hover.

**Indoor Brooding.**—Where there are sudden changes it is a good plan to put the brooder in a little coop or house. Such a building should have a floor space not smaller than 8x10 feet. The floor of the pen should be dry sandy or gravelly soil, covered lightly with chaff or short straw, and the chicks receive all their dry food scattered through the litter. As soon as the weather is suitable, the chicks should be allowed outside.

**In rearing early chickens the brooder should be placed in an unoccupied but warmed room of the house and the floor covered with building paper, dry sand and litter.**

**Outdoor Brooding.**—When the season becomes warmer and the weather settled, the outdoor brooders can be run to best advantage in an orchard or open shed where the chicks can have both shade and sunshine and a run to grass. If the brooder is so placed that it is a little sheltered from the direct rays of the hot sun it will run more evenly, but it should be located where it can be easily sunned a part of each day.

### WHAT TO EXPECT

We find that the average number of chicks hatched is 33 1-3 per cent. of the eggs set. The fertility runs about 75 to 80 per cent. which cannot be complained of in early spring. Of two hundred eggs placed in the incubator, about 50 will prove infertile when tested, leaving 150 or 75 per cent. The hatch comes off and you get 100 chicks or 50 per cent. although incubator manufacturers claim to the contrary. Of these 25 are apt to die, leaving 75 chicks or 37½ per cent. of the eggs set.

	Eggs set.
Three eggs make one chick.....	3
Two chicks make one mature bird	6
Two mature birds make one cockerel .....	12
Ten cockerels make one 93 point cockerel .....	120
Ten 93 point cockerels make one 94 point cockerel .....	1,200
Ten 94 point cockerels make one 95 point cockerel .....	12,000
Ten 95 point cockerels make one 96 point cockerel .....	120,000

## A Big Package "Salt of Life" Free to the Sick

**Send for it today**

**Send for it today**

**Send for it today**

This is not a drug, nor a medicine, nothing made by human hands, but a direct gift from God to kill disease and lengthen human life. This salt is a wonderful substance discovered in the mountains of Virginia. The world stands astounded by its marvelous curative powers. It is the essence left by the evaporation of the waters of Virginia's famous Seven Iron Alum Springs—a positive panacea for all human ills. You can now drink from this Fountain of Life, **FREE**. No matter how sick or old you may be, what the disease is, it cures. Doctors may pronounce you incurable, but Salt of Life dumbfounds them with surprise. Even when everything else has failed you this marvelous natural remedy will cure and restore you to perfect health. Salt of Life conquers all disease be it internal, external, chronic, malignant, infectious or death-dealing. Invigorates and strengthens; purifies the blood, adds bone and muscle and prolongs the life-giving elements. It brings all the joys of life and it costs nothing to find this out, for we will send you a big package so you may test it, free, if you will only send us your name and address. **SALT OF LIFE CO., 402 E. Broad St., Richmond, Va.**

## RHEUMATISM

**Wonderful New External Remedy  
Curing Thousands. Any Rheumatic Sufferer May Try It  
Without Cost.**

**Send Your Address and Get  
A Dollar's Worth FREE.**

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and relieves the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address **THIS VERY DAY.**

**PROF. S. M. WATSON, Dept. 19, Battle Creek, Mich.**

### CHAPTER XVII.

#### The Flight from Sceaux.

The responsibility brought by the possession of such valuable state papers oppressed me greatly, to say nothing of the perils which would beset their custodian if it became Jerome's purpose to reclaim them. I thought it most prudent and proper under present conditions to see the dispatches safe in de Serigny's hands—then, at least, I would be absolved from any blame in the matter. Serigny held me responsible, and it would perhaps be the part of wisdom to act independently of Jerome, report fully to Serigny, and if it were then his wish that the investigation concerning Yvard and Madame du Maine be pressed to further discoveries, nothing would be easier than to return to Paris almost before Jerome could miss me. I need tell Serigny nothing of my suspicion of Jerome; even if true, his animosity would vanish with the cause which gave it birth.

There was much to acquaint Serigny with, much perchance he knew already. Paris swarmed with rumors. Every lip was busy with second-hand gossip coming, as each relator declared, from the most reliable sources. "My cousin, who is laundress to the Countess de Lamoignon, says," and upon this immaculate authority the butcher upon his morning rounds detailed the most delightful and impossible gossip to his customers.

"Pierre, my son, the valet, who is in the confidence of the Duke of Gesvres, heard His Grace say with his own lips"—and so the wine-room stories flew, gathering strength and falsehood as they went. But the story of to-day gave the lie to that of yesterday, and no man knew the truth.

War with Spain filled every mouth, yet none had a why or a wherefore. The King said "war," and all his nation echoed. No, not all. Many there were who gave voice to the cry with hearts that rebelled, with clear brains questioning the right of one man to plunge a whole people into renewed slaughter. These held their peace for the sake of their necks. "I am the State," Louis had declared, and such ideas were not for the canaille to have; they must curb their tongues to cheat the gibbet. Being a soldier and under orders, I had no right to form opinions, but, sobered in some degree by these reflections, paced about until it came time to take horse and away.

"In the name of the wandering Ulysses, Placide, where have you been these two good hours?" said Jerome, suddenly coming toward me.

"Has it been so long? I tired of the crowd and strolled alone through the gardens."

His quick eye caught sight of the handkerchief tucked snugly in my belt.

"A lady? And so soon?" he bantered me.

My tell-tale flush permitted no denial, nor did I care to discuss it. As we talked we drifted into a small room just off the main hall.

"By the way, Placide, had we better not place our dispatches in some safe hiding until we leave here? It might be suspected we have them. The devil only knows what that scheming de Valence and du Maine may not unearth. Their spies are everywhere."

I agreed with him. It was as well; anything to gain time and allay suspicion. But I understood my lady's warning was true; his earnestness convinced me.

"Where do you carry them?"

"Sewn in the lining of my cloak," I replied. A lie, but pardonable.

"Why, you careless fellow; they may be lost. Where is your cloak?" seeing I did not have it.

"In charge of Damien; he is trusty."

"Better have it yourself; wait here, I will go and fetch it."

I congratulated myself on this diplomatic stroke, for Jerome was about to start off in all haste when Damien himself ap-

peared, and before I could stop him, delivered the message.

"The horses are saddled and at the door."

"Go and wait with them."

Jerome had taken my cloak from the fellow's arm, for in fact he had it, and now laid it across his knee. His blank expression showed utter astonishment at the disclosure.

"What does this mean? We are to rest here to-night?"

"No; I ride to Paris."

"Why?"

"I am afraid."

"Of what?"

"Of everything. We are in the house of our enemies, and it is the quality of courage to be discreet."

During this brief dialogue Jerome was stealthily running his hands through the lining of my cloak until he comprehended I had misled him. I could almost put his thought in words. Together we arose, laying each our hands upon the half-closed door, he to hold it, I to open it, steady-eyed, and each reluctant to cause the breach we knew must come.

"Placide, the papers are not here," he said in a quiet tone, yet full of determination.

"I know it."

"Why have you deceived me then?" for he could mask his purposes no longer. "Hand me those dispatches."

"No. My orders are to place them in the hands of Serigny."

"But I must have them."

"And I tell you as firmly, you can not."

"Listen, Captain," he begged in altered tones, "those dispatches may compromise Celeste. Let us taken from them anything which implicates her in this miserable intrigue, and deliver the rest. That is easy. I can open and close them again so it can not be told."

"My orders are not to open them."

"By God, you will!" he burst out with volcanic fury. "No, no; I am too hot. We can lose them; tell Serigny they were never found; tell him Yvard carried them off; tell him he never had them. We can fix a tale."

"It would be a long story, and a liar must needs have a good memory."

I was playing for time, time to think, time to get away.

"But I will go with you to Serigny," he insisted, "tell the lie and make him to believe. Pshaw, man, you know not the ways of the world, at least not at the Court of France."

"Think, Jerome, of the war, of our people in the colonies, of our honor?"

"I care not for it all," the wild passion in his voice made me almost fear him. "All that is as nothing to me where Celeste is concerned. Oh, Placide, think of it! I love her, love her, love her—do you comprehend what that means to such a man as I? I, who have loved her almost from her birth, have seen her taken from me and sold—yes, sold by her money-loving father, sold sold! I, who have borne all her husband's leers when, flushed with the insolence of rank and wine, this shriveled bridegroom bore her as a piece of ornament to his house, in Paris. Can I bear to lose her now?"

"But, Jerome, you would not be such a coward as to permit our brethren in the colonies to be slaughtered, while you tell your pitiful lie to shield a woman? It can not be done. What a fool you are come to be. Man, man, where is your courage?"

"I care not. Love for such a woman would make of Truth a liar, and of Jove a fool. Think, Placide, think of her, Celeste, in the Bastille, the irons cutting into her delicate hands, those hands which I have so fondly held within my own—the cold stone for her bed. Or, worse: the block, the headsman and the jeering rabble. Have you no feeling, man? Suppose there was some woman whom you loved—a guilty love, I grant—but so strong, so deep, so overpowering, you could not master it? Suppose she was threatened, would you not protest her even if you lost your life; yea, bartered away your honor?"

A pale little tearful face thrust itself before me as he spoke, and I knew my own weak heart. I confess his pleading staggered me, and I hesitated. He came closer; all the love and fear of a strong

**UP-TO-DATE FARMING, Indianapolis**

and desperate man wove itself into his words.

"Could you only have seen her two hours ago when you left her chamber; have heard her sobs, felt the tremble of her heart when she threw herself, just as when a child she used to do, into my arms pleading for protection! Those dispatches will ruin her. She so calm, so proud, so brave to all the world, wept like a terrified baby upon my breast. Placide, I'd die and go to hell to save her. She so cold and pure, her very name is a reproach to this flock of butterfly women. This woman loves me, loves me even though that love be what men call dishonor. Bah! I hate the word. Her father never sold her heart. No, that was mine, forever mine. Had I but foreseen this I'd have left you rotting in Bertrand's dungeon. No, no, Placide, I meant it not; I'm not myself; forgive me, comrade; pity her and pity me."

I vaguely wondered what there could be in the packet to cause him so sincere an apprehension. But I must think of my people and be strong. I denied him once for all. He sprang at me with the fury of a demon. Being the cooler and stronger, I threw him off easily and reached the door as he came again with his sword. It was a delicate predicament. I could easily kill him. Wild with a lover's fear, he left his front open to my blade, but I'd had enough of death. He paused to shove a table from his path, which gave me time to open and slip through the door.

In a moment he rushed out behind me, pale and panting. The corridor, deserted, echoed to our flying steps. I ran on ahead making my way toward the horses. Meeting people outside, we had to slacken our gait, smile, and conceal the realities of the situation, the necessity for which he apprehended as quickly as I.

Four horses stood ready, and choosing the one I thought best fitted for a hard chase—it was evident we could not afford to fight it out at Sceaux—and to fight seemed now his purpose—I vaulted lightly into the saddle, and before Jerome could hinder, had jumped the low wall and taken the direct road to Paris.

Practiced horseman as Jerome was, it took him no time to follow, and his grooms joined in the chase.

On, on we sped. Trees, fences, walls and people all melted into one motley and indistinguishable stream. In the open road we strung out, according to the speed of our mounts, one of the grooms dropping farther and farther in the rear. The distance between Jerome and myself, despite his frantic belaborings of his brave steed, grew steadily greater.

Just before we passed a crooked lane off to the left, leading whither I knew not, Jerome turned in his saddle and called to the two grooms now well to the rear.

"That way quick; to the Versailles road. Cut him off."

The fellows obeyed, reining their horses into a swinging lope, as, less hurried, they took the lane indicated. Jerome thence rode on after me alone. The situation was now becoming awkward. I had acted without cool consideration heretofore, taking the Paris road because it was the only one I knew, and trusting thereafter largely to fortune. Now, as I caught occasional glimpses of the city spires, the towers of Notre Dame, I must perforce remember I had no hopes from them. The crazed man behind knew the city well, while to me it was a labyrinth of difficulty. I had no friends, while he counted many. I must act, and that quickly. Had I but known enough to turn down that lane into the Versailles road I could have reached the palace without molestation, thanks to my good luck in picking the best horse of the lot. Thinking of the lane brought an idea which promised well.

Moderating my speed gradually I suffered Jerome to draw nearer. I then called over my shoulder that as we were now man to man, we might dismount and fight it out upon a piece of level sward beside the road. His horse was nearly spent, and inflamed to fury by the fear of my escape, he eagerly agreed. While we parleyed, I worked myself into a position near his horse's head, and as he prepared to alight, snatched my sword and with a quick upper cut severed one rein near the bit. The blade having cut his horse slightly under his throat, he reared and plunged, and finding himself uncontrolled, started madly off down the road, Jerome cursing, screaming and clinging to his mane.

I had to laugh at the success of my stratagem, for though it was a scurvy trick to play an old friend, it was much the simplest way out of the difficulty to dispose of him in this bloodless fashion. I put my horse about now without interference. When I wheeled down the lane toward Versailles, Jerome's clatter and dust was just dying away over the crest of a distant hill, making most excellent time in the direction of Paris.

Now that this new danger was past, I rode on heavy-hearted enough, for I had

grown to love Jerome, and blamed him little for his sudden touch of fury. For I was nearly in the same boat, borne on by the same strong currents as Jerome.

Verily, what will man not do for woman? Love had turned him from a courteous nobleman of France, a brave and kindly gentleman, into the frenzied coward who would lie to his master, slay his friend, and turn traitor to his countrymen. A god could not love and be wise.

I jogged along slowly, seeking to rest my horse, for I could not tell how soon I must look to his speed for safety. It was necessary also that I should see the two fellows who watched the Versailles road before they caught sight of me. Possibly an artifice might avail me where force would fail.

Presently from a slight eminence the broad highway could be seen winding out of Paris, glistening in the starlight, for it was now after dusk, twisting in dusty undulations toward the distant palace of the King. I drew rein among some trees which served for shelter, and scanned the way to see if the watchers were in sight. The lane, before it entered the Versailles road, branched out into two portions, one bearing away toward Paris, while the other traversed a piece of low ground that struck the main road several hundred yards in the other direction. Within the irregular triangle thus formed the two grooms had thrown themselves upon the ground, being distinctly visible in a little clearing.

# WOMAN'S ILLS

Women suffer in a most painful manner from Sick Headaches, Low Spirits, Loss of Energy, Nervous Dyspepsia, and many other distressing complaints which often destroy life or so undermine the health as to make life miserable.

BEECHAM'S PILLS have saved the lives of thousands of women who have tried other medicines without avail and almost given themselves up to despair. Let every woman on first sign of derangement take a dose of BEECHAM'S PILLS as per instructions with each box and she will be

## Positively and Quickly Cured.

If you have not a box in the house get one at once. Do not wait until you are sick.

# BEECHAM'S PILLS

the "Little Doctor" in the home, regulate the general health. They purify the blood, strengthen and invigorate the digestive organs, give vim and tone to the nerves, and put the whole body in a thoroughly healthy condition.

Sold by Druggists at 10c. and 25c. Or mailed by B. F. ALLEN CO., 365 Canal St., New York City, if your druggist does not keep them

# CASH For Your FARM

(or other real estate)

## No Matter Where It Is

If I did not have the ability and facilities to sell your property, I certainly could not afford to pay for this advertisement.

Like my hundreds of other ads. that are continually appearing throughout the country, it is practically sure to place on my list a number of new properties, and I am just as sure to sell these properties and make enough money in commissions to pay the cost of the ad. and make a good profit besides.

That is why I can afford to advertise. My ability to make quick sales has enabled me to build up the largest real estate business in the world.

Why not put your property among the number that will be listed and sold as a result of this ad.? For eight years I have been making quick sales for hundreds of people in every section of the country, and I am confident that I can make a quick sale for you.

I do not handle any of the side lines usually carried by the ordinary real estate agent. I do not make any money through renting, conveyancing, mortgages, insurance, etc. I *must* sell real estate—and lots of it—or go out of business. I can assure you I am not going out of business. On the contrary, I expect to sell more than twice as many properties this year as I did during 1903.

Eight years of the most active kind of experience, offices in principal cities from Boston to San Francisco, hundreds of special representatives, and an expenditure of over \$100,000 a year in advertising, give me better facilities for quickly selling your property than any other broker in existence.

It doesn't matter what kind of a property you have; it doesn't matter whether it is worth \$100 or \$100,000, or in what town, city, state or territory it is located, if you will send me a brief description, including your lowest cash price, I will tell you how and why I can quickly convert it into cash, and will give you my complete plan for handling it, together with a letter of advice.

## FREE OF CHARGE.

The information I will give will be of great value to you even if you should decide not to sell. Write today or fill out and mail to me the left-hand coupon below.

If you want to buy any kind of a property in any part of the country, tell me just what you want. I believe I can fill your requirements very promptly and save you some money at the same time. Use right-hand coupon.

## \$1.75 WORTH OF FARM SUPPLIES

Free for the Asking, Fully Prepaid to Any Address

\$1.00 Worth of Wilbur's Stock Food.  
25 Cents Worth Wilbur's Poultry Food.

25 Cents Worth Wilbur's Louse Killer.  
25 Cents Worth Wilbur's Gall Cure.

### What Wilbur's Stock Food Is.

NEARLY a quarter of a century's actual experience has proven beyond doubt that Wilbur's Food is a money maker for feeders. WE KNOW THIS. It has been PROVEN to us thousands upon thousands of times in the most forceful manner. We want to convince YOU and we are willing to do it AT OUR OWN EXPENSE.

You know the value of pasture for any kind of stock; how it keeps the animals in good condition—nature's own way of doing it. There is no argument about the value of the pasture, but it does not last the year 'round. We prepare a food, which, mixed with grain and fed to stock, furnishes in stall or feed box in the proper proportions the ingredients of pasture diet, invigorates and fattens stock at small enough cost to make the food a money-making investment for the owner of one cow, horse, hog or sheep, and a proportionately larger one for the owner of thousands of heads.

#### For Cows.

You know when the pasture goes down in the fall, the milk goes, the butter goes, the flavor goes, until all are shortest when the price is highest. Wilbur's Food invigorates cows; it supplies the needed roots, barks and leaves of the pasture, sustains the flow of milk and color, quantity and flavor of the butter. Take a cow right off the pasture, feed her Wilbur's Food in the stall and she will show very little loss of milk, and one cent's worth of Food per day saves one dollar's worth of grain per month.

#### For Steers and Calves.

One ounce of Food fed with grain to the steers when fattening for market will put flesh on them and save you money on grain. A healthy animal wastes no food, it is all transformed into flesh. For calves you are raising, or ones you are fattening for veal, you can obtain the most wonderful results by using one-half measure of Wilbur's Food mixed with one pint of ground oats or corn meal.

#### For Hogs.

Hogs, you know, are the most susceptible of animals to contagious disease. But you know, too, if they escape contagion, they are kept cheaper than any other stock. There is either "make" or "break" in raising hogs. If you keep your hogs healthy, they can resist contagion, will fatten quickly and cheaply. If they get sick and refuse to eat, you know how quickly they die. Nothing will save them; medicine is useless. To keep them healthy you must feed them something they will eat, and something that will satisfy the demands of their systems. We believe there is only one thing in the world that will do this and that is Wilbur's Food. It is not a medicine, it is a pure food made from pure barks, roots and seeds. Hogs like it and hundreds of hog raisers say it is the only thing they can feed which proves satisfactory. Every hog that eats it will improve at once. If fed for thirty days the hog will be in perfectly healthy condition and fatten fast and cheaply.

#### FULLY PREPAID.

All charges for bringing these goods to you are fully prepaid by us. We shall not ask for any money for these goods nor hold you under any obligations to us for receiving them, THEY ARE ABSOLUTELY FREE. You should take advantage of this great offer at once. There is much to be gained and no cost whatever to you. Cut out the coupon below and mail today—Now.

Does anyone sell Wilbur's Stock Food in your town or near you? .....

### Prevents Abortion.

The health of young animals depends almost altogether upon the health of the mother before delivery. Wilbur's Stock Food makes rich red blood and gives the young animal a good start in life. By counteracting colds and soothing the nerves while the mother is in delicate condition, Wilbur's Stock Food PREVENTS ABORTION and saves for the breeder at least one-half more of his increase. Wilbur's Stock Food fed in small quantities to young animals will make them grow large, strong and fast.

### Wilbur's Poultry Food.

WILBUR'S Poultry Food is an egg maker and a fat maker which will not only force more profit from the poultry yard but will also prevent disease and save birds. We put out the largest package of egg food hat has ever been offered for the money. Every poultry raiser and every farm wife wants Wilbur's Egg Food because it pays them to use it. It makes hens lay and produces larger heavier birds. A 25c package will be sent you FREE as one of the four parts of this offer.

### Wilbur's Louse Killer.

Wilbur's Sure Louse Killer does away with lice every time. It is sure and complete death to ticks, mites and small parasites of all kinds whether on animals, fowls or plants. The directions are simple and the results are sure. Wilbur's Sure Louse Killer also makes a remarkably effective sheep dip. Every poultry raiser and every stock owner, farmer or gardener should keep Wilbur's Sure Louse Killer on hand. A full sized 25 cent package ABSOLUTELY FREE as part of this offer.

### Wilbur's Gall Cure.

Saddle and harness galls are cured while the horse is working. Cuts, bruises and old sores are healed up quickly by the use of Wilbur's Gall Cure. This is more than a mere salve. It does something which no salve will do. It not only presents healing agents to the wounded flesh, but effectually keeps out of the sore all air and dirt and reduces the inflammation. A 25 cent box of Wilbur's Gall Cure is part of this great offer of FREE GOODS for a test.

### ABSOLUTELY FREE.

These packages are offered FREE to get you acquainted with Wilbur's goods and to get you to give Wilbur's Stock Food and farm supplies a thorough test. We send them to you absolutely free with transportation charges fully prepaid to your railroad station. We make no charge whatever for these four packages and there is not one cent for you to pay out upon them either now or in the future.

### OUR RESPONSIBILITY.

Nearly a quarter of a century in successful business has given us a very enviable position in the business world. Any banker can tell you whether we are responsible and the publisher of any large agricultural paper can tell you if we do as we agree. Further than this we refer you to any bank or wholesale house in Milwaukee or to R. C. Dunn & Co., Bradstreet or any other commercial agency, and the First National Bank of Milwaukee in particular.

OUR PLACE OF BUSINESS.

WILBUR STOCK FOOD COMPANY, 14 SECOND STREET, MILWAUKEE, WISCONSIN.

# UP-TO-DATE FARMING

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

### TERMS TO CLUB RAISERS

Any person may make up a club. (A club may comprise new subscribers or renewals of old subscribers) as follows:

A Club of 2 - for \$ .75  
A Club of 3 - for 1.00  
A Club of 10 - for 2.50

### ALTERNATING PLAN

If you have not time to make up a club, we will accept

Your Own Subscription 2 yrs. for \$ .75

3 " 1.00

For Membership in the A. S. of E. add

50 cents to any offer, for each member.

**Acknowledgement.** The date in connection with your address on wrap per informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. **Don't Neglect This. See Special Subscription Offers elsewhere in this number.**

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and change of address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent. discount when two or more consecutive insertions are taken. About eight words make a line and 14 lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promises as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transaction occurs within a month of the publication of the paper and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

Indianapolis, March. 25, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the March 15, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 150,000. S. E. Cullum, State of Indiana } Before me, Charles E. Brigham, a notary  
Marion County } as public personally appeared S. E. Cullum and  
swears to the foregoing. Charles E. Brigham.  
[Seal] Notary Public.

## \$ Wheat

What did we tell you?

60c Corn

It will come. Remember what we tell you

Forward march.

Build that granary.

Farmers to the front. That's where they belong.

Speculators to the rear. That's where they belong.

Will equitable prices or politics be first with you in 1904.

Let profitable prices be first this year, politics second, or twenty-second.

Co-operation! Concert of action! Fair prices! should be the motto of every farmer in the land.

Have you noticed how cash wheat hangs to the dollar mark at Chicago, regardless of the speculative price?

### NOTICE TO TOBACCO GROWERS

We want tobacco growers everywhere and merchants and officers in towns in tobacco growing districts to correspond with the National Union of the American Society of Equity, Indianapolis, Ind. The object is to organize the growers so profitable prices may be obtained. There is absolutely no salvation for the business except through organization, and the plan of the A. S. of E., is the only practical one.

If the people who are desirous of seeing this industry put on a basis of certainty and profit, will act at once, the trust will buy the 1904 crop at the grower's price. No trust or power on earth can prevail against the power of our producers combined. This is your opportunity. Will you embrace it?

A Million, A Million United. Are you working for them? It means profitable prices for 1904.

Organize local unions of the A. S. of E. everywhere. They will be the strength of our farmers, and the farmers are the strength of the nation.

Suppose Secretary Wilson did discover that the people are being robbed by the meat trust, what does this discovery benefit producers or consumers?

If farmers will prepare that granary before the next harvest, they will get their price for the first bushel of grain instead of waiting several months, as in 1903.

Members are urged to wear the emblem of the Society. This is very important. Any member who may lose his emblem can secure another by remitting 6 cents to the National Union.

For some years past the farmers of America have been educated in the school of adversity, and adversity is a bitter and hard task-master. They have learned their lesson well, and are now ready to guard their own for the future.

You can't make men honest or moral by statute law, but by proper laws one great source of roguery in America may be entirely cut off, or at least greatly curtailed. We mean speculation in food products. Will Congress ever see it?

Perhaps the 1904 wheat crop will be large enough to justify a 90-cent price, or so small as to demand a \$1.50 price. Whatever the crop is, the A. S. of E. and Up-to-Date Farming will see to it that the grower receives an equitable price.

Look out for some sensational leaps and tumbles by the speculators between now and harvest. Don't get scared about future prices. The amount of grain in farmers' hands precludes the possibility of any large surplus being carried over.

Offerings of wheat are light enough to keep the cash market at \$1.00. Farmers, don't you see how easy it is? Will you ever be such idiots again to dump your grain soon after harvest and let the speculators and gamblers price and manipulate it?

The farmers cannot be too strongly impressed with the necessity of building granaries on their farms for the purpose of carrying their grain instead of placing it in elevators. In elevators it forms the basis for the speculators, and speculation is the bane of the farmer. Build granaries!

Cattle raisers, cotton growers, tobacco growers, wheat growers, corn growers, fruit growers, in fact all producers of food stuffs or clothing products, are equally interested in the movement in favor of organization to control marketing and command remunerative prices. They must all join the Society of Equity.

The American Society of Equity appeals to the intelligence of the farmer. If the aims and plans of the Society did not commend themselves to the thoughtful and prudent it would not be worthy of membership. The growth of the Society has established the truth of the declaration that it appeals to the reason, the sober thought of the farmers.

The merchants, the manufacturers, union labor, and other interests constantly petition Congress for this or that law. Why should not the farmers of the country get up a monster petition demanding that a fatal blow be struck at grain gamblers? They could readily send up a petition bearing the names of three million real estate owners.

We are not making much effort to get early crop reports. We cannot see in what way they will be valuable to members and others. Prices have been set on last year's crops, which are to prevail on those crops until the end of the crop year. Any estimates now would not represent the crop finally. Neither could they be used to make the crop better or worse.

A bushel of No. 2 wheat (Chicago price), 8 pounds of cotton, less than two bushels of corn (at 60 cents a bushel), two bushels of oats (at union price), four dozen of eggs (at union price), pays for a membership in the American Society of Equity. This is the Society that is booming farmers to the front, where they belong.

What has become of the large crop of wheat the government reported the country raised last year? Don't the facts regarding light deliveries all through the season and the small reserve in March (the smallest in twenty-three years), by the government report, prove that the crop was much less than any of their estimates. Don't it look now as if the estimate of the A. S. of E. was the nearest correct? If the government had placed their figures at 550 to 600 million bushels last August, as the Society did, dollar wheat would have come months earlier and farmers would have had millions of dollars more, which they should have had.

As soon as we can prepare the article we will print facts and figures proving that all past seasons of business depressions in this country were brought about by low prices of farm products; that politics had nothing to do with them; that manufacturers and others were dragged into the maelstrom because the farmers were not prosperous. This is a bold statement, but the evidence can be presented that will convince every unprejudiced mind. Keep the farmers prosperous and this country can not experience hard times. This is the object of the A. S. of E.

Stockmen will find that two things are necessary to put their business on a safe and profitable basis. First is getting together in the American Society of Equity. There is not another plan offered on earth that so fully meets their requirements. Second, is stock yards of their own at principal markets. In these yards stock must be kept at cost, which should not be much more than on the farm. In short, all cattle and hogs should be kept in the yards a few days, so they may rest and feed up after the railroad trip before being offered for sale. We could write much on this subject, but we think stockmen will take the hint.

In this issue we are pleased to print a report of the effort to organize the A. S. of E. in Olmstead county, Minnesota. We referred to this before in February 15th issue, under "Merchants Benefited," but since then we neglected to give our readers a report of the results. Mr. Webber's report, as referred to, will be of much interest to farmers and merchants wherever it comes to their notice. Also, it will give new ideas for organizing and open up new fields and greater possibilities. If you have preserved your February 15th paper read the article in that number in connection with this report.

A skilled mechanic always commands better wages than one that is unskilled. Not that alone, but he can get work when none is found for the common laborer. The skilled farmer—that is, one who has fitted himself for his vocation by a thorough mastery of the science of farming and of marketing his product—is always more successful than the one who is contented to merely plow and reap what happens to grow, and then sell it to the first comer, at whatever price is offered him. The farmer should be a student of the world's farming, know what the world produces, what the world wants, and also how to get the very best crop results from his farm. This can be accomplished when he is a member of a national society representing

his business, where he can look for information and advice. The farmer that can make thirty acres harvest as large a crop as was formerly gathered from forty acres is a king among men. The boys of to-day on the farms will grow far larger and better crops than their fathers ever produced, for this is a period of education and advancement.

### THE SITUATION.

March 31, when this paper closed, we could see no elements in the crop situation in this country to seriously affect the next yield of wheat. Some sections suffered from the winter, but less than usual. Some sections are dry, while floods prevailed in others. The outcome depends on future weather, but as the crop has escaped any considerable winter damage this figures many points toward a good harvest. Reports from Europe are not favorable as a whole for the wheat crop, but no great amount of dependence can be placed on any reports at this season. It is claimed that from a half to one million less acres were sown in France than the year before. The spring has been late for farm operations, which of itself is no criterion of what the crops will be. It does, however, mean that, weather permitting, the work will go forward with a rush. Fruit prospects are good at this writing, and barring late frosts will be in abundance. We believe 1904 will be a great year for farmers.

### ENGLISH TARIFF ON FOOD SUPPLIES.

The claim is made that the object of taxing food supplies imported into Great Britain is to benefit the colonies. Of course the idea is to impose the tax against importations from countries not a part of the British empire, and in this way make a better price for the surplus food producing colonies. Now the question arises whether the same result would not be accomplished if the plan of the A. S. of E. was applied in those countries jointly with the United States? If Canadian farmers organize with the United States farmers to control marketing and make prices, everything will be accomplished that the advocates of the tariff bill are contending for.

### SATURDAY AFTERNOON OFF.

Farmers will be wise if they conclude to work five and a half days to the week this summer. We are certain if they would plan just such crops that they can take care of in the five and a half days and take Saturday afternoon off to attend their union or for recreation they will be far ahead in money results in the fall. It is not the great quantity of stuff you grow that makes you rich, but the price you get for it. If a great drought was to come this summer and cut down each crop one-fourth below the normal, you would positively get more money for it than you would from the full crop. If this is true, and it is, why work yourselves to death to produce enormous crops? This is a scientific (?) way for farmers to commit industrial suicide. But farmers are learning fast. They have learned how to compel good price, and we believe they will take the rest cure. Start it this year with a Saturday half holiday.

### INCREASE FARM STORAGE.

A granary on the farm will have a good effect, even though you cannot hold your grain. It will allow you to run a bluff that frequently will work. To illustrate: Vice President, Hon. James Barlow, usually tells these stories when out organizing: "When the interurban railroad was building to his town a certain farmer along the line hauled some timber on the right of way and made arrangements to build. He did not want a building there, but he compelled the railroad company to pay him a good sum to get off. Another: A certain poor man owned a lot adjoining the residence of a rich man. The latter wanted to buy the vacant lot to add to his home, but would not pay a fair price for it. To bring matters to a crisis the poor man bought a load of cheap lumber and hauled on his lot, also staked off the foundation for a house and employed a man to begin to dig. This had the desired effect and he got his price for the lot."

So with farmers. We advise every one of them to make themselves as nearly independent of millers, elevator companies and warehousemen as possible. Farm storage is

absolutely essential, or where local unions are formed community elevators and warehouses may be resorted to. We earnestly implore Kansas farmers particularly to see that there is no occasion for the report to go out that the wheat is so abundant that it must be stored on the ground. Such reports have a depressing effect on the crop throughout the country. What we say with reference to wheat applies to every other crop the farmers grow. When it comes to fruit, eggs, butter and perishable products, cold storage houses must be provided as soon as possible.

#### WILL ENFORCE THEIR RIGHTS.

The dairymen of Kentucky are endeavoring to secure from the legislature some needed laws for their protection. As is usual, when the farmers ask anything there is opposition, but the dairymen are disposed to enforce their rights. On this point the "Inland Farmer" has this to say:

"The dairymen propose to force the enemies of the farming and dairy industry of this State to come out and fight in the open. The lessons which the old cow has taught us, of planting a vigorous kick at the right time and place, shall be heeded. No man or set of men is strong enough to browbeat and fight the farming interests in this State. If there are good reasons for opposing the desired legislation, let them be heard; but we will have no more of this committee-room bushwhacking."

As we have contended from the beginning, there is but one way for the producers to secure legislation in their interest, and that is by a close organization. As individuals they exercise at best only individual influence. The farmers could learn a most excellent lesson from the two great political parties of the country. What is a political party? It is a combination of men holding similar views of policy. As individuals they could affect nothing, but they unite in a party, with a party organization, and a very close organization at that. Each member is a worker to some extent. They all unite in a concert of action. The leaders in every locality seek for the weak places in the enemy's line, and then they move on that weak place in concert. If the farmers would unite as men of the same political faith unite, they could demand of legislatures what they would, and their demands would be granted without a protest from any source. Until they do unite they will be, as heretofore, at the mercy of every one who has a conflicting interest.

#### FARMERS SHOULD UNITE.

The spirit of combination is in the air. We hear of it from every direction. From New Jersey comes word of an organization of the truck gardeners, for the purpose of enforcing better prices for what they produce. It also proposes to combine for co-operative buying. In Texas a combination is being pushed among stock raisers to provide against too great shipments at one time. A similar organization has been started in Iowa. One of the latest combines is that of the rice mills of the country. This combine sets forth that it will be in the interest of the producer and the consumer, holding that the profits of the middlemen have been much too large. One of the features is to start in every part of the country "rice kitchens" for the purpose of introducing the four hundred or more different ways in which rice can be prepared for the table. In some parts of the country efforts are directed toward getting the farmers to join stock companies, for the building of elevators, the purchase of grain, etc. In this direction we would repeat the word of warning we have so often uttered, that it is not only dangerous but destructive for farmers to put money into any such joint stock companies. As a rule, farmers do not know anything of the details of operating elevators, manufacturing establishments, meat-packing establishments, and kindred industries. Experts are required, and the farmer-stockholders would necessarily be compelled to depend upon hired experts, hence would be at the mercy of sharpers. Farmers should unite, but it should be in one national union for all their interests, and under their own control. They should unite for the purpose of securing remunerative prices for what they produce. This is a legitimate purpose, and one that can accomplish something in their behalf.

#### UNION LABOR ON FARMS.

"A union of farm hands in Iowa is reported, the men asking for an eight-hour day, \$30 per month, board and washing and 'other minor concessions.' We have hoped that the union craze would not affect the workers on farms, nor do we believe that it will do so to a large extent. The relation of a farmer to his hired help is peculiar; there is and should be a good deal of 'give-and-take' on both sides. There can be no steady adherence to a set of rules laid down by an organization either of employers or workmen.

Personal agreements as to the work, with the law of demand and supply to regulate the wages, will be found the only satisfactory plan on the farm. And as in everything else a disposition on the part of each to accommodate the other will make conditions far better than reliance on any union to secure to either side its so-called rights."—National Stockman and Farmer.

We cannot take the optimistic view of the situation as does the above paper. A commodity will command its market value. There have been so many illustrations of successful attempts on the part of laborers to organize that we dare not ignore the possibilities in that direction. We cannot see why farm laborers would be immune, particularly since there is such a great demand for them. Why should labor leave the shops, offices, factories and public works to work on the farms at less wages and longer hours? Personal agreements are impossible where self-interests are antagonistic. We cannot see what the law (?) of demand and supply has to do with it. The whole question resolves itself down to market price. Farmers, are you prepared to pay the market price for labor in 1904? In this connection we will quote from "The Third Power," as follows:

"\* \* \* 'The farmers of the United States can only continue in business on the present basis by using the cheapest labor on earth, i. e., wife labor, child labor, and the labor of their babes. The price set by speculators and gamblers for the fine grain, vegetables and fruit—the product of God's earth—compel the agriculturist to resort to such unbearable extremities. No hired men can be secured to take their places at wages the farmers can pay. While the nation and state cry out against female and child labor in factories, not a word of protest is raised against the toil of farmers' wives and children.'"

But a better time is coming. In fact, the signs of the time indicate that it has already arrived. Farmers have learned how to regulate their marketing and compel prices that will allow them to pay the market price for labor. The year 1904 should see this problem completely solved, never more to return and trouble farmers. From every point of view it is imperative that farmers should hasten to complete their organization for business reasons.

#### GOOD ROADS.

No class of American citizens are more deeply interested in having good roads than the farming class. All they produce must be transported to market. Little or none is sold on the farm. They must reach railroad stations or steamboat landings, and bad highways make the task heavier and much more expensive than if the roads were good. A bill is before Congress to provide a system of federal aid to the construction of good roads over the country. It is certainly the most gigantic undertaking ever proposed to the government, for the United States covers a vast extent of territory, and it would not do to slight one section while providing for another.

When the wars of Louis XIV had impoverished France and destroyed agriculture, Colbert, his great minister of finance, undertook to re-establish French prosperity. During the wars the roads of France had been neglected, and had reached an impassable condition. Colbert borrowed money for the government, employed all the idle returned soldiers, and set about the work of rebuilding the roads of the kingdom, while the agriculturists set about the work of restoring their farms. Within five years France was again in a state of prosperity. Colbert had solved two questions—what to do with the unemployed, and how to restore the agricultural resources of the country. The history of Colbert's success is a great object lesson.

In this country, however, there are stumbling blocks in the way that did not obtain in France. One is the powers of the federal government under the constitution. When the government undertook to construct what is known as the "National Road," from Cumberland, Maryland, to St. Louis, the project was opposed on the ground that roads belonged to the States. To get around this objection it was claimed the proposed thoroughfare was to be a "military and post road," and under the constitution the government could build it. To save complications the government formally asked the consent of the several States through which it was to be constructed.

With the rural mail route system it might be argued that under the post road clause the government could either construct or aid in the construction of good roads. The military clause no longer prevails. We do not propose to discuss, at this point, either the constitutional power of the government in the matter, or whether it is good policy for the government to enter upon such a gigantic undertaking, and it should be remembered that the building is

only a part of the work. The roads would have to be maintained. The good roads are needed, but the farmers can not get this or any other legislation without organization. The bill now pending in the Congress may be a practical one, or it may not, but whether practical or not, it will never culminate in a law unless the farmers so demand. One thing should be remembered: every highway in the country has been built and maintained at the expense of the farmers. It may be claimed that some of them, such as turnpikes and other toll roads, were constructed by private capital. Primarily that is true, but the cost of construction and maintenance was assessed, in the shape of tolls, against the farmers using the road. Let the farmers organize for their own protection and the good road question will soon be solved.

#### VALUE OF COMBINATION AMONG THE FARMERS.

"Some time ago it was suggested in this department that farmers in a neighborhood should combine for their own benefit and protection, and in the same article warning was given that such combinations would be difficult to bring about mainly because each member of it would want to 'boss.' Several correspondents have evidently misunderstood the suggestions made, and ask what we think of the possibilities of the farmers of the country forming a combination, a small trust as it were. (1) The plan is as impracticable as it is unwise, for if such combinations have not worked well on a small scale, what could be hoped for in very much larger operations? (2) The better plan, at least for a beginning, is the local combination whereby the progressive men of a section (do not take in those who are not progressive, for they will be a drawback and a burden) get together and pool their interests to the extent of (3) shipping in carload lots, instead of each paying the higher tariff on the smaller shipment, dealing through one commission man who is reliable, (4) growing and shipping only the best. (5) Buy in the same way. The whole plan is based on the idea of getting wholesale rates on what is bought, which includes freight rates and handling. (6) There is an enormous advantage in a combination like this dealing with one commission man. The shipments to him would be so large that he simply could not afford to slight them (provided, of course, the quality was up to the mark) for fear of losing the consignments. Try this plan if you have progressive farmers around you, and if it works, you can extend operations next year."—Indianapolis News.

The editor of Up-to-Date Farming has recommended that in every county or city of the country a board of wise men be established, whose duty it is to pass on the talents of every school boy and school girl at one or more times during the school course. In this way weak faculties could be developed and the result would be a better rounding out of the education. Finally when the young man or young woman completes his or her education a chart will be given that will show the personal qualifications. This chart to be kept and presented when the person seeks employment; also to be the basis for entry into the various professions. The object will be to fit each person to his vocation.

We refer to this plan now, because we think if the chart scheme had been in vogue the person who wrote the above article would probably be shoveling dirt instead of writing newspaper articles. For any person to set himself up as a leader or teacher when he knows nothing about the subject is absurd, though serious. Farmers need honest advice on this important subject. They are honestly seeking it, and it is a subject that concerns them more seriously than any and all other combined. Let us analyze the above:

(1.) Whenever farmers talk about combining it is for the prime object of benefitting their prices. Now tell us where was there ever a combination on a small scale that ever thought they had the power to dictate prices when all the other farmers were out of the combine? The reason the small combines were not successful was because the members did not get benefits. Any organization of the farmers for benefits must be on a national scale. And how does the writer know it is impracticable? Has he tried it? And pray why unwise? If farmers can combine to benefit the distributing end of their business we think it would be very wise. What do the farmers say? (2.) And they will fail as fast as they can be formed. Farmers like others must get enough benefits to interest them. (3.) The small saving of freight will never keep them together while the speculators make the price. (4.) This is largely governed by seasons. (5.) What is buying at wholesale as compared to selling at your own price? (6.) We would like some illustrations to prove this assertion.

Try all these plans and you will learn to your sorrow that they are futile. There is only one way for farmers to organize, that is on a national scale, the object being to control marketing and compel your price.

#### LIBRARIES FOR FARMERS.

This is a reading age. By this we do not mean the reading of works of fiction alone, or of what are sometimes termed literary works, but we mean that the one who does not read falls behind his neighbor who does, in many ways. There are libraries for lawyers, for doctors, for commercial men, for manufacturers, for scientific men, why not for farmers?

There are few towns of any size without a public library, and they are multiplying rapidly. These libraries give a vast advantage to the sons and daughters of the dwellers in the cities and towns over the sons and daughters of those living on the farm. The real education of life is obtained after leaving school or college. Schools and colleges only give the rudiments of an education. Observation, reading, a close study of people, of events, and of books, after the school or college has been left behind, give the finishing touches to the education begun in the school.

There was a time when books were high priced, and to collect a library cost a snug sum, but now books are so cheap that almost any one can indulge in the luxury of owning a good library. But the point we desire to emphasize is that libraries open to farmers and their families should be established in every township. To establish such a library would call for only a small tax, and money could not be better expended. Some States have what they call "traveling libraries." That is, selected libraries of one hundred or more volumes in each, which are sent to different parts of the State, under certain conditions, and then returned to the parent library. These traveling libraries, when carefully selected, serve a very good purpose, but they do not, and can not, take the place of a permanent library, added to yearly. The great William Ellery Channing had this to say of books:

"God be thanked for books! They are the voices of the distant and the dead, and make us heirs of the spiritual life of past ages. Books are the true levelers. They give to all, who will faithfully use them, the society, the spiritual presence of the best and greatest of our race. No matter how poor I am, no matter though the prosperous of my own time will not enter my obscure dwelling. If the sacred writers will enter and take up their abode under my roof, if Milton will cross my threshold to sing to me of Paradise, and Shakespeare to open to me the world of imagination and the workings of the human heart, and Franklin to enrich me with his practical wisdom, I shall not pine for want of intellectual companionship, and I may become a cultivated man though excluded from what is called the best society in the place where I live."

Like music, books are a great civilizer, a great humanizer, and the boy or girl who reads none but good books, seldom goes wrong. They are a source of constant delight, a perpetual fountain of pleasure. As to the companionship of books, this is what John Alfred Langford says:

"As companions and acquaintances books are without rivals; and they are companions and acquaintances to be had at all times and under all circumstances. They are never out when you knock at their door; are never 'not at home' when you call. In the highest as well as in the deepest moods they may be applied to, and will never be found wanting. In the good sense of the phrase, they are all things to all men, and are faithful alike to all. \* \* \* As friends and companions, as teachers and counselors, as recreators and amusers books are always with us, and always ready to respond to our wants. We can take them with us in our wanderings or gather them around us at our firesides. In the lonely wilderness, and the crowded city, their spirit will be with us, giving a meaning to the seemingly confused movements of humanity, and peopling the desert with their own bright creations."

"All work and no play makes Jack a dull boy," is as true to-day as when the aphorism was first penned. So all work and no recreation on the farm is sure to dull the mind of the farmer and prevent the proper mental growth of his family. It has been from the farm that the wisest and best of our statesmen have come; the farm has furnished our best educators, the greatest preachers, the profoundest thinkers. But they came from farms where books were cherished. They would read at night and while following the plow during the day ponder over what they had read. Books should be read for recreation as well as for instruction. The college student turns from his books to athletics for relaxation and recreation. The farmer should turn from his daily toil to books for his relaxation. It will be good for mind and body. With the mental stimulus thus gained he will be a better farmer and more successful.

The people of the towns and cities cheerfully tax themselves to establish and maintain libraries, and they find the investment to pay ample dividends. Townships might well profit by the example of the towns and cities, and people in the country would find that the returns from the library tax would soon prove the tax to be a good investment.

# THE BLIND "GUIDE" AGAIN.

There is a paper printed in Indiana called "The Farmers' Guide." It is devoting nearly as much space to prevent farmers from co-operating to elevate their business as Up-to-Date Farming is to bring farmers to the front. The paper is a queer one and the editor is a rare genius. He can crowd more inconsistencies and more egotism in shorter space than any other man alive, while at the same time displaying an ignorance more profound than is often noted in these days, when free schools are the fashion. His ignorance is so dense that he don't know that he is injuring no person but himself and this fact he will be duly apprised of by his subscribers, providing he has any with good horse sense.

He is in a grave dilemma and is trying to ride the co-operation horse and the anti-co-operation ass at the same time, and the result would be pathetic if it was not so ludicrous. He is in favor (or says he is, which is not the same thing,) of the dairymen forming a union for co-operation, the cattle raisers and the publishers forming unions, the coal miners uniting, everybody in fact, but the farmers generally. He tells us in a paragraph that a union of the dairymen of a single county increased the price of the butter they produced ten cents a pound, yet, in the same breath declares it impossible for the wheat men to raise the price of wheat by a combination. He is very modest, however, for he admits that a combination of dairymen can increase prices only in the States where the Guide circulates. It is the circulation of the Guide, then, and not the co-operation of the dairymen that influences the price of the butter. There is something audaciously funny, and charmingly egotistical in that claim of the Huntington editor. It is a notice to all dairymen in the United States that if they want to increase the price of their product, they must send in a club of subscribers to the Guide; that co-operation is a good thing, but it will be a waste of energy, unless the Guide circulates in that vicinity. Some rude and irreverent person, on reading the declaration of the Guide, would say, in the vernacular of the street, that the editor "has his cheek with him," but we beg to assure all such that the aforesaid editor is innocent of anything of the kind, for in another place in his paper, while intimating that some farmers might like to purchase and operate a farm journal, he says that if they will open a correspondence with him he will put them on the track of how they can purchase the "most practical farm journal that reaches the farmer's table," meaning "The Farmers' Guide," of Huntington, and then adds that if they should purchase, he "could assure you (the purchaser) of an anxious seat for fifty-two weeks of seven days each" during the remainder of the life of the purchaser. In that assurance he is honest, direct, and intelligible, for it must be an anxious seat to try to run a paper for farmers, and oppose everything tending to better the condition of the farmers.

In his issue for March 26 the editor takes up three whole pages in discussing co-operation as he views it, and in fighting the American Society of Equity. He divides his discussion into several articles. One of them bears this heading: "Co-operative Feeding." It would be truly delightful if he had, in the article told his readers just what he means by co-operative feeding, but he does not, as there is not a word about feeding, co-operatively or any other way. The fact is, he was trying to tell what great good six men might do for themselves by raising the same kind of beef cattle, and selling at the same time. If good for six men, why not good for sixty, and if good for sixty, why not good for sixty thousand; and if good for cattle, why not good for wheat?

He also opens his paper to a letter from J. A. Miller, of Marshall Co., Ind., who, according to his own report about fourteen months ago, sent for particulars of the A. S. of E., and received about four pounds of documents. We quote from his letter.

"Almost the first thing I found out was that every member was bound to subscribe for a paper that had been self-constituted the organ of the society. Now, if there is any sure way to have me not take a paper it is to try to convince me that I am in some way under obligation to take it."

Mr. Miller balked on the official paper idea but he did not have sense enough to know that co-operation by farmers is impracticable without a medium for communication between the head of the society and members. His argument and reasons are absolutely silly. He also states: "The nucleus is a seed store that for a time had its advertising matter sent through the mails at second class rates, but when the Postmaster General issued his famous order making it necessary to have a positive circulation among regular subscribers etc., \* \* \* The A. S. of E. was the result." \* \* \*

Such statements are entirely without foundation in facts, and the creation of a pessimist. For Mr. Miller's informa-

tion we want to assure him that the originator of the A. S. of E., and chief promoter, thought it unwise to dispose of the business that was making a living for himself and family until there was prospect of making a living from some other source. The editor of this paper in his desire to bring farmers to the front where they belong and where they will be in the near future, has invested much of his own money in its development and we have enough faith in the farmers and in the A. S. of E. to believe it will all come back. This is not a scheme to promote a newspaper nor a seed business. It is a plan to put farming at the head of all industries, and when that is accomplished the writer will willingly retire if it is the will the farmers. Mr. Miller is the first person who has made a statement like the following: "The worst thing about the society is that it teaches a doctrine of hatred and discontent." The truth is its motto is "Equity to All." Equity, justice, good will, freedom and independence to every loyal American citizen. Mr. Miller delivers a harangue about the Board of Trade, horse trotting, betting, etc., to prove that the A. S. of E. don't measure up to his standard and concludes as follows: "The farmers occupation is the best paying, happiest, most honorable and the most conducive to good morals of any business on earth." We are not at all surprised that Mr. Miller don't want to "jine." There is nothing for him to gain and he would lose that big dollar which we bet looks as big as a cart wheel to him, and of which we venture the prediction he has mighty few.

But the funniest paragraph in this very funny paper reads as follows: "We know that if Guide readers will co-operate they can by good farming, good tillage, good use of their means, increase the money income of their farms." There is nothing doubtful about this. The editor knows it, and we know he knows it, for he says he does. Knows what? Why, knows that if farmers, that is, those of them who read the Guide, will co-operate (and it is well to remember that they must co-operate) they can by good farming, good tillage, and good use of their means increase the money income of their farms. Everybody else in this wide, wide world, supposed that he knew that by good farming, good tillage, and a good use of his means, a farmer could increase his money income, provided prices did not drop on him, whether he co-operated or not. No wonder the editor has an anxious seat for fifty-two weeks of seven days each. But, bosh, stupidity such as possesses the editor of the Guide, does not deserve attention. We put the masses of farmers far above him in mental caliber and have no doubt every paper that opposes any legitimate attempt on the part of farmers to better their condition will abundantly reap the fruits of their own folly.

Perhaps, the editor of the Framers' Guide knows something about the following extract from a letter sent to a person who betrayed his trust:

"Mr. J. A. Everitt, Pres. American Society of Equity:

"Dear Sir:—I feel it my moral duty to let you know that a prominent farmer's paper invites me and offers to me, to take up arms against you.

"\* \* \* The letter of the said prominent editor of a prominent agricultural paper closes in this way, 'I do not know that I care to go into an open fight with Everitt, but if I could see a chance to give him a neat stab under the fifth rib, I think I would rather enjoy doing it.'"

We leave this whole matter with the farmers. We can trust those who understand the A. S. of E. To all others we say, investigate.

## ADULTERATION OF FOOD.

The United States Congress and many of the State legislatures have made efforts to put an end to the adulteration of food products. So far all the efforts have ended in practical failure. The food adulterator plays with the life and health of his victims. It is true that all food adulterations are not injurious to health in a very marked degree, but many of them are. Whether injurious to health or not they are fraudulent, and a species of robbery. The farmers are sufferers from food adulteration. Much of what they sell is adulterated before it gets to the consumer, and very much that they buy is adulterated, thus reducing their legitimate market.

Those who served in the Union army during the war between the States well remember the suffering caused to the troops by the shoddy clothing and the paper-soled shoes dealt out. Rascally and thievish contractors took advantage of the necessities of the government and defrauded the government out of millions of dollars and inflicted untold suffering on the patriotic soldiers. Those rascally contractors were no more criminal than the adulterator of food products. It is no doubt true that the vast majority of the retail dealers are innocent in the matter of selling adulterated foods, for they purchase for pure, and sell as they purchase. Teas, coffee, sugars, rice, flour, meal, dairy products, are special subjects of the adulterator. It is

extremely difficult to get any of the spices pure, and much of the mustard offered for sale is mixed with yellow clay.

How to most effectively put a stop to these adulterations is a knotty problem for the law-maker. It is hard to make men honest by law. There is a well authenticated story of an ancient king of Gaul, who having been converted to Christianity, issued a decree ordering all his subjects to appear and be baptized. This was making Christians by the wholesale, but history fails to record as to the effectiveness of thus converting a people by decree of the sovereign. The chances are that most of them remained barbarians to the end. Congress or a State Legislature may enact laws to make men honest, and a few may become honest through fear of the shame of prosecution, but the most of them will remain dishonest. Every State in the Union has a law against selling adulterated liquors, but it is a hard matter to find the pure article for sale anywhere. It is to the interest of farmers that they unite in demanding the best laws that can be enacted against the adulteration of food products, and to do whatever lies in their power to see that the laws are rigidly enforced when once passed.

This is one of the objects of the American Society of Equity. It should not be forgotten that the Society aims at uniting the farmer class to protect their interests in all directions. Very little can be accomplished by individual effort, but everything is possible to the strength that comes with union. If the farmers are united no legislature or congress would dare reject any bill favored by them. Farming was the first great interest of the country, yet it was the last to receive recognition by the creation of a department of the government in its interest, if we except the department of commerce and labor, which is simply a political fifth wheel to the wagon. Except the organization

of a department of agriculture (which is largely devoted to increasing crops to make lower prices and benefit other classes) practically little has been done for this interest, which, in its diversity, the number engaged in it, and the immensity of the value of its aggregated products, is greater than all the other interests combined. As great as are the manufacturing industries, the mining industries, they are very small when compared with the agricultural. The railroad interests are a part of the agricultural, for they depend so greatly on the products of the farms.

In this government of the people it is easy for united effort to win. It is also impossible for individual or spasmodic efforts to prevail in accomplishing any great end. Some people say the farmers cannot unite. A few years ago the same was said of the laboring class, yet the workmen of America have been welded into a compact, homogeneous mass. To hold such a doctrine, to make such a statement that the farmers cannot or will not unite, is an insult to that great class. The farmers own more than half of the taxable wealth of the United States, and is the intelligence of the owners of this vast wealth to be insulted by the statement that they cannot combine in their own interest?

They can unite. The rapid growth of the American Society of Equity has established this fact, that the farmers not only can but will unite when a plan that promises success is offered them. For the sake of the present argument let it be said that even united they will fail in controlling prices of their products, they certainly can come nearer accomplishing that desired end by united effort than under the present conditions. But, by union they can force Congress to enact much needed legislation in their behalf, one of the laws being in favor of purity of food. They can compel a law breaking up the gambling in food products and thus place the products of the farms out of the hands of reckless speculators. If they can do nothing more than to secure adequate laws on these two subjects they will have accomplished more for their own prosperity than has been done since farming was first introduced into the world.

## OFFICIAL LETTER HEADS AND ENVELOPES, FOR MEMBERS AND OFFICERS OF THE A. S. OF E.

If Not Called For In 5 Days Return To  
**JOHN A. ROBERTSON,**  
R. R. 4. AUBURN, IND.

**Farmers to the Front.**

**THE AMERICAN SOCIETY OF EQUITY**  
HEADQUARTERS  
INDIANAPOLIS, IND.

**THE NATIONAL UNION OF THE A. S. OF E.,**  
Indianapolis, Indiana

GENTLEMEN: Enclosed find \$..... for which please send all charges paid ..... Emblematic Official Letter Heads and Envelopes.

Name of your farm or Special Business: .....

**PRICE LIST.**

100 Letter Heads, 100 Envelopes, \$1.00  
250 Letter Heads, 250 Envelopes, \$1.80  
500 Letter Heads, 500 Envelopes, \$3.25  
1000 Letter Heads, 1000 Envelopes, \$5.25

Name..... State.....  
P. O..... R. R.....

Every member of the American Society of Equity is interested in this offer. Every member SHOULD use the official stationary of his society.

It is more business like, besides you are constantly doing missionary work. On the back of the letter sheets will be neatly printed such circulars as "FARMING EXISTS BY DIVINE RIGHT," "WHERE DUTY LIES," "THE EQUITY OF DOLLAR WHEAT," etc., etc. When you write your letters you will be pushing for "THE MILLION—THE MILLION UNITED" farmers. That's why we will print them so cheaply.

Take up your pencil or pen, fill out the blank to the side, cut out, and send to headquarters and we will send them at once all charges paid at prices named. Give both your Post office and Express office.

Come now and surprise us with your orders quickly. 1000 orders of 250 each means 250,000 (a quarter million) messages for A. S. of E. and PROFITABLE PRICES. Several thousand members should embrace this offer at once. We would be glad to hear you cry (or have you write) "WE'RE COMING PRESIDENT EVERITT, ONE HUNDRED THOUSAND STRONG."

Now Brothers in Equity, just think, how you will help the farmers movement and at the same time HELP YOURSELVES by embracing this offer. The paper and envelopes don't cost as much as they would cost at home, while these mean something. Every time you write you will be proud of them and proud of the society they represent and to which you belong. Really half the letters in the country should carry the message of freedom and independence for the greatest class of our people and "EQUITY FOR ALL."

We have ordered a new press which we hope you will keep busy turning out the official letter heads and envelopes, and thus help FARMERS TO THE FRONT where they belong.

Don't lay this aside until you have done this act.

Address,

The NATIONAL UNION of the A. S. of E.

Indianapolis, Indiana

# A \$10 Opportunity

## INVEST \$10 A MONTH

where the money will work for you 24 hours every day, where it will be absolutely safe, and where it will pay you at least 13½ per cent annually.

### Own

Some shares of stock in an old established money making enterprise.

And I want to sell you one or two shares of this stock for 50 per cent less than it is really worth.

You can pay cash for it or you can buy it on the easy payment plan of \$10 down and \$10 a month if you prefer.

I do not care to sell you more than a few shares as I have but a limited number and I want to distribute them in a way that will bring me as many new customers as possible for my investment department.

### My Motive

My motive in offering you this stock for less than it is worth is purely a selfish one.

I want to add your name to my list of well pleased investors.

I know that if you own a share or two of this stock you will be so pleased with the investment that the next time you have money to invest you will come to me.

And you will send your friends to me.

And your friends will in turn send their friends.

A dozen well pleased clients send me more business than hundreds of dollars' worth of magazine and newspaper advertising.

If you buy a few shares of this stock it will be a safe, profitable investment for you and the best kind of an advertisement for me.

One year ago I had less than 100 clients in my investment department.

Now I have nearly 700.

In another year I want two or three times 700.

And that is the reason I want you.

### Let's Get Acquainted

If you buy a little of this stock we will get acquainted.

And when we get acquainted you will find out that what I offer you is just what I say it is.

You will find out that you can safely invest your savings through me.

You will find out that I will look after your money just as carefully as I look after my own.

You will find out that if you invest your money through me it will earn the largest possible profit consistent with safety.

I am a young man.

I expect to be in active business for the next 25 years.

And even if I wanted to sell you something worthless, even if I wanted to

misrepresent the value of this stock, I couldn't afford to do it.

You know as well as I, that if the investments I offer do not turn out just as I represented, it would soon ruin my business.

I certainly cannot afford to have my business ruined. I can't afford to take even a chance.

Just the Real Estate Department of my business is worth \$1,000,000.

At least it pays me good interest on that amount.

It took hard work, energy, enthusiasm and square dealing to build it up to its present size.

Do you suppose I would risk injuring it by even *trying* to sell you a single share of stock through any misrepresentation?

If I were not sure it would be one of the best investments you could make, I could not afford to offer it to you.

I have put my money into this stock.

My sister owns some of the shares.

Two other relatives of mine have invested several thousand dollars in it.

Isn't this irrefutable proof of my faith in this enterprise?

Isn't it proof that it will pay you to get in touch with my investment department?

Will you let me send you full, interesting and convincing particulars?

Let me show you where your idle dollars will safely earn at least 13½ per cent per annum.

If you will fill out and mail to me the coupon, I will send you some interesting information—information that you will find valuable even if you are not in a position to invest any money just now. Do it today.

**W. M. Ostrander**

406 North American Building  
Investment Philadelphia  
Dept.

W. M.  
OSTRANDER

406 North American  
Building, Philadelphia.

Send me full particulars about how I can safely invest ten dollars a month where it will bring at least 13½ per cent a year.

## PRACTICAL ORGANIZATION.

How the Farmers and Merchants of Olmsted County, Minn., Have Joined Hands in the American Society of Equity.

Probably one of the most successful organizations of retail merchants in the country is the Olmsted County Merchants' Association, which is simply a new name for a wider application of the benefits of what was originally the Rochester Merchants' Association, organized some two years ago in Rochester, Minn.

The plan of organization and operation of this association has been applied for and introduced into eighteen different states during the past six or eight months. Delegations from cities and towns hundreds of miles distant have visited Rochester for the purpose of becoming familiar with the manner of carrying on the work of this organization, which has certainly become famous among merchants' associations.

Its success is due largely and primarily to the fact that its members have not limited the scope of its usefulness, but have undertaken the solution of every problem that has presented itself as bearing directly or indirectly upon the welfare of its immediate surroundings.

With its diversity of objects it has been able to keep alive the interest and enthusiasm of its members, which is so essential to the success of such a movement, and through the lack of which so many organizations have become inoperative and ineffective.

Merchants in neighboring towns soon came to appreciate the value of such an organization, and, at their request, the association was enlarged to include all the merchants of the county and it now has a membership representing seventeen different towns in one of the best counties in the United States.

Soon after this association had become so decided a success, some of the representative farmers of the county conceived the idea of forming an association of the farmers along similar lines.

The fundamental principles of the American Society of Equity were communicated through the local newspapers by a practical farmer of the county, who also brought the matter to the attention of the secretary of the merchants' association.

Ever ready to assume the initiative, and believing the interests of the farmer and merchant to be identical, the merchants were not slow to take up the matter. Realizing the benefits that had accrued by reason of their own co-operation, they could not but recognize that even greater benefits must result from this so much larger organization of the farmers. These merchants felt that any proposition tending to improve conditions upon the farm should have their first and best consideration. They believe the farmer to be, as it were, the barometer of trade and finance to which the merchant is bound to look before planning a season of business operations. The needle of this barometer points to 100 when his crop is good and prices fair.

Then the farmer is practically digging abundance of wealth from the soil, which naturally flows into the arteries of trade.

When the needle points to 75 that same stimulus to business, which characterized the more favorable condition, is of course not in evidence.

Repairs about the farm are not kept up as they should be, the farmer has less money to spend and is obliged to confine his purchases to the cheaper and inferior qualities.

To an even greater extent is business affected when the needle of the barometer stands at 50—where it stands to-day in many sections of this country. Look at the conditions that surround the home and circumstances of the average American farmer after two or three years of work without profit—years of small yield and low prices.

His harness, wagons and machinery are pretty well played out; he has been getting his groceries and other necessa-

ries of life on credit; he is cautious about hiring help; inclined to do all he can with his own hands and take his chances on results; and finally obliged to set aside his inherent pride and solicit extensions of time from his creditors, who are the merchants of his county. Since these conditions are in evidence in this favored agricultural county, may we not suppose that they exist throughout the country.

Realizing, then that something should be done to remove these elements of uncertainty from the circumstances of the farmer, to further their own interests, the merchants of Olmsted county, Minn., considered an organization of the farmers absolutely necessary.

They proceeded to study and discuss the plan of the American Society of Equity, and found it to be free from the various weaknesses that had characterized former attempts to organize the agricultural interests of the country.

They found that it does not require the investment of any considerable sum of money for capitalization, but, on the other hand, seems to provide for a substantial organization, without capital stock, to secure co-operation of the farmers of the entire country, with a view to regulating prices of farm produce.

Believing the plan suggested to be a most practical one, and feeling that its operation must result in direct benefit to all classes of business, the merchants completed arrangements for a general convention of farmers and merchants to be held in Rochester on February 10th, last.

Hon. H. B. Sherman, a deputy organizer of the National Union, had been invited to address this convention and assist in perfecting an organization. Over four hundred farmers responded to this first call and hardly one who was not impressed with the almost unlimited possibilities of the plan as explained by Mr. Sherman.

More than one hundred memberships were taken out before the meeting closed and Rochester Union No. 1, of the American Society of Equity had been organized and officers elected; and all this in a community that had never heard of the plan before.

And even more surprising is the interest and enthusiasm that is being displayed since the organization. New members are being enrolled very rapidly and it is believed that in three months the membership will number not less than a thousand farmers and merchants in this single county. Such an organization can not but exercise a tremendous influence for good in this community. The farmers feel that, in admitting the merchants to their organization they have secured an element of busi-

ness ability and facilities for meetings that would not otherwise be obtainable. And the merchants appreciate the possibilities for furthering their own interests, in more ways than one, by co-operating with the farmers and lending their assistance and influence in bringing about improved conditions wherever it is possible.

Not alone will benefit be derived in the way of better prices for their produce, but the power and force of such an organization, judiciously exercised for the promotion of local improvements and the direction of local affairs, can bring about results that would not be possible in any other way.

Undoubtedly the readers of Up-to-Date Farming will hear more of the progress of this Minnesota organization when it has had an opportunity to get down to real work.

And no doubt other associations of retail merchants will be interested to know that the Olmsted County Merchants' Association feels that this organization of the farmers of its county is one of its greatest achievements. This may sound strange to some of those who have been inclined to discourage such movements among farmers, but let them try it along these lines and be convinced.

To antagonize such a movement certainly means almost actual ruin to the mercantile interests of the community. Even though the outcome or results from such an organization be doubtful, it would seem to be good, sound business policy for the merchants to take hold and encourage the movement—especially since it involves so little expense.

W. C. WEBBER,

Sec. Olmsted Co. Merchants' Ass'n.,  
Rochester, Minn.

## Uncle Alf's Friendly Chats

### HAS A VISIT FROM THE MINISTER

Rev. Gilbert Winton: "Brother Martin, without further preliminaries, I will come at once to the object of this visit. I have been reading lately, and we have been talking in my neighborhood, of the American Society of Equity, and about the farmers, through some national agency, fixing fair and reasonable prices upon their products. That seems to us like a wild dream, a something bordering upon the impossible. If it could be done, though, it would revolutionize agriculture, the greatest calling of God's creatures, and it would make farming the most desirable vocation of the human race. I heard that you believe this can be done, and I at once said to myself, 'If Uncle Alf Martin believes in it he has a reason for that belief, and I will go and have a talk with him about it. At all events, a talk with him will be worth the twenty miles' drive necessary to get there.' This is the way I thought it out, and here I am."

Uncle Alf: "Well, Bro. Winton, I am certainly glad to see you, and whether you get paid for the trip or not, I am sure I shall, for life always has a new charm for me, and the house always seems brighter when sunshine and friends enter the door. The boys will attend to your team, and we can talk at our leisure. What phase of the question do you wish to discuss?"

Mr. Winton: "In the first place, what do you know of the American Society of Equity? I am told you are well posted in regard to it, though it is reported over in our county that it took something of a 'jolt' to bring the matter seriously to your attention."

Uncle Alf: "So they've heard of it away over there, have they? It was a joke, sure enough, and it completely knocked me off my supports for about half an hour." And Uncle Alf took another hearty laugh, as he recalled the events of his "surprise party." He then continued:

"So you want to know about the society. Mr. J. A. Everitt, of Indianapolis, some three or four years ago, became impressed with the injustice of the fact that of all producers the farmers were the only ones who did not name the prices of their products. The products of the farmers alone were priced by the users of them and not by the producers. He conceived the idea that it is possible, through co-operation, to place the farmer on an equal plain with other producers, and permit him to become, like them, the pricer of his products. He began to discuss this matter in his deservedly popular rural magazine, Up-to-Date Farming. I believe Mr. Everitt was the first person in the world to give public expression to this idea, and it was such a radical departure from prevalent notions that it amazed the world and startled the farmers themselves. Like every other new thought, it was ridiculed by some, scoffed at by others, whose business it had been for ages to fill their coffers by usurping the right to put prices upon the products of the soil—both buying and selling prices."

Mr. Winton: "Does any body do that? Do not prices adjust themselves by an irrevocable law of conditions? Supply and demand, for instance?"

Uncle Alf: "Read the markets. Sometimes prices are up, sometimes they are down, great changes often taking place without any possibility of a change in conditions—no possible difference in supply and demand. How often are there 'corners' in wheat, in corn, in everything, when prices go beyond all reason, and fortunes are made and lost in a day, farmers rarely gaining thereby, and consumers always being made to suffer. The recent corner in Cotton is too fresh in the mind to need even reference. These fluctuations can not be the result of any fixed law."

Mr. Winton: "It does look like they could not. But I diverted you from the subject."

Uncle Alf: "Yes, Mr. Everitt kept

'shelling the woods,' and hundreds of thinkers all over the country were awakened to the reasonableness and justice of his proposition. The result was the organization, in December, 1902, at Indianapolis, of the American Society of Equity. Mr. Everitt's ideas crystallized into form; an active propaganda was at once begun, and has ever since been vigorously prosecuted, until now there are local unions in every State, and a membership closely approaching one hundred thousand."

Mr. Winton: "It's object, you say is to secure to the farmers the privilege of putting prices upon their products."

Uncle Alf: "That is the first great object. There are others, many others, and important ones, but they will not be pressed until the first is obtained, and toward the attainment of that much progress has already been made."

Mr. Winton: "That is a noble purpose, truly, but you will not take it unkindly when I say I can not see the possibility of it. Nearly all farm products are of such a wide range of production. Take corn, for instance. The corn raisers of Illinois might make a price entirely different from that made by the corn raisers of Indiana, while those of Iowa or Nebraska might make prices different from either, and so on throughout the entire realm of corn production. The price in Chicago would be one thing, that in St. Louis another, and in Kansas City and Omaha another. Thus, it seems to me, the markets would be confused, and chaos would reign in trade so as almost to destroy business, and ruin those whom it is proposed to benefit, the farmers themselves. Take a narrower view of it. My neighbor might think he should have a certain price, I might fix on a different one, and some one else on a price still different, so that buying and selling might become an impossibility. If one have a right to make a price, the same right must be accorded to all."

Uncle Alf: "Co-operation is the remedy for all these contingencies. The obstacles you mention apply to farmers unorganized. Were they organized as those of other callings are organized, not one of these difficulties would be in the way. The co-operative head would name prices equitably based on prevalent conditions and a central market. The prices for all on a given crop for a given time would be the same, accessibility to market making the only variation. The misfortune of location, of course, will have to be borne by the producer, but this variation should be only the reasonable cost of transportation."

Mr. Winton: "That suggests to me another difficulty, which even co-operation would not overcome and make a price carrying an equal profit. Crops may be produced at much less cost in some localities than others. It is much easier to raise a bushel of corn in the

142 Illinois Street, CHICAGO, ILL.

black lands of the corn belt than in the thinner soils of the outlying regions, and a price which would carry a profit in the one case might involve a loss in the other."

Uncle Alf: "This also brings in the element of individual misfortune, which, it is true, can not be overcome. But even this has compensating features; it will awaken to a study of crops and cost of production, and thus lead to the growing of crops best adapted to soil and climate, and to methods that will produce the crops at the least cost. Besides it is not assumed that crops may be made uniformly profitable. To do that lack of skill in the producer, variations in soil productivity, unfavorable seasons and distance from market must be overcome. The thing proposed is to make equitable prices, fair to the average producer, or based on average crops, and also fair to the consumer, and thus free the market from speculative control, secure stability of price, and divide between producer and consumer the vast hoards of profits now appropriated by the speculative price makers. The producer may then reasonably calculate in advance what he may expect from his crops, and he will then adapt his crops to himself, his soil, his usual climatic conditions and his nearness to or distance from market. Under present uncertainties he has no encouragement to do that; indeed he has no light to guide him to it."

Mr. Winton thought seriously as a person earnestly striving to solve a difficult problem. In a short time he said:

Mr. Winton: "It does look like that position is tenable, and the mere hope for the good results which must follow the attainment of the object, justify every effort that can be made to that end. But how can it be accomplished? Pardon the incredulity implied in the question."

Uncle Alf: "As I have said, by co-operation. The speculative price fixers have taught us a better lesson than they themselves practice. Their insatiable greed has divided them into two classes, each striving to plunder the other. One class bets that a future price will be so much, and the other class bets that it will not. Each class then exerts all its talent and power to win the stake which is the margin between the price bet and the price forced by the other side. And thus are the prices of farm products fixed. The farmer's toil is made a plaything of the most unscrupulous gamblers that ever staked fortunes upon games of chance. Equitable prices will be fixed without this spirit of greed or element of chance. The year's supply as determined by authentic crop reports uninfluenced by speculation, and the consumption as determined by reliable statistics, will be carefully considered and compared, and prices based upon these, and carrying for the producers a reasonable profit under average conditions, will be named as minimum prices for the crops of that year. This will insure stability of prices—at least prices could not go below the minimum."

Mr. Winton. "That is clear. I can readily see that if a board of trade, prompted solely by greed of gain, can name a price and force the world to ac-

cept it, a similar board, acting for the combined interest of producer and consumer on the principle of equity, can do the same. But such a board must have the support of the producers. This you say is to be secured by co-operation. Is it possible to get all the farmers to thus co-operate, and accept the price so fixed?"

Uncle Alf: "Perhaps not; nor is it necessary to the accomplishment of the object. As in political contests there is a balance of power which secures results, so is there a balance of power between production and consumption, between supply and demand, if you prefer to have it that way—between seller and buyer, and these are really the only parties that are interested in the price. This balance of power does not represent so great a force as is usually supposed, but it is master of the situation. Enough producers to represent this balance of power can be induced to co-operate, and it will co-operate. The American Society of Equity is the instrumentality which will bring it about. It is gaining strength all the time, and is proving the feasibility and practicability of its claims every day. It now holds the balance of power in leading crops of some of the producing centers. As a valuable auxiliary the Farmers' Mutual Benefit Association, once a powerful farm fraternal organization, has thrown off the errors of its earlier life, and, while retaining its excellent fraternal features, is heartily co-operating with the American Society of Equity in the battle. I believe even now almost won, to secure to the farmer the God-given right to put a price upon his sweat and toil investments and the products resulting therefrom. So this balance of power can easily hold its products, not for a speculative price such as the gamblers create, nor to starve a hungry world into excessive payments, but simply to keep the market steady, and secure justice and equity for a class that a world of greed has plundered almost ever since God proclaimed the law that man should eat bread in the sweat of his face. It can be done. It will be done. It must be done. It is an awak-

ening of humanity to another step in God's eternal march to better things for his children, another advance for civilization, the greatest material one ever yet made!"

Uncle Alf's kindly face was lit up with a glow of enthusiasm, and honesty and earnestness marked his every feature. Mr. Winton sat for a minute or more in thoughtful silence, as if in careful review of the field just gone over, or in heart communion with the God to whom he so often went for light and guidance. Finally a glow lit up his well-molded and strong features, and he rose to his feet, grasped the hand of his aged friend, and in measured but firmly expressed words, said:

"Brother Martin, it is enough. It is right. It is God's will. My duty is plain, and my course is clear. I must give my support to this movement, and my people must be awakened."

A benignant smile lit up Uncle Alf's already beaming face, as he reached to the folds of a mantle drapery, and took therefrom an A. S. of E. badge, which he fixed to the lapel of Mr. Winton's coat, and the two friends again seated themselves to discuss their plans for future work.

WHOLESOME LITTLE STORIES WITH A  
MORAL  
HENRY BURNS GEER

How the Law Butted In.

It was all about a boy—a little fellow only ten years old. His name was Ed. Perry, and his mother's name had been Sallie Perry; but the angels called her to the home above the clouds, and then he just had his papa and two married sisters. At least, this was all there were in the family for about a year—or till Mary Delzell happened along; and then there was from the very first a chance for an increase; and almost before Ed. knew it, he had a new mother. It seemed to suit Ed. all right; but his sisters got mad about it, for Mary was younger than either one of them. Still, they couldn't help matters, and so, they just had to make the best of it; but they "cut her," as they expressed it, every time they had a chance. And then, when a fever carried the father away, leaving the step-mother a heart-broken young widow, the sisters put on the war paint, for sure.

"Ed. shan't stay with that Mary Delzell a day longer than it takes for me to law him away;" Ellen, the eldest, declared.

So, they got up a habeas corpus proceeding, and filed a petition for possession of the boy. The judge of the Circuit Court granted the petition temporarily, and then he sent an officer to investigate conditions at the step-mother's home, and to gather information from disinterested neighbors. The evidence thus gathered was all in favor of the bereaved woman; and so the judge ordered the boy restored to her. Then there was a scene:

"She'll beat him to death, the vixen," exclaimed the sisters in concert. "Don't let her kill our brother, Judge."

Mary, with her soft blue eyes filled with tears, looked inquiringly at the judge. The look he returned made her feel that truth and equity were not yet dead. She read sympathy and confidence in the strong, honest face on the bench. The little boy laid his head in her lap, and patted her hand.

"She shall not harm your brother;" said the Judge; and then he did a remarkable thing, in entering a decree of his own motion. He ruled that the step-mother should be the custodian of the child; but that she was restrained by the court from punishing it in any way; and that, in case of disobedience, or any action necessitating restraint, and possible punishment, the mother should report to the court, and that august body would see that the necessary chastisement was properly meted out.

The widow understood; it was a sop thrown to the opposition to her parental authority, and it was received by the sisters as evidence of the justice of their petition. He was a wise Judge who sat on that bench. He reflected the wisdom of the "Third Power" in our body economic; which some people think incompetent to lift its affairs up out of the reach of contending factions—capital and organized skilled labor, and the blighting grasp of the stock gamblers.

Two Kinds of Bulls.

One of them, a great big hairy creature, with fierce horns, and a harrowing bellow. The other a very slick citizen, a member of that doubtful class known as "cotton brokers." The first bull was a Mexican by birth, a half wild, and recklessly brave creature, that was led into the ring in the amphitheatre to be prodded and goaded, and finally slain for the amusement of a people who claim to be civilized, but who still possess in a very strong degree, that trait of sav-

In Addition to the Regular FREE Premiums

the same Lion Heads will entitle you to estimates in our \$50,000.00 Grand Prize Contest, which will make some of our patrons rich men and women. You can send as many estimates as desired. There will be

Two Great Contests

The first contest will be on the July 4th attendance at the *St. Louis World's Fair*; the second relates to *Total Vote for President* to be cast Nov. 8, 1904. \$20,000.00 will be distributed in each of these contests, making \$40,000.00 on the two, and in order to make it more interesting, in addition to this amount we will give a

Grand First Premium of \$5,000.00

to the one who is nearest correct on both contests, and thus your estimates have two opportunities of winning a big cash prize.

Five Lion Heads cut from Lion Coffee Packages and a 2c stamp entitle you (in addition to the regular free premiums) to one vote in either contest:

Printed blanks to vote on found in every Lion Coffee Package. The 2c Stamp covers the expense of our acknowledgment to you that your estimate is recorded.

WORLD'S FAIR CONTEST

What will be the total attendance at the St. Louis World's Fair on July 4, 1904? At Chicago, July 4, 1893, the attendance was 283,273. For nearest correct estimate received in Woolson Spice Company's office, Toledo, Ohio, on or before June 30, 1904, we will give first prize for the nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize.....	\$2,500
1 Second Prize.....	1,000
2 Prizes—\$500.00 each.....	1,000
5 " — 200.00 each.....	1,000
10 " — 100.00 each.....	1,000
20 " — 50.00 ".....	1,000
50 " — 20.00 ".....	1,000
250 " — 10.00 ".....	2,500
1800 " — 5.00 ".....	9,000
2139 PRIZES.....	TOTAL, \$20,000

PRESIDENTIAL VOTE CONTEST

What will be the total Popular Vote cast for President (votes for all candidates combined) at the election November 8, 1904? In the 1900 election 13,859,553 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before November 5, 1904, we will give first prize for nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize.....	\$2,500
1 Second Prize.....	1,000
2 Prizes—\$500.00 each.....	1,000
5 " — 200.00 ".....	1,000
10 " — 100.00 ".....	1,000
20 " — 50.00 ".....	1,000
50 " — 20.00 ".....	1,000
250 " — 10.00 ".....	2,500
1800 " — 5.00 ".....	9,000
2139 PRIZES.....	TOTAL, \$20,000

4279—PRIZES—4279

Distributed to the Public—aggregating \$45,000.00—in addition to which we shall give \$5,000.00 to Grocers' Clerks (see particulars in LION COFFEE cases) making a Grand Total of \$50,000.00.

Complete Detailed Particulars in Every Package of

LION COFFEE

WOOLSON SPICE CO. (CONTEST DEPT), TOLEDO, OHIO.

DON'T BUY GASOLINE ENGINES

less to buy and less to run. Quicker and easier started; has a wider sphere of usefulness. Has no vibration, can be mounted on any light wagon as a portable. Weighs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 2½, 4, 5, 6, 8, 10, 12 and 16 Horse Power.) High-grade Gasoline Engines, 3 to 6 horse power—adapted for Electric Lighting, Marine and Pumping purposes. L&P mention this paper. Send for catalogue. THE TEMPLE PUMP CO., Manfrs., Meagher and 15th Sts., CHICAGO, ILL. Established in Chicago, 1859.

—UNTIL YOU HAVE INVESTIGATED—  
"THE MASTER WORKMAN"  
A two-cylinder gasoline engine superior to all one-cylinder engines. Costs for a light wagon as a portable. Weighs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 2½, 4, 5, 6, 8, 10, 12 and 16 Horse Power.) High-grade Gasoline Engines, 3 to 6 horse power—adapted for Electric Lighting, Marine and Pumping purposes. L&P mention this paper. Send for catalogue. THE TEMPLE PUMP CO., Manfrs., Meagher and 15th Sts., CHICAGO, ILL. Established in Chicago, 1859.

agery which causes them to rejoice in the suffering of a creature of the lower class. This bull was brave to an exceptional degree, and fought to the death with the Mexican Matador, who was paid to slay him in the presence of thousands of delighted Mexicans, with doubtless, a goodly sprinkling of native Americans in the audience. The contest was a grand one, and the man, who thought he had made the final death thrust, turned with a sense of pride and self-glorification, to receive the plaudits of his delighted auditors, when the bull, weak and dying as he was, struggled to his feet, and impaling the unguarded victim of his just wrath, on his magnificent horns, threw him backwards and fell with him, man and animal dying together, as a full sense of the horror of the situation settled over the spectators. There were some present, and many others who heard and read of the affair, who expressed more respect and sympathy for the bull than they did for the man.

The other bull which we have in mind, was an entirely different kind of a bull, and in a vastly different situation. He was not as honorable, nor as brave a bull as the first one, for he was never known to fight out in the open—all his methods being in secret, and his attacks underhanded. This latter bull was what is known as a "Cotton Bull," one of those fellows who have been playing toss and pitch with the cotton crop of the South during the last six months. He was known for a long time as a very successful bull; and it is said that that which he drew out, as his "rake off" in the unfair deals which he helped to a successful finish, amounted to many millions of dollars during the last year. So great was his success, that he became reckless, and gambled without hedging, which latter a wise gambler usually does. With his horns of finance, he tried to toss the cotton market higher, and higher, as all his bets were leading that way. But, finally, the load became top-heavy, and it fell over on him; and the greatest cotton gambler in Wall street, was crushed to the floor in defeat, and financial collapse. Like the first bull, he is trying to rise again, that he may make another thrust at equitable prices, and honest dealings. Let us hope he will never again be able to manipulate future transactions in cotton to his own selfish interests, for, verily, it would be much better for those who grow cotton, and the others who buy it for legitimate purposes, if he should die, in a financial sense, even as the other bull died, literally.

#### The Love of Brownie.

The strength of a mother's love is proverbial. Poets sing of it, artists picture it, and the records of history teem with the love and heroism of mothers—the mothers of men. But, Brownie was not a human. She was a little brown banty hen, and no one would have suspected her of loving, but then, we can't always tell where the evidence of love will make its appearance. It is like the measles, or scarlet rash, and is liable to break out anywhere. Brownie was a great layer, for her size, and her cute little eggs were brown like herself, for she wore feather leggings, which gave evidence that in the long ago, she had descended from a great big Asiatic ancestor. But Brownie didn't know or care anything about that. She did care, however, and fuss in her little hen-way, a good deal about the injustice of a little banty hen like herself, being despoiled of her own eggs, and given a half a dozen big old Plymouth Rock eggs, when her maternal instinct came over her, and she got broody, and clucked about, and finally took to the nest, and wouldn't budge an inch. But, Brownie was faithful, and when she had warmed those big eggs up, with her throbbing breast, and cast a soft feathery shield all about them to keep them warm, she seemed happy again, and kept up the vigil of waiting and of incubation, just as contentedly as if they had been her own little round eggs. She was a little home-body who loved the freshest crumbs whenever the table-cloth was shaken at the back door, and she seldom strayed away from the

yard. No one would have thought that the day would come when Brownie would become distrustful of Little Ned, her owner, for she seemed to love him too. And, let it be said now, that she was true to him, just as long as he was worthy of her trust. But, when those big old Plymouth eggs were turned into six fuzzy chickens; and Ned took them from Brownie, and gave them to a larger hen which hatched at the same time, Brownie lost confidence in him. In fact, she seemed to mistrust all humanity after that. She left the kitchen yard, and could not be found anywhere. In a day or two Ned missed two of the chickens that Brownie had hatched. The next day three more had disappeared, and on the third day, the sixth and last one was gone, and so was Brownie. Ned had put the big hen in a yard to herself, so that Brownie, nor any other hen could get to her. He had noticed that the day before Brownie had disappeared, she was running about the yard clucking and taking on in a great way; and now, she and all the little ones were gone. Now, Ned's mother, being a woman, had a mother's heart, and she said to Ned, who was just a little fellow:

"If you can find Brownie, son, I think you will find her chickens, too."

So, Ned started out to hunt her up, but he hunted in vain, she was nowhere to be found. And then Ned cried a little, and his mother, to comfort him said:

"I will look for her later in the day, you must get ready for school, now."

So she went out, after a while, with a pan of bread crumbs, and called "chick, chick, chick." But Brownie came not. Then she went down to the hog-lot, where the weeds had grown up tall after the hogs had left their winter quarters; and there she called again. Finally, the weeds began to shake, and directly Brownie with six fine, large Plymouth Rock chickens crept cautiously into view. Ned's mother was delighted. She spoke softly to Brownie and gave her the crumbs, and brought a pan of water to her, and the little hen-mother drank and showed all her little ones how to weeds. When Ned came home his mother told him of her good fortune in finding Brownie and her babies, and Ned rushed down there to see her and her chicks, but she was hidden in the weeds, and he could not coax her out, for she still mistrusted him, and never again would she come at his call. Had he not despoiled her of her young, and might not his intentions be evil again? She remembered how she had stood for hours and hours for three days, and called and called for her babies up by the kitchen yard, till she had finally gotten them all from the foster mother to whom he had given them, and now that she was secure in the big weeds, she would keep out of his reach.

And so, Brownie and her brood staid in the weeds, and Ned's mother went each day and placed the food and water for them, for she admired the little hen for her devotion to her babies, and down in her motherly heart she sympathized with the hen-mother that had manifested so great a devotion to her little ones; and so she was kind to her.

People who think that the eternal truths of equity are not implanted in every human breast are mistaken; for it is a fire that burns, not only in the soul of mankind, but reaches down and lifts up even the dumb creatures, which are likewise capable of discerning the difference between right and wrong—of equity and inequity.

#### HEAVES

HE feeding of undue quantities of bad, musty or dusty hay—or severe exercise after full feed is the usual cause of heaves in horses. Red clover in large quantities too, is especially apt to produce this disease.

**SYMPTOMS.**—Animal will show first symptoms after full feed and large draught of water if put to fast work. The onset of the disease is characterized by dry, hacking cough, which may appear several months before there is any other sign manifest, such as lifting of the flanks and distension of the nostrils. A very constant symptom is slight, frothy discharge from the nostrils and rattling in the head and windpipe.

Bronchitis is also very frequently associated and is characterized by moist, coarse rales or rattling. In severe cases the abdominal walls are lifted with each expiration. This is done to expel air from the lungs, which in health is done by the elasticity of the cell walls.

**TREATMENT.**—Feed with care, avoid dust of every kind. Horses suffering from this disease should never be permitted to gorge themselves with food or drink. Large quantities of bulky food should be avoided. Hay and grain should be made damp an hour or two before given. The following formula gives excellent results: Fluid extract of stramonium, fluid extract of lobelia, of each one ounce; Fowler's solution of arsenic, six ounces; mix and give a tablespoonful in half a pint of water on food, two or three times a day.

When relieved follow this treatment with regular, small doses of Dr. Hess Stock Food, the great horse tonic, and the horse will become strong and active, with a brilliant coat, and be immune from all the common ailments. His food requirements will be less; all his food will be eaten with relish, and all of it will do him good.

For every disease and condition for which Dr. Hess Stock Food is not recommended the little yellow card in every package entitles you to a letter of advice and special prescription from Dr. Hess (M. D., D. V. S.), who formulated Dr. Hess Stock Food. This stock food is endorsed by medical and veterinary colleges. If these colleges know of nothing better than Dr. Hess Stock Food for horses, cattle, hogs and sheep, it must be good. No unprofessional manufacturer can equal it.

Sold on written guarantee, 100 pounds, \$5.00;—except in Canada and on Pacific Slope—smaller quantities at a slight advance. Fed in a small dose.

Dr. Hess Stock Book, a standard work consulted and commended by veterinarians, will be sent free if you state what stock you have—how many head of each, what stock food you have used and mention this paper. Address Dr. Hess & Clark, Ashland, Ohio.

**RURAL MAIL BOX FREE** To the first person sending us the address of any one canvassing for petitions for a new route we will give an approved, galvanized, steel mail box free. **OAKES MFG. CO., Box 27, Bloomington, Ind.**

### The "Clipper" Well Drilling Machine

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

ENTHUSIASM IN OKLAHOMA

To the Editor of UP-TO-DATE FARMING:  
The thirty-two local unions of Blaine county held their first county convention here, on the 11th and 12th of March. The conventioners meet at the court house, Friday at 2 o'clock p. m., Bro. J. B. Winn was chosen chairman and Bro. Davis, secretary. The Editor of the Herald delivered an address of welcome. The chairman introduced Willard J. Conover, territory organizer, who entertained the members and visitors with reports of the wonderful growth and work of the American Society and its principles. The Saturday morning session was devoted to the business of organizing a county union and it was decided to have each local union in the county to select one delegate, and these delegates to meet here on Monday, May 24, and select one delegate for the State union. At 2 o'clock p. m. the different unions all formed in line in front of the postoffice and marched to the court house, where Chairman Winn introduced A. H. Allinson, the enterprising creamery man of Oklahoma, who gave a short talk on dairy farming. Territory Organizer Willard J. Conover was called upon and made an enthusiastic speech. We advise such meetings to be held in all parts. We hope that in a very short time there will be no farmers left who do not belong to the A. S. of E.

OKLAHOMA.

TO THE FARMERS OF MICHIGAN

Do you know that Michigan is now producing more than half the beans of the United States and the prices you realize are not at all equitable to the producer? If you will give the American Society of Equity the support it deserves and run the membership up to 60,000 or 70,000 in the State before another crop is produced you could certainly control the price and make the business pay a nice profit instead of being compelled to give the middle men and the speculator one fourth or more of your crop for the privilege of selling to him and supplying the consumer at an unfairly low price. Will you stand back and take no interest in this great movement which is destined to sweep the land and make farming a successful and profitable business instead of a life drudgery? When meetings are being held in your locality will you not show self interest enough to at least attend them and use some of your energy and influence to get others to attend or will you lie dormant and let some one else do the work and you reap your share of the benefits?  
J. P. LOCKWOOD,  
Howell, Mich.  
Subject for Discussion:—How Can Michigan Growers Make the Market Price of Beans?

CONGRESSIONAL FOLLY

The secretary of agriculture has asked Congress for \$125,000 to enable him to make experiments in cattle feeding, in search of a method by which beef cattle may be "finished" at less cost to the producer. This sum has been cut down to \$50,000, which is likely to be allowed.

Good citizens like to see wisdom in the ruling powers and will not charge them with folly, except in the most palpable case. Such a one is that referred to above. Experiments of that character are constantly being made by our agricultural colleges, and at the experimenting stations. But what stockraisers need is not so much, how to make cheaper beef, but how to get better prices for it. Cheaper production could not benefit the stockraisers, because the monopoly of price fixing stands between him and his customer, and can and does drive the price down as fast as he can cheapen production, keeping it only on a living basis.

On the other hand, cheaper production, though taught by the nation, could not benefit the beef-eater, because between him and the producer stands the monopoly of price fixing, which can, and does, hold the price of beef up, without any regard to cost of production.

If Congress, or Secretary Wilson, really desires to benefit these two classes, they can do so by abolishing the tollgate of speculation that has been erected between them. This done, the producer and consumer will meet on common grounds as seller and customer, recognizing mutual interests, and prices will be made in equity. To cheapen production without regard to the making of prices is simply widening the field of speculation and increasing monopoly's profits.

Again we appeal from the "powers," to the power that is rising in this country—the makers and first owners—who may, if they will, by co-operation, control the supply and thus compel the price on the market.

Subject for Discussion:—Can Stock-raisers Set Their Own Price on Cattle, and How?

SAVED THE AVERAGE FARMER FROM WANT

There is one thing that has saved many renters on the farm from actual want. In the past their wives have had a corner on enough poultry, eggs and garden-stuff to keep the family supplied with the necessities of life. If the trusts could have gotten their hands on these, many farmers would have come to want in the bad years. But every farmer ought to stand in line with the organization which will give him profitable prices on every crop he raises and thus enables him to make that home more comfortable and beautiful for the woman who has stood by him in the short years and made the living for him and his children.  
C. O. D.

Subject for Discussion:—Can Farmers Keep the Price of Eggs to 25c a Dozen the Year Round, and How?

GROWING FOR CANNERS

At a recent farmers' institute the canning industries were discussed and some figures were given that showed pretty clearly that the growers were the lambs and the operators the shearers. The A. S. of E. has work to do in this as in many other industrial fields. Producers

have long been the under dogs in the struggle, and we hope the dawn of Equity will shed light enough to lead them safely out to the upward path. Subject for Discussion:—Can the Growers for Canning Factories Set Their Price Instead of Taking the Price Made by the Operator?

NATIONAL FARMERS' CONGRESS

There will be held at St. Louis, June 16th to 20th, a National Farmers' Congress. Local Unions should arrange to send delegates. Further particulars will be given in future numbers, and on application to The National Union of the A. S. of E.

FORM 148

## LOCAL UNIONS.

A convention of the local unions of Johnson county, Arkansas, was recently held with most gratifying results. Among other business transacted, the convention fixed the prices on products for the local market for the year 1904. A committee was appointed to confer with a like committee from the United Mine Workers' Union, to establish reciprocal trade with them. The next convention will be held with the Coal Hill Local Union, at New Prospect school house, on May 27.

Mr. T. J. Woodard, of Clarksville, Ark., writes suggesting that an assessment of one dollar be made on all the members of the A. S. of E., to constitute a relief fund to be used in helping members of the Society who, from debt or necessity cannot hold their crops. His proposition of relief is to take the crop of the member needing assistance, pay off his indebtedness, sell the crop and put the money back in the treasury. He further suggests that when the membership becomes able, through the effect of increased prices to help themselves, then the money accumulated could be used in the erection of cold storage houses, etc. He would like to hear from other members on the subject.

F. M. Sanford, of Hancock county,

Indiana, writes: "I have been a reader of your paper for the last three years, and I think it gets better every month. I think every farmer ought to read it. I took your advice and got one dollar for my wheat, and I am now ready to sell some corn at fifty cents."

Phillip Will, of Lull, Penn., has this to say of "Up-to-Date Farming": "Your paper has done more good for the farmer than every other paper I ever read. I am a subscriber to three other farm papers, but when my time runs out I will have no further use for them. Not a word of encouragement do they have, but hard work and no pay. Those big farm papers tell us the foreign war and this and that, is the cause of the increase in price of wheat, but we know better."

T. L. Cooper, of Raleigh county, W. Va., writes: "It seems to me that the organization and co-operation of the farmers is the greatest question that today is confronting the industrial world. The strong man—the organized—has bound the weak—the unorganized—and taken away his armor, and spoiled his goods—the profits. Yet, can we not see a stronger man that is able, to bind the strong man and cast him out? This stronger man is co-operation in the form of organization as proposed by the American Society of Equity."

To the Editor of UP-TO-DATE FARMING:

Local Union, No. 3, Geary, O. T., in considering an article in UP-TO-DATE entitled "A Petition," respectfully submit the following:

"That as a mark of our appreciation as loyal citizens, we most sincerely thank our honorable and worthy (?) servants for their high grade ability rendered in our interest along their official lines, and

WHEREAS, Under our present system of high taxation the frequent and far reaching fluctuations in prices of farm products (which is ever to the detriment of the farmers), and

WHEREAS, we cannot conscientiously support the measure. Therefore be it

RESOLVED, That if our worthy Congressmen from the several states will bring about the necessary legislation in the interest of agriculture, putting the agricultural class on an equal basis with other classes and establish equitable prices, thereby increasing the farmers' income in proportion to their own, THEN, we will grant your petition. And be it further

RESOLVED, That a copy of these resolutions be sent to UP-TO-DATE and that a general invitation be extended the several other unions to express their sentiments in like manner."

Respectfully submitted,

P. Y. TONKINSON,  
G. W. OWENS,  
J. L. GABLE,

Committee on Resolutions.

**PRICE \$37.50**  
**Split Hickory Top Buggy**  
No. 4089—This is a good, strong, substantial buggy and not to be compared with the cheap, inferior buggies offered at the same or lower prices. Equal quality sells at retail for from \$50.00 to \$60.00. It is sold on 30 Days Free Trial, Satisfaction Guaranteed.

It is our leader in driving wagons and the best value on the market for the money. Full description in our catalog.

# HOW TO CO-OPERATE AND WITH WHAT BENEFITS

This is a great subject for farmers. Every other important business is organized and co-operating. There is more reason why farmers should co-operate than for any other class. Also, contrary to the general opinion, they can co-operate with as definite results and greater benefits than any other class. You can learn how in the new book,

## THE THIRD POWER, Farmers to the Front

J. A. EVERITT, Indianapolis, Indiana

This is the greatest book ever written. It should be read by every person in America, and particularly by farmers. Read a few extracts from many letters.

Here is indeed a great book for farmers and for all people interested in social problems from the farmer's viewpoint. \* \* The book is ably and forcibly written, displays an intimate acquaintance with agricultural conditions. \* \* It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in the pages. "THE THIRD POWER" ought to do much to stir up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties. \* \* I most heartily recommend this book, particularly to farmers everywhere.

THE AMERICAN CO-OPERATOR,  
Lewiston, Me.

It will create a new mind in the reader.

W. P. BRYANT,  
Corona, Cal.

\* \* \* "THE THIRD POWER" teaches the more humane idea that 'co-operation is the life of trade.' It is a sign that the thoughts and purposes of men are changing for the better. \* \* \* Thoughts and efforts are heaving the world's wide breast, and betoken coming changes that shall bring about better things for humanity. THE SUNDAY PATRIOT,  
Jackson, Mich.

"THE THIRD POWER" is worth ten times its cost. Its teachings are plain and explicit; its objects are noble and just; its truthfulness cannot be disputed. It is a book that should be in every home in the country.

H. F. MARCUSON,  
Harpers Home, Va.

"THE THIRD POWER" is ripe fruit—it is wheat without chaff. \* \* The manner of treatment is bold and original, with new and valuable thoughts scattered all through. \* \* The one opened question—that of united action and consequent success, is laid down at the farmers' feet, and the road is pointed out with no uncertain hand. It shows that a mighty effort is being made to get the forces on the farm in line for the great victory that is within their grasp, when they shall rise up as one man, and planting themselves squarely in the highway of iniquity, shall stand there as a great tower of strength—the greatest power on earth, the grand and new—the third power. A power that shall cause a parting of the ways; that shall obtain equity for the farmers because it is their right. "THE THIRD POWER" is a book that must be read to be appreciated. \* \* \*

HENRY BURNS GERR,  
Nashville, Tenn.

\* \* To my mind "THE THIRD POWER" has only one equal in late economic literature, viz. Edward Bellamy's "Looking Backward," which contains idealisms without immediate practicability. "THE THIRD POWER" may be called the "Looking Forward" for American farmers with all its ideals immediately practicable and possible. \* \* \* Many a farmer will be started to thinking on sound lines by its perusal. \* \* \* The principles it teaches must be known, understood and put in practice if farmers will come to their own, and agriculture be put on a sure footing for prosperity. It should be studied.

C. H. TAYLOR,  
Gillaspie, Va.

Will these statements start you to thinking? Will they cause you to act and secure the only work ever written than tells you all the troubles affecting agriculture; also, clearly points out the remedy and provides the plan for applying the remedy? All farm problems are solved by the Third Power.

It will be a crime to refuse knowledge and light on dark subjects that generations have waited for when it is within your reach. If the owner or operator of any farm will not rise above any sluggishness and indifference that may dominate him and reach out for this fruit of knowledge, we urge the boys to send for THE THIRD POWER so they may not live in ignorance and under the uncertain, vicious system that has prevailed with agriculture in the past. Or if the wife and girls want less of drudgery and more of pleasure and luxury in their farm home let them see that a copy of THE THIRD POWER is obtained without delay.

I would not be deprived of the valuable information contained in this "Gem of the Library" for any money consideration. I have boys now merging into manhood, and in this, if I can leave them nothing else, I will give them a legacy far superior to dollars and cents.

J. M. DUNLAP,  
Vicksburg, Ky.

I believe it is the most thorough and complete analysis of the present industrial condition, and in my estimation it proposes the most reasonable and practicable remedy for correcting the evils that now exist industrially, politically and economically, of anything I ever read.

R. R. SMITH,  
Howell, Mich.

It is the only exact presentation of the actual conditions effecting the farming class, ever written.

W. C. PITTMAN,  
Hillyard, Wash.

It is a strong and masterful portrayal of the benefits to be derived by farmers through co-operation.

GEO. G. WINANS,  
Hamburg, Mich.

It is just the right thing to set farmers to thinking. Your statements, statistics and deductions are beyond refutation.

EDWARD MURPHY,  
Crary, N. D.

\* \* \* It aims at something higher than merely mercenary results. It aims at giving agriculture its proper place amongst the noblest of industries, and enable farmers by co-operation to secure rights and benefits to which they are justly entitled, but which they can never expect to gain without organization.

THE JOURNAL,  
Indianapolis, Ind.

"THE THIRD POWER" is prompted by a desire on the part of the author to have farmers reap the profits of their toil instead of the speculators and brokers. The manner of treatment is bold and original. The style is fresh and interesting. \* \* \* The entire book possesses the deepest interest and value, not only for the farmer—the class most deeply concerned—but all those who are interested in social problems.

AGE HERALD,  
Birmingham, Ala.

It is a plain, straightforward, forceful, convincing argument, and since an opinion is about, that either a farmer's union or a land trust is the inevitable outcome of present economic tendencies, capitalists and financiers as well as farmers and labor organizers are interested in looking the matter straight in the face. The ordinary single handed farmer, \* \* \* is "sweated" in a manner not dissimilar to the slaves of the sewing machine. The producers of food and the makers of clothes—that is to say the two most indispensable laborers in the organization of society, and therefore theoretically the most independent—appear to be the most oppressed; they can earn only a bare subsistence. \* \* \*

BROOKLYN EAGLE,  
New York.

I cannot find words to express my opinion of "THE THIRD POWER." To say that it is the best work on the agricultural industry I have ever read, but

feebly expresses my opinion of it.

J. B. THORBUEN,  
Sec. State Board of Agriculture, Guthrie, Okla.

"THE THIRD POWER" opens up a new field of literature. The object of the book is the betterment of conditions now existing among farmers of America. The argument, though radical, is clear, forceful and concise. The book makes interesting reading. That the author has given much attention and study to the questions under discussion is shown in the way he has handled the subject. \* \* \* He does not write modestly but makes his assertions boldly and in language simple but strong. His statements may be practical, but they are decidedly startling. Laying all this aside, it is safe to assert that the book will be read with interest.

ADVERTISER, Newark, N. J.

"THE THIRD POWER"—The attention of every person interested in agriculture should be directed to this work. \* \* \* The present discouraging conditions of agriculture are forcefully discussed. The benefits of industrial co-operation are clearly and logically presented, and the opportunity is given to every farmer to throw off sluggishness and indifference, and assist in promoting one of the greatest and best movements of the age. The rapidly increasing popularity of the society (which "The Third Power" represents) indicates that the commercial emancipation of the long ignored and down trodden farmer has begun and that the rights of the ruralists will not only be defended but respected.

TIMES, Albany, N. Y.

"THE THIRD POWER" is apparently published in the interest of the new farmers' movement, The American Society of Equity, though not in a narrow sense. It is really a general plea for justice to the producer of what is most important for man's material welfare. Mr. Everitt's book is of special interest, as representing the spirit of the hour in favor of co-operation for mutual protection, with special reference of course to the farmer.

BROOKLYN TIMES,  
Brooklyn, N. Y.

There has been much written on the benefits of organization and co-operation by farmers in late years, but "THE THIRD POWER" is the most ambitious effort yet made as well as the most complete. It is written with a thorough understanding of the subject in hand. \* \* \* In the space allotted for review it is impossible to set out even briefly the line of argument the author follows, but the reviewer can say without over-stepping proper limitations, that the book is one that every farmer can read with profit, and one that politicians would be wise to read and ponder.

SENTINEL, Indianapolis, Ind.

"THE THIRD POWER" is well written, an intelligent, earnest appeal to the agricultural class to rouse themselves and become the power in the world that their labor entitles them to. There can be no manner of doubt that the place of the practical farmer in the general economy of things is not what it ought to be, and not what it might be. The only reason they are not what they might be is because he has not taken it. EVENING TELEGRAM,  
Philadelphia, Pa.

## Veterinary Department

[Conducted by C. C. McCue, Akron, O., to whom all communications should be addressed, before the 1st of the month to insure insertion in the following month's issue. All subscribers are invited to submit questions. All communications must be signed in full, not for publication, as only initials will be used, but to show good faith.]

**Blood Warts.**—Would like to know a sure cure for blood warts on mules legs. One on knee and one on lower joint.—J. H., O'Fallon, Ill. Take a wax thread and tie around the neck. At least three turns being made and the ends being fixed by passing them beneath the last preceding turn of the cord, so that they can be tightened day by day as they slacken by shrinkage of the tissues. If the neck is too broad, it may be trans-fixed several times with a double threaded needle and then be tied in sections. After you have tied off the warts, burn them down with stick caustic, until you get the roots burned out. Keep a good ointment well rubbed in, all around warts during treatment.

**Barren Mare.**—Had a ten-year-old mare that had a colt two years ago. She did not clean properly and had a discharge for some time, which apparently left her. She is now in a similar condition. Have bred her for two seasons and get no results.—N. E. K., Waupun, Wis. You may never be able to get your mare in foal again. She has leucorrhea. Inject her daily, as follows: Take one quart of soft warm water, and put into it a half ounce of cura powder. Shake well and use quickly, before powder gets time to settle in water. You may probably get discharge stopped. If so, she may breed.

**Dysentery.**—Had a young mare taken sick with diarrhea, and died after four days sickness; did not seem to be in much pain, but wanted lots of water. Tried a number of remedies with no results. What was the cause of death? Could she have been saved?—W. S. P., Shelbyville, Ind. The treatment that would most likely have saved your mare would have been the following: One pint of raw linseed oil and a few hours later, one ounce doses tincture of opium every hour until dysentery ceased.

**Abscess.**—One of my milk cows has an abscess on the base of ear; has been that way several days. Do not know what caused it, unless she struck her head against the manger.—H. O. P., Hope, Ind. The abscess was probably caused by a blow of some kind. Make an opening at lowest point of abscess, with sharp knife, with small blade. Press out all pus, and syringe it out with hot water, not hot enough to scald. Work in an antiseptic powder twice a day. Consult advertisements in this paper for such a remedy.

**Depraved Appetite.**—Some of my cattle are suffering from a peculiar malady. They seem to enjoy licking the ground, gravel and the dung of other cattle. They are poor in flesh; their hair is rough, the milk is thin and watery. They are restless and they frequently bellow.—P. H. S., Terre Haute, Ind. Your description leads to what is called a depraved appetite or Pica. This may be caused by feeding bad food, which has

undergone changes, which lessen its digestibility and impair its nutritive value. Feeding on low, swampy land become predisposed to it. You should improve the process of digestion, and supply your animals with a sufficiency of sound and wholesome food. Keep plenty of salt where your cattle can get it at all times. Rock salt is preferable. Obtain a guaranteed condition powder for cattle and feed it regularly for three or four weeks to the effected cattle. If you are in doubts as to the kind, write me and I will prescribe.

**Sprain of Shoulder.**—Have a young bull that is lame in left shoulder. Noticed it the latter part of month. It does not get any better. Think at times it is worse. He slipped and fell a short time before I noticed lameness.—L. I. G., Le-Moines, Ia. Tie your bull up to keep from using injured leg. Feed him soft food and keep his bowels open. Use hot applications for a week. If he shows no improvement, clip hair off injured part, about four inches square, and rub in the following preparation: Bin-Iodide of mercury one part, hogs lard three parts. Tie head, so as to prevent his licking blister, until the fourth day; on the fourth day, rub the blistered part with a good ointment, and every day thereafter until the scabs fall off. By this time you can turn him loose in large box stall or barn yard, for gentle exercise. Continue the use of ointment once a day until haired over. If the lameness still remains, let him rest for twenty days and repeat the above treatment.

**Troublesome Sheath.**—Will you please tell me what to do for a horse that has a mattery discharge from his sheath. What is the cause of it? Can it be cured? I don't know how long he has been that way, as I just bought him. He seems in good health otherwise.—B. G., Mansfield, O. Wash out sheath with soft warm water and castile soap. Work out all hard pieces. Do this very gently so as not to cause irritation. After sheath has been thoroughly cleaned, get a good ointment, take quantity about size of hickory nut and rub thoroughly around penis and inside of sheath. If there are any ulcerations that are discharging, use an antiseptic powder to dry them up; then continue the ointment treatment three times a week, and wash out every two weeks until well.

**Question.**—I have a mare seven years old this coming spring. Bred her to Jack, spring she was four years old. She lost her colt the following October, that being her first colt. She has been cross to horse ever since. Could I give her any kind of feed or medicine that would bring her in heat. Is now in good flesh.—A. H. B., McKenzie, Tenn. Reduce your mare's flesh. If she has been working hard, lighten it one-half. If she has been doing little or no work, work her every day. Take her to horse at stated periods. If you can get her to breed to horse first year, raise a colt, and the following season breed her to Jack. Be careful not to work too hard after breeding her.

**Indigestion.**—Will you please state symptoms and treatment of indigestion in a horse, and oblige a subscriber.—N. I. M., Decatur, Ill. Indigestion is usually first noticed by the irregular appetite. At times he will have a ravenous appetite and again will not look at feed. At

## Sharples Tubular SEPARATORS

### WHICH?

Tubular	or	Bucket Bowl?
Simple Bowl	or	Complicated?
Izzers	or	Hasheens?
Right Now	or	Were Once?
Walst Low Can	or	Head High Can?
Self Oiling	or	Oil Yourself?
Wash 3 Minutes	or	Wash Thirty?
All the Butter	or	Most All?
Best Butter	or	Medium Butter?
Tubular	or	Bucket Bowl?

### WHICH DO YOU WANT?

Tubulars are different, very different. Just one Tubular—the Sharples. All the others make bucket bowls—can't make Tubulars because they are patented. Ask for catalog B-186.

Sharples Co.  
Chicago, Illinois

**INTERNATIONAL STOCK FOOD CO., Minneapolis, Minn., U. S. A.**

times he will have a desire to eat unusual substances. The bowels may be loose one day and constipated the next; grain and hay passing from him undigested; passing wind with foul odor. The skin may present a harsh, dry appearance. When the above conditions arise, we should first make a careful examination of the food; its quality, quantity, condition and time of feeding. The water must be carefully scrutinized, also the condition of the mouth and teeth. If the teeth are sharp or irregular, they must be cared for; if decayed, extracted. If the cause is attributed to rapid eating or bolting of food, then the manger and feed box must be fixed to avoid this trouble. If there is a tendency to distension of the stomach and bowels with gas, the following tonic will be found very effective: Baking soda, powdered ginger and powdered gentian, equal parts. Mix thoroughly and give in heaping tablespoonful doses twice a day before feeding. Either give in form of a powder or as a drench.

**Catarrh-Grub.**—Some of my sheep discharge from nose and are very weak.—P. L. D., Des Moines, Ia. Examine for grub in head. Give ½ dram sulphate iron in feed twice a day.

**Hoven.**—Have some cattle that bloat badly. A veterinary has to be called frequently. Please explain treatment.—I. L. J., Cedar Rapids, Ia. You should have a trochar to puncture them in event that milder remedies should fail. A cathartic is good in such cases. Epsom salts or any good physic. Injections should be given frequently.

**Question.**—Feed was scarce here one season and I could not feed enough to keep cattle fat. Their calves each year after I quit feeding them milk get thin, growth stops, and coat is rough. In their two-year-old form are as small as yearlings. I feed whole grain and hay. They are also troubled with lice. Also are troubled with a cough.—M. C. J., Clay Center, Kan. Would recommend feeding your cattle dampened ground feed, using a good condition powder. The cough is probably caused from dry feed. For lice, take coal oil one part, hogs lard three parts, mix thoroughly, and give your cattle a thorough greasing from the point of their nose to tip of tail. Do not get it into eyes. It will smart if you do. If the first treatment does not kill the lice, repeat it in two weeks. Keep your cattle in good healthy shape and the calves will be in good shape.

#### TREES WORTH PLANTING

The Galbraith Nurseries, Box 39, Fairbury, Nebr., whose advertisement has been running in our columns, is a reliable, satisfactory place to buy all kinds of trees. We have reason to know that they have an especially fine stock ready for digging and immediate delivery. Strong rooting, vigor of growth and hardiness is well known to be a Galbraith characteristic. The Galbraith prices are most reasonable. They make a specialty of grapes and all kinds of fruit and shade trees. If you are going to plant this spring, make sure of getting the Galbraith catalog before making up the order.

#### A GRATIFYING REPORT

It is indeed gratifying to the editorial management of Up-to-Date Farming to see the announcement from Theodore Noel Company repeated for the 15th time in this issue of Up-to-Date Farming. The offer made by the company is an exceptional one, unlike anything made by any other house advertising in American publications, and it is necessary that it be accepted by people of good intelligence and of strict honor and integrity, as the firm depends upon the reader's honor for payment of the money if the reader is benefited. They report to the editorial management that they have succeeded in benefiting and curing hundreds of ailing readers of Up-to-Date Farming, and that such readers are very prompt in their payment, which leads them to again make the offer in this edition and use a full page in doing so. Every reader who has not accepted should send to the company for a package of Vitae-Ore by all means. The company

## SAVED A BILLION DOLLARS TO THE DAIRY FARMERS & BUTTERMAKERS OF THE WORLD

That's what the DE LAVAL CREAM SEPARATORS are estimated to have done since their invention twenty-five years ago. From creamery to farm their use has spread all over the world, until now more than 500,000 machines are in use. No other invention ever did nearly so much for Dairying.

Have you had your share of this great saving? If not there could be no better time to get in line for it. Don't let any more of it go to waste.

Send for a catalogue and name of nearest local agent.

Smooth galvanized wire, 100 lbs. to bale; gauges, 11 to 14 inclusive; lengths, up to 250 ft.—per 100 lbs., \$1.40. New annealed wire continuous lengths, 11 to 16 gauge, \$1.90 per 100 lbs. Barbed Wire, 100 lbs., \$2.35.

## POULTRY NETTING

150 lineal ft. to bale; 12 in. wide, 50c—other widths in proportion.

## Doors, each \$1

Like cut. Our catalogue contains list of Lumber, Sash, Doors, Windows and Building Material of every kind. We can estimate on your mill work and all requirements. Also a bath room outfit complete consisting of closet, bath tub and wash stand, for \$37.50.

## Plumbing Material

**Furniture from Weddell House Cleveland, Ohio**  
We bought the furniture and fittings complete of this well known hotel. It is of highest quality and sold at such low prices as to be within reach of all. We have a complete catalogue containing list of this and other material from high class Clubs, Hotels, etc., purchased by us.

## New Kitchen Chairs 45 Cents Each

We bought 1000 dozen of them; they are brand new and the strongest chair on the market. Have three spindles, made of hardwood, scooped seat, nicely finished. Price each, 45 cts., in lots of six. Also have a quantity same as above striped and decorated and much better finished. Price each, 50c., in lots of 6. We also handle new furniture of every kind, bought at *Sheriffs and Receivers'* sales.

## Farm Forges

**\$4.75 and up.**

We bought several carloads of new Portable Forges at low price. **HORSESHOES**, per keg, \$3.00. Horse-shoe Nails, per lb., 8c. Post Drills, \$4.85. Blacksmiths' Tools of every kind. **MIXED BOLTS**—a handy assortment—per lb., 3c.

# Up to Date POULTRY

The editor of this department will be glad to hear from Up-to-Date readers. Address Poultry Department, Up-to-Date Farming, Indianapolis, Ind.

## FEEDING AND CARE OF YOUNG GEESSE.

Geese are a paying investment. They are free from many of the diseases so common to other fowls, having no lice, very little trouble to raise, and require but little feed until time to fatten for market. Rearing goslings or "green geese" as they are termed when of marketable age is attracting much attention at the present time. The early birds are much more valuable than those hatched later because they mature earlier and are consequently ready for market much sooner.

The first and second eggs give the strongest goslings and should be set under hens. Select those of medium size, fluffy and of assuredly motherly instincts, giving them from five to seven eggs each. The third laying which completes the product of the season may be hatched by the goose. Eleven eggs are usually sufficient for a setting, though some geese will cover twelve or thirteen.

After they have been incubated from five to eight days it is well to test them and remove those which are not fertile. Thirty days are required for incubation and upon the twenty-fifth day the eggs should be taken from the nest and placed for about one minute in water heated to a temperature of 104 degrees F. The earlier they are set in the season the better, as heat is bad for the young goslings.

The hen should not be disturbed at hatching time. If uneasy, given her food upon the nest, as it is most important at this period that the moisture generated by the newly liberated goslings does not escape, it being essential in aiding the remainder to free themselves from their shells which would be toughened if exposed. Some hens do not take kindly to such unnatural offspring and may kill the youngsters. In cases of this kind, remove the goslings as they hatch and return them as soon as the hen accepts the situation.

When the birds are thoroughly dry, or about twenty-four hours after hatching, remove the hen and brood to a large, roomy coop and pen them for a week.

Where the goose has the brood a pen made of boards a foot wide will suffice, but a hen must be enclosed.

### Feeding.

The first feed for goslings should be a mixture of soaked bread, cornmeal and bran fed in a crumbly condition. Provide sods, if the coop is not on grass, also a shallow dish of water, partly filled with stones to keep the youngsters out. Pulverized charcoal and sand should be mixed with the meal to supply grit. Keep the birds as dry as possible, not allowing them to go into the water until fully feathered, unless the weather is quite warm.

After the third day give a ration composed of equal parts by measure of bran middlings and cooked vegetables. This feed is given them three times a day, until they are five weeks old. After this time feed a mash of one-third cornmeal and two-thirds bran. If the fowls are to be fattened feed one-half bran and one-half cornmeal. Boiled hominy and rice form a very good feed for goslings. Always provide plenty of grazing but never feed corn.

The coop in which the goslings are confined at night should be bedded daily with cut straw, otherwise it will become damp and the young birds will suffer from rheumatism. During the day shade must be provided as goslings are liable to be overcome by heat and may die from its effects.

Many find it difficult to distinguish the sexes. The surest way is by their voices; the female has a hoarse voice like she had a cold while the male makes a clear loud noise. Then the gander holds his head higher than the females and should have a "curl" at the tail.

### PROFIT IN EGGS.

It is well known that there is a regular rise and fall in the price of eggs, which are highest about Thanksgiving to Christmas, and lowest about May and June. The high prices of early winter being due to the scarcity of eggs at that time, the old hens not having recovered from the effects of the molt and the bulk of the pullets not having begun to lay.

April is the best month for hatching the American, and May the best for the Mediterranean varieties. Six months of good steady growth will bring Plymouth Rock and Wyandotte pullets to full maturity, and pullets of these breeds hatched in April, will begin laying in October, and in November and December will be shelling out a full quota of eggs. Similarly Leghorns and Minorcas hatched in May will reward us if fed for growth.

### WORK FOR THE MONTH.

Feed your breeders plenty of meat, ground bone and shell, and if confined give them green food in abundance. Set all the hens you can this month and hatch the birds that will be in good shape by fall. Give the old hen a good meal of corn before placing the chicks with her. Keep before the chicks fresh water, powdered charcoal, sharp grit or coarse sand.

### NOTES.

A good game hen will whip a rat or a hawk and fight anything that molests her brood. A few on the place are good as they seldom have bad luck in raising a family.

The average market weight for broilers, dressed, is three pounds to the pair. The best selling season for roasting fowls is from March to August. Prices are then best. The weight should be from four to six pounds.

Do not ship the roosters and hens in the same crate. If you do, expect your returns on the same basis as is paid for old cocks.

Never carry a fowl by the legs with its head hanging down, nor a duck by its neck.

Either eggs are being used more largely or the American hen is not doing her duty. At any rate eggs are wanted and they bring spot cash.

Send for Farmers' Bulletins 51, 64, 141 and 182. They will inform you of the possibilities and details of poultry raising. Address Secretary of Agriculture, Washington, D. C.

USE

## Turkey-lene

The Wonderful Antiseptic Remedy and Tonic.

Thousands say "It's Marvelous."

Turkey-lene prevents disease, strengthens, tones and invigorates the birds and keeps them absolutely free from vermin.

Long experience enables us to give valuable practical advice on every phase of Turkey raising. This advice we give free to every purchaser of Turkey-lene.

Send 60c. by registered letter or money order and we will send prepaid enough Turkey-lene for the broods of two hens with full directions how to profitably raise every one of them.

THE NATIONAL TURKEY-LENE COMPANY, Dept. 128, Washington, D. C.

**It's Easy** to get rid of lice on hens, horses, sheep or cattle with Lambert's Death to Lice. It's great for sitting hens. Kills mites and lice without injury to stock. Sample 10c; 100 oz., \$1.00. "Pocket Book Pointers" free. D. J. LAMBERT, BOX 400 APPONAUG, RHODE ISLAND

**GREIDER'S FINE CATALOGUE** of Standard bred poultry for 1904, printed in colors, fine chromo, suitable for framing, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents. B. H. GREIDER, RHEIMS, PA.

**\$12.30 For 200 Egg INCUBATOR**

Perfect in construction and action. Hatches every fertile egg. Write for catalogue to-day. GEO. H. STAHL, Quincy, Ill.

Readers are invited to ask questions. Address Orchard Department, Up-to-Date Farming, Indianapolis.

### BORDEAUX MIXTURE.

Bordeaux mixture is, and will remain, the most important fungicide for general use against fungus diseases of fruits and farm and garden crops, such as apple scab, plum leaf spot, potato mildew, cucumber mildew, etc. There is such a constant demand for information as to how best to make and use bordeaux mixture that this subject is treated more fully than any other in the bulletin.

The essential ingredients for making bordeaux mixture are freshly slaked lime and copper sulphate solution. The fungicidal value lies in the copper.

The lime is added only to prevent injury to foliage and to make the mixture more adhesive and more easily seen after being applied to the foliage. Lime water will not do. A very thin white wash made from lime and water, commonly called milk of lime, is needed. The relative amounts of lime and copper sulphate which are used may be greatly varied because a great excess of lime may be used without injury to foliage, but it is absolutely essential that enough lime be used, or injury to foliage will surely follow. It is not safe to use less than two-thirds as much lime by weight as of the undissolved copper sulphate; that is to say, in the proportion of 2 pounds of lime to 3 pounds of copper sulphate.

**Excess of Lime.**—The question will be asked: Why use any excess of lime? The reply is that under certain weather conditions an excess of lime tends to prevent injury to the leaves by bordeaux mixture; as it also does when certain arsenical poisons are added to the bordeaux mixture. Fresh interest was given to the question of the best proportion of lime to copper sulphate because of the widespread injury to bordeaux-sprayed foliage in 1902.

Heretofore two pounds of quicklime have been recommended for neutralizing three pounds of copper sulphate; and this proportion abundantly satisfies the ferrocyanide test. In view of the experience of 1902 it appears that a larger proportion of lime is desirable. Under ordinary circumstances it seems best not to use a greater weight of lime than of copper sulphate since it has been shown that a great excess of the lime tends to render the bordeaux somewhat less efficient against fungi. A thick mixture cannot be sprayed so readily, neither can it be applied so uniformly, as a thinner one. The solid particles do not stay in suspension so well. For instance, in a mixture made according to the normal formula and poured into a glass cylinder 15 inches high, the solids settled between three and four inches in one hour. In a similar cylinder containing a mixture made with a large excess of lime the solids settled between five and six inches in the same time.

### DAMAGE BY FREEZING.

It is generally thought that the intense cold throughout the north, east and many portions of the west has destroyed many peach and plum orchards. As yet the damage can by no means be estimated, as the trees thus affected will often carry through to the full blossoming stage and then die.

The best that can be done is to watch developments carefully. Where tops are not frozen clear back to the bodies, many may doubtless be saved by cutting back to and a little beyond the healthy wood. With young healthy trees of three or four years growth, when the bodies have been injured, many may probably be saved by cutting off below the snow line and painting the stub heavily. Many trees thus handled will sprout above the bud, and by careful handling will still make good trees. It is probable, however, that the damage is far reaching and many orchards will have to be dug out and started anew. I see nothing for it but that the stone fruits will be scarce and high, and those who have them will obtain high prices. So the caution is to care well for what trees have been spared and at once set to work for new plantings.

If damage has been as widespread as many predict, it will take years to build up the enterprise to its past proportions, so the wise course is to begin at once, and if trees must be replaced do it now and get in on the ground floor. We certainly hope that the matter has been exaggerated, and that the real injury is far less than has been estimated. But at all events, much planting will be done and we should be satisfied with nothing less than the very best varieties and the choicest of stock. Breed up the fruit as well as the live stock. This can often be done with the material right at hand. Many have trees, vines or berry bushes that are far superior both in bearing and table qualities, to those of the same variety right around them. These are the ones to propagate from, and are often far better than those procured from the nursery.

Change of varieties is often risky, for a success under certain conditions will often prove a failure under others. So if we have tried and tested sorts that have succeeded well under our surroundings, the safer way, generally speaking, is to breed up from them, and start slowly with untried sorts. Give the new sorts a chance in an experimental way, as valuable results will often materialize.

### FRUIT ALL THE YEAR.

To the Editor of UP-TO-DATE FARMING:

In reading your paper of January first, page 22, on Commercial Orchards, I was impressed with what the writer said that farmers could have fresh fruits from July 5th until May 15th. We live on a small farm, something less than a hundred acres, down here in Virginia and make no effort to grow fruit for market and we have fruit from June until in late April. Our early strawberries come in before the middle of June, then the late ones and before they are gone the cluster cherries and before they are gone comes raspberries, goose berries, currants and blackberries. Then in July comes the early apples and plums. We have the early harvest red astricans and strawberry apple, that affords eating and cooking apples. Our Wild Goose plum has been bearing for twenty years and has never failed entirely until 1903, and nearly every year it has had fruit enough for all our neighbors and some for the boys.

Later in July the peaches begin to come in and continue until late September. Then there is the early pears and the fall or winter pears, fall apples, the quince and damson, then the winter apple of which we like the Wine Sap best. While our orchards are not large there are very few years but that some has wild fruit. The Wine Sap apples nearly always bear some fruit; the same of the Keifer pear, cluster cherry and the strawberry, are all apt to have some fruit every year.

F. D.

How many have a running stream or pond where watercress will grow. Such ones are fortunate, for the culture is profitable and the cress is growing in popularity.

**WIRE & NAILS** Direct from factory to consumers. Write for prices. E. A. WEIMER, Oakland, Maryland.

## Saw Mills

The DeLoach Patent Variable Friction Feed Saw Mill with 4 h. p. cuts 2,000 feet per day. All sizes and prices to suit. Shingle Mills, Edgers, Trimmers, Planers. Corn and Buhr Mills, Water Wheels, Lath Mills, Wood Saws and Hay Presses. Our handsome new catalogue will interest you.

DeLoach Mill Mfg. Co., Box 850, Atlanta, Ga.  
114 Liberty St., New York, N. Y. 614 Third St., St. Louis, Mo.

## AGENTS WANTED

Our scales make a good line with specialties, implements, machinery, mill supplies, nursery stock, separators, foods, etc. Fine catalogue, liberal contract, no expense, no experience. Write for full particulars. Act Quick.

OSGOOD SCALE CO., Binghamton, N. Y.  
231 Central Street.

## GROW SWEET POTATOES

There is a large and increasing demand for good sweet potatoes. Farmers anywhere can grow them with good success. Anyone with a little ground can start

### A PROFITABLE BUSINESS

By my complete plan for cultivating and storing sweet potatoes. Full illustrated book about the business from start to finish 50c postpaid. Money back if you want it.

BRYAN TYSON, Box 213, Carthage, N. C.

## FREE TO ALL!

Send for our 120 page Illustrated Catalogue of PLANTS, SHRUBS, FRUIT, SHADE AND ORNAMENTAL TREES, SEEDS, ETC.,

mailed free to any address. 60 Greenhouses and 30 acres well stocked.

Address, NANZ & NEUNER, Louisville, Ky.

## PANSY SEED

### 12 PACKETS 15C

12 PACKETS best Large Flowering Pansies worth 60 cents at the very lowest prices and so by many seedsmen at 10 cts. a packet, \$1.20. The following are the varieties by colors. All are large or giant flowering:

Spotted Yellow, Spotted White, Fancy Striped, Rosy Lilac, Fiery Red, Fire King, Sky Blue, Silver Bordered, Mammoth Butterfly, Dark Margined, Black and White, Giant White.

We make this offer to introduce our choice flower seeds into thousands of new flower gardens. You've never been offered as great a bargain by an old established reliable seed house before. Simple directions for sowing and cultivating on each package which will guarantee you the finest bed of pansies you ever beheld.

Enclose a dime and a nickel in a plain letter and we will mail them to you at once. If you want any more seeds, flower or vegetable or corn or potatoes for the farm or bulbs or anything for the garden and farm, ask for our catalogue, 164 pages. Address

J. A. EVERITT, Seedsman, Indianapolis, Ind.

## Spavin

Bone Spavin, Bog Spavin, Ringbone, or any kind of blemish—we have what you need to make a certain cure. Guaranteed always—money right back if it ever fails.

### Fleming's Spavin Cure (Liquid)

for the soft bunches—Paste for the hard ones. A 45-minute application and the lameness goes. Lots of blemish information in the free book we send.

## Fistula and Poll Evil

Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in fifteen to thirty days.

Fleming's Fistula & Poll Evil Cure is a wonder—guaranteed to cure any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. Write for our free book on diseases and blemishes of horses.

FLEMING BROS., Chemists,  
307 Union Stock Yards, Chicago, Ill.

## SWEET POTATOES.

### Some New Points of Value.

The quality of land and the preparation thereof are the first things to be considered. A sandy loam, well supplied with humus, is considered best for sweet potatoes. If deficient in humus, as most of the old lands South are, it will be well to first grow and turn down a legume crop, preferably cow peas.

If the land is sandy, spring preparation will answer for cow peas, but if not sandy, the land should be well prepared by thorough early plowing.

A few weeks before the time for planting cow peas arrives, lay off into drills three and a half feet apart and deposit therein 600 pounds per acre of a fertilizer made by mixing 400 pounds of muriate of potash with 1,600 pounds of acid phosphate; mix the fertilizer well with the soil.

At the proper time open the drills and plant cow peas at the rate of about twelve pounds per acre. Cultivate thoroughly from start to finish; if possible permit no grass to mature seed.

Soon after maturity, say after frost, turn down the entire crop of vines and let remain until early spring.

### Cutting vs. Draws.

Proper tests have shown that, other things being equal, vines cut into lengths of three leaves each and planted with one leaf or joint above ground, will yield about 36 per cent. more potatoes and of better quality than draws will.

### A Hot Bed Superseded.

If a hot bed be employed in growing vines for cutting purposes, it is impractical to give the vines the necessary distance. The plan below gives ample distance and will also produce plants sufficiently early to yield a full crop of potatoes. Hence, it is believed that the new plan will eventually, to a great extent, supersede hot beds, especially in the middle and southern portion of the United States. The advantages of the new plan are such that it can probably be profitably employed throughout the northern portion of the sweet potato belt.

The sweet potato is a semi-tropical plant. Therefore, the ground should be warm when the plants are set. Proper tests have shown that plants from a hot bed, set in cold soil, did not do so well as those set later from a cold bed. The latter commenced running first.

### The New Plan for Bedding.

Construct a bottomless box of proper size to suit the quantity of potatoes; it may be two and a half feet deep. Procure a proper quantity of fine stable manure, wet with water and fork until uniformly wet, but not to saturation. Let remain thus until a gentle warmth is developed. Then place in said box to the depth of about eighteen inches and settle; if packed too firmly the manure will not heat. Place on the manure corn cobs or other coarse litter to the depth of a few inches. Then the potatoes to the depth of six to eight inches and finish with a covering of wet cloths placed on the potatoes. Water (not too cold) should occasionally be poured over the potatoes. If the manure gets too warm, reduce the temperature with water. Use a thermometer. Heat of manure may range from 70 to 90 degrees.

In a few days sprouts will appear. The potatoes should then be taken out and bedded as follows: Construct drills in the open air three to four feet apart. Fertilize the drills properly and mix with the soil. Then place the potatoes endwise, one row for each drill, leaving a space of one to three inches between the ends. Cover with about one inch of soil and finish with one and a half inches of well rotted chip manure. Treated as above, the potatoes are not apt to rot in the drills; the sprouting process will prevent.

## Cultivation.

Soon after sprouts appear above ground, cultivation with plow and hoe should be commenced and continued so long as plants are needed, thus materially advancing their growth.

### Transplanting.

When the plants attain proper size, draw about three-fourths of them, cut off the roots and transplant the tops in the usual way. Three-fourths of the roots removed, leaving a few roots at top, will be an improvement over the whole root. The plants left are for cutting purposes. When they attain a length of three to four feet cut them off a little below the first leaf. Then cut into lengths of three leaves each and transplant in the usual way, leaving one leaf or joint above ground. The top plants, containing the buds, will yield better than the average of the other cuttings. Use only the first crop of vines. The stubs that are attached to the potatoes should be rejected.

### Another Plan.

With a sharp knife or shears, remove 6 to 7 inches from the top ends of the vines. Transplant these cuttings in the usual way as shallow as they will live, say two or three inches deep. Topping the vines, as above, will cause suckers to start, generally a sucker above each leaf. When these suckers attain a length of four to six inches, cut the vines a little above the suckers below, thus removing with each cutting a leaf, a sucker and a shank below the sucker, usually two to two and a half inches long. Transplant these cuttings sufficiently deep to cover the joints properly; the potatoes principally start from the joints and they appear to do best when near the surface where they can receive the heat from the sun.

In transplanting, construct holes of proper size, 14 to 18 inches apart, and fill with water. When the water is absorbed fill again. Place a plant in the water and draw loose soil around it, but do not pack the soil; a good supply of water will usually settle the soil sufficiently without packing and will also give the plants an immediate start, an important feature.

The potatoes generally proceed from the joints, as aforesaid. The lower ends of the shanks, where cut, will soon heal and send out a good supply of roots; these roots appear to be necessary to sustain the plants and the potatoes above.

The above points, especially the importance of providing a shank when there is only one joint, did not occur to me in time to properly decide them by experiment the past season. Cutting vines into lengths of three leaves is known to be good, and cutting into lengths of only one leaf, with a shank attached as above may prove equally good.

After the soil has been prepared, as aforesaid, lay off into drills three and a half to four feet apart. The sweet potato is a rank feeder of potash and phosphoric acid. Therefore, if planted on a legume sod, apply per acre in the drills muriate of potash 65 to 130 pounds, or 260 to 520 pounds of kainit in lieu of the muriate of potash, and 165 to 330 pounds of acid phosphate.

If not planted on a legume sod, double the above dose and add thereto nitrate of soda 135 to 270 pounds. Mix the fertilizer with the soil, preferably a few weeks before planting, construct ridges thereon and plant as aforesaid.

BRYON TYSON.

Do you know why your face is irritated and has a drawn, biting feeling after shaving? Only one reason—poor soap. Try Williams' Shaving Soap and note the difference. The soft, rich, thick lather makes shaving easy, and the after effects make it a pleasure. Send 2 cents for sample to the J. B. Williams Co., Glastonbury, Conn., and you'll agree with us after you have tried it.

## GRAPE VINES

STARK GRAPE NURSERIES are in the heart of the famous Chautauque Grape Belt, which produces the finest vines grown in the U. S. We have an immense stock of all leading sorts; quality perfect; prices low as those of any reputable grower. Send us your orders—one vine or a car load. A complete line of fruit trees, small fruits, etc. Price List free.

## A "Little Doctor" on the Farm.

The good housewife, especially those in the country districts, recognizes the importance of small beginnings in all things; most especially is this the case in the earliest stages of sickness. The liver becomes sluggish, constipation ensues, and the stomach being disordered, food instead of nourishing the body, is actually poisoning it. Undigested food generates gases which poison the blood and cause biliousness, sick-headache, and a general out-of-sorts condition. But the prudent housewife knows the necessity of keeping a remedy at hand. She has a box of

## BEECHAM'S PILLS

in the cupboard, and on the first sign of any departure from the general health, a dose is given, and good health is restored, and further suffering is averted. In hundreds of thousands of homes BEECHAM'S PILLS are the only family medicine. They keep the family in good health and no other medical aid is required. If you would keep well let BEECHAM'S PILLS be your Family Medicine.

STARK BROS' PORTLAND, N. Y. Louisiana, Mo.

## A FEW NOVELTIES.

(Howard's Star Petunia.)

Each year the seedsmen list new claimants for our favor; many of them worthy of the praise lavished upon them and many others no better than varieties we now cultivate. We shall notice only a few of the so-called novelties; all of which are improvements on old favorites; and all within reach of the ordinary purse. Few of us can indulge in the "truly" novelties and anyway many of them are no sweeter or prettier than our common flowers.

Among sweet peas we have White Wonder, a double stemmed many flowered sort, with from eight to twelve pure white flowers of largest size usually all facing one way. Several years ago I found a double stemmed pink sweet pea among many vines and tried hard to save seed from it, but no pods ever formed, so I lost my opportunity to become famous, as the originator of a novelty.

Ivy-leaved Nasturtiums, while not exactly new are listed as novelties, and are especially valuable for window or porch boxes, as trailers, or to border a walk or flower bed. The leaves are sharp-lobed, and veined with a lighter color, resembling the hardy English ivy. The petals of the flowers are narrow and set on a slender foot-stalk giving a starry effect, very pleasing in contrast with the showy foliage. "Golden Gem" is a self-colored orange-yellow flower. "Flamingo" is an intense glowing scarlet. "Fordhook Fancy" is usually golden yellow or straw color, blotched and striped with rosy carmine.

For several years Luther Burbank has been working on the verberna, and now we have the "Mayflower," a strain with flowers of extra size, deliciously fragrant and in lovely shades of pink.

Howard's "Star" petunia is decidedly novel and well worth having. The ground color of petals is bright crimson or rosy purple; the stars are pure white, or light blush. Plants are very free bloomers.

The "Shasta" daisy and "Blue-eyed

African Daisy" have been before the public long enough to established their prestige, and deserve all the good things said of them. "Shasta" is an immense, semi-double, dazzling white daisy, with small golden eye. Perfectly hardy, and perennial. *Arctotis Grandis* or Blue-eyed Daisy must be treated as an annual in this country. The foliage is soft and downy of whitish color. Flowers are nearly three inches across and produced in great profusion throughout the season. The petals are pure white on their upper surface and lilac-blue on the under side. The centre or eye is light blue with slightly projecting white stamens. As cut flowers, both these daisies are exceedingly valuable, having long stiff stems and lasting well in water.

Japan furnishes us with a bush form of "Daylight" *dolichos*. The growth is compact and the bush is most conspicuous when grown singly. Flower stalks crowded their entire length with dazzling white blossoms rise twelve or fifteen inches above the foliage. White pods succeed the blossoms so that the plant is showy in all stages of growth.

## Edging the Border.

Usually we depend upon the perennials for the border, but this year we are starting a new border so we shall have to use a good many annuals if we are to have much of a display, and how surprised I was when reviewing the catalogues, searching for low-growing and trailing plants to plant close to and among the stones which edge my border. The book was just full of them, and such variety in foliage and bloom. There's *Ageratum* with its fuzzy blue or white balls of bloom; *Alyssum*, "Little Gem," growing only three or four inches high but each plant covering a space of ten or twelve inches and covered from spring until fall with fragrant white flowers; *Candytuft* in white, lavender and crimson; *Coleus*, whose leaves are of all colors, sizes and shapes;—*Dianthus*, *Fireball* and *Snowball*; these are especially fine, dwarf and compact, with large double flowers beautifully fringed; *Forget-Me-Not* and *Heliotrope* give shades of blue, lavender, and white, to say nothing of delightful odors; *Linum*, or *Crimson Flax*, is also charming throughout the season with clean foliage and satiny cups of scarlet or crimson. The *Lobelias* furnish us with the national colors not only in "Tricolor" which combines all these in one plant, but in "Heavenly Blue" "Crystal Palace" and "Erinus" in blues, "Cardinals" a brilliant scarlet, and "White Gem" which forms dense balls of purest white. *Cardinals* differs from the other members of the family in being perennial.

All nasturtiums are lovely in the border, giving a riot of color, tumbling over their rocky confines and running out over the green lawn, for we never put up

## Names of Farmers Wanted

The Valley Farmer wants names and addresses of farmers anywhere in the U. S. They want to get them interested in their big farm magazine which now has a circulation of over 100,000 copies and is acknowledged to be the best farm paper in the West. The subscription price is 50c per year, but if any of our readers will send them five farmers' names and addresses and ten cents in stamps or silver they will enter you as a subscriber fully paid for a whole year. Address Valley Farmer, 531 Jackson Street, Topeka, Kan.

**MONEY** Hundreds \$. Made quickly. Shrewd men write. E. T. Behr, La Crosse, Wis.

## MEND YOUR OWN HOLES

In granite, tinware, milk pans and all kitchen utensils with "Easy Rivets" use them. Package by mail 25c. AGENTS WANTED.

GENESSEE NOVELTY CO., Batavia, N. Y.

**LEARN** Telegraphy \$50.00 to \$75.00 Monthly. We teach you quickly and place you in a situation when taught. Easy tuition. Expenses low. Write for Catalogue; it is free.

## Can You Tell What This Means?

\$200.00 IN CASH FOR THE BEST ANSWERS.

This rebus can be solved by anyone who will give it a little time and study. It represents an old saying, and \$200 in cash will be given to those who can tell what it means and also suggest another old saying that we can use in another contest of this kind. This contest is a test of your ingenuity and if you succeed in sending in the best and nearest answer and sentence we will award you the first prize of \$100. For the next best, we will give \$50; for the next best, \$25; next best, \$15, and next best \$10. All prizes will be paid in cash and be awarded by a committee of three disinterested persons. The only condition is that you comply with our easy conditions, which are that you will agree to get at least four subscribers among your friends for the Household Guest, our interesting monthly magazine, at our club price of 25 cents each. To make it easy for you to comply with the conditions and get the subscribers we will send you 4 handsome pictures, size, 16x20, printed in beautiful colors, suitable for framing, so that you can give one to each subscriber. Do not send any money, simply send your answer. We will

enter it and send you subscription blanks and pictures so you can get the four subscribers, and if your answer is the best there will be no trouble about you getting the prize. We also give you choice of articles from our premium list for obtaining these subscribers, such as Rings, Watches, Sewing Machines, Dinner Sets, Dolls, Lamps, Silverware, etc., full particulars of which we will send you. In addition to this contest you will be entitled to compete without further condition in another contest in which we give

## \$325.00 IN CASH PRIZES

particulars of which we send you with the pictures. If you want your share in these cash prizes, your choice of premium from the Mammoth Premium List, write us today. Do not send any money now, simply write your solution of this puzzle and send in a sentence and we will enter your answer and send the pictures, sample copy and full particulars of our \$325 contest at once. No one living in Chicago or suburbs can compete in this contest. Write today. Address

HOUSEHOLD GUEST CO., Dept. 64

358 DEARBORN ST., CHICAGO, ILL

any "Keep Off the Grass" sign where the nasturtiums can see it. The Mignonette too is given wide latitude and wanders at its own sweet will. The Oxalis with bright green clover-like leaves gives us a new color note in its brilliant yellow, and soft pink blooms. Then all colors of the rainbow troop in with Cupid Sweet Peas, Pansies, Dwarf Drummonds, Petunias, Portulacca, Sanvitalia, Torenia, Trifolium and Verbenas.

Really there is such an endless array that I can never choose. I'll just have to order them alphabetically and plant them the same way, and I guess I don't need the perennials very much so far as making display is concerned.

For Perfume.

Many of our loveliest flowers have no perfume and it is advisable to provide for this lack by planting something having fragrance in close proximity. The Asperula, Odorata—white, and Azurea Setosa—lavender-blue in color was a prime favorite with our grandmothers who knew both varieties as "Sweet Woodruff." They are hardy annuals bearing continuously, clusters of small sweet-scented flowers, beautiful for bouquets, when dried they impart a delightful odor to the linen chest or wardrobe. As it succeeds best in partial shade and grows only twelve inches high, it may be scattered to good advantage among taller growing flowers.

Sweet Lavender—Lavendula vera is one of the best perennials to be used for sachet purposes. In ordering seed be sure and give the botanical name or you may get the variety generally sold, which isn't what you want at all. The seeds may be sown in shallow drills, in window boxes, and transplanted to open ground after danger from frost is past, about eight inches apart in rather light well-drained soil. The second spring they should be again transplanted into permanent beds, about two feet apart each way. Cut the sprays when in full bloom, spread on newspapers and cure quickly as possible in a cool shady room. All shed blooms may be made into sachets; the twigs lighted and burned in a room will fill it with odors of the garden.

Heliotropes are beautiful as well as fragrant, are easily grown, and should be found in every garden, yet we rarely see them except when grown as pot plants. Mignonette is not always "sweet" but if you order "Golden Queen," "Improved Machet" or "Nineteen Hundred" you will be sure of fragrance and beauty, too.

Marvel of Peru or Four o'clock, will perfume the whole garden, and is always a great favorite with little people.

Nicotiana-Affinis—has pure white Bonvardia-like flowers, on long terminal tubes, so sweet that a few plants will perfume the whole garden. Petunias, stocks, sweet peas and wallflowers are all desirable, and once raised will be retained for many years.

# MAN-WEIGHT GARDEN TOOLS

## Solve the Labor Problem

Indispensible to every person who wants to get the Greatest crops and the most money from a minimum of time, effort and land.

Different from all other hand machines. THE WEIGHT OF THE BODY DOES THE WORK; instead of the weight being lost on the ground through the feet it is applied to the machine by the lean of the body. Can be used day after day with less fatigue than with hoe or any other machine. It may astonish you to know that one man with a MAN-WEIGHT can do more work and do it better than ten men with hoes, or five men with five hand-push machines, yet it is a fact. This is one way to solve the labor problem. If time is money, or ease of doing your work an object, you cannot possibly afford to do without a Man-Weight combination.

The machine is propelled by the weight of the body. No muscular effort is required through the arms. The hands guide the tools all around the plants just like a hoe in the hands. When you go over a field with a Man-Weight you have both cultivated and hoed. You can now begin to imagine the advantages of these great and almost marvelous machines.

## MANY MACHINES IN ONE

The Man-Weight Combination is really multum in parvo. It comprises, plows, hoes, cultivators, harrows, single and double wheel. It is the most complete outfit on the market today, some of its exclusive and superior features mentioned above. Why buy a machine for each kind of work when you can get all in one. Why buy any other machine when you can get a strictly up-to-date Man-Weight Combination? Why take any other kind as a gift if you can get a Man-Weight at any price? This will save time, save money, enable you to tripple your acreage and greatly increase your crops. It will save you its cost in several ways several times a season. Read the following letters and send for catalog if you want more information.

This illustration shows the Man-Weight Cultivator saving a plant that was out of line with the others in the row. Either or both drag bars may be moved to right or left or up or down without changing the directoin of the wheels.

Your Man-Weight Cultivator received and put to good use. Find it is the biggest little machine we have ever used or seen.—A. A. SANDERS, 507 E. 7th St. Brooklyn, N. Y., June 1, '03.

Your Man-Weight is a great improvement. I find that it largely increases one's capacity. It is as great a help, as the improved horse cultivators are over the double shovel. A 120 pound man can do more work with a Man-Weight than six big men with hoes and do it better.—S. LEE COX, Oakwood, Ill., January, 1903.

After a few days' use of the Man-Weight Cultivator, I can say it fills all the claims you make for it.—J. F. BRINKERHOFF, Cuyahoga Falls, O., June 1903.

The Man-Weight Cultivator came to-day. We tried it along with a . . . . All present thought that the Man-Weight was the best. The soil was very heavy but the machine did excellent work. We tried it in cabbage, tomatoes, beets, onions and corn.—W. G. SPEEDLOVE, Harrisville, Mo., June 3, '03.

This illustration shows the Man-Weight Cultivator in high stuff and the operator walking between the rows. This construction is very popular, particularly if the plants are wet

**PRICE** Man-Weight Cultivator, 5 set of tools, complete combined single and double wheel (without drill) **\$8.00**

**FREE TRIAL** If you are still skeptical about the merits of the Man-Weight Machines, or if you are still unconvinced as to their superiority over the old style machines, write us to that effect, and we will send you one of these Man-Weight Cultivators on a week's FREE TRIAL. Use the machine for 6 days, and on the seventh day remit us the price (\$8.00) if you are satisfied with it. OR IF YOU ARE NOT SATISFIED with the machine, and do not desire to keep it, write us NOT LATER than the seventh day, advising us of this fact, and we will send you shipping directions for same.

We want you to take advantage of this offer. We want every gardner in the U. S. to know about our labor saving garden tools. Just as soon as they all know about the Man-Weight and are convinced of its advantages, we will have nearly all of the garden tool trade in the country.

**QUIT HAND HOEING! CURE THAT BACKACHE! THROW AWAY THOSE OUT-OF-DATE GARDEN HOES YOUR GRANDFATHER USED! BE UP-TO-DATE!**

## GET A MAN-WEIGHT

**CAUTION:**—In order to take advantage of this free trial offer, it is only necessary to convince us that you are a person of responsibility, that you really need such a machine, and that you are not just some curious person wanting to see this tool. Therefore in sending in your order cut out the coupon attached, and besides giving your own name thereon, give the name of some other responsible party, preferably a bank or business house, to whom we can refer if necessary.

### BEAUTIFY YOUR LAWN.

In city or country there is nothing more delightful to look at than a nice, well-kept lawn. Of course it requires some attention and labor, for there are few things beautiful or useful in this world of ours, that does not cost in labor or money, but it will repay all the labor and attention it costs. The lawn need not be an extensive park. If only a few feet in depth, and the width of the house, it can be made very attractive. If space permits there should be a few shade trees, and care should be used in their selection, transplanting and trimming. In trimming the work should be done so as to give the tree a symmetrical appearance, and increase its leaf power.

The lawn should be well set in grass, and that, if colsely cut may be made to have the appearance and touch of velvet. To give it this bright, green color, and velvety softness, all the dead grass must be carefully cleaned away after each cutting. All visitors to Washington are delighted by the beautiful swards around the government buildings, and in the smaller parks of the city. This beautiful appearance is caused by the fact that government gardeners pay as much attention to the grass as to the flowers.

Flowers should not be neglected in this lawn for your home, but should be a feature. Nearly every woman has her choice of flowers, as she has of colors for her gowns, so the choice and variety of the flowers must be left to the individual taste. The flowers can be put in tasty beds or to border the walks, and with a little care in the selection you can have flowers in bloom from very early in the spring until heavy frost comes in the autumn. A vase of flowers in the family room, in the parlor, or in the dining room adds a wondrous beauty and life to each of the rooms.

The farmer's wife and daughters are just as much entitled to have things beautiful about them as are the wives and daughters of those who live in the city, and what is more, they will enjoy them just as much. In the summer time, when the evenings are long, and the housework is done for the day, a wonderful sight of enjoyment can be had sitting out on a beautiful lawn, where the eye can feast on the beauties of nature. Why, such a lawn is a great humanizer. The wife and daughter will be happier for an evening spent on such a lawn, and the farmer himself would soon grow to be thankful for the pleasant shade, and the bright colored flowers, and to think that a vase of flowers on the table at meal time makes everything taste better. There is no other way a farmer can make his family so contented and happy, as by beautifying their home. It would be easy for him to get the trees, if they are not already growing on the lawn. The work of transplanting would not be

very heavy. The grass and flower seeds would cost but a trifle, and the return in pleasure, happiness and contentment would be a thousand fold.

### HOW TO BOIL EGGS.

To properly boil eggs for table use is a high art. Many rules have been given as to the time required to properly boil an egg, but the cook can not be looking at the clock all the time, and it is a very poor rule, anyhow. Nearly all cooks put the egg in boiling water. It is a very bad habit, and a bungling way to cook an egg. Soused into boiling water one of two things is sure to occur. Either the shell will burst, permitting part of the egg to escape, and water to enter the shell, or the silk on the inside of the shell, and the white of the egg, will be made tough and unpalatable. The result is that when an attempt is made to break the egg at the table the silk comes off with the shell. Cooks have often complained when trying to take the shell from hard boiled eggs, that pieces of the egg sticks to the shell. Of course they will, if the egg has been immersed in boiling water.

Every kitchen ought to be provided with an egg tester. They are easily made but very efficient ones can be purchased at a small cost. The eggs should be tested before being put in the water. When ready, put your eggs in cold water, place upon the stove, and as soon as the water has come to a boil they are ready to serve, if soft-boiled are desired. If medium or hard boiled are preferred, let them boil a minute or two. Eggs thus prepared are palatable and nutritious, and you will always know when to take them off without having to look at the clock all the time.

### HOW TO HAVE GOOD COFFEE.

It is not every good housewife that knows how to supply her table with good coffee. Coffee when well made is a most delightful beverage, and to make it right is so easy that the wonder is so many housewives offer on their tables a muddy compound, that is wretched to the taste, and when the liquid is drank leaves in the bottom of the cup a spoonful or more of an ugly looking residuum. Of course the quality of the bean has something to do with making good coffee, but an excellent drink can be made out of the cheapest bean on the market.

Do not buy coffee in packages. Coffee when once roasted begins to lose its strength and aroma, and as it grows older this deterioration is more rapid. In cities many grocers offer to their customers fresh roasted coffee every day. This makes it possible for the housewife to always get the bean at its very best. Those living in the country can not thus be served, hence they must attend to roasting the coffee. This requires skill and close attention to get the best results. A mixture of Java and Mocha in equal parts is the favorite of coffee drinkers. A few simple rules, if followed, are all that are necessary to place on every table coffee that is not only drinkable, but will prove a veritable delight.

Measure out the amount of the ground berry needed. That will depend upon the degree of strength desired. Put in the white or yolk of an egg, covering the whole with cold water. Then beat until the whole is thoroughly mixed. Set it aside for five or ten minutes to give the coffee time to swell. Fill up with the amount of water needed, using cold water. Place it on the fire and let it come slowly to a boil. Under no circumstances permit it to boil hard. If you do nothing will prevent it from becoming dark and muddy, but let it simmer for twenty minutes or half an hour, or even longer if time permits. Before serving pour out a cupful, so as to take away what grounds have settled around the spout of the coffee pot. Then quickly pour in half half a cup of water. This will drive all grounds to the bottom. If these few rules are followed the liquid will be of a bright, amber color and as clear as crystal. It is a great mistake to pour boiling water on the ground coffee, as it scorches the coffee so it will lose its delightful aroma, and much of its strength.

### A SPRING SNAP OFFER

The attention of our readers is directed to a very attractive offer which is made by F. S. Burch & Co., 143 Illinois St., Chicago, whereby a complete dipping and branding outfit can be secured at a price much lower than before. The goods put out by Birch & Co. are well known throughout the country and there is no reason to doubt that many sheepmen will quickly avail themselves of this opportunity to secure the outfit at a little more than half the regular purchase prices.

### 20th CENTURY WAGON BOX AND RACK

In another column of this issue appears the advertisement of the Model Mfg. Co., Box 18, Muncie, Indiana, describing their 20th Century Wagon Box and Rack. The three articles of wagon box, stock rack and hay ladders have been unweildly, unsatisfactory and expensive, to say nothing of the loss of time in making the changes. To have these three articles successfully combined in one, and at the same time preserving a handsome appearance is certainly a matter of great advantage to the farm. Read their ad and write for their catalog.

### A BEAUTIFUL ROOM.

One of the first things to be considered in the work of beautifying a room, whether it is the dining, family, the bed-room or parlor is the selection of the draperies. In these days, when draperies are made in such tasty and varied designs, and are really so cheap, it ought not to be much trouble to make a very charming effect with draperies. Very lovely summer draperies are made of sheer material. They give to the room an air of coolness. They should be arranged to hang in natural simple lines. Much of the effect depends upon the hanging of this or any other drapery. If looped it should be done daintily, with satin ribbon to harmonize, or with cotton cord. The bows should be full and so arranged as to be seen from the outside of the house. The cords and tassels are easily made at home by twisting together several strands of heavy cotton.

Another very pretty drapery is of bobmet, having a full frill on the front and lower edges. This style of drapery looks best when hung from a small brass rod, and caught back on each side with a long cord. Another dainty cutrain, and one more stylish than either of the others is made of white swiss, with insertions of lace. It is very pretty with a ruffle finish. To give the drapery a richer effect, curtains of blue and white Japanese cotton crepe may be used. These crepe curtains should be pushed back close to the ends of the pole, and permitted to fall in straight lines. Even with old and well-worn furniture a really dainty look can be given to a room by pretty draperies.

### THE WOMAN WHO MAKES HOME HAPPY.

As a rule, women are more unselfish than men, but very often they lack the right kind of consideration for their husbands. They will treasure up all the cares and worriments of the day for their husband's ears when they come home at night probably feeling weary and tired. If the husband appears unsympathetic, the wife will imagine herself a much injured person. Then follows the little rift in the lute that destroys the sweet harmony of the home. The woman who makes her home happy and who is always pleasing in her husband's eyes is the one who exercises those two indispensable qualities, tact and cheerfulness. Speaking mildly, the woman who "nags" has precious little loveliness in her character. Her husband deserves the greatest sympathy, for certainly the man with a "nagging" wife has an unhappy lot. A woman is only increasing her husband's faults when she is forever depicting them to him. One sweet quality in a woman will do more good than any number of reprovals.—Exchange.

Onions are considered excellent, if cooked and used once a day to break up cold. An onion plaster is made of freshly fried onions placed between layers of flannel and applied hot; keep on over night, or for several hours. A syrup from a layer of onions and a layer of sugar baked in a hot oven is good for croup. A slice of fat, salty bacon, sprinkled with pepper, and applied to the throat, is excellent for sore throat.

When making beds always have the bed-room windows open, as the incoming fresh air helps to make the feathers rise and separate. By this simple plan bed-making becomes less arduous.

Put a Pinch of saltpetre in the vases in which flowers are kept; this will make them look better and keep fresh for a much longer time than they would otherwise do in plain water.

When making jam pour a few drops of salad oil into the preserving pan; then, with a piece of soft paper, rub the oil over the bottom. This will prevent

the jam sticking to the pan if the string be not quite as constant as it ought to be.

In making sauces always dissolve butter in the saucepan, add the first, and after that the water or stock.

In purchasing beef take notice of color. The lean will be a bright pink flecked with spots of clear white and suet firm and white. If the yellow don't buy the meat; you are sure it is stale. Veal should be fat grained and white. If too large be tough, unpalatable and unhealthful. Selecting mutton, seek small bones, legs, plump, fine-grained meat, and be sure that the lean is dark-colored, light and bright red like beef. The suet should be white and clear.

## ROLLMAN FOOD CHOPPER

Will chop a given quantity of meat or other with less labor than any other household machine made.

Will cut a given quantity of meat or other as quickly as any household machine if you save the time required for cleaning the machine.

Cuts all meats and foods with less waste than any other machine.

Is small and of light weight, is convenient to handle and infinitely better adapted to household use than the old style cumbersome machines.

EASY TO CLEAN

Has Steel Cutters—fine, coarse and nut butter cutter. Chops three-fourths pound raw or cooked meat per minute, fish, vegetables, fruits, nuts, spices, coffee, etc. A handy and efficient household tool, adapted to all household requirements. This chopper will cut one pound of meat quicker and with less waste than any household machine made if you reckon time for cleaning machine. Easiest cleaned.

**OUR OFFER.** For 75 cents we will send you one of these invaluable machines. UP-TO-DATE FARMING one year, "Kitchen Krinkles" a book of recipes by Mrs. S. T. Rorer, and full directions. For \$1.00 (25c extra) we will deliver it to you any where in the U. S. Give Express office as well as P. O.

**UP-TO-DATE FARMING**  
INDIANAPOLIS, IND.

## The "Plymouth Rock" Combination Repair Outfit

A Complete outfit of Tools for General Boot, Shoe, Rubber, Harness and Tinware repairing, including a RIVETING MACHINE. Consists of 40 First-Class Tools and Materials shown in cut.

**The Most Complete and Practical Outfit Made**

This is the most complete and desirable outfit made. The Lasts and Stands are strong and heavy, and every article is strictly first-class, the best there is made, and the same that practical mechanics use.

The special feature of this outfit is that it contains one of the latest improved Automatic Riveting Machines for setting tubular rivets. With it any one can do all his own harness, strap and belt repairing. The saving on these items alone will pay the user the cost of the outfit in a year, to say nothing of the saving on repairing one's boots, shoes, rubbers and tinware.

Each Set Packed in a Neat Wood Case

## EQUITY IS BEST

(EFFIE STEVENS)

Little Bessie Johnson  
Was to speak a piece,  
At the Local Union,  
When the speech should cease,  
Made by Farmer Abbott,  
Long and rather dry,  
Telling why the farmers  
Should for justice try.

Many hard statistics,  
And long words he used,  
If all those who listened,  
Came to be confused,  
Allow him they could not,  
Though his talk was wise,  
O they sat pretending,  
Stifling yawns and sighs.

Tired little Bessie,  
Sitting stiff and straight,  
Wonders why all grown folks  
Should stay up so late;  
Pulls her curls and listens,  
Can't make out a word,  
'Tis the driest story  
She has ever heard.

So she sits and fidgets;  
Whispers low her piece,  
Till her papa warns her,  
If she does not cease,  
He will whip her soundly,  
Soon as they get home;  
Then she sobs a little,  
Wishes she could roam.

By and by the speaker  
Ends his lengthy talk;  
Bessie is so sleepy,  
She can scarcely walk,  
But her papa lifts her  
To the platform high,  
Then the sea of faces  
Makes her want to cry.

But she bravely swallows  
All her silly fear,  
Tries to speak up loudly  
So they all can hear.  
"Of all bands for farmers  
Equity is best—"  
Stage fright now besets her,  
She forgets the rest.

Papa tries to prompt her;  
Makes a stern request,  
But she only murmurs,  
"Equity is best."  
People all are smiling,  
Papa takes her down,  
Carries her to mama,  
Wears an angry frown.

"Of all bands for farmers  
Equity is best,  
For it heralds justice  
To the sore oppressed."  
That's the piece which Bessie  
In her sleepy fright,  
Failed to quite remember  
Local Union night.

## A CALL FOR VOLUNTEERS

(FANNIE E. POOL)

Come now and join our union  
You farmers one and all,  
Come bring your wives and daughters,  
There's room for great and small.  
Don't be afraid to venture,  
The welcome hand we'll give  
To those who will unite with us,  
And in our order live.

CHORUS

Then come brothers come,  
Don't tarry till too late,  
We'll offer you the welcome hand,  
And meet you at the gate.

You'll not regret your money,  
Your time you'll never miss  
For time thus spent is joyful,  
In such a work as this.  
Our aim in life is high,  
Our motives pure and true;  
Farmers this invitation  
We offer now to you.

CHORUS

Then come, be up and moving,  
For time flies swiftly by,  
Much good can you be doing  
If you but only try.  
Unfurl the farmer's banner,  
Shake out its fleecy folds,  
That in its stainless beauty  
All nations may behold.

CHORUS

Upheld by hands made brown by toll,  
And hearts both true and tried,  
Oh patient tillers of the soil,  
(The Nations hope and pride)  
Send o'er high hills and valleys wide,  
The glad news word of right,  
That farmers in their humble homes  
Have majesty and might.

CHORUS

Then Monarchs proud shall honor,  
And blessings on you shed,  
For the humble farmer  
They look for daily bread.  
Yet need ye not to covet  
The princes power and wealth,  
For crowns contain no jewels,  
Compared to peace and health.

CHORUS

Your wealth consists of meadows green,  
And fields of moving grain,  
Your homes made neat by laborsweet.  
Prove you've not lived in vain.  
Then hail to the farmers' banner,  
From war and bloodstain free,  
May peace, good will and Equity,  
It's motto ever be.

CHORUS

Then come brothers come,  
And join our noble band,  
We'll meet you at the gate,  
And extend the welcome hand.

**GOLD TEETH** THE LATEST FAD. FILL YOUR own teeth. A gold plated shell that fits any tooth. Easily adjusted. Removed at will. Looks like regular dentist's work. Fools them all. 10c EACH or 12 for 50c. C. F. FARGO, Frenchtown, N. J.

## RHEUMATISM

Wonderful New External Remedy  
Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims your self by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—bu send your name and address THIS VERY DAY  
PROF. S. M. WATSON, Dept. 19, Battle Creek, Mich

## THE HAND THAT HOLDS THE PLOW

(ARTHUR J. BURDICK)

"The hand that rocks the cradle" has been made the theme of my song,  
And to it—and its owner—rarest praises, too, belong;  
But another hand is worthy of much credit, I allow,  
And so I sing my ditty to the hand that holds the plow.

Our sons may climb the ladder which leads them up to fame,  
And all the world may know them and honor do their name.  
Their deeds may lead the people to lay laurels on their brow,  
But the hand that feeds these heroes is the hand that holds the plow.

The world must have its toilers in all portions of the field,  
And some must do the planning, and some the pen must wield.  
The world too, needs some singers, but faint would be the song,  
Did not some grasp the handles that to the plow belong.

'Tis well to rule the nation; 'tis well to make their laws;  
'Tis well to shoulder markets—well to fight for Freedom's cause;  
'Tis well Fame's smiles to bask in, but my homage yield I now,  
To that brave, patient toiler whose hand 'tis, holds the plow.

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

### CHAPTER XVII, Continued.

Their position commanded quite a considerable stretch of road toward the city, and as by going that way it would take a good hour and a half of hard riding to get so far, it was certain they did not expect me to pass for some time. That cut-off through the lane must have been ten miles the shorter journey.

This reflection gave me some hope that I might be able to slip by in a gallop before they could take horse. Yet I could not afford to waste much time, for Jerome might perchance find means to follow, and would not be in a pleasant humor. There could be no accounting for the lengths to which his desperation and folly might carry him. I had need for both haste and caution.

I was now at the top of a slight hillock, the grooms resting at the foot. As ill fortune would have it, my horse's hoof loosened a stone, and one of them looking up recognized my figure clear drawn against the fading colors of the sky. They both jumped up with an alertness which would have done credit to old woodsmen, and before I could dodge by, had remounted and taken possession of the road. My more elevated position and perhaps better hearing, too, enabled me to detect the coming of persons along the road from Paris. Certainly as many as three or four horsemen, perhaps a vehicle. It could hardly be possible that Jerome had made the trip so quickly, yet I did not know what other and shorter way he might find. At any rate every instant intensified the danger, for if it were Jerome, then, indeed, I could not hope to make Versailles that night.

Listening more critically I decided they were traveling too slowly to be Jerome's party.

I would then most gladly have charged the insolents in front and taken all chances, but my half hour of quiet thought had brought me the conclusion it was too much to risk my life, at least until Serigny was acquainted with the information we had gained. I, too, was the only person who knew of the traitors on board le Dauphin.

"Who are you, and what do you mean stopping a gentleman's path?" I called to the twin who had drawn a little away from the foot of the hill seeing the disadvantage of their former position in case I charged them, and preferring to receive me on the open ground.

"No harm, Monsieur, we only mean to detain you until M. de Greville comes up," the slender man spoke quite politely.

"M. de Greville will not come up this night—may God have mercy on his soul!" I added solemnly.

"Why not, fine sir?" the gruffer fellow on the big bay questioned with some heat. I made no quibble on his manner, but replied:

"I doubt I have slain him. He lies back yonder in the road to Sceaux, and I know not whether he be dead or still lives."

They hesitated and consulted together in a low tone; I saw my opportunity to press their indecision.

"What excuse can you make and what authority have you for halting an officer of the King with dispatches to the King? With M. Jerome de Greville to stand between you and harm it was dangerous enough; now it is a matter of hanging."

"But M. de Greville is not dead," they protested together, "we left him a few minutes since alive and well." I seized upon the vacillation manifest in their voices and proceeded with confidence.

"Then how think you I came along the road? Think you M. Jerome would let me go so easily? You know his temper too well? Does he change his mind like a woman? I turned about to take the nearer path, and see, his blood is not yet dry upon my sword."

"We do not believe you. It is some trick."

"If you will but move this way and give

me clear passage to Versailles, I will go and say nothing. You can then return and minister to your master."

"Nay, we'll hold the road an hour, which gives him time to come up. An hour gone and you may pursue your journey."

"Then, forsooth, one of you can make his peace with God. I'll shoot your stoutest bully and try blades with the other."

I raised the pistol which had been concealed unknown to Jerome, and to say the truth, it looked formidable enough all aglitter beneath the rising moon, though I doubted much if I could strike my mark.

As I started resolutely onward I warned them: "Pull your nags off in yonder level space, leave the left fork free, or by the gods, you burly black-haired rascal, I'll take the first shot at you, you make the fairest target. Way there, in the King's name!"

As is ever so with low-born churls, and no gentleman to command, each looked to the other for some act of heroism, and each sought his own safety.

They stood their ground only an instant, then pulled aside as I had bidden them. As soon as I passed them a decent distance as if I had no fear, I put spurs to my good steed, and, breathing more freely than I had done for many days, heard the merry pounding of his hoofs upon the open way to my mission's end.

### CHAPTER XVIII.

#### Serigny's Departure.

The clocks were striking, one after the other in monotonous imitative fashion, the hour of nine when I delivered my horse to a sleepy groom at the little tavern just outside the Versailles gate.

Serigny was already in his rooms, intent on some business, and opened his door himself. There was no need for concealing his gratification and the intense impatience he felt to know results, nor did he make any attempt at concealment. On the contrary, he was as urgent as a school child. Everything about him, packed in boxes and traveling bags, seemed prepared for instant journey. Upon his table a few disarranged papers were scattered beside a leathern portfolio, through which he had evidently been looking when I arrived. Without stopping to replace any of the documents he hastened to a seat, and drawing his chair close, commanded me to begin. My coming had been so sudden I had given no consideration to the nature of my report to Serigny, and found some difficulty in gathering ideas together in such shape they would be understood. I had hardly begun my statement when quick steps sounded along the outer passage followed by an almost imperative knock on the door. Jerome, I thought. So it was. Jerome, bespattered and soiled from his hard ride, a raw bruise across his cheek, his clothing awry. He was pale and determined, yet quiet withal.

I instinctively rose and laid my hand to my hilt. A glance reassured me. His purpose, lying deeper, I could not divine; it was plain though he brooded not that kind of quarrel. Nor do I to this day know what he intended when he first entered Serigny's room that night.

"I rode after you in all haste, Captain."

"Indeed you did," I mentally agreed.

"And met a fall, which, as you see, has somewhat disfigured me," and he laughed, while I agreed with him again.

Serigny, being so intent on the important transactions of the hour, accepted his explanation without question. The welcome, though cordial, was brief, Serigny being a man of no unnecessary words.

"Go on, Captain," and I picked up the broken thread of my narrative where Jerome had interrupted.

As I went on obediently, Jerome would now and again supply some link wherein my memory failed, or suggest something I had left unsaid, until having so much the nimble tongue he took the telling out of my mouth entirely. I could not complain, for he detailed the various adventures far better than I, and gave me more of the credit than I would have claimed for myself. We had, by common consent, forgotten our late strife, and becoming much interested I broke in upon a glowing account of my heroism:

## FAMILY RECORDS

Beautiful colors; background solid gold; space for photographs, date of birth, marriage & deaths, etc. Tremendous seller. Agents delighted. ## SELL SILVERWARE WORK FOR YOURSELF

No Capital or Experience Necessary—A Chance for All Ambitious Men and Women to Secure Profitable and Permanent Employment

Here is an opportunity to enter into a profitable and pleasant business, requiring neither capital nor experience. We want men and women agents to sell Solid Yukon Silverware—the most beautiful and durable table flatware made. Yukon Silver is one of the most remarkable products of the age and is unquestionably superior to anything heretofore produced for the manufacture of knives,

forks and spoons. Practically it is better than Sterling Silver, and costs only about one-sixth as much. It is the same color as Sterling Silver, but much harder, will wear longer and not tarnish as quickly. It is solid through and through, no plating to wear off and is as bright and lustrous as burnished coin silver.

As evidence of our faith in the quality of Yukon Silverware we furnish a guarantee to every purchaser, warranting it for 25 years and agree to refund the purchase price at any time, if the goods do not prove satisfactory.

We furnish our agents a handsome assortment of samples put in a substantial leatherette roll, neatly lined with a soft, tinted flannel, making a very business-like and attractive display. When closed the samples and case roll up compactly in convenient form to carry.

You don't need any capital to start in business with us, as we don't require you to pay for goods in advance, but will ship the goods direct to you, freight or express charges prepaid, and give you 30 days to deliver, collect and remit.

Under our liberal plan it is easy to make from \$3.00 to \$5.00 per day, and many of our agents earn far more than that. Selling Yukon Silverware is an honorable, genteel and profitable business—a strictly high-grade occupation for both ladies and gentlemen.

Write today to Raymond Manufacturing Company, 436 Jackson Street, Muncie, Indiana, for particulars.

## REQUEST ADVERTISERS WANT TO

Know in what Paper their Advertisement was seen. Therefore We TO Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.

"THE BLACK WOLF'S BREED" began in the September first issue of UP-TO-DATE FARMING. The fifteen back numbers containing the first installments will be sent for 3 UP-TO-DATE FARMING, Indianapolis

"Hold, Jerome, by my faith, you grow more garrulous than a fishwife of the barriars; tell but a plain, straight tale, and leave off all that romantic garniture of thine," and thence I reclaimed my straggling story and brought it to a conclusion. All this while the dispatches for which we had risked so much lay safe in my breast. I rather hesitated to produce them, dreading what the hot-headed fellow might do to get a hold upon that which peradventure would cause trouble to his lady love. I could not decline when Serigny asked for them, but hauled out both packets, one taken from Yvard, the other from Broussard, casting them upon the table. Jerome eyed them so that I knew from the look his late fury was not yet dead, and I watched him in readiness for any move he might make to repossess them.

He sat as unconcerned as if the whole affair interested him no further, now that the main object of his solicitude was safe in the keeping of his superior. I misdoubted whether this was not all a sham, and could hardly believe him the same frenzied Jerome who had pleaded so hard, and fought so desperately for this self-same packet of Yvard's, which at this time reposed within easy reach of his hand. Once he reached out and took it up negligently, inspected the seals and marks, then replaced it. His examination seemed one of mere idle curiosity, or would have so appeared had I not known that he was already perfectly acquainted with every mark borne by our charge. The eyes, half closed in dreamy contemplation, spoke apparently of a man who has been relieved of some grave responsibility and enjoys the relaxation, yet, for all of that, he was listening most intently to what Serigny and I were talking of. Serigny was now fondling the instruments which were to be the restoration of his own and his brother's influence. His words were addressed to neither of us in particular.

"Here is the seal of Spain. Cellemare again. Egad! They are bold, or must have great confidence in their emissaries. Here, too, is Madame. Ah, my clever little lady, you have outdone your own cleverness at last. I fancy even the King's old love for his son's mother will not save you now. I would I knew what was in them."

"We can easily see, and close them snug again," ventured Jerome, but noting Serigny's frown, he turned it off with a laugh, "or so our friend Madame would advise."

It thus became manifest he had not abandoned his idea of intercepting whatever might compromise Madame de Chartrain.

Serigny continued: "These must be placed before the King unopened by any of us. Yes, it's a risk," he caught Jerome's knotted brow of indecision. "I grant you it is a risk, for I know not what complications are herein contained. I will seek the King and with these am sure to gain his own ear."

Jerome all this while uttered no other word, nervously flicking the mud splashes off his boots, and lifting an earnest look now and anon to Serigny.

My own mind was busy devising means to foil any contemplated treachery upon his part, and wondering whether it was not my duty to acquaint Serigny with the whole truth of the matter. The test came when I least expected it. When all our adventures had been detailed again and again, his dozens of incisive questions answered, our conversation naturally drifted toward the future. My mission in France completed, there was nothing now but a return to the colonies, and the uncertainties of a campaign which I no longer doubted was imminent. Somehow the thought of a great and glorious war did not appeal to me so forcibly as such a prospect would have done some few weeks ago.

There was ever a shy little face, a brave girlish figure which stood resolute and trembling before me in the park, that intruded between me and the barbaric splendor of our western wars. Nor did I raise a hand to brush the vision aside. It toned down the innate savagery of man, softened the stern, callous impulses of the soldier, and all the currents of my being trickled through quieter, sweeter channels of life and love. Even the shame of it made not the thought less sweet.

There was but a trifling period to spare for such gentler musings, for Serigny, by a gesture, called attention to his well packed luggage.

"See, I am ready. I only waited your coming and report to put out at once for le Dauphin. My people have already gone forward to arm and provision her for the struggle. We must be prompt. There is much to lose in a day. I myself will go on to-morrow and have all in complete readiness for the voyage, and, who knows, for the fighting on the other side. Now give heed Placide—Captain de Mouret," for he was always particular to distinguish the man from the soldier, and in giving orders to address me by my proper

title. "The war has been decided upon; you will remain here and watch developments"—he was proceeding to acquaint me with what was expected of me. I knew not what he might say, but felt impelled to throw out a silent warning, which even he understood it not, he was quick to take. He paused and looked me inquisitively in the face. I glanced awkwardly from him to Jerome and back again.

The thought then dominant was a growing distrust of Jerome, and the desire to have our movements secret. I remembered Bienville's words, "We know not who to trust," and being ignorant of what orders Serigny meant to give, or how much information they would convey to Jerome, deemed it best to let all the occurrences of the day come out. I could not forget the lad's gallantry, nor must I lose sight of the fact that as affairs now were, he might very well have gone over to the other side for the sake of Madame; things stranger than that took place every day, and I had learned to be discreet. He might thus come into valuable hints and afterwards cast them into the scale against Bienville, for every means good or bad would be used by them to save their own influence, to uplift the Duke of Maine, if Bienville were involved in the general ruin, why, what mattered it to them?

While I remained hesitating for a word, Jerome's ready wit had already comprehended my purpose. He took the words from my lips. His countenance first flushed, then became hard and fixed, compelling me for the time into silence.

"Monsieur de Serigny, I perhaps can speak you better of your good Captain's mind. He mistrusts me—"

"You?" burst out Serigny greatly surprised. "Why you have ever been our staunch and loyal friend. What is this, Captain de Mouret, surely you are above a young man's jealousy?"

Jerome gave me no time to explain. "Softly, softly, sir. The Captain has good cause. Give me heed, my friends. To you, M. de Serigny, I will say upon my

## A Big Package "Salt of Life" Free to the Sick

**Send for it today**

**Send for it today**

**Send for it today**

This is not a drug, nor a medicine, nothing made by human hands, but a direct gift from God to kill disease and lengthen human life. This salt is a wonderful substance discovered in the mountains of Virginia. The world stands astounded by its marvelous curative powers. It is the essence left by the evaporation of the waters of Virginia's famous Seven Iron Alum Springs—a positive panacea for all human ills. You can now drink from this Fountain of Life, **FREE**. No matter how sick or old you may be, what the disease is, it cures. Doctors may pronounce you incurable, but Salt of Life drenches them with surprise. Even when everything else has failed you this marvelous natural remedy will cure and restore you to perfect health. Salt of Life conquers all disease, be it internal, external, chronic, malignant, infectious or death-dealing. Invigorates and strengthens; purifies the blood, adds bone and muscle and prolongs the life-giving elements. It brings all the joys of life and it costs nothing to find this out, for we will send you a big package as you may test it, free, if you will only send us your name and address. **SALT OF LIFE CO., 402 E. Broad St., Richmond, Va.**

## FREE CAN YOU COUNT? FREE

A Handsome \$500 Piano, Ladies or Gent's  
Elegant Gold Watch and Chain, Diamond  
Ring and \$300 in Cash. **SEND IN YOUR COUNT AND WIN.**

**CAN YOU COUNT?**  
Try It and See. Have You Got a Good Plan? It may enable you to win a Big Prize. We are making this liberal offer for the sole purpose of advertising our bright and interesting paper, **Commercial Poultry**, the leading authority in America on poultry raising and all topics connected with poultry. We want everybody interested in poultry to become a subscriber.

**Get Your Counts in AT ONCE. YOU MAY WIN A PRIZE.**

**FIRST PRIZE.** A handsome high-grade Piano, circassian walnut, figured mahogany, genuine quartered oak and ebonyized case, with carved top mouldings and handcarving on the music desk, trusses, pilasters and bottom frame. This piano has instrumental attachments and imitates perfectly the tone of the celestine.

**SECOND PRIZE.** \$150 in Cash. **THIRD PRIZE.** \$50 in Cash. **FOURTH PRIZE.** Beautiful Solitaire Diamond Ring; one to lady and one to gentleman. **FIFTH PRIZE.** Handsome Ladies and Gentlemen's Gold Watch and Chain with Chain or Waltham movement. We will give one watch to lady and one to gentleman. **SIXTH PRIZE.** \$25 in Cash. **NEXT 10 PRIZES.** \$5 in Cash each. **475 TO BE DIVIDED** equally between all those who come within three of the correct count.

**CONDITIONS OF THE CONTEST.** The person giving correct or nearest correct count will get first prize. Next nearest correct, second prize, etc. In case of a tie for any prize it will be awarded to the person giving best plan of counting the eggs. Each must send 50 cents for a full year's subscription to **Commercial Poultry** which entitles you to one free count; \$1.00 pays for three years and entitles you to three counts. If you send in three counts you may be able to win all three of the first prizes, as all it is necessary to do is to send in the correct count and the next two counts on each side of the correct number. **OUR PRIZES ARE WELL WORTH WORKING FOR** and if you are interested in the subject of poultry you cannot afford to be without our handsome monthly publication, **Commercial Poultry**, which tells you all about the latest ways of raising poultry and is worth many times the price we charge for a yearly subscription. There is no element of chance about this contest. **IF YOU CAN COUNT, YOU CAN WIN.** Anybody having 8 counts may enter additional counts at 25c each. The more counts you have, the better will be your chance of winning. The award of prizes will be made by a committee of three disinterested persons. If you are already a subscriber to **Commercial Poultry**, your subscription will be extended. Address all letters and make all remittances payable to **COMMERCIAL POULTRY, 22 Pontiac Bldg., Chicago.**

honor, which until this day was never stained by thought or deed. I will say,—this day I would have betrayed you. Nay, do not look so pained and unbelieving; all men are mortal, and passions stronger even than duty, stronger than loyalty, yea, stronger than honor itself, may tyrannize over the best of us. I repeat, this day would I gladly have betrayed you, betrayed my friends to save—well it boots not whom, but a woman. For the woman I love may lose her liberty if not her life when those accursed papers reach the hands of the King. I was mad, and at this moment doubt and fear myself. It is better not to trust me with your plans; the Captain is right. Jerome de Greville never yet deceived a friend, but for the love of God, Messires, do not tempt him now," and he faced about with unsteady step and started toward the door. Before we could detain him he was gone, leaving Serigny staring in the most unbelieving and bewildered fashion at me.

"In God's name, Captain, what piece of folly is this? Tell me all, for oftentimes the success of the most careful plans is governed by just such undercurrents as this, of man's love, or woman's spite. Go on; I listen."

I explained briefly Madame's position, Serigny nodding his acquiescence; it was an old tale to him, except he did not know Jerome's relations with Madame. Of her domination over the Duke of Maine he was well aware. When my story was fully done he pondered for a long while in silence. His sorrow was deep and sincere.

"Poor fellow; poor fellow; as noble a lad as ever drew a sword, but in his present frame of mind it is safer not to trust him; he is capable of any act of desperation. We will do our best to protect his lady, though. Where was I? This matter has disturbed me—Oh, yes, about to give your orders. You see I am all ready to leave. I have but waited your return. The war has been decided upon and the news needs only to be given out. The King hesitates and wavers; Chamillard is a mere reflection of the royal whim. If we do not attack the Spaniard he will attack us; it is simply a question of whether we want the war at Biloxi or Havana. For my part I would rather see Havana in siege than Biloxi. This matter can not be long delayed, a few days more at most. These dispatches may decide. With these before the King he will no longer doubt my brother, but will place the blame where it most properly belongs—for in the main, Louis is just. I would not desire any greater pleasure than to see the gibbet whereon these traitors of the itching palms, these thieves who sell their King for Spanish gold, will take their last dance. Do you remain here for as many as six days, this room is at your disposal. Be quiet and discreet; learn all and tell nothing. A still tongue is the safest in these times. The moment war is declared make all speed for Dieppe and we will up anchor and away."

Serigny was as happy as a boy at the prospect of action; the atmosphere of court ill agreed with his fiery temper. This was the gist of our plan of operations, and it was so arranged in detail.

In a few moments Serigny left me, taking the packet with him, and I in excess of caution followed him at a little distance, locking the door behind me and keeping the key in my pocket. I bore his tall figure well in sight until he passed out of the unfrequented halls into that portion of the palace where the many shuttlecocks of fortune congregated to laugh and talk and plot and lie. Not long after he came back, sorely nettled and disappointed.

"It is done; the King has them in his own hands; yet he does not talk; promises nothing; is closeted with his ministers; they must be of considerable importance. It is all secure for us, for I told him of my departure in the morning to the colonies, and he assented. I judge, then, it is something of a very delicate nature, touching the royal honor of the King's own blood. Besides much is in cipher which it will take time to read. Louis, you know, would not admit, save to those nearest his throne, the possession of the secret Spanish cipher."

The night passed by dismal and uncertain enough. I must confess to a great sinking of the heart when I saw Serigny's carriage roll away in the gray of the early morning, leaving me absolutely alone in my father's land of France, where in the short space of two weeks so much had transpired; much to be ever remembered, much I would have given worlds to forget.

It must have been a most forlorn and dejected looking creature that stood in the great square that sunless morning, peering into the mists which had absorbed the carriage. The solitude of vast untrodden forests breeds not that vacant sense of desolation which we children of nature feel in the crowded haunts of men. Face after face, form after form, voice after

voice, yet not one familiar countenance, not one remembered tone, not the glance of a kindly eye; all is new, all is strange, all at seeming enmity. The defection of Jerome, my only comrade, was indeed a cup of bitterness. I dreaded to meet him, not knowing what tack he might cut away on. Yet I could not blame him; it was more of pity I felt.

I recall with great delight some of the minor occurrences of the next three or four days. After Serigny's departure, every afternoon at imminent risk I would take horse to Sceaux, and pursuing a by-way through the forests and fields through which a wood cutter first led me, ride hard to catch a glimpse of her who now occupied all my thoughts. I wonder at this time how I then held so firm by the duty of returning to the colonies, when the very thought of war and turmoil was so distasteful to me. When I rode to Paris and clothed myself once more in my proper garments, their friendly folds gave me a new courage to meet whatever Fate might send.

It may be pertinent to chronicle here, what history has already recorded, the result of placing those dispatches in the King's hands.

The Duke of Maine, as all the world knows, disavowed his wife's act in treating with Spain, and thus saved his own dainty carcass from sharing her captivity in the Bastille. But both he and Madame were imprisoned until he made most abject submission and apology to Orleans.

Madame de Chartrain was sent to a provincial fortress, and bore her incarceration with great fortitude, winning even from her enemies the admiration always accorded to firmness and virtue.

Philip of Orleans being once firmly established in the Regency, changed his usual course, and pardoned many of those who had conspired against him. Their prison doors were opened, and the Duke of Maine, becoming reconciled to his haughty lady, forgave her and gained great credit thereby in the vulgar mind. They spent their lives quietly at Sceaux during the Regency, and naught else of them concerns this history.

Philip of Orleans possessed some of the virtues of a great man, and many of a good man, but these he kept ever locked in his own bosom. His mother, the rigid and austere Madame, said once of him:

"Though good fairies have gifted my son at his birth with numerous noble qualities, one envious member of the sisterhood spitefully decreed that he should never know how to use any of these gifts." Such was the character of the Regent.

Of Jerome and Madame de Chartrain I would fain tell more, but during the troubled times in America I completely lost sight of them, and my inquiries developed nothing of sufficient verity to give credence to here.

All Frenchmen know of Jerome's gallant death at Malplaquet. It is a fireside legend now, and young French lads turn their moistened eyes away at the hearing. Marshal Villers being sorely hurt and in peril of capture, there fought beside his litter an unknown gentleman who, without name or rank, yet bore himself so commandingly, the discouraged guard rallied again and gave him willing obedience. Arrived at a narrow bridge he urged the litter bearers safely across, and fighting at the rear to be himself the last to reach a place of safety, he was struck and fell. Prince Eugene, the courteous enemy, who had himself witnessed the incident, sent a guard of honor to the Marshal at Valenciennes the next day with the body, deeming it that of a man of consequence. His letter congratulated the defeated Villars upon having such chivalric friends.

It was poor Jerome, and no one knew him then. He rests now with his fathers.

I loved the lad truly. As knightly a gentlemanly as ever died for his King, or lied for his lady.

CHAPTER XIX.  
The Castle of Cartillon.

Two days, four, passed. Serigny had departed for Dieppe to arm and equip le Dauphin, yet still there was no official declaration of war. I was waiting, as he had ordered, for the formal declaration, on the publication of which I was to join him on board at once and we would set sail instantly for Bloyl.

Another anxious day, during which I vacillated between an ignoble love and a noble duty. Then, late in the evening, the whole court was fanned into a blaze destined to spread throughout Europe and America, by the announcement that the war had been formally decided upon.

Men may long look forward to a crushing calamity, and when it comes be surprised and unprepared. So, though I well knew I must leave France with all speed, and possibly never see her shores again, I put it from me as persistently as men do the certainty of death. Every day did I ride to Sceaux, by the old wall, and catch a glimpse of her I loved. When war was at last declared there

was no time for parleying with duty. My path lay straight and clear before me; yet for once a soldier's duty and a soldier's adventure gave me no pleasure. All my thoughts were elsewhere.

Hot-foot to Sceaux again I rode on my way to Dieppe, and from the same embrasure at the wall where my horses had trampled down the foliage many times, I watched her coming. It was not for long. More hurriedly than was her custom she glided, a glorified young creature, in and out amongst the shrubbery, until the envious chapel door hid her from my sight. No living thing was in view. The sound of no discordant voice broke the holy peace of God. Temptation came never to our first erring mother in more insidious guise than this.

Where was the harm, I reasoned, it was but for an instant's speech with her, ere the bounding seas would roll between us. So with nervous haste I tumbled from my horse and tethered him stoutly to a tree. Over the wall and to the chapel door took another instant, and there, inside, at the rail, she knelt. I paused, as a slumber might, hesitating to mar with heart profane the devotions of a saint. My foot struck a cracking board in the entry, and drew her glance toward me. She sprang up as I entered, with a swift cry of surprise, and, as I fancied, some whit of gladness in the tone.

"You, Monsieur? You here? I thought you away from Sceaux."

"Yes, Madame, true; but I returned to speak with you before I leave France forever. I came here to—to—" I could not tell her why; my heart, so full, clogged my utterance. But women ever understand.

As I cast about me for a word, we had drawn closer, and taking the hand which half-hid in the folds of her dress, gleamed more white and pure, I would have raised it to my lips. Even at such a time I noted the device upon a ring she wore, a device grown so familiar: A wolf's head, sable.

"An old thing of my mother's," she explained, "Charles has one, and I."

I eagerly seized upon a subject which might so naturally prolong our interview.

"Aye, I know the device well; are you of the d'Artis?"

"Yes, my mother was; there are now none of the race. The last is a wanderer; I know not if he lives."

"I know, perchance, of such a man, Madame; would you tell me more of him, of yourself?"

"I never saw him, my mother's father. Her married displeased him greatly. When her first child was born, a girl, she sent it to him for his blessing. He denied it, saying he wanted no more of women. The child died in infancy. Of my sister's birth and mine he was never told. Then he went away, where, none know."

# ARE YOU HUNTING

for health? Have you been BEATING ABOUT THE BUSH, first trying one course and then another, following the lead of others no wiser than thou, only to find that the game will not come within your range?

THE PLACE to HUNT FOR rabbits is where rabbits ARE KNOWN TO EXIST; the place to HUNT for health is where HEALTH HAS BEEN KNOWN TO BE FOUND!

It is beating up the woods where NO QUARRY LURKS to hunt for health in a bottle of alcohol and sarsaparilla, or a package of senna and straw; it is only following the track and trail of hundreds of disappointed, tired and footsore hunters, many of whom have fallen by the way-side.

Let their experience, AS WELL AS THE EXPERIENCE OF SUCCESSFUL HUNTERS, GUIDE YOU! Those who have hunted for health AND FOUND IT, are competent to tell WHERE IT CAN BE FOUND. Thousands of satisfied hunters say the ROAD LEADS TO VITAE-ORE, that the hunter for health, searching amid its subtle curative, healing and restorative properties, will not be disappointed.

If you have been using other treatments without the results that were promised and that you anticipated, THROW THEM AWAY and begin with this natural medicinal ORE! It will not fail you!

## YOU ARE TO BE THE JUDGE

Sent on 30 Days Trial  
BY MAIL, POSTPAID

### Read our Special Offer

WE will send to every subscriber or reader who writes us, mentioning UP-TO-DATE FARMING, a full-sized One Dollar package of VITAE-ORE by mail, postpaid, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs or dopes of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand we ask our pay only when it has done you good and not before. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. Vitae Ore is a natural, hard, adamantine, rock-like substance—mineral—Ore—mined from the ground like gold and silver, and requires about twenty years for oxidation. It contains free iron, free sulphur, and magnesium, and one package will equal in medicinal strength and curative value 800 gallons of the most powerful, efficacious mineral water, drunk fresh at the springs. It is a geological discovery, which fresh at the century for curing such diseases as

there is nothing added to or taken from. It is the marvel of the century for curing such diseases as Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration and General Debility, as thousands testify, and as no one answering this, writing for a package, will deny after using. Vitae Ore has cured more chronic, obstinate, pronounced incurable cases, than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines or doctor's prescription which it is possible to procure.

VITAE-ORE will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING if you will give it a trial. Send for a \$1 package at our risk. You have nothing to lose but the stamp to answer this announcement. If the medicine does not benefit you, write us so and there is no harm done. We want no one's money whom Vitae Ore cannot benefit. Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just what we agree. Write today for a package at our risk and expense, giving your age and ailments and mention UP-TO-DATE FARMING so that we may know that you are entitled to this liberal offer.

### YOUR STORY Will be Like Hers

#### A CURE AND ALWAYS A CURE

Sarah A. Chappell Wrote for It. Tried It  
Judged It, and Is Not Sorry  
Why Not You

BAXTER, MO.

I take pleasure in telling what Vitae-Ore has accomplished for me. I had suffered seven years with a severe Stomach Disorder and Indigestion, the trouble dating from the year 1897, and have doctored and used patent medicines all the time. I began a treatment with Vitae-Ore some time ago, and have at this time taken in all four packages, and feel almost as well as I ever did in my life. I do hope that all suffering women can be induced to try this wonderful medicine as I did, and be cured as I have. If it was not for Vitae-Ore I surely would not have lived much longer, as I had about given up all hopes, but now I feel that life is worth living—I am so well and cheerful. I recommend it among my friends, finding it a great pleasure to do so, and feeling that it is my duty as a recompense in some measure for the great good it has done for me. I know that Vitae-Ore is what it is claimed to be, and only wish that all afflicted will give it a trial.

SARAH A. CHAPPELL.

## NOT A PENNY UNLESS BENEFITED

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

# UP-TO-DATE FARMING

*A Magazine of Up-to-Date Methods on the Farm  
For Up-to-Date People and those who want to become Up-to-Date*

MAY 1 1904

50 CENTS A YEAR

Think of a business where the millions of people engaged in it are constantly putting forth their greatest effort to increase production, when the fact exists that the greater the production, the lower the price. In this stupendous effort farmers are putting forth, we might say, to commit industrial suicide, they are goaded on by the agricultural press, by government experiment stations, agricultural colleges and farmers' institutes. Has the world ever witnessed a spectacle like it in any other industry? Absolutely no.

**J. A. EVERITT, PUBLISHER**  
**INDIANAPOLIS**

# HOW TO CO-OPERATE AND WITH WHAT BENEFITS

This is a great subject for farmers. Every other important business is organized and co-operating. There is more reason why farmers should co-operate than for any other class. Also, contrary to the general opinion, they can co-operate with as definite results and greater benefits than any other class. You can learn how in the new book,

## THE THIRD POWER, Farmers to the Front J. A. EVERITT, Indianapolis, Indiana

This is the greatest book ever written. It should be read by every person in America, and particularly by farmers. Read a few extracts from many letters.

Here is indeed a great book for farmers and for all people interested in social problems from the farmer's viewpoint. \* \* \* The book is ably and forcibly written; displays an intimate acquaintance with agricultural conditions. \* \* \* It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in the pages. "THE THIRD POWER" ought to do much to stir up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties. \* \* \* I most heartily recommend this book, particularly to farmers everywhere.

THE AMERICAN CO-OPERATOR,  
Lewiston, Me.

It will create a new mind in the reader.

W. P. BRYANT,  
Corona, Cal.

\* \* \* "THE THIRD POWER" teaches the more humane idea that 'co-operation is the life of trade.' It is a sign that the thoughts and purposes of men are changing for the better. \* \* \* Thoughts and efforts are heaving the world's wide breast, and betoken coming changes that shall bring about better things for humanity. THE SUNDAY PATRIOT,  
Jackson, Mich.

"THE THIRD POWER" is worth ten times its cost. Its teachings are plain and explicit; its objects are noble and just; its truthfulness cannot be disputed. It is a book that should be in every home in the country.

H. F. MARCUSON,  
Harpers Home, Va.

"THE THIRD POWER" is ripe fruit—it is wheat without chaff. \* \* \* The manner of treatment is bold and original, with new and valuable thoughts scattered all through. \* \* \* The one opened question—that of united action and consequent success, is laid down at the farmers' feet, and the road is pointed out with no uncertain hand. It shows that a mighty effort is being made to get the forces on the farm in line for the great victory that is within their grasp, when they shall rise up as one man, and planting themselves squarely in the highway of iniquity, shall stand there as a great tower of strength—the greatest power on earth, the grand and new—the third power. A power that shall cause a parting of the ways; that shall obtain equity for the farmers because it is their right. "THE THIRD POWER" is a book that must be read to be appreciated. \* \* \*

HENRY BURNS GEER  
Nashville, Tenn.

\* \* \* To my mind "THE THIRD POWER" has only one equal in late economic literature, viz. Edward Bellamy's "Looking Backward," which contains idealisms without immediate practicability. "THE THIRD POWER" may be called the "Looking Forward" for American farmers with all its ideals immediately practicable and possible. \* \* \* Many a farmer will be started to thinking on sound lines by its perusal. \* \* \* The principles it teaches must be known, understood and put in practice ere farmers will come to their own, and agriculture be put on a sure footing for prosperity. It should be studied.

C. H. TAYLOR,  
Gillaspie, Va.

Will these statements start you to thinking? Will they cause you to act and secure the only work ever written that tells you all the troubles affecting agriculture; also, clearly points out the remedy and provides the plan for applying the remedy? All farm problems are solved by the Third Power.

It will be a crime to refuse knowledge and light on dark subjects that generations have waited for when it is within your reach. If the owner or operator of any farm will not rise above any sluggishness and indifference that may dominate him and reach out for this fruit of knowledge, we urge the boys to send for THE THIRD POWER so they may not live in ignorance and under the uncertain, vicious system that has prevailed with agriculture in the past. Or if the wife and girls want less of drudgery and more of pleasure and luxury in their farm home let them see that a copy of THE THIRD POWER is obtained without delay.

I would not be deprived of the valuable information contained in this "Gem of the Library" for any money consideration. I have boys now merging into manhood, and in this, if I can leave them nothing else, I will give them a legacy far superior to dollars and cents.

J. M. DUNLAP,  
Vicksburg, Ky.

I believe it is the most thorough and complete analysis of the present industrial condition, and in my estimation it proposes the most reasonable and practicable remedy for correcting the evils that now exist industrially, politically and economically, of anything I ever read.

R. E. SMITH,  
Howell, Mich.

It is the only exact presentation of the actual conditions effecting the farming class, ever written.

W. C. PITTMAN,  
Hillyard, Wash.

It is a strong and masterful portrayal of the benefits to be derived by farmers through co-operation.

GEO. G. WINANS,  
Hamburg, Mich.

It is just the right thing to set farmers to thinking. Your statements, statistics and deductions are beyond refutation.

EDWARD MURPHY,  
Crury, N. D.

\* \* \* It aims at something higher than merely mercenary results. It aims at giving agriculture its proper place amongst the noblest of industries, and enable farmers by co-operation to secure rights and benefits to which they are justly entitled, but which they can never expect to gain without organization.

THE JOURNAL,  
Indianapolis, Ind.

"THE THIRD POWER" is prompted by a desire on the part of the author to have farmers reap the profits of their toil instead of the speculators and brokers. The manner of treatment is bold and original. The style is fresh and interesting. \* \* \* The entire book possesses the deepest interest and value, not only for the farmer—the class most deeply concerned—but all those who are interested in social problems.

AGE HERALD,  
Birmingham, Ala.

It is a plain, straightforward, forceful, convincing argument, and since an opinion is about, that either a farmer's union or a land trust is the inevitable outcome of present economic tendencies, capitalists and financiers as well as farmers and labor organizers are interested in looking the matter straight in the face. The ordinary single handed farmer, \* \* \* is "sweated" in a manner not dissimilar to the slaves of the sewing machine. The producers of food and the makers of clothes—that is to say the two most indispensable laborers in the organization of society, and therefore theoretically the most independent—appear to be the most oppressed; they can earn only a bare subsistence. \* \* \*

BROOKLYN EAGLE,  
New York.

I cannot find words to express my opinion of "THE THIRD POWER." To say that it is the best work on the agricultural industry I have ever read, but

feebly express my opinion of it.

J. B. THORBUEN,  
Sec. State Board of Agriculture, Guthrie, Okla.

"THE THIRD POWER" opens up a new field of literature. The object of the book is the betterment of conditions now existing among farmers of America. The argument, though radical, is clear, forceful and concise. The book makes interesting reading. That the author has given much attention and study to the questions under discussion is shown in the way he has handled the subject. \* \* \* He does not write modestly but makes his assertions boldly and in language simple but strong. His statements may be practical, but they are decidedly startling. Laying all this aside, it is safe to assert that the book will be read with interest.

ADVERTISER, Newark, N. J.

"THE THIRD POWER"—The attention of every person interested in agriculture should be directed to this work. \* \* \* The present discouraging conditions of agriculture are forcefully discussed. The benefits of industrial co-operation are clearly and logically presented, and the opportunity is given to every farmer to throw off sluggishness and indifference, and assist in promoting one of the greatest and best movements of the age. The rapidly increasing popularity of the society (which "The Third Power" represents) indicates that the commercial emancipation of the long ignored and down trodden farmer has begun and that the rights of the ruralists will not only be defended but respected.

TIMES, Albany, N. Y.

"THE THIRD POWER" is apparently published in the interest of the new farmers' movement, The American Society of Equity, though not in a narrow sense. It is really a general plea for justice to the producer of what is most important for man's material welfare. Mr. Everitt's book is of special interest, as representing the spirit of the hour in favor of co-operation for mutual protection, with special reference of course to the farmer.

BROOKLYN TIMES,  
Brooklyn, N. Y.

There has been much written on the benefits of organization and co-operation by farmers in late years, but "THE THIRD POWER" is the most ambitious effort yet made as well as the most complete. It is written with a thorough understanding of the subject in hand. \* \* \* In the space allotted for review it is impossible to set out even briefly the line of argument the author follows, but the reviewer can say without overstepping proper limitations, that the book is one that every farmer can read with profit, and one that politicians would be wise to read and ponder.

SENTINEL, Indianapolis, Ind.

"THE THIRD POWER" is well written, an intelligent, earnest appeal to the agricultural class to rouse themselves and become the power in the world that their labor entitles them to. There can be no manner of doubt that the place of the practical farmer in the general economy of things is not what it ought to be, and not what it might be. The only reason they are not what they might be is because he has not taken it. EVENING TELEGRAM,  
Philadelphia, Pa.

### ERRORS REGRETTED

The work of a large publishing house is very complicated, especially when growth is so sudden as to find inadequate arrangements for taking care of it. It is possible that, in sending out our regular spring statements to subscribers, some may have received notices of delinquency who are fully paid up. If such is the case we very much regret it, and assure our friends that it was caused by unavoidable over-crowding in some of our departments. We regard our subscribers, though scattered all over the world, as members of one great family, who, in many respects at least, have similar tastes and purposes, and we wish that family to remain an unbroken one. So far as we are concerned, all shall be treated with fairness, courtesy and equity.

### IMPORTANT ANNOUNCEMENT

Michigan Bean Growers' Attention!

The American Society of Equity will at once direct their efforts to organizing farmers in the bean growing districts of Michigan for the purpose of securing a fair and equitable price for the 1904 crop.

Michigan produces three-fifths of the beans of the country and the price the growers in this state agree upon will be the market price. Parties are requested to correspond with Mr. Geo. G. Winans, (State Organizer), Hamburg, Mich., who will give all information and necessary assistance.

By order of The National Union of The A. S. of E.

J. A. EVERITT, Pres., Indianapolis, Ind.

Here's a tip to the speculators: Cash wheat in any future month up to August will be worth at least \$1.00 at Chicago. Corn will go to 60 cents by July.

Now's the time to join the A. S. of E. That trip to the World's Fair this summer will cost you some money. You can afford it if you get your price for your crops.

This is the time of the year when hope is high as we plant the seeds. How much better it would be if certainty of price for the crop could be depended upon.

The saying "A poor excuse is better than none" will hardly excuse those farm papers that oppose the attempt of farmers to control their marketing, to compel a fair price.

Violent fluctuation in the speculative markets is a sure indication that spring has come and the crop liad with it.

The Farmers' Guide, Huntington, Ind., is opposed to the farmers movement to control marketing to make prices as represented by the A. S. of E. It has said so and it has said that it is glad to hinder the movement. Farmers remember these things.

If you want to be absolutely sure to maintain good prices on wheat and cotton and make good prices for other 1904 crops, you must join the American Society of Equity this spring. Membership fee \$1.00.

This is a critical year for farmers. Will they maintain dollar wheat or will they let the speculators price it down?

If the wheat crop this year is the largest the country ever grew it will be worth a dollar per bushel. Farmers cannot afford to grow it for less, hence consumers must not expect it for less.

If farmers want to make themselves independent of speculators and elevator combines, let them store their grain in their own graneries. The effect of a few millions of bushels of grain in elevators is disastrous to prices because it belongs to market manipulators. There may be many more millions in the farmers graneries, but it will require the hard cash to get it out.

If stockmen want to be independent of the packers and stock yards, let them have their own stock yards where they can keep their stock almost as cheaply as at home and lay on fat while waiting for the union buyers getting ready to bid.

## CROP REPORTING.

There may be some impatience regarding the publication of crop reports. The A. S. of E. does not base its operations on future prospects or probabilities, but on existing facts. We don't intend to guess at "what may be," as the gamblers in "futures" do; our calculations have to do only with "what is." The minimum price for any crop must be based upon what is actually made; not upon what may be made, and that price, or its legitimate growth to the maximum, should command that entire crop without any reference to what may or may not be next year. It may readily be seen, then; that we cannot deal in prospects, nor would such dealing be desirable if we could. The intelligent farmer wishes to be assured of a steady market, not of a fluctuating one, hence each year's crop must supply the demand for the year intervening between its reaping and that of the next, so that there be no scarcity and no stagnation, unless the former should be brought about by an actual crop failure, which could not be known until the crop is made, and it would then lead to an increased minimum price. Hence it is very evident that reports of "prospects" would be neither useful nor desirable, but would rather play directly into the hand of speculation. We refer to government reports for verification of what we say. Let every farmer do his very best with his every crop, and let the National Union have actual results when the crop is made. No fears but we shall have them in advance of all speculative schemes.

## PROSPERITY FOR THE AMERICAN FARMER.

The American farmers stand today face to face with a crisis in their affairs. Farming in America has not been as remunerative as it should be, owing to the prevailing low prices, and the question which now confronts the farmer is whether this condition is to continue. A recent number of "The Thresher World," contained this pregnant paragraph:

"High prices for wheat mean increased prosperity for the American farmer, who has learned how to sell wheat as well as to raise it. This year, for instance, farmers believing in the prediction of dollar wheat held on to their stock—or as much of it as they could, and thousands of them realized the expected price."

It matters not, in this discussion, what it was that made the farmers believe they could get a dollar for their wheat, the important fact being that they did believe it, and did get it. It is true that only a few, comparatively, received a dollar or more for their wheat, for the great majority of the producers had disposed of their holdings before the dollar price was reached. Those who did believe, and held on received this remunerative price. If all others would have had the faith all would have received the price.

Nearly all the 1903 crop has been disposed of, or will be before the crop of 1904 is harvested and ready for market. The question now confronting the wheat grower is what he must do to secure a remunerative price when his new crop is harvested. It is a grave question for his future. Upon it hangs suspended his future for some years to come. He can command a remunerative price for his crop this year, and it rests wholly with him whether he receives it or not.

The speculator is his enemy, and they with the grain buyers and millers of the country will combine against him, and will have the sympathy and aid of the speculators in all other kinds of farm products. This element own or control the elevators, and when the wheat is placed in the elevators it is at their command. They may not own the wheat, it may still remain the property of the farmer, but in the elevator it is visible, it is the basis of the speculators' calculations, and while it remains there it is just as much at the mercy of the speculators as if they actually owned it.

If remunerative prices are to prevail this year the first requisite is for the producer to believe that he can get them,

determine that he will not sell at less, and then hold, as did those of the 1903, until the price is offered. How are they to hold on to their crop until a remunerative price is offered? Nearly all farmers have grown into the habit of disposing of their crops when threshed because they are not prepared to hold their crop. As we have said, in the elevators the crop is a club in the hand of the speculators to be used against the owner of the crop. Hence the only thing that remains is for the farmer to prepare to hold his crop on his own farm, free from the grasp of the speculator, and free from the storage charges of the elevators. To do this he must build his own granary. The building of farm or community granaries then becomes at once a prime factor in securing and making permanent prosperity for the American farmer.

This building of granaries is a necessity and cannot be longer delayed. Not every farmer is prepared for the building, perhaps, and it is not every one that raises a crop large enough to justify the expense. In either case the neighborhood, or community granary comes into play. In every farming community there can be found enough farmers who can and will join in the erection of a granary, in which each contributing farmer can have his own bin, or bins. By such a union the erection of the proper building will cost but a trifle for each. Two, four, six or more farmers can thus unite, and each farmer could still own and control his own crop. If necessity required it, he could readily borrow money on the contents of his bin, and thus avoid the necessity of selling at any price the speculator might offer.

The question is, the necessity is, to build granaries, and if you are not able to build for yourself, join hands with your neighbor. Once having a way to store your own grain, free from the tax of the elevators, you can easily hold until the proper price is offered. That time will come, and when it comes you will be ready to take advantage of it. Had the farmers of this country erected their own granaries ten or a dozen years ago, they would have saved to themselves millions of dollars. The importance of having granaries ought to have impressed itself upon them years ago. Through the lack of them they have been taught a stern and hard lesson, and all that is left for them now is to repair, as speedily as possible, the mistake they have made.

The question of being able to get a remunerative price is no longer a problem. As the extract from "The Thresher World" says, the farmers believed they could get, and believing, held out for it, and did get it. They got it by holding out for it. The problem for the 1904 crop is no harder than was that for 1903. For 1903 they got it for the last part of the crop only. For that of 1904 they should get it from the very start, and will get it from the start, if they exercise the same faith and prudence as actuated those who got it for the 1903 crop. To put them on the safe side, and in a position to compel the price, they must have a storage place of their own.

Grain is not the only product of the farmer for which a remunerative price can be demanded and enforced. Fruit, dairy and poultry products, can not be provided for in granaries, but they can in cold storage plants, and cold storage plants will speedily follow the erection of granaries. "The Thresher World" well said that "the American farmer has learned how to sell wheat as well as how to raise it?" It is in the selling where all the profit lies. To raise great crops, unless they are sold well is an absolute injury to the farmer. A part of the lesson of learning to sell, must eventuate in the caring for, until the time to sell comes. Build granaries! Again we say, build granaries! AND BUILD THEM NOW.

The right time to market your crop is when you are offered a remunerative price. There is no other right time. The farmers can compel a remunerative price by co-operation.

## FOR THE RELIEF OF TOBACCO GROWERS.

Before this paper reaches the readers the campaign will be on to rescue the tobacco growers from the grip of the tobacco trust. It is too early to report results before our form's close, but judging from the calls for meetings, Kentucky, Tennessee, Virginia, North Carolina and Maryland are ripe for organization, or as one deputy president wrote: "My county is red-hot for organization."

The start will be made in western Kentucky by National President Everitt, assisted by Deputy National Organizers Barlow and Sherman. The work in western Kentucky will be under the management of Deputy President James W. Lee, of Morgantown. We expect the movement will attract people who can go into new territory so that the whole tobacco district will be organized before the end of 1904.

It was our good fortune to receive a remarkable document on this subject recently. It is a print of a speech by Hon. A. O. Lewis, of Kentucky, in the house of Representatives, Washington, March 4, 1904. It is a vivid portrayal of the bad condition of the industry from the producers standpoint, and seeks relief through the repeal of the internal revenue tax upon twisted manufactured tobacco. We quote as follows:

"There is one relief and only one—the producer of tobacco must find a market not controlled by the trust. That market you can open by the repeal of this tax."

We want to go farther than Mr. Lewis. We don't propose to ask the government to repeal any tax. We don't propose to honor the tobacco trust by going outside of their jurisdiction and finding another market. We propose to teach the growers themselves how to find a market with the trust and with any and all independent buyers. We will teach the growers that they are greater than the trust—for what would the tobacco trust be without tobacco? When the growers realize this, and they will, then the trust's representative will go up to Henderson and find growers asking a good fat price. He will go down to Madisonville and find it the same way and to Hopkinsville and Princeton, and all through the tobacco district and it can buy tobacco at the growers price only. Then will days better than the good days of the past return to the State of Kentucky.

We quote as follows from Mr. Lewis' speech:

"We have 1,700,000 men, women and children whose lives and whose living depend upon the price of their product."

"The smallest farmers in the world are the growers of tobacco. \* \* \* Until a short time ago tobacco returned from \$50 to \$300 an acre. Now I have evidence to show that the growers make less than of average of 30 cents a day. There are today not less than 90,000 men in Kentucky and Tennessee who work for their daily wage under the manipulation of this trust."

"This greedy and aspiring organization, (The American Tobacco Company) today is absolute master, with the partial exception of the cigar trade, of a business whose retail sales amount to the enormous sum of \$500,000,000 annually."

"And now there is talk and more than talk of a curtailment of the crop. Dollar wheat is an attractive, a persuasive advocate. May not the future hold some surprises in store?"

"The American Tobacco Company and it alone has a direct and pecuniary interest in destroying the price of the raw material and maintaining fixed and invariable the cost of the manufactured product. To this one merciless and powerful commercial despot these wretched producers of tobacco justly attribute all their woes."

"The distribution of wealth today is a more serious question than the creation of it. This country will create wealth. Its energy, its courage, its tireless ambition, the fire and force of the American laborer that will make him, if need be, turn night into day, make it as impossible to stop the creation of wealth as it would be to stop a pot from boiling with a hot fire under it. The thing is the distribution of wealth."

In conclusion, Mr. Lewis said:

"Another thing I want to ask the American Congress is this: 'What is going to become of 120,000 men who last year received from 19 to 30 cents a day in a land which you say is prosperous.' This business is destroyed. These men will

be thrown entirely out of employment. They must leave their homes. They must become outlaws or they must become homeless tramps and vagabonds on the face of the earth. There is no work for them on the farm. If they do not cultivate tobacco there will be five times as many men on these farms as are required to cultivate them in wheat and corn or hay."

The American Society of Equity comes to the rescue and answers the question addressed to the American Congress. Congress is slow to act, but thank God and the inherited American love of freedom in our citizens, when the way is shown they will help themselves. The A. S. of E. shows the way for each toiler on the farm, each man who creates the necessities and luxuries from the soil, how to be the freest and most independent person on earth. Though he may have been ground into the dust for years, yet he can now come to the front and dictate even to trusts.

## SHOOTS WILD

Alvin Magee, institute speaker and consequently in the employ of and under the domination of the politically inspired and directed Experiment Stations, writes more than a column to the National Stockman and Farmer. He says: "Recently I had the pleasure of listening to an address by Mr. J. A. Everitt, etc. He commends the objects of the A. S. of E. at some length and refers to them "praiseworthy" but closes as follows:

"Frankly, however, the president of this society does not present the case in a way that inspires faith. (1.) He assumes that a board of directors can secure a more perfect distribution of perishable products than the thousands of shrewd shippers who are intouch with various markets by telegraph every day. (2.) He assumes that individual producers will let their produces rot at home rather than accept a price below the one fixed by a board. (3.) He assumes that grain stored on the farm will not affect market price. (4.) He assumes that a million men can be held together in a sort of combine when experience shows that even a few hundred men, in a steel or coal combine, dealing with non-perishable articles, cannot maintain prices for any considerable length of time."

Frankly, we must say that Mr. Agee does not understand the first principles of co-operation on the plan of the A. S. of E. Just like other editors they proceed to judge this farmers movement on evidence that was never presented in the case.

(1.) We will always contend that the producers of perishable products can secure a more perfect distribution of their goods through a board of directors acting for them than they can through thousands of shippers and commission merchants, who don't co-operate, but who are each for himself and let the grower hold the empty sack, if not enough to fill all the sacks.

(2.) We assumed nothing of the kind, but we advised that it would be wise to let the surplus of a perishable crop rot at home rather than to send it to market and break the price of all below a profitable point. We don't know what the critics will do when such a proposition is presented, until tried.

(3.) We assume grain stored on the farm will affect the market price, and never stated to the contrary. Store the grain on the farm and the longer it is kept there the higher the price will go.

(4.) We assume where a million men are in a combine to control marketing and make prices, enough of them will do the right thing to accomplish the desired end regardless of any number that can't of wont do the thing. If we had only a few hundred we would admit our case was weak, but give us the million and the plan will work automatically, without any one doing anything they don't want to do.

Under the heading of "The Sentry Box" is an article which may well claim the thoughtful attention of every farmer and every friend of agricultural advancement. There is no connection between The Sentry Box and the A. S. of E., nor the National Union, or Mr. Everitt. That article was not inspired from these headquarters, nor had any one here any knowledge of its intended production. It is simply the unprejudiced expression of facts as seen from high points of observation.

## WHEN MR. EVERITT COMES TO SOUTHERN INDIANA.

We are often reminded that a single swallow cannot make a spring, and we are quite as certain that Mel. Swallow cannot stay the tide of co-operation now sweeping over Southern Indiana. But who is Mel. Swallow? We do not know, and possibly no one else does. But he is represented as a young farmer in Southern Indiana, who writes to a paper published in the northern part of Indiana to oppose the A. S. of E. and farm co-operation. He says if Mr. Everitt will come to Southern Indiana, he will find "one-half or more of the farmers with plows, harrows, mowers, wagons, buggies and even binders, sitting in the lot or scattered over the fields, left where they were last used, and lots of times with a big, empty barn within a few rods of them, while the farmer himself is off to town with nothing to do but complain of hard times." Mr. Swallow's capacity for swallowing must be conceded, else he could never have swallowed that sentence. But Mr. Swallow continues: "Many farmers do practicably nothing from the time their crops are harvested until the time to start others." And again, "It is the rot and rust of machinery, wagons and tools that the farmer needs to look after, and we will not have so much time to think of Mr. Everitt's 'dollar wheat scheme.'"

Well, Mr. Swallow does not mince at the Southern Indiana farmers, he does not take time to swallow them, he simply gulps them down. When Mr. Everitt comes to Southern Indiana he will find the farmers there as intelligent and progressive as the average farmer of the country, and as anxious for improvement and as determined to have justice—equity.

How flippantly the thoughtless dismiss the great question of price! Suppose the farmers are not sufficiently careful of their machinery. We urge them to be more so, and insist that they take care of what they have, but their alleged short coming in this respect is no reason why the products of their labor should be exploited by those who do not labor. Though a farmer may be wasteful, he does not thereby forfeit his right to the profits of his toil. Because he allows his machinery to rust does not give some one else the right to rob his corn crib and granary. The discontent of the farmer must not be aroused. Dnscontent! The farmer must have the contentment of the hungry hound that sets o on his haunches and starves while the big dog gnaws the bone taken from his own kennel!

If the picture drawn by Mr. Swallow is real, it affords the strongest possible argument for organization and co-operation on the part of the farmers, and when Mr. Everitt comes into Southern Indiana, he will see that local union of the A. S. of E. are organized all through that section. Then the conditions that Mr. Swallow and the "Guide" picture will disappear. The two conditions cannot exist in the same neighborhood and there cannot be anything more elevating and better regulators for the farmers than to meet together in their own society rooms and discuss all the things complained of by this young farmer.

## CULTIVATE NUT FRUITS.

American farmers do not all comprehend the great profit in the cultivation of nut fruits. Originally the forests of America were full of nut-bearing trees—the walnut, the butternut, the hickory, the pecan, the chestnut. In many of the States these trees have almost entirely disappeared. Nuts of nearly all kinds are always salable at a good price, and the chestnut and pecan crop never equals the demand. Every walnut tree on the farm is good for \$2 to \$3 every year without any cost in cultivation, of time or labor. The only labor required is to gather the nuts after nature has knocked them from the tree, and prepare them for market. A single tree on the farm might not

offer inducement enough to gather the nuts and prepare them for market, but suppose you had fifty or a hundred on your farm, and a hundred would not occupy more than one acre of ground, what then, with every tree worth \$2? Can a farmer occupy the same amount of ground to better advantage?

Chestnut and pecan trees are much more profitable. In many parts of the United States the English walnut can be grown without trouble, and every bushel of nuts will bring \$2, and every tree, when arrived at maturity, will produce from three to five bushels annually. After being once propagated the trees need but little care to keep them in bearing order, and their life is very long. The great objection is that it requires several years to bring the trees to bearing, and the farmer is apt to say that should he plant a number of trees he would not live to enjoy the fruit thereof. That may be, but it is a very selfish plea. His children would receive the benefit, or should he desire to sell, a good orchard of nut-fruit trees would add very materially to the value of his farm.

Every farm has half an acre or more that can be spared for a nut orchard. The young trees will not cost much, and after they have started their growth after transplanting need little care. A few trees set out each year for half a dozen years would make a very considerable addition to the value of the farm, and the outlay in money would hardly be missed. Every year would add to the value of the trees, and with a little attention their productiveness would be increased. Such trees do not winter kill, nor does the drought, or frost, or excessive rain materially interfere with their productiveness.

There was in Spain at one time a custom that amounted almost to a law, for everyone who happened to eat fruit along one of the highways of the kingdom to stop and plant the seed on the side of the highway. The result was that in a very short time all the highways of Spain were bordered with fruit trees, the fruit whereof was to be enjoyed by those who traveled along them. Such a custom would hardly be possible in this country, but it would not be a bad idea for each farmer to turn over to his boy, or boys, a piece of land, on which they should be required to set out each year one or more nut fruit trees. The use of nut fruits is rapidly growing, more rapidly than the production increases. There is no likelihood of the market being over-supplied, hence the price will be remunerative.

## CO-OPERATION SUCCESSFUL IN DENMARK.

Is there an American who does not believe America can do anything any other country can do? Little Denmark is making a great success of co-operation, as is shown by the following authoritative statement:

A Copenhagen authority states that co-operation has been the great influence in the development of Denmark's agriculture. Co-operative dairying is directly responsible for an increase in the value of Danish butter exports from \$5,000,000 in 1882, the date of the inception of the co-operative movement, to over \$29,000,000 in 1900. This has been brought about largely by marked improvement in quality, which is placed at something like thirty per cent. and without which Danish butter could not have secured its present privileged position. There are now 1057 co-operative dairies in Denmark supported by some 8,500 cows, or more than four-fifths of the total number in the kingdom. The Danish co-operative bacon factories last year killed 636,000 pigs and 10,000 head of cattle, and received in the English market four cents per pound above the average price of bacon coming from other countries. Largely owing to the system of co-operative egg production the value of egg exports from Denmark has risen from \$1,947,000 in 1895—when the co-operative egg movement started—to more than \$4,380,000 in 1901. Danish eggs now average nearly four cents per dozen in London ahead of other foreign eggs. If little Denmark had received the same average price in the English market last year for her butter, bacon and eggs, as did other foreign countries her farmers would have been \$7,166,000 poorer. Danish agricultural co-operation also extends largely into buying supplies of all kinds. The little kingdom may be said to be a country of agricultural co-operation.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

## WAR CRY SONG

BY E. A. JACKSON, OF OREGON.

*We are coming, Mr. Everitt,  
A million farmers strong;  
We will join your great Society,  
And help the cause along.*

*We are coming, surely coming,  
To help producers on;  
We'll make a strike for Equity,  
And sing our war cry song.*

*We'll sing our war cry song,  
Yes, we'll sing it all day long;  
We are coming, Mr. Everitt,  
A million farmers strong.*

## DON'T FAIL TO REPORT.

The work of the National Union is very much interfered with by a failure of local unions to report. A great many of them do so, thus keeping in close touch with headquarters and insuring an unbroken record, but some of them fail, and thus make a break in the record. We must have reports from every local union. Secretaries are sometimes negligent; sometimes they move out of the neighborhood, and sometimes new ones do not fully understand their duty. In such case any member of the local union may send in a report, and are specially requested to do so.

\*\*\*

## WRITE LETTERS.

The editor of this department is anxious to have letters from the local unions, and also from individual members. We must keep in touch with one another. Never before was started a movement of such gigantic proportions, or around which clustered such wonderful possibilities. The country is large. Each section wishes to know what all the others are doing. The official paper brings them together every two weeks. Will you speak when you meet? Do it by writing letters, or even postal cards, telling what you are doing and how you are doing it, and advancing any ideas that way be developed in the local union. As an excellent example of the kind of letters I desire, I give the following splendid letter from F. W. Rodenberg, deputy president and secretary, Metropolis, Ill.:

John P. Stelle.

Dear Sir: The Local Union department in the official paper is proving very interesting, only there should be more news from the locals direct. This would greatly aid in binding us closer together.

Most interesting meetings have been held by Metropolis Local Union No. 1.

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by you guns within the real fort to repel the enemy.

Programs have been rendered covering such important questions as "How may we make the local union the greatest possible power for good in the neighborhood?" "The restoration of the soil," "Resolved, That it would be wise for the farmer to quit work at 5 o'clock during the summer season;" "Resolved, That our farms are better adapted to grazing and stock growing than to the production of grain."

Recitations and instrumental music have had a place in our programs.

Our object so far has been to strengthen our local so we can work to a better advantage in securing the objects of our grand society. In members, if well drilled and instructed, there is strength. Hoping much good will be accomplished by this department.

F. W. RODENBERG, Sec.

\*\*\*

I am persuaded that the paragraphs and other matter which appear in this department are useful and that they are appreciated, but, just as Mr. Rodenberg says, the local unions wish to hear from each other. An army is never so enthusiastic and determined as when it knows its comrades on other fields are winning victories. You need pay little attention to the form of your letters. Give the news and the ideas; the editor will do the rest.

\*\*\*

"Much better than we expected." That is an encouraging word which comes from many directions. Pass it along. "Paul may plant and Apollos water," but final success depends upon the farmers themselves.

\*\*\*

Uncle Alf's talk with that Chicago editor, though somewhat extended, is well worth a reading. I think it will be conceded that the editor did not make much off the old farmer. These agricultural editors have to have a jolt now and then.

## THE FIELD IN GENERAL.

A. F. Cushing, Dexter, Mich., writes: "The Third Power," (Mr. Everitt's book) beats anything I ever saw. I would not take \$5 for it if I could not get another like it."

\*\*\*

In the same letter Mr. Cushing says: "I now have about 300 bushels of wheat on hand. I will get \$90 more for it than I would have got but for the A. S. of E. We have a local union here of 40 members."

\*\*\*

Mr. C. L. Cannon, Falls, Minn., says: One great beauty of the A. S. of E. lies in the fact that a member can be all alone anywhere, and still be in touch with the spirit and workings of the entire co-operative machine."

Yes, in this the A. S. of E. is distinct from all other societies, and in this one fact is wiped out what many have thought the greatest difficulty in the way of success—the wide territory covered by agriculture.

\*\*\*

A friend with a farm of 10 acres declares that, on account of results already achieved he holds it at \$300 more than he did before the A. S. of E. was organized. That is a sure effect of the success of the organization. Farms will be more valuable because the crops they produce will be more valuable.

\*\*\*

A Michigan friend writes:

"I want to tell you why Up-to-Date Farming is the best paper for farmers to read; it is full of truth and common sense, and has made the farmers more money than all the rest of the agricultural papers combined."

\*\*\*

J. L. Boatman, Girard, Kas., writes:

"I admire the stand you take for the farmer. I really believe we shall soon be in the front where we should be, instead of behind where we always have been."

\*\*\*

C. W. Paterson, of North Dakota, sends us a speech recently delivered in the United States Senate by Senator McCumber, of that State. We note the following, and may later quote from the speech at greater length:

"Every great elevator company which buys wheat and sells it again is interested, first, in buying as cheaply as it can, and selling at as great an advance as it can; and, second, in buying in at as low a grade as it can and selling out at as high a grade as it can secure."

"In many elevators," declares Mr. McCormick, "no No. 1 northern is graded in, while thousands of bushels are graded out." Also that "the amount of wheat sold out of the Northwestern elevators during the past ten years was 26,868,000 bushels more than the amount bought in for the same period." Under the present system, therefore, the farmers are beaten in price, grade and weight. We are glad these facts are reaching Washington, for it is time there was something doing.

\*\*\*

W. F. Weist, of Ohio, writes:

"Yours is indeed an Up-to-Date paper, and I would not be without it for three times the price. It ought to be in every American home."

\*\*\*

Dr. N. W. Stroup, Elizabethtown, Pa., ordering a copy of "The Third Power," says:

"I wish to join the A. S. of E., and hope it will not be long until you will be in this part of the State. The farmers must do something to get out of their serfdom. They work almost day and night for the benefit of others. At present the young people, both boys and girls, despise the farm, and we must make farm life more elevating, or the country will go to ruin."

\*\*\*

B. V. M. Brouse, reporting the organization of a strong union at Deerfield, Ind., says:

"We have about thirty members in our union, and many of them our most substantial farmers, and co-operation and farmers' unions is the common conversation in every neighborhood."

\*\*\*

W. G. Scott, president of Olmstead county, Minn., writes under date of April 6:

"The farmers' union of Olmstead county, in connection with the Merchants' Association, are arranging for an extraordinary event the first Saturday in June. There is a wonderful interest in this new movement of the farmers. Information is sought from all parts of the State as to what the A. S. of E. stands for, and I think the entire State will be organized within a year."

# Uncle Alf's Friendly Chats

HAS A LIVELY TALK WITH A  
CHICAGO EDITOR

"Hello, Mr. Martin."

"Hello."

"This is Mr. B— of Chicago, editor of the Farmers' ——. I am on my way to L—, and must wait here some time for a train? I would like very much to have a talk with you. Can you not drive into town this morning?"

"Why, yes, I can come as well as not. I am glad of an opportunity to meet and talk with you. I remember seeing you at the Fat Stock Show and at one of the State farmers' institutes; and I have been reading your paper so long that you seem like an old acquaintance and friend. Yes, I will be in town in a very little while."

"Thank you. I am at the — hotel."

\* \* \*

Uncle Alf—"Good morning, Mr. B. I am glad to shake hands and talk face to face with a man whose writings I have so long read with profit."

Mr. B.—"And I am glad to talk with an intelligent, progressive farmer, whom I know to be honest and sincere and who is not carried away by every fresh breeze that blows. I want to talk with you about the American Society of Equity."

Uncle Alf—"Very well. I am pleased to talk with you on that or any other subject pertaining to the welfare of the agricultural classes. But you editors of farm papers are so well posted that we look to you for light on all these subjects."

Mr. B.—"We are never so well posted as when we get our information direct from the farmers themselves."

"Uncle Alf—"Thank you. But before we talk about anything else I want you to tell me all about the Chicago markets. I do not mean the prices; I can get that from the papers, especially from the excellent weekly review in the ——. I want to know how the products are handled and how they get from the producer to the consumer. Live stock, for instance."

Mr. B.—"Well, I believe you have been at the stock yards. That, you know, is a city within itself, and the herds and herds and droves of stock, cattle, sheep and hogs, that come in there, an ever-flowing tide, an avalanche constantly sweeping in from the trains and melting at the slaughter houses, flowing out in rivulets to the shops and disappearing from the tables of millions of eaters. One can hardly understand it who has not seen it."

Uncle Alf—"Ah, it does me good to hear you talk; it is so much like reading the —; and the words actually spoken seem to have so much more life than those in cold type. But that avalanche of live stock comes from the

farms and ranges. There must be a starting power and a propelling force. Not a hoof of that onward-moving flood of stock can be removed from pasture, range or feed lot until the consent of the owner is procured. Of course the means of obtaining that consent is the payment of the price. What I want to know most of all is how the price is made and who makes it."

Mr. B.—"The price is made by the purchasers. They determine from time to time what they will pay and that becomes the market price. It is from them we get our market review you were pleased to compliment just now."

Uncle Alf—"I ask pardon, but for fear I forget it, I want to switch off on another subject for a moment. I understand Chicago to be a great manufacturing center; at least it is a great distributing point for all kinds of agricultural implements and machinery. These come out to aid us on the farms, and we could not well get along without them, though sometimes we are inclined to growl a little at the price. We think they come a little too high sometimes."

Mr. B.—"It does seem so, but the manufacturers are at tremendous expense."

Uncle Alf—"Yes, that's so. How do they determine the proper price at which the implements should be sold?"

Mr. B.—"They count up all the cost of a given output—material, labor, taxes, insurance, interest on investment, wear of machinery, salaries of the corporation officers, advertising, cost of getting on the market (salaries and expenses of drummers), loss of time on slow debts, loss of bad debts, freight charges and all other items of expense. To the sum of these items they add the desired profit and divide this final sum by the number of machines in the output; the quotient is the price of each machine."

Uncle Alf—"So the manufacturers make the price with mathematical exactness."

Mr. B.—"Certainly; the factories could not exist a fortnight if they did not do that."

Uncle Alf—"Well, I do not want to get too far away from that live stock business. Do the stock yards (I mean the company, of course,) buy all the stock that comes into them?"

Mr. B.—"Oh, no, they don't buy any of it. It is first bought in the country by local shippers, though owners may ship their own stuff, and frequently do."

Uncle Alf—"Do the local buyers and shippers have anything to do with fixing the price?"

Mr. B.—"Only to the extent of determining what margin they will maintain between the prices they pay and the

prices they expect to receive. This is usually hazardously close, and often slight fluctuations are disastrous to them."

Uncle Alf—"The stock yards, then, is merely a receiving station where the stock can be held and cared for until it is sold. While there it still belongs to the shipper."

Mr. B.—"Yes, a yardage fee is charged for receiving it and exposing it for sale."

"Uncle Alf—"So I understand. But the stock must be fed while it is there. May the shipper bring his feed with him from the country and himself feed his stock as he did at home?"

Mr. B.—"No; he is not allowed to ship feed into the stock yards; he must buy it there."

Uncle Alf—"I suppose he may go into the city and buy it on the market, have it hauled to his pens and do his own feeding."

Mr. B.—"No, he is not permitted to do that. Feed is kept in the yards and he must buy it there."

Uncle Alf—"Does he get as cheap in the yards as he could in the city?"

Mr. B.—"No, the price in the yards is about double the market price."

Uncle Alf—"That makes keeping stock there pretty expensive, doesn't it? and the shipper is just about compelled to take whatever price may prevail at the time. If he wished, why could he not buy feed at the city markets or even bring it from home?"

Mr. B.—"The charter of the stock yards company gives them the exclusive right to furnish the feed at a price to be fixed by themselves. But it is held that there is nothing tyrannical about that, as no one is compelled to buy it."

Uncle Alf—"But no one else is allowed to bring feed in; he must buy or do without. It is a good deal like the liberty of the cat which the boy dropped into the well with the kindly assurance that it could not drown unless water went into its lungs and none would go in unless it drew it in itself. But let us get back to the selling. You say the stock yards company does not buy."

Mr. B.—"No, they neither buy nor sell."

Uncle Alf—"I suppose the owner does the selling?"

Mr. B.—"No, he is not allowed to sell."

Uncle Alf—"Not allowed to sell his own stock?"

Mr. B.—"No, there are commission houses; he consigns his stock to some one of them and they sell it for him."

Uncle Alf—"You say the buyer fixes the price. Has the owner nothing to say about it?"

Mr. B.—"Oh, yes; this is a free country; you can't take property without the owner's consent; he has the American right to accept or reject the price offered."

An indignant flash darted from Uncle Alf's eyes as he thought what a mockery of freedom this sort of proceeding is, and at the coupling of the name American with it. The owner may reject the price offered; he is a free man, but he must continue to pay the stock yard's prices, suffer the shrinkage of his stock, and be nearly certain of a lower bid on the morrow. He again thought of the liberty of the cat in the well. But he smothered his feelings and continued:

Uncle Alf—"You say the purchaser fixes the price?"

Mr. B.—"Yes. There are several big packing houses and whichever of them bids highest for the stock gets it."

Uncle Alf—"But may not these buyers combine, agreeing upon prices from day to day, refuse to bid against each other and destroy what little competition there might be?"

Mr. B.—"Yes, they do that, and have been known to divide purchases for which only one house made a bid."

Uncle Alf—"Truly, Mr. B., is not that a condition of things bad for the stock

raiser and still worse for the local buyer and shipper? The producer must market his stuff to realize upon it, the local shipper must buy at a margin which will not only save him from loss, but that will give him a profit; reaching the market he must buy feed from a corporation at an extortionate price, he must pay some one else to sell it for him, and to cut down enormous expenses which would soon absorb his capital, he must accept whatever price is offered, that price being arbitrarily fixed by agreement of the buyers and from which there is no appeal. Though wrapped in the panoply of an American citizen, boasting of the liberty and independence of that citizenship, the owner of the property, whether producer or local purchaser, by artificially created conditions, is compelled to give up his property on the terms of the taker as ruthlessly as though taken from his pockets at the muzzle of a gun."

Uncle Alf "boiled over"; he couldn't help it.

Mr. B.—"It is bad indeed, bad as it could be. It all comes of special privilege. Knock out special privilege and you've cracked the nut that breeds the worms that are everywhere gnawing at agriculture's vitals."

Uncle Alf—"But could not the farmers establish markets of their own, stock yards of their own, if you please, commission men of their own, at actual cost of feed, etc., with wages for those who manage them, and thus get their stock to the packing houses, or even to the butchers' blocks or the consumers' tables, without running the gauntlet of these special privileges?"

Mr. B.—"No, it has been tried. A few years ago the F. M. B. A. and the Alliance formed at Kansas City what was known as the American Live Stock and Commission company. It was composed of the stock raisers themselves, and they lopped off all the extortionate features by employing their own salesmen, furnishing their own feed, etc. It worked well and saved the stock men thousands of dollars. But as soon as the stock yards people began to feel the pinch suit was brought against the new company on a charge of violating that part of the stock yards charter which authorized the charging of certain fees for handling the stock. The new company was defeated and ordered to comply with the charter. This they did by charging the fees the old company charged, but as the company itself belonged to the stock men, these fees, as well as the proceeds of sale, were paid over to the stock owners. Suit was again brought on the ground that this was not a compliance with the spirit of the law. Again were the farmers defeated, the court holding that they were infringing upon the vested rights of the corporation. The case was taken to a higher court with the same result, and the farmers had to go out of the commission business, having paid thousands of dollars to learn that farmers have no right to sell their own stock at the market centers.

"So you see, Uncle Alf, everything has been done that can be done, and that is why I wished to talk to you about that society. It is bound to be a failure, and I regret to see such men as you deceived. These corporations take refuge behind what the courts call their vested rights, and are firmly entrenched in special privileges."

Uncle Alf—"Mr. B., the picture you yourself draw is a dark one, an enthronement of monopoly which makes it seem that but little of liberty remains. But I am not willing to consider the case a hopeless one. The idea that the American farmer may not get his products to the consumer without paying enforced tribute to law-entrenched monopoly is repugnant to every instinct or tradition of this nation. There must be a remedy."

Mr. B.—"Yes, it is in the abrogation of special privilege."

Uncle Alf—"Certainly. But this is very indefinite, Mr. B. It implies political action and the repeal of laws almost indelibly stamped upon the statute books and engraven upon charters. Those who granted these privileges at the behest of monopoly will not abrogate them in the face of monopoly's command not to do so; hence we must seek a more accessible remedy. Organization gained the special privileges, organization retains them and enables the beneficiaries to plunder the rest of the world. May not organization on the part of the only remaining unorganized power do something to at least break the force of monopoly?"

Mr. B.—"I would hope so if it had not already been tried. Note the expensive failure I referred to a while ago."

Uncle Alf—"Do you know, Mr. B., that that effort did not cost the farmers a cent? The savings of the company during its brief existence were sufficient to fight the case to a finish and, after defeat, to pay back every cent that had originally been invested in it? That effort stands as an indestructible monument to the tremendous sums the monopolies rob the farmers of every year."

"But the plan of that effort was the organization of a rival concern, an antagonist of the stock yards monopoly, commission men and the packing houses. This of course arrayed against it millions of money and all the talent the millions could buy, backed by the court plea of vested rights."

"Take this view of it: Every hoof of that stock when on the ranges or in the pastures or feed lots is absolutely in control of the owners. Not a hoof of it can be moved without the owner's consent, and he can feed from his own barns and cribs—no one can say him nay. While two days in the stock yards might absorb all of his profits, two weeks at home might rather add to them. When I switched off a while ago on to the subject of manufacturing, you told me that the manufacturers computed with mathematical accuracy the selling price of each machine and that they could not remain in business a fortnight without doing that. The same is true of every productive industry but that of farming. The farmer must submit year in and year out to what would destroy every other industry in a fortnight."

"Suppose the farmers were organized as other s are and were represented at the market centers. It takes no great stretch of the imagination to conceive of a knowledge at headquarters of the contents of every pasture, feed lot and ranch in the country, and, from week to week, of the precise condition of the stock. The approximate amount of beef, pork and mutton required to supply the market could just as easily be known. A comparison of these would readily indicate an equitable price, which could be made known on the farms just about as easily as at the stock yards. The price itself would make known just what shipments should be made and what withheld to maintain the equitable price. The only antagonists the monopolists would have would be their present antagonists, the producers themselves out on the farms, where they could neither be sued nor compelled to sell. Don't you know, Mr. B., that if shipments to Chicago were withheld one week, the market would be demoralized, prices would soar and people would be hungry. No, don't come at me with the old chestnut that farmers can't organize and that they won't stick."

Mr. B.—"No, I will waive that, for farmers can organize as well as anybody else, and they can co-operate if they will, at least enough of them to represent the balance of power between production and consumption, and I admit this is all you need to the accomplishment of this purpose. But I see other and greater difficulties in the way. When the call goes out for stock, how are you to determine who shall ship and

who shall not? Each man who has a bunch of cattle, sheep or hogs ready for the market is anxious to get rid of them."

Uncle Alf—"That is not a difficult problem at all. The people who have the stock know the price it is worth out on the farm or at the market town, if you please. They got this information from their society headquarters. Whenever the call comes for stock at their price they will sell. When the call is at a less price than theirs, they will keep their stock on the farm. Now, it follows that if the world has been consuming all the meat produced under the old conditions it will continue consuming it under the new conditions when the producer sets the price and regulates his marketing to meet the demand. The main point is to distribute the shipments so that a year's supply will be furnished during the year instead of overwhelming the demand by the temporary supply. This is a lesson that may soon be learned and instead of the feed lots all being full at a certain time and all empty the remainder of the time, experience will see to it that the feed lots be never over full and never empty, some feeding so as to bring their stock off at one time and some at another, thus equalizing the supply and insuring a steady market. This difficulty occurs to a greater or less extent with other of the important farm products and all of them may be controlled the same way. Farmers may control the prices of their products just as all others control the prices of theirs."

Mr. B.—"Well, Uncle Alf, I confess your reasoning is entitled to consideration. But there are other difficulties. Suppose this plan should succeed. Your purpose is to maintain a steady market at a price which, under normal conditions, would insure a fair profit to the producer."

Uncle Alf—"Yes, just as the manufacturers and others do."

Mr. B.—"But you offer no solution of the stock yards extortion problem, or the abolition of special privileges. May not these corporate monopolies retaliate by adding what you secure for the producer to what they extort from the consumer and thus recoup their losses and bring suffering to millions? The poor and even the well-to-do in the cities now pay for provisions all they can stand. Is it not better for the farmer, who has an independent living, is it not better that he suffer these unfair conditions than that others should suffer hunger?"

Uncle Alf—"Greed would reply with Cain's famous answer: 'Am I my brother's keeper?' But not so we. I take this view of it: Special privilege, which you so eloquently oppose, is the gift of society to unscrupulous greed, and society alone can abolish it. If the condition which you suggest were brought about, it would awaken society as nothing else could, and in its awakened indignation it would do what you for years have urged should be done—abolish special privilege and hurl monopoly from its throne. The organized farmers would gladly join in making the overthrow complete. That would not trench upon the farmers' equitable prices, for there is abundant margin even now between the price to the producer and the price to the consumer to give the farmer a far better price than he now receives and yet supply the consumers at prices much below what they now pay."

Mr. B. was very thoughtful for some time. Uncle Alf sat, not with an air of triumph, but as one conscious of right, truth and reason. With his characteristic twinkle, he said afterwards he was waiting for what he had said to "soak in." Mr. B. roused himself.

Mr. B.—"Well, Uncle Alf, I called you in to talk about the American Society of Equity, and we have talked about everything else."

Uncle Alf—"No, we have talked about

that all the time. This is the Society of Equity. These are our purposes, not only with live stock, but with all other farm products. We don't propose to interfere with the rights of anybody else. We know, as you declared of the manufacturers, that no industry can live without pricing its products. Farming has lived without doing so; its wonderful powers of recuperation enables it to live, but the right belongs to it the same as to others, and our first great object is to secure to farmers that right."

Again Mr. B. sat in thoughtful silence, finally resuming the conversation in a much less confident tone.

Mr. B.—"You would not expect a careful editor of a conservative farm paper to come to a hasty conclusion, but I must take this matter under consideration."

Uncle Alf—"Thank you, Mr. B. But I can not help calling your attention to an article which recently appeared in your paper. I was reading it when you called me up this morning. Speaking of the American Society of Equity, you say: 'Yet are we compelled to believe, from what we have seen of it up to this time, that its leaders either are interested persons seeking personal gain, or blind leaders of the blind, hopelessly at sea as to what to do or what method to adopt to accomplish it.' Now, Mr. B., is not that a little beneath the dignity of a paper we have all these years welcomed into our homes and gladly placed in the hands of our children? Isn't it the stock in trade of all the opponents of farm organization and isn't it in constant use by all the beneficiaries of special privilege? If they can not otherwise destroy opposition, they discredit the promoters of it and by cowardly insinuations destroy their influence before the people."

Uncle Alf found it difficult to suppress his rising indignation, but with an effort he maintained his usual quiet dignity and continued:

Uncle Alf—"I believe, Mr. B., I would better read all the remainder of the article so there can be no mistake. I have the paper in my pocket:

"Every idea advanced by themen who advertise themselves as leaders of this organization has been talked to rags in a hundred previous organizations that have passed successively into innocuous desuetude, after costing the farmers millions in cash and grievous disappointment, and this for the reason that they have insisted upon treating symptoms instead of the real disease that lies at the root of the economic iniquities of the time. These wiseacre doctors propose to apply the remedy to the blotch on the face, while every vein and artery of the body politic is clogged with bad blood. They are pretending to work for the benefit of one element—the farmer—whereas, all elements composing the social fabric are suffering from the same identical causes, and none may be helped or harmed without affecting for good or ill every other. Any man who says he has a remedy for the farmer's ills that is not fundamental to all socio-economic disorders advertises himself at once as a fool or a knave. The remedy that will aid the farmer now and for all time is the same remedy that will aid the workingman, the capitalist, the merchant, the artisan. There can be but one remedy for all, for all suffer alike and from one universal cause, and that one cause is monopoly. Monopoly is founded in special privilege and just so long as the people permit special privilege to exist they need not only look for no relief, but may be sure that, with the ever-increasing complications of the socio-economic problem, conditions will tend to become universally more difficult for every interest save those which are monopolistic in character.

"The farmer, the capitalist, the laborer—all must put their brains to work. Take no man's word for it, but learn for yourself the truth. In the providence of God every individual must work out his

own salvation. No leader can vicariously assume the task if he would. Think on these things!"

"I regret to read that, Mr. B., even to you, it is so little like you, seems so out of place in our dear old friend, the —. In this conversation you yourself have outlined a condition which is intolerable, and which makes such a movement as the A. S. of E. an imperative necessity. Instead of every idea advanced by this society having been 'talked to rags,' no society ever before took up this line of thought and action. I have purposely led you to discuss the most difficult of our proposition, the live stock interest. I have not sought to ignore any of those difficulties, but I have met them squarely and have shown that even they may be overcome, and results achieved which will benefit not only the producers of meat products, but the consumers and the world, and ultimately lead to the overthrow of special privilege. So, you see, we do not work for one element, but for all, and hence escape your epithet of 'fool and knave.'

"Now, take your own article, Mr. B. Let it be accepted by the world, and make the whole world anxious to carry out its every suggestion. What would be done? What line of policy is marked out? There must be no leader in any movement that may be started, each must work out his own salvation. Monopoly must be crushed, special privilege must be abolished, but who shall do it, and how? Echo for answer feebly returns your own words: 'Something must be done, but nobody must do it.' If there be a movement it must be without leaders. If any one assumes to lead, let him be a cursed; he must be discredited before the people. Mr. B., could the beneficiaries of special privilege devise a scheme so sure to perpetuate them, or so sure to make impregnable the throne upon which monopoly sits? Pardon me, my friend, if I make a little display of warmth; I cannot help it. Yes, I see your train is coming, and I must not detain you. But I do wish you agricultural editors would get out of the ruts you have worn for yourselves and take a practical view of the conditions that confront us, so as not to bolster up and make impossible the eradication of the evils you yourselves condemn."

But the train whistled, and Mr. B. was gone.

#### ACTIVITY IN ILLINOIS

To Up-to-Date Farming:

Meetings were held last week in Trenton, Highland and Greenville in which thirty-two different local unions were represented. The weather was most disagreeable, but many farmers showed their interest by coming twelve and fifteen miles in buggies over roads that were bad indeed.

The meetings were addressed by Senator James Barlow, of Indiana; L. N. Staats and C. O. Drayton. Great in-

terest and enthusiasm were aroused, and the farmers were shown clearly how they may control the markets of agricultural products. Included in the things done the following resolutions were adopted:

Resolved (1) by the members of the A. S. of E., representing the many farmers' unions of Southern Illinois, that the everlasting gratitude of the farmers of the United States is due J. A. Everitt, president of the National Union, for his practical business plan of co-operation among farmers for better prices for their products, and for his persistent, patient efforts to put this plan into operation, and we, the farmers and business men here represented, pledge our best efforts to spread the movement throughout the entire country.

(2) That we favor the making of Up-to-Date Farming a first-class agricultural weekly paper, though at an increased subscription price, so that our needs for an agricultural paper may be fully met by the official paper of the A. S. of E.

[Such improvements are contemplated and will be carried out at the very very earliest possible date. At present the printing facilities are inadequate to turn out the semi-monthly as promptly as we desire. Hence the weekly must wait for improvements that we hope to make soon. Also it is the intention of the publisher to make the official paper second to no all-round farm paper in the country.—Pub. Up-to-Date.]

(3) We urge old members to be prompt in the payment of their annual dues, and we recommend that the fund arising therefrom be employed in an active campaign for the spread of the Society. As a most fruitful field for such campaign we commend the States of Kansas, Nebraska, South Dakota, North Dakota and the Great Northwest.

The members in this part of Illinois are determined to put this plan into complete operation as rapidly as possible. If we can raise the price of wheat only ten cents a bushel, it means seventy million dollars to the farmer. A rise of ten cents on corn is two hundred and fifty millions, and on oats it makes another hundred millions. Ten cents per bushel on these three products is a gain of \$420,000,000 to the farmers. See what this means; we cannot afford to lose it.

I recommend that such meetings as I have described be held all over the country. They enthuse and educate.

C. O. DRAYTON,  
Trenton, Ill.

## The Extra Money

Illustrates 25 styles, and tells how the ADVANCE FENCE is constructed. There are no loose ends at the top and bottom of the fence. Stock can't injure Advance Fence without tearing the wires. We use only the best quality galvanized steel wire. You take no risk at all—we sell ADVANCE FENCE ON THIRTY DAYS FREE TRIAL. We will let you be the judge. If you are not perfectly satisfied after giving it a fair trial you can slip it back at our expense. We sell all our fence under these conditions. None of it comes back. Our customers are satisfied. They know our prices and quality. If you knew we could expect an order from you. Your name and address on a postal card will bring our Book and Wholesale Prices. Write today.

ADVANCE FENCE CO., 7624 Old St., Peoria, Ill.

that the dealer charges (his profit) makes the fence no better. You might as well keep that part (the profit) yourself. It is easier to buy your fence direct from the factory—it gives you a larger line to choose from. We sell at wholesale prices and pay freight to your railroad station on 40 rods or more. Our

**FREE FENCE BOOK**

# Thirty Days Trial Free

No farmer can afford to be without a Bi-Pedal Sickle and Tool Grinder. We know this and we know that all you need to convince you personally of the fact is a trial of the machine. We are so confident of this, that we are going to make you an offer that you positively cannot turn down. Unless you have used one of our machines you have never used a Carborundum Grinding Wheel, because we are the exclusive manufacturers of hand and foot power grinding and sharpening machines fitted with Carborundum Wheels. There are other grinders, but they all use emery or corundum wheels. There is a big difference between these wheels and Carborundum Wheels. We can furnish our machines with emery or corundum wheels and will do so if you wish for less money than with Carborundum Wheels, but you do not want these cheap wheels because they have nowhere near the grinding quality of Carborundum. **Carborundum Wheels are the only wheels which will not draw temper from steel tools and with which water is not used when grinding.**

Carborundum is one of the many products of electricity. It is a mixture of saw-dust, salt and sand, fused at the intense heat of 7,000 degrees. This heat is generated by the wonderful electric furnaces at Niagara Falls. It is the hardest known substance, rivaling the diamond in cutting power. A piece of glass or the hardest metal is ground by it as though it were a piece of soft iron. **A Carborundum Wheel does not glaze, cuts faster, does not generate heat and wears longer than any other grinding wheel.** You can readily see this for yourself.

The Bi-Pedal Sickle and Tool Grinder is an automatic machine for doing all kinds of sharpening and grinding. The power is produced by the feet, leaving the hands perfectly free to handle the work. By the use of gear wheels a speed of 4,000 revolutions per minute is given the grinding wheel, with no effort at all, you might say.

It is easily adjusted for grinding mowing machine sickles. The tool rest is a movable clamp which will hold a sickle of any make. The sickle can be put in or taken out at any place desired. An old sickle can be ground as readily as a new one or nicks removed, the grinding being done so perfectly as to preserve the original bevel and grinding all teeth absolutely uniform.

The Bi-Pedal is also the most automatic grinding machine made. A boy can run it as easily as a man. It will grind plow and cultivator shovel points, harrow discs, sickles, scythes, knives, axes, in fact any and all grinding, sharpening or polishing required. It will save its cost many times over and every machine is guaranteed to be absolutely perfect. With each machine is furnished the following:

- 1 One Bevel Carborundum Wheel for grinding Sickles.
- 2 One Solid Carborundum Wheel 5x1 1/2 in. for grinding Edge Tools.
- 3 One Carborundum Wheel for Gunning Saws.
- 4 One large Polishing Wheel.

The Bi-Pedal Sickle and Tool Grinder is the most practical and satisfactory grinder and sharpener on the market. Don't take our word for this. Don't take any one else's word against it. We may both be prejudiced. Try the machine yourself.

## THIRTY DAYS TRIAL FREE

We will send you a complete machine on 30 days trial. Take it and **test it to your entire satisfaction.** If at the end of 30 days you do not say it is the finest tool of its kind on the market **send it back at our expense.** If it is as represented send us \$8.50. We ask you in all candor, could we, unless absolutely sure that our machine was exactly as represented and satisfactory in every way, make such an offer as this and advertise it broadcast?

## Not What We Say But What the Machine Does

### Good—Does Not Draw Temper

Luther Bros. Co., North Milwaukee, Wis.

Gentlemen:—I received your Grinder alright. It is even better than I expected. Have ground knives, axes, cultivator shovels and seeder teeth. It grinds very fast and does not draw the temper. I was afraid that it would. I tried an emery grinder; it heat the tools and drew the temper, and this machine grinds so much faster. Can I have the agency? S. H. Van Selus.

Dundas, Minn., February 24, 1904.

### They Wear Well Too. 1901.

Luther Bros. Co., Milwaukee, Wis.

Gentlemen:—Your machine is worth its weight in gold. I would not take \$50 for mine if I could not get another. Pleasant Prairie, Wis., Nov. 15, 1901. L. Larabee.

### Two Years Later 1903

Luther Bros. Co., North Milwaukee, Wis.

Gentlemen:—I purchased one of your Bi-Pedal Grinders nearly three years ago, and would say that we have used it almost every day since. It gives perfect satisfaction, and any person that has any grinding to do ought to own one. It is a gem. L. Larabee.

Pleasant Prairie, Wis., December 26, 1903.

### Perfect Satisfaction

Luther Bros. Company, North Milwaukee, Wis.

Gentlemen: In this present age of labor saving devices your Bi-Pedal Sickle and Tool Grinder ranks with the best. In operation it is simple, its work is quick and effective. It is a combination of high class tools—in a compact form. Your offer of free trial is a proof that you place the machine before the public on its merits and in the hands of any intelligent person it will prove the assertive statement above. Banks with the best. George W. Gibbons, Floodwood, Mich.

Feb. 23, 1904.

### Works Quick and Effective

Luther Bros., N. Milwaukee, Wis.

Dear Sirs: In this immediate neighborhood, and within a radius of five miles, I sold fifty of your Bi-Pedal machines, the great bulk of them within three miles of town, and I am pleased to say that up to date, so far as I have learned, they are giving excellent satisfaction. This refers to the season just past, and during the present year the prospects appear good for at least four times that number.

Wm. J. Graham, Carsonville, Mich.

Jan. 30, 1904.

## THE SENTRY BOX

### CAN FARMERS COMBINE?

Recent advances in the market price of wheat, cotton and other agricultural products call attention to systematic efforts which have been made for a combination of farmers to enhance prices. Having been engaged in these efforts for many months, their promoter resolutely claims to have been potent in accomplishing the results which we all see.

An enterprising agricultural writer and publisher in Indiana started in to work up this combination. He prints a farmer's paper. He has even written a book in furtherance of this scheme and many will attribute to him the remarkable advance in prices, which others credit to short crops or the war between Japan and Russia. The movement, however, seems to the Sentry worthy of careful notice as a sign of the times and the possible beginning of a new era in the agricultural life of our people.

Farming is and always has been our leading industrial interest. Anything which legitimately improves the condition of the vast agricultural population of the United States must be of universal concern to all citizens. If it be true, as the leading promoter of this farmers' combination idea asserts, that his clients can practically combine so as to reap for themselves the enormous profits which speculators, warehousemen and manufacturers have hitherto gained, there will certainly have dawned upon the country a new economic dispensation.

According to the statement of the enterprising originator of this plan, he commenced a combination for dollar wheat on June 26, 1903. He claims to have then presented evidence to show that wheat was really worth a dollar. At that time speculators were selling the farmers' wheat crop in futures at 60 cents to 65 cents a bushel. Many millions of bushels were thus contracted and millers as well as dealers sought to contract with the farmers in advance of threshing at 65 cents a bushel.

Owing to the agitation for the farmers' combination, an unusually large number of producers refused to make these advance contracts and even in August and September when the wheat was ready for market, refused to sell at current prices except as absolute necessity compelled.

January 1st, 1904, wheat had reached 90 cents in Chicago and then the vigilant, belligerent advocate of the combination publicly asserted that it was intrinsically worth \$1.04. The subsequent course of the market is well known. The general tendency has been upward. People usually ascribe this tendency largely to the outbreak of the war in the Orient. Friends of the farmers' combine will, of course, claim the lion's share of credit, and if it be true that through their efforts a very large part of the resulting profit has gone into the pockets of the farmers instead of the speculators, the Sentry assumes that there will be few to mourn.

As to how much of this credit is thus attributable, there will be honest differences of opinion. There are such honest differences on all subjects—even as to the relative sagacity of the elephant and the Missouri mule—but the happy farmer who saved his wheat and realized

a profit of 40 or 50 cents a bushel thereon will have occasion to thank the wide-awake author of the combine scheme, and will have encouragement as well as added facilities for entering upon a similar course of procedure in subsequent years.

Whether such combines will always be effective or not is doubtful. They can seldom show even mythical results equal to those above cited, but undoubtedly the thrifty farmer gains each year in ability to carry out for himself the plan of holding his surplus for higher prices and thus helping to corner the market. With the improvement of his means, the necessity for early sales diminishes. Whether the possibility of extensive combination among farmers over vast areas exists, is still an open question, on which the Sentry is not called upon at present to express an opinion. Past efforts in that line have mostly failed, but they have usually been made in seasons of agricultural depression and adversity when necessity compelled the farmers to sell their produce as soon as ready for the market at the best prices obtainable. Certainly the present era of prosperity is a most favorable time for a hopeful trial of this interesting experiment.—The Sentry.

Note.—Responsibility for the opinions and utterances of "The Sentry" is assumed by the Sentry Box Bureau, of 825 Vermont avenue, Washington, D. C.—Editor.

### THE MEN UP THERE AND THE MEN ON THE FARM.

The farmer is pre-eminently a business man, yet he seldom considers himself so. He is like the Irishman who worked at carrying brick to a brick-layer. He wrote home to his brother a letter like this: "Dear Moike:—Come to Ameriky at once. I've struck it aisy. All I have to do is to carry me brick to the top of the ladder, and begorra, a man up there does all the wurruk." All the farmer has to do is to raise the crops, and the "man up there" does all the business. And the farmer gets less wages than the common laborer, while the man who "does the work" gets well paid, and laughs at the idea of a farmer becoming a business man. But why should we not call ourselves business men? We fill the trains, the ships, the warehouses, the stores; we supply the blood that flows through the arteries of commerce. We keep the factories running and make it possible to pay union wages working short hours. We make business possible, without us it would die. And yet, the man who does all this must take a lower rank in the "business" army, than the insignificant clerk at the crossroads store, who parts his hair centrally and slaps the farmer on the back with "hello, Reube." The farmer dictates not even the terms by which he is doing business. He leaves that work to "the men up there." Now, truly such farmers are not business men, and do not consider themselves so. They are right in the opinion, too. And the great pity is, there are too many of us that are that class of farmers. But ours is the fault, and with us lies the power of its correction. We can change this if we will. Don't say "can't." Don't even think of it. "Can't" never did anything in this world but prevent people from doing things. We will put the farming of our country on a true basis. We will organize on co-operative principles and do the tricks of our trade ourselves. We will get some facts in our head, some hope in our hearts, some enthusi-

asm in our souls, and go in to fight and to win; for that is business. It sounds like it. But we want men; men who love the farm; men whose minds are as broad as their shoulders; men who have the courage of their convictions and dare to follow the lead of progress. Men who will step out with "We can and we will" written in every line of their faces, and speaking in every action. And they are coming. Put your finger on the pulse of public feeling to-day. You will feel the throbbing of the fever of unrest that comes from the heartbeats of the Nation's business—the workings of our farmers. It is the epidemic of organization. It is contagious. It has affected all other lines of business. The laborer, the artisan, the manufacturer, the banker; all of them are unionized. They are successful in their unions. They did not think the farmers would catch the disease. These doctors of finance thought they had them vaccinated with the serum of ignorance and indifference. They would stop the nation's fever now if they could, but it has gone too far. The farmer has got it, and got it bad. Already thousands have been taken and more are coming down with it every day. The farmer will organize and that speedily and then he will put himself where he belongs, the foremost business man of the world.

### It's the Stroke that COUNTS!

Diamond tears on morning spray,  
Where the balmy breezes stray,  
And with sweetest blossoms play;  
Hear the birdies' roundelay,  
Ripling laughter every day—  
Pretty maiden, charming May.*

THE GROWING OF DOLLAR WHEAT

It is growing—growing now. In some sections it is just peeping out from beneath the mantle of snow that has covered it all winter. In others the spring freshets are trickling, laughing and sinking about the roots, carrying down into the lower depths the richness of the top soil to gladden and strengthen and enlarge the stalks that will later throw out the golden heads. In still other localities it is up strong and green of blade, with the center stalks taking form and starting upwards to the sunshine that beams down on it with softness and a warmth born of more southern skies; while the expanse of green waves and undulates like an ocean of green spray in the soft breezes of the Southland. It is growing, growing now, and ere long the sap will harden in the grain, the stalks and the chaff that encases the precious grains will turn a golden brown; and then, while the sickle blades sing their song of harvest, and the humble peasant in foreign lands—likewise the growers of the lesser acreage in our own country—swing the cradles in the fence corners and along the water courses, they should all—aye, they will all take up the same grand triumphant song—the song of dollar wheat.

And why not? They are the people. It was they who plowed the soil, who harrowed it, who prepared the seed; and they still, who guided the drill behind the quick-stepping team; or, they who with a strong, regular military stride marched over the fields and broad-casted the seed that has sprung into the new life and made possible this thing for which we work and talk and sing—this age of dollar wheat. Who has a better right to say what the price shall be when the harvest is over? Have others spent time, expended brawn, or devoted thought and work to this purpose? Have others a better right to say what the harvest shall bring to those who planned and worked and nursed this fruitage of

the soil from the seed to the gathering? We think not. We believe in the enduring principles of equity, and we appeal to the tillers of the soil—to the growers of the wheat—to price their own labor, to control their own produce, and by organization and co-operation to reserve unto themselves the fruitage of their toil. This is the way we should regard this matter. The growers of the wheat should listen to no other story, and should hear no other song than the equitable song of home-made prices for home-grown products, and of dollar wheat from first hands. This thought should be implanted and cultivated in the mind until all else shall be excluded, in so far as relates to the pricing of farm labor and the fruits of the farm. Let this be the song of the summer breezes. Let it be heard in the warble of the wood-songster and the notes of the lark. May it take wings on the summer clouds and sink deep into the hearts and minds of the growers of wheat, even as the rain drops descend to gladden and refresh the soil. The thought, the resolution and a firm-set determination to grow dollar wheat should be engrafted in the growing of the crop itself this season, to bear fruitage in a successful termination when the grain is sent to market.

FOR THE DEFENSE.

In these days of creeping, crawling, hopping and flying pests, ready to bite, bore and suck the life from all vegetation, we must needs prepare for war in time of peace. In making out seed orders we may as well include powder guns, sprayers and traps as well as ammunition for the same. We shall need copper sulphate, lime, slug shot, Buchach, sulphur, Paris green, whale-oil soap, tobacco stems or dust—and an unlimited amount of vigilance (this last is not on sale), if we expect to rout the insect and fungus enemies to fruits and flowers. The O. K. Seed Catalogue has everything needed, listed at reasonable prices.

### THE BEEF INTEREST.

Beef production is rapidly becoming one of America's greatest industries—selection, breeding and feeding is becoming both an art and a science. The fastidious American palate is no longer satisfied with the unfinished product of the prairie and the range, and each year sees the demand for choicest beef increase.

Besides, the ranges are not what they used to be. Human restlessness and the constant overflow of population are crowding upon the grazing lands of the West, and the supplies coming from the ranches are diminishing. All this points unmistakably to the constantly increasing importance of the farm herds.

This fact appeals to the farmer to look with greater care to his cattle and pastures. He must henceforth not only supply beef stuff in greater quantities, but he must supply it of superior quality. In all but the dairy sections the beef type commends itself, and even this must be improved so far as patience, skill and good feeding can improve it. We know of large sections of the Ohio Valley, on either side of the river, where the old type (or rather entire lack of type) of pioneer "woods" cattle still prevails. Old White Face, Brindle, Spot and Pide, that our grandmothers called out of the woods to be milked, are still to be seen, weighing from five to eight hundred pounds when as fat as we ever make them. And the yearling and two-year-old steers are sharp-backed, thin-flanked, flat-sided fellows that would not get fat and plump in a corn crib or clover field. These must disappear with the woods and creek bottoms they used to run in, and the round, heavy-built Short Horns, Herefords and "Dodgies" must take their places; and the rich blue grass, red top and clover pastures must come in where the wild ranges used to be, and the feed lot must finish what the pastures have well made.

But that which is of most importance to the stock raiser is the price. Who can afford to invest money when he can have little or no idea as to what the return is to be? And who can raise beef cattle without an investment of money—pasture, feed and time? An uncertain price makes the whole proceeding uncertain. When prices depend upon the secret manipulations of packers' combines, it is impossible for the farmer to make calculations that carry with them a single element of safety. He can not know what steps he dare take with a view to improvement, or what expendi-

tures to make to increase his herds or his facilities for better treating them. Steady prices, reasonable certainty of the market, is what the farmer needs above all things else. Give him this and his native common sense and energy will promptly solve all the other problems and supply the world with such beef as has heretofore only found its way to the king's tables. May not this be secured by co-operation—co-operative marketing?

### DON'T STUNT THE COLT.

In the best farming circles it is now clearly understood that best results can only be secured by keeping the young animal constantly growing and doing its very best. This is particularly true of the colt which is expected to become a high class animal. Mr. G. C. Goodale, of a Mine, relates this incident:

"A few years ago, while judging the colts at the Kennebec fair, a gentleman brought in a year-old stallion. He was in fine, healthy condition, of fine conformation, finely gaited, and scoring ninety-odd points he easily captured the blue ribbon over a large field of colts. His breeding was fine. His owner said to me, 'I am going to keep this colt for a stallion.' I told him he would make a fine stallion, as he had the breeding, the gait, the fine color and conformation. But I said, 'If you want a fine horse keep this colt growing and in good condition until matured.' Six months later I was going by his place and he called me in to see his colt. I was surprised to find the colt poor. He had not grown a bit for six months. I told him he had spoiled his colt. He said he had a fine pasture to turn him into and he would be all right. I said to him, 'When this colt commences to grow again he will grow out of proportion somewhere.' The result was that he grew ewe-necked, his shoulders grew upright and he grew sway-backed. This changed his gait so he could show no speed, and his owner gelded him at four years and sold him for a small price."

### EARLIEST MATURITY FOR PROFIT.

The animal that is ready for market at the earliest age is almost invariably the one that yields most profit, and it is the one which is now in readiest demand. Such terms as baby beef, young lamb and pig pork were unknown in the markets a few years ago; now they take their place with spring chicken, and are seen in the daily orders of the best customers. John M. Jameson, of Ohio, gives the New York Tribune some experiences in this line with pigs. eH and a neighbor one fall had a bunch of shoats in all respects about equal. He pushed his all through the winter, and brought them into the market in May at about 200 pounds each. The neighbor's went to market in September at about the same weight. It is unnecessary to ask which made a profit.

# Sharples Tubular SEPARATORS

## The Separator News

Did you think all separators were alike—that any kind was good enough—that makers of bucket bowl separators would tell you their machines are poor? Some dairymen have thought so—have dropped a bunch of money that way. But you'll not if you investigate—read The Separator News—learn that

### Separators are Vastly Different

A cow's leg and tail may look alike, but they're very different. One is good for support—the other to swipe your face in fly time. SEPARATORS are just as different. The Separator News tells how, tells it plainly, tells why Tubulars are best, appeals to your judgment. Tubulars recover more butter fat—skim twice as clean by official tests. It's the only simple bowl separator. The Separator News tells about separators—issued periodical—subscription free. Write for it and catalog No. C-186.

# POOR ANIMALS.

Does it pay to keep poor stock? Cattle, horses, sheep and hogs of poor breeds cost as much to maintain as those of good breeds, and they are far less productive to the farmer. This is especially true of dairy cattle. In these days every farmer is more or less a dairyman. That is, he deals to a greater or less extent in dairy products. The most productive dairy product to the great average of farmers is butter, hence, in selecting his cows he should be careful as to their butter productiveness. By carefully weeding out the poor cows, and just as carefully testing the heifers he saves for dairy use, he will easily enlarge his butter product. There is always a demand for good butter, and at fair prices. Every farmer would find it to his advantage to pay considerable attention to the product of his dairy; and one of the first considerations is the selection of his stock.

This is true whether he makes butter or sells the milk to the creameries. Another matter of importance is the manner in which his product is presented for marketing. It is in that many farmers fail. A city housewife will more readily pay from thirty to forty cents a pound for butter that is attractive to the eye when offered for sale, than twenty cents

for that which is less attractive. Proper marketing has as much to do with the success, or want of success, of a farmer as the production of crops. This is especially true of the product of the garden or the dairy. A great many good market gardeners fall far below reaping the full benefit of their hard work in raising vegetables for market, because of their lovely manner in which they send their truck to market.

## SELECTING FEED.

It is not every one who raises hogs for market that knows that a difference in feed produces a marked difference in the flavor of the meat, or if they do know that fact, they are unaware that it would have any influence on the demand for the meat with a better flavor. The French are the peicures of the world, and they give the preference to beef, mutton, or fowls according to the flavor created by a certain course of feeding. Take poultry as an example. There is a marked difference in the taste of poultry, produced by the process of fattening, as there is between certain fishes. In this country certain varieties of ducks always command a higher price than others, but those same epicures have given no heed to the difference in chickens, yet the difference is just as marked.

At the table people often remark that the ham or the pork is exceedingly fine, and give the credit to the cook, whereas the excellent flavor is owing more to the feeding of the hog than to the arts of the cook. This is beginning to be known, and it will not be long until consumers will demand the better flavored meat, and then it will command a higher price. The first requisite in producing this finer flavor is that all the feed should be sweet and clean. Hogs, unlike cows, will eat any dirty food, and they are permitted to forage after any kind of impure or uncleanly food they can find. If the raiser would see to it that the hogs received none but clean food, and that fresh, and that the water was also good and wholesome, they would soon find their hogs were not only healthier, but that the meat would be of a much finer flavor.

Swill-fed hogs fatten, and fatten readily, but the fat is not healthy, nor is the meat of good flavor. Whatever you do, see that the feed is clean. Corn, one of the best possible foods for hogs, if foul or musty, will injure the flavor. We are too much given to thinking that the hog is a filthy animal by nature, and therefore craves filthy food. There is no truth in either proposition. Clean pens, a clean range, clean feed and clean water are essential to get the best meat.

**3 FEEDS FOR ONE CENT**

## 111 PIGS FROM 5 SOWS IN 6 MONTHS

INTERNATIONAL STOCK FOOD CO.,

Minneapolis, Minn.

COIN, IOWA.

DEAR SIR:—I have been feeding the "International Stock Food" for the last three years and find it to be all that you claim for it. Last April I had five sows that farrowed 61 head of pigs. Four of the sows had 12 head each, the fifth one had 13 head. Fifty-five head of these pigs will average over 200 pounds each at 6 months old, and I must give "International Stock Food" credit for at least part of the large litters and the great growth of my pigs. These same five sows farrowed 50 head of pigs in the September following, an average of 10 pigs to the sow, making 111 head of good, strong pigs from 5 sows in less than six months. The sows and pigs were Poland-China. Who is next?

Yours truly,

A. G. HULLMAN.

Beware of Inferior Imitations and Substitutes. Write Us About "International Stock Food." We Have Thousands of Similar Testimonials and Will Pay You \$1000 Cash if They Are Not Genuine.
